THE CANNING TRADE

THE JOURNAL of the CANNING and ALLIED INDUSTRIES

Established 1878

PUBLISHED EVERY MONDAY BY

THE TRADE COMPANY

ARTHUR I. JUDGE . . . . . Manager and Editor

107 South Frederick St.

Baltimore, Md.

Telephone Plaza 2698

Packers are invited and requested to use the columns of THE CANNING TRADE for inquiries and discussions among themselves on all matters pertaining to their business.

Business communications from all sections are desired, but anonymous letters will be ignored. ARTHUR I. JUDGE, *Editor.*

THE CANNING TRADE is the *only* paper published exclusively in the interest of the *Canned Food Packers* of the United States and Canada. Now in its 45th year.

TERMS OF SUBSCRIPTION.

Payable in advance, on receipt of bill. Sample copy free.

One year,	$3.00
Canada,	$4.00
Foreign	$5.00

Extra copies, when on hand, 10 Cents each

Vol. 47 BALTIMORE, AUGUST 27, 1923 No. 1

EDITORIAL

WE ARE ENTERING A NEW DAY—Somewhere, somehow the canners seem to be getting some of that stuff which makes a rabbit spit in the eye of a wildcat. At least, some of them have thrown their hats on the ground, rolled up their sleeves and are twitching their feet, as they threaten to knock the stuffin' out of some parties who have been pestering them. And we are just onary enough to sit on the fence-rail and urge them to "go at it," "knock their blocks off," "don't let 'em bluff you any more." What are we talking about? Just turn over to that little notice elsewhere in this issue, headed "Sure Cure for Cancelitis."

For years we have tried to make the canners develop enough backbone to tell the jobber "just where he gets off" when he tries an unfair tactic; to stand back of their contracts and insist upon fulfillment when market prices go off as well as when they advance; in a word, to stick up for their rights and to fight for them. Up until the time of the war canned foods futures were a real uncertainty because the canner never knew whether the jobber would take them or not. The one thing the canner was sure of about his futures was that the jobber would kick on everything, and then some, from time of delivery to the next packing season. Quality, color, degree of syrup, kind of cases used, route of shipment, and what not, were used as excuses for not accepting the goods; and one canner once told us that his shipment was refused and left at his risk in a distant city because the quality was too good for the label the jobber wanted to use. A shipment has been known to be refused without ever opening the car door, much less after examination of the goods. Of course, this was always when the spot market was lower than the future, and on early deliveries of futures, during canning season, this was usually the case. Did the canners ever fight back? If they did, the records are woefully lacking.

Then came the war and the leaping, jumping demand for canned foods at any price. The canners, well trained in this school of duplicity, tried to repay the jobbers in their own coin, some ignoring their future contracts entirely, others cutting down on the amounts, and so on. Did the jobbers fight back? They howled to high heaven, swore at and to the canners, and threatened never to buy futures again. They had never heard of such a thing—nor had they. The game had always been played the other way. Out of it all it would seem the canners have learned their rights, as well as the rights of the other man, and the industry will be better for it only if the jobber makes the canner live up, honestly, to a full completion of his contract, not exacting too much in quality, nor more than the best human efforts can produce; and, on the other hand, that the canner demand as much of the jobber, and not supinely submit because he happens to be a good buyer! Let's hope both have learned their lessons and will apply them.

WISCONSIN ALLOWS UNLABELED GOODS—The Wisconsin Department of Market has formulated rather stringent regulations covering the canned peas produced in that State, one of them being that the size and quality and variety be plainly marked on the label after June 1, 1924; and in addition to this was the requirement that no unlabeled goods could be shipped. Under date of August 11th, Mr. Alvin C. Reis, Counsel of the Commission, wrote us as follows:

> General Order No. 11, prescribing labeling regulations for canned peas, has been supplanted by General Order No. 11-E, effective June 1st, 1924, which allows the marketing of canned peas without label. The new order specifies the wording which is required wherever a label is used, but does not demand a label, as did the original regulations.

We have heard canners on the floor of Wisconsin meetings say that they have sold goods as of one quality, only to find them appear under jobbers' labels as another, and, of course, a higher quality. Wisconsin cannot stop this in another State, though the evident purpose of requiring the labeling of all goods was to prevent just such deception; and for the sake of the good name of Wisconsin, this would have been a wise action; but when occasion arises where peas or any other products from another State are shipped into Wisconsin, the regulations will care for that contingency. This might well be cited as another example of the need of a law requiring the name of the producer on all food products. Some day the Bureau of Chemistry and the various State authorities will see the light on this question, and we will yet have that law, despite the opposition of the jobbers. Nothing will so reduce the amount of misrepresentation as when the canner, or other producer, is obliged to father his goods. As Dr. Bitting has said, that name on the label will do more than all the food laws and all the inspectors can ever do. Knowing this, as these food authorities must, the wonder is that we have been so long without it.

AND SPEAKING OF LABELS—When the time comes that every canner will be proud to father every can of goods going out of his establishment, in that day we will have quite well solved the problem of quality. None but a fool would put his name on a can of string beans, for instance, about which we were told this week, which, because of the scarcity and high price of string beans, contained 16 string beans. This, of course, was a stretch of the imagination, but it illustrates the human weakness too often found among canners, and anything but unknown among jobbers, to stretch the pack when the crop is short and the prices likely to be high. One false step of this kind, with the name of the canner on the label, would kill that canner's trade in string beans forever more; and so it would be with every other item of food which the consumer must buy on faith in the can.

And this brings to the forefront again the question of intelligent labeling. In that day, too, the label will tell the true story of the food inside the can. It could not be otherwise with any man who valued his own good name and business. So this would seem to be the key that will unlock a whole lot of blessings. Then, let's have it; and the sooner the better.

THE TIN-PLATE QUESTION—Last week the conference with the Standardization Committee, in Washington, was held, and Dr. Elwell presented the claims for a better tin plate and a standard to be used as a guide in his usual forceful and energetic and thorough style. From the examples he displayed, it is clearly evident that there is considerable room for improvement in the quality of tin plate used for food cans. On the other hand, the tin-plate makers and the can makers contended that it is humanly impossible to make a uniformly perfect sheet of tin plate, and it was their plea that the manufacture of tin plate has reached as high a standard as any other line of procedure, and should not be crippled by a set standard to which they could not adhere in every instance. It forms one of the tough problems which the Department of Commerce is finding in its efforts to help all business, and that means both sides of all questions. Dr. Elwell has clearly shown the need for improvement; possibly the tin-plate men may be able to remove some of the troubles, if not all, and certainly the can-makers will welcome a plate that will produce better cans and lead to more contentment among the canners.

THE CANNED GOODS EXCHANGE AT BUFFALO—At the recent meeting of the Canned Goods Exchange attention was called to the fact that it made no exhibit at the Canned Foods Show in Atlantic City, and at the chagrin members felt at this oversight. Accordingly it was decided to appoint a committee to look after this matter, and to appropriate sufficient funds to see it properly installed. Mr. E. A. Kerr has been chosen Chairman of that Committee, and that means that there will be action on it.

SURE CURE FOR "CANCELITIS."

CANNERS of the country who are victims from time to time of buyers canceling orders at will may read with profit the following account of how a representative canning concern of this country fought back when imposed upon. In fact, this concern makes it a practice to fight when it believes itself to be in the right, and in this case has kindly consented to give the facts for the benefit of other canners who from time to time find themselves in the same position.

The representatives of the firm which fought and so signally won its case, terms the revoking of bona fide orders "cancelitis," and offers their method of meeting the situation as a thing which will have a tendency to cure the disease.

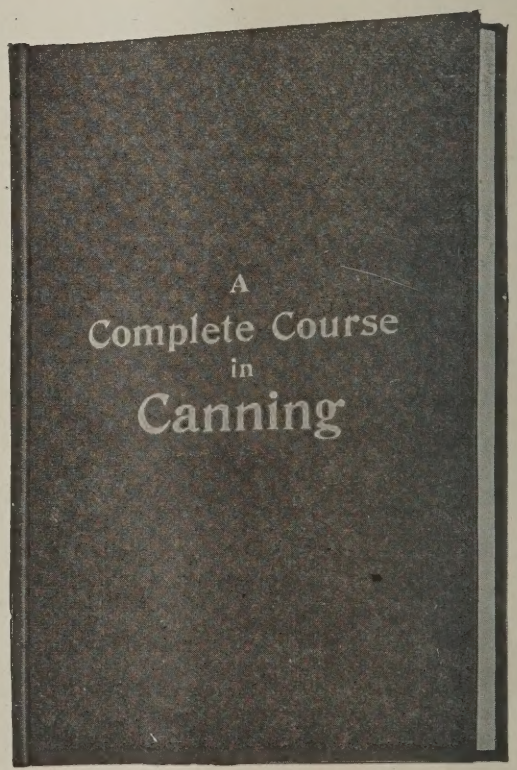
It seems that about the middle of June, last year, a certain concern ordered eight hundred cases of a standard product. Some six weeks later the order was cancelled. The canner's representative approached the grocer in as nice a way as possible, pointing out the facts in the case, but finally took a firm position, as may be seen by the following pointed paragraphs:

"You made this contract, gentlemen—you cannot break it in this light manner. We are not going to be foolish enough to make a shipment to you unless we know you are going to pay for it, but we will tell you one thing—you are either going to take these goods, or you will pay the loss occasioned us by your not taking them. You may think we are bluffing—you will learn that we are not. If a contract made in good faith can thus lightly be set aside by your good selves, it is high time we found out whether a contract is worth anything.

"Now, we submit to you one of two propositions. We will either make the shipment to you, if you will permit, and pay for the goods in accordance with the contract terms, or you can send us a check for the amount of the loss, which at today's rate we will make owing to your not taking the goods.

"* * * If you will send us your check for the amount in question, we will call the matter off. Otherwise, please withdraw your remarks that you will not pay for the goods if we ship them. As we said before, you may think we are bluffing. It's going to cost you a good deal more than the amount in question to find out that we are not."

There was received in reply to this letter what the canner termed "the silliest answer we ever saw." The canner finally was obliged to make a journey to the city in question—and a long trip it was—but, although he had been quite successful settling similar controversies, he could do nothing with this particular concern.



Thereupon, forsaking the channel of diplomacy, he launched a full-fledged court action. In the meantime the buyer had remarked in one of his letters that perhaps in his (the canner's) home State he could do thus and so, but that in his (the buyer's) State things would be different. Therein the buyer again guessed wrong, for although the case was tried in the buyer's own State, and before a jury of that State, the jury awarded the canner his loss in full, together with one hundred dolars court costs. And the canner has received his money.

He concluded his communication to the N. C. A with the following characteristic paragraphs:

"There is one canning concern, for whom the writer has the honor of working, that will live up to its contracts if the people with whom we do business will also do so, and while we, at the same time, will compromise cases rather than go to law, if it comes to a point where a man will not submit a decent compromise, we will fight every time.

"A few years ago we won a case here in our State against a grower who would not deliver us a certain raw commodity when the market was much higher, and the advertising of this fact has led the growers to understand that we mean business. It occurs to us that similar advertising will have a likewise desrable effect on the wholesale grocery trade."

Conditions Of Crops In All Sections

Crop Reports By The Canners

[Notice—If canners would but recognize the opportunity offered through The Canning Trade for a free exchange of this highly important information, this page would grow to several pages each week. Trouble is, when a canner is asked to report on his crop conditions, he grows fearful that the information will get to the buyer, and so he refuses, or neglects, to send in a report. Truth is, the buyers get the information in other ways, and sometimes wrongly, and the only result from the canners' refusal is that fellow-canners are kept in darkness. And some rejoice in that. It is a huge mistake for the canners to act this way. If all canners would be free, and honest, in reporting exact crop conditions, it would tremendously benefit the entire canned foods market—not hurt it. And to lie in such reports is to simply cheat yourself playing solitaire. If the crops are there, the peak will come from them, and just when you think the market should be about free of goods, those goods come creeping out, market advances are checked and doubt spread, hampering all operations. If all canners knew the crop conditions of others, all could operate more intelligently, guiding their courses accordingly. The canner who withholds his crop information is like the ostrich that hides its head in the sand and thinks no one can see him. Don't be an ostrich.

Every week we send out hundreds of return postals, get back a few. Don't wait to be asked by mail; take this invitation and frequently report your crop progress. Rest easy as to who sees these—for 90 per cent of our readers are fellow-canners, and the other 10 per cent are brokers and a few buyers. We earnestly invite you to help make this a most important Bureau, and we feel that we can count upon you.—Editor.]

Sharps, Va., August 21.—It is about time that the "Biddle's" commence to "Bid," and the Whoesaler (who does not wholesale any more) to imagine "a vain thing" about tomatoes. But in this section we will have a much shorter crop than last year. The heavy rains washed off the blooms, and the blight and wilt are worse than I have ever seen in this section, and up to this date not a cannery in this "neck" has run a full half day. So where will the bumper crop come in that the daily papers speak of? Let us wait and see what we see.

Harrington, Me., August 20.—The crop of blueberries (which is all we pack) is about 50 per cent of an average crop, and therefore pack is the same. This is due to cold spring and a drought. Our acreage is not up to normal, because of hard condition for burning land in spring of 1922.

New Hartford, N. Y., August 20.—Canning crops in Eastern New York are about normal in acreage and in condition. This includes peas, Refugee and wax beans and corn. Tomatoes are not packed in Eastern New York to any extent. In Western New York above crops are about normal and tomatoes are looking well, though rather late on account of cold weather. Apples will be a light crop and are considerably affected by fungus, which does not hurt them for canning, as the fungus pares off with the skin. But it is a very serious matter in barrel apples, because the fungus gradually works into the apple.

Mt. Vernon, Ind., August 20.—Crops are coming on good. Late acreage normal. Late fall and no storms mean a good pack.

Sank City, Wis., August 17.—Sixty per cent crop of peas. Looks as if our corn crop will be about 50 to 60 per cent.

Elkins, Ark., August 20.—Our acreage is above normal, but crops are way below normal. In fact, this section is mostly all burned up. There will not be a half normal pack this year.

Peru, Ind., August 20—Early planting of corn, poor; later planting, fair. Early rains and cold weather have bunched crop so that it is coming all at once.

New Era, Mich, August 21—Heavy rain last night and today broke a long dry spell which had been working havoc with our wax bean pack. Will have difficulty filling orders in full. Peaches and apples look very good. Plums are short.

Windsor, Conn., August 23—Tomato crops look fine, but weather continues very cool. Will begin canning August 28th.

Wilson, N. Y., August 22—Had heavy wind yesterday that took off a good many pears and apples. Tomato crop about 75 per cent. Corn 50 per cent.

Pineville, Mo., August 20.—It is very dry here, and unless it rains at once, the crop will be a failure. One-half of it is damaged now.

Aurora, Mo., August 13.—Acreage normal. Crop conditions very poor on account of continued dry weather. The crop will be 50 per cent short, and still worse if the dry weather continues.

PUBLIC HEALTH SERVICE WARNS AGAINST POISON IVY AND POISON OAK

United States Public Health Service

THE poison is, perhaps, the plant most frequently encountered by the unsuspecting city visitor to the country, says the Public Health Service. Yet it may be easily distinguished from other creepers by its three divided leaves. The harmless creepers have five leaves. This one distinguishing mark, if borne in mind, will protect the vacationist from poison ivy. Poison oak is a shrub, or small tree, with broad leaves, very much resembling the leaves of the oak tree.

The part of these plants to be feared is the resinous sap. When a plant is injured, this sticky sap exudes. It comes in contact with the skin and sets up an irritation which is distinguished by its acute character. This irritation frequently begins between the fingers.

The symptoms of ivy poisoning are comparatively easy to recognize. A more or less mild attack may be ushered in by a burning or itching of the skin. Within twenty-four hours after the skin is exposed to the poison of the plant, a red rash appears. This is followed by more or less swelling and itching, then small blisters filled with serum make their appearance. The parts of the body affected may swell to enormous proportions.

At one time it was believed that many persons who had suffered from attacks of ivy poisoning would experience a recurrence of the attack if they passed through a wood or came into proximity with the plant, even though the ivy itself was not touched. It now appears certain, however, that contact is necessary in order to produc ivy poisoning.

Ivy poisoning, says the Public Health Service, may sometimes be averted even after these plants have been handled, provided the parts exposed are washed thoroughly with soap, water and alcohol. This washing must, however, be thorough, otherwise it will only tend to spread the irritating poison.

The treatment of ivy poisoning is simple and easily administered. One of the best treatments is bathing with salt water. Sea water is best, if it is available. Another good application consists of one teaspoonful of boric acid in a quart of hot water. The affected parts should be bathed with warm water every day, or every two days, and carefully dried without rubbing. Bathing should be followed by another application of boric acid. The attack may subside in from four to six days. The best advice to vacationists is: Study the poison oak, the poison ivy and the poison sumac, that you may distinguish these plants from their neighbors. Once you are able to recognize them, you can scrupulously avoid them. Avoid the creeper with the three divided leaves. Avoid the small shrub with the broad leaves like the oak. Give the sumac that grows in swampy places a wide berth. Persons who have suffered from plant poisoning do not soon forget the experience.

CHINESE LIVE ON CORN MEAL.

CORN flour is the principal article of diet of the South Manchurian Chinese, the daily per capita consumption being said to be between 2½ to 3 pounds. Next to the soya bean, the corn crop is the most important in the Antung district, according to Consul W. R. Langdon in a report to the Department of Commerce. There is no way of estimating the annual yield of corn, but it is sufficient to provide about two million Chinese with their main source of sustenance and allow a surplus of nearly half a million bushels for export from Antung to other Chinese ports. The grinding and marketing of corn flour has so far been in the hands of small grain retailers who crush small quantities of flour in their shops to meet the daily demand. The crushing is done with primitive granite millstones turned by a blindfolded mule.

23

(*Continued from page 31*)

tive, being based upon a very low price of dried, hand-picked white beans, which are being offered f. o. b. Michigan elevators at $5.25 to $5.50 per one hundred (100) pounds, about 33⅓ per cent less than last year.

Rhubarb—It is said that the supply of canned rhubarb packed by Michigan canneries this season has all been sold out, and that graded refugee beans, green, whole and cut, are about closed out in that State.

New York canneries have been offering No. 10 red, sour, pitted cherries recently at $8.50 per dozen, f. o. b. cannery, and by doing so they have forced Michigan canners to meet the price, which they have done, and are taking business due to the fact that New York freight rates are higher than Michigan freight rates.

Tomatoes—A few cars of Indiana tomatoes which have arrived at Chicago from Southern Indiana of the 1923 pack show excellent quality. One large Indiana canner has sold out completely on tomatoes, and is taking no more orders, and I understand that many of the other canneries are not offering any canned tomatoes in any size, and will not until they provide for the fulfillment of the future orders that they have taken. No. 10 tomatoes, f. o. b. Indiana canneries, extra standard quality, have been sold at $4.50 per dozen, and I understand that some of the ordinary or standard quality were sold for future delivery at $4.70 per dozen, but it is difficult to find any canned tomatoes of that size in Indiana for sale.

Corn—Canned corn in Iowa of the 1922 pack is, I understand, entirely sold out and gone, with the exception of a few thousand cases of extra standard quality, and Iowa and Nebraska have sold for future delivery of the 1923 pack about 1,600,000 cases of canned corn, or probably two-thirds of their estimated pack. I also learn that the supply of the 1922 pack in Ohio is practically closed out, and Wisconsin and Illinois have long since entirely closed out last year's pack of canned corn.

Never has the situation on canned foods in ten or more years past been so statistically strong. All the staple grades of canned foods, and those that are not so staple, are completely sold out, and the new pack of 1923 will arrive on a bare market.

It might be said that the market for canned foods is almost completely a "Sellers' Market," and there need be no apprehension on the part of buyers of lower prices later in the season. Everything that is put into cans this season will be needed and will be salable.

It should be remembered that there is a great void in the supply of canned foods which was created by the policy of the wholesale buyers and retail grocery buyers during two years past of buying in small quantities and frequently.

That policy has reduced stocks in wholesale warehouses and on shelves and in their storerooms to such a low ebb that a large proportion of the 1923 pack will be required to furnish reserve stocks upon which dealers, wholesale and retail, can do business.

"WRANGLER."

NOW, THAT THE FARMERS ARE SCARED, WHAT NEXT?

THE importance of the winter wheat crop to our national prosperity is to be noted in the pages of whatever newspaper one happens to be reading. Apparently those most interested in what lies immediately ahead of us in business and industry are following the reports of the wheat market with breathless interest. Why? Because, seemingly, they believe that unless farmers make money, the rest of the country is out of luck.

What a curious, tragic anachronism it is that conditions of supply and demand should so work together as to cause the wheat farmer's success to be also his misfortune. At least that is what one would gather from a casual reading of the financial pages where it is related that the big surplus supply of wheat has forced the price down—down to what? Why! on reading a little closer, we find that the price has been forced down below the cost of production. That seems curious, for we have been told so often that we have come to believe it that volume production means lowered production costs. "But," the answer comes, "it all depends upon what basis you figure your volume and whether there's a market for your volume once you have it." Taking that last proposition first, we grant its truth, but how are we going to work it out in practice? In order to be sure there would be a market at a fair price for all the wheat we will produce in 1924, someone will have to tell us a year ahead how much wheat the world will use a year later. Fifty million people are listening respectfully—and they are still listening. Then, after that little matter is nicely taken care of, someone must be found who will persuade the farmers to grow only the required amount of wheat. Fifty million people are respectfully waiting—and they are still waiting. Apparently if the farmers have grown so much wheat that they cannot get for it what it cost to grow, they will have to find the answer for themselves, individually—each man for himself.

Time was when one dollar was considered a highly desirable price for wheat. Obviously, dollar wheat must have paid them profit enough to make the business interesting. Now, "the prevailing prices do not pay the cost of producing the crop." It is, therefore, equally obvious that, since (keeping in mind the dollar standard) prices have not come down, production costs must have gone up. And, of course, they have come up. How could they help coming up? Consider for a moment. The acre yield—and that is what goes far toward determining the financial results of the crop—has advanced little, if any, during recent years, while labor, taxes, transportation and other charges have all materially increased. And, by way of doubling up, Mr. Farmer has added a few acres to his wheat land. The extra acres were wished on him during the war, and he never seems to have lost the habit. And so now the world seems to agree that he's in a bad mess. Well, perhaps he is, and perhaps he isn't. At least, there are a good many farmers on farms all through the country who are still able to sit up and take a little nourishment—who possibly are right this minute figuring out what kind of a car they are going to buy. They are the farmers who are producing wheat in such a way and at such a rate that they can and are making money in the present market. They are the men who figure that the real proposition in growing wheat is to grow as many bushels to the acre as they can on an acreage which they have found stable over a cycle of years and which they can handle without depending on outside labor. They know that their production costs will be right and that unless the world goes to smash they'll make money.

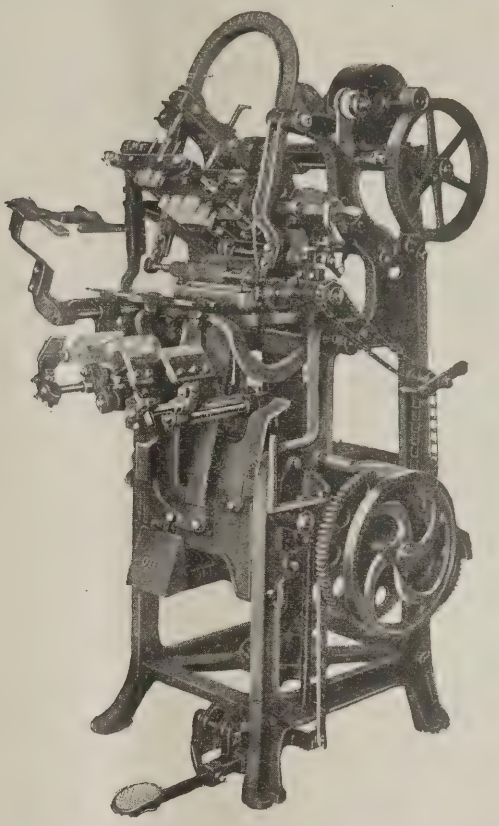
Thus there may be something in the suggestion that our financial experts and economists may perhaps accomplish more in the long run if, instead of attempting to correct the present situation entirely by frightening the farmer with the specter of over-production, they endeavor to excite some enthusiasm in him about his costs of production.

Use H & D Boxes

Low in Cost -- High in Safety

HERE are the most efficient and satisfactory boxes ever made for carrying canned goods shipments. Specially constructed for canned goods, their firm and sturdy walls keep the cans from rolling and wedging in transit and deliver them clean, unscratched and undented at destination.

You will welcome H & D Canned Goods Boxes for their lower initial cost, their convenience in handling and the minimizing of storage space.



Write today for our free "Canners Shipping Book". Menton your sizes and we'll send quotations and *free samples*. No oblgations for this service.

SWELLS AND SPRINGERS*

By W. D. BIGELOW
Director, Research Laboratory
NATIONAL CANNERS ASSOCIATION

IN discussing this subject, an attempt will be made to answer briefly the following questions:

(1) What constitutes a "swell" or "springer"?

(2) What are the conditions of the product or of the process which might cause the formation of "swells" or "springers"?

(3) What food products coming into this category might be safely and properly used as food?

Preliminary to discussing these questions, we will describe briefly some of the most important steps of the canning operation.

After the food is prepared by washing, peeling, trimming, etc., it is placed in the can with or without the addition of water, syrup or brine, and given a preliminary heating. This preliminary heating is sometimes given before the food is placed in the can. With other products the food is filled into the can cold, hot water, syrup or brine added, and the can heated by passing through a steam-box or by partially submerging in a bath of hot water. This operation is called "exhausting." It is employed in order that the can may be sealed while the contents are hot, so that the contraction that accompanies cooling will leave a partial vacuum in the can, causing the ends to be flat or slightly concave.

After exhausting, the can is sealed and then "processed," or in other words heated for the purpose of sterilizing the contents.

The heat penetration of canned foods is an important factor in determining the process necessary for sterilization. It is sometimes difficult to determine the heat penetration of a given product. Fruit which is thoroughly ripe has a tendency to cook up more than fruit that is greener, and thus retard the heat penetration of the liquid in the can. With many products, such as spinach, the time required for heat to penetrate to the center of the can increases with the consistency of the product. Therefore, if the processor underestimates the consistency of the canned product, the ripeness of a batch of fruit, or the amount of sugar added, understerilization may result and produce swells.

After processing, the cans are cooled and stacked in the warehouse. The cans now used almost exclusively for packing fruits and vegetables are closed by means of crimping the entire end on to the body of the can, tightness being assured by means of a gasket of rubber composition or paper. This is the open-top or so called "sanitary" can.

With the hole-and-cap can, which is now used only with a few products, a cap is first soldered on the open end and the vent-hole in the cap is closed afterwards. Where a particle of food is in contact with the vent-hole, it is often necessary to make another vent in order to close the first one. When two vent-holes are found in an entire lot of hole-and-cap cans, their presence is due to the fact that the cans are given what is known as a "kettle exhaust;" that is, the cans are filled cold, and sealed, after which they are heated in the retort for a few minutes. The cans are then removed from the retort and vented to allow the escape of air. The cans are then sealed while still hot, by closing the vent-hole, and the cans are returned to the retort and processed. This method is rarely employed now, but was formerly employed regularly with meat and fish products. The method of kettle exhaust is sometimes, though rarely, employed with sanitary cans.

(1) What constitutes a swell or a springer?

(2) What are the conditions of the product or of the process which might cause the formation of swells or springers?

These two questions are so inter-related that they will be discussed together.

A "swell" in canned foods is a can which has undergone decomposition by micro-organisms, accompanied by the generation of gas, which first destroys the vacuum and then causes pressure in the can sufficient to bulge the ends. This decomposition is often of putrefactive nature and may be rapid or slow, according to the organisms and temperature. Swells are due either to under-sterilization, or to leaky cans.

Defects in the manufacture of the can, or in the plate from which the can is made, may cause occasional leaks, sometimes so small that even when the can is filled with air under a pressure of 20 or 30 pounds and submerged in water, the air that passes through them is in such fine bubbles that it is difficult to see. When such cans are filled with food, the bacteria that pass through these openings cause decomposition, and when pressure results, the openings are sometimes closed by particles of food and are difficult to find.

A "springer" is a can whose ends are more or less bulged, but in which the pressure is not sufficient to prevent pushing in the end to their normal position by the fingers.

"Springers" are due to the following causes:

Pressure from hydrogen generated as a result of chemical action of the acid contents on the metal of the container.—The pessure in springers of this class may gradually increase till they cannot be dstinguished externally from swells.

Imperfect closing of the can.—It is possible, especially when the paper gasket is employed, to close a sanitary can with such a degree of tightness that bacteria are excluded but air admitted. This condition of closure often leads to the formation of springers, especially with products which are stacked in the warehouse before the ends of the cans collapse and which, therefore, cool slowly.

Overfilling of the can.—With some products of heavy consistency it is possible to fill the can so full that the contents are crowded down in such a way as to bulge the bottom. A can sealed in this manner may be swelled or may be a springer immediately after processing. With some products a tight seam is sometimes prevented by filling the can so full that the contents splash over the edge of the can during sealing. This accentuates the condition referred to above, often causing a seam sufficiently tight to exclude bacteria but loose enough to admit air. This form of springers has been especially prevalent with corn, but its cause is now generally understood so that it has been largely overcome.

Sealing at too low a temperature.—Nearly all canned products are sealed into the can while hot in order that when they are cooled after processing, their volume may contract, leaving a partial vacuum in order that the ends of the can may be flat or slightly convex at all elevations and temperatures of storage. With some products (e. g., corn) this preheating is accomplished in kettles or continuous cookers and the product is filled into the can hot. With other products the can is filled cold and "exhausted"—that is, it is passed through a steam box or partially submerged in hot water until the contents are sufficiently heated. Some products heat so slowly that an exhaust box is not sufficient and devices are used for pre-heating the raw product before filling it into the can.

Dented cans.—Occasionally cans are so dented in handling that their capacity is reduced to such an extent as to bulge the ends.

In springers where the pressure is caused by insufficient exhaust, or by over-filling or improperly sealing the can, this pressure does not increase with time, but remains constant except as it is influenced by temperature of storage. The ends

---

of the cans are somewhat distended and may be easily pressed into place with the fingers. When the fingers are removed the ends may resume a convex position, or may remain concave or flat (according to the pressure within the can) until the can is jarred, and sometimes until the temperature to which it is subjected is increased.

A number of packers have put up products in the fall which appeared normal until the following summer, when springers developed, and when these were held till the cool weather of the following fall the ends resumed their normal concave position. Thus it has frequently happened that foods packed, for instance, in New York, Maryland or Alaska, have been sold by packers who had no suspicion that they were abnormal in any way, and yet those that remained on the retailers' shelves the following summer, especially in the Southern States, developed springers as a result of increased temperature.

In the same way the internal pressure of the can as compared with the pressure of the surrounding atmosphere is profoundly affected by altitude. A can which has neither vacuum nor pressure at sea level is a springer at higher altitudes at the same temperature. It has frequently happened that large shipments of cans which were in normal condition when shipped from near sea level were springers at higher altitudes.

This reduction in external pressure may be so great that the partial vacuum or negative pressure within the cans may be changed into a positive pressure and cause the ends of the cans to bulge more or less. As every 1,000 feet elevation is equivalent to a reduction of about one inch in barometric pressure, cans showing a two-inch vacuum at sea level would show about a one-inch pressure at 3,000 feet or a three-inch pressure at 5,000 feet.

The case is somewhat different when pressure is due to hydrogen generated by the action of acid fruits on the metal of the can. According to the amount and character of the fruit acid present, the tin and especially the iron of the container are more or less attacked, the latter causing the astringency which is often called the "tin" taste of some canned foods, and springers of the class we are now discussing are produced. Since the action is chemical, it is influenced by time and temperature of storage. It progresses more rapidly in summer than in winter; more rapidly in a hot warehouse than in one that is cold. The amount of hydrogen generated depends first on the time and temperature of sterilization; second, on the promptness and efficiency of cooling after sterilization; third, on the length of storage; fourth, on the temperature of storage.

The question is sometimes complicated still further by the presence of oxygen or by the characteristics of the tin plate. Some fruits, as for instance apples, contain a material amount of oxygen (accompanied by nitrogen and carbon dioxide), probably in their intercellular spaces. The water and syrup used in canning are also likely to contain much oxygen in solution. The oxygen present greatly accelerates the formation of springers and may lead to perforation of the cans. This is new information, and the industry is promptly changing its technological methods accordingly. It has been a potent factor in the past, however.

Some lots of tin plate form springers more quickly than other lots when used as containers for the same batch of fruit, packed and stored under identical conditions. The reason for this has not been explained and unfortunately we are unable by the examination of plate or cans to determine their service value in this respect.

The relative importance of these factors cannot be stated. In some cases the amount of tin and iron dissolved and the amount of hydrogen generated are greater within a week after canning than in two or three years in other cases.

Since the amount of hydrogen increases with time and temperature of storage, the pressure on the tin gradually increases until it cannot be distinguished, by pressing with the hands, from swells. Finally the pressure becomes so great that a seam is sprung, causing leaks and leading to infection and decomposition.

In distinguishing between swells and springers it is important to bear in mind that the former usually progress rapidly and the latter slowly or not at all. Swells, therefore, usually become hard, or even burst before they reach the retail trade. In fact, it is the custom of canners to hold their goods a sufficient time to permit defective cans to swell before shipment. After this it is usually only an occasional can that develops a leak and becomes infected.

When a large percentage of a lot of canned food shows convex ends which may be pressed into place with the fingers, they are usually springers and not swells. Moreover, when decomposition has progressed so far that the ends begin to bulge, the odor on cutting the can is unmistakable.

Springers due to hydrogen gas are found in strongly acid foods and are largey confined to the more acid fruits. The non-acid foods that attack tin or iron (pumpkin and string beans) rarely form springers of this class. The three staple canned vegetables, tomatoes, peas and corn, neither attack the metals of the container to an appreciable extent, or form springers due to hydrogen. Fruits of high acidity, particularly apples, cherries, plums (with pits) and berries, as well as rhubarb and sauerkraut, are particularly apt to form springers of this class and very rarely are swells due to bacterial spoilage found in them.

(3) What food products coming into this category might safely and properly be used as food,

Swells should not under any circumstances be used as food. Sometimes, especially in the case of fruit, such swells are the result not of bacteria decomposition, but of the action of yeasts, and the products are simply sour. However, it is to meet all such conditions that a clause has been included in the Federal law, and all State laws, forbidding the sale of products which in whole or in part are "filthy, decomposed or putrid." Certainly that clause should be held to cover all foods which it properly describes, whatever their form and manner of preservation, and all canned foods which are "swells" as a result of decomposition by micro-organisms are intended to be covered by this clause and should be covered by it. They should not be used as food or in the preparation of food.

With springers the case is widely different. Springers due solely to insufficient exhaust, or to overfilling or improperly sealing the can, are sound and edible in all respects. The contents are sterile and sound in every way and their use as food, or for the manufacture of foods, should be permitted. It is obvious that their sale on the market in that form should not be permitted. The bulged end, even if it can be readily pushed in place with the fingers, is taken by the consumer as a warning sign, indicating decomposition. It is a safe and reasonable sign and one which the consumer should continue to use. If food products of this nature are to be sold to consumers, therefore, the cans must be so treated as to remove the bulged condition. This may be done by heating, venting, resealing and again sterilizing.

In the early stages of springers caused by hydrogen gas, the contents are in every way suitable for consumption. Here again the springer should not be sold to the consumer because, as stated above, the bulged can may properly be regarded as a warning sign. In springers of this type, which have reached an advanced stage, the contents may become unsuitable for food. Not that the product can be regarded as injurious to heath, but the amount of iron dissolved may be sufficient to impart a strong metallic taste which makes the product unpalatable. It frequently happens that cans, in which the action of the acid on the metal has reached this stage, cannot be distinguished by their outer appearance from a true swell.

In this connection it should be kept in mind that spring-

ers may be due to the combined action of several of the causes mentioned above. A can of fruit may be a springer immediately after processing because of insufficient exhaust or improper sealing. Under such circumstances a much smaller amount of hydrogen is necessary to distend the ends of a can than if a good vacuum were present immediately after processing, therefore the amount of pressure shown by the sealing of a can of acid fruits even in the absence of decomposition is not necessarily an indication of the amount of tin and iron dissolved.

The work of food officials would be simplified if the presence of a sealed vent on an open top can were prima facie evidence of decomposition. Such a conclusion, however, is not logical nor is it necessary in order to protect the consumer. It should not be possible, acting under the name of the law, to prevent or restrict the sale of food that it sound and wholesome, prepared under good conditions, and in every respect suitable for consumption. Such a decision is unjust to the manufacturer and prejudicial to the public good, in so far as it is uneconomic.

Springers, and even hydrogen swells due to action of fruit acids on the metal container, are profoundy influenced by the temperature and time of storage. The designation of such products as decomposed is unscientific and untrue. It is unfair to the canner, for it implies carelessness or ignorance on his part and places responsibility on him for a condition which is due to improper treatment after the product left his hands.

DOG DAY DOINGS

THE usual summer silly-season seems to have come on with a rush. The local dead animal man was instructed to call at a certain farm and remove a dead cow. On his arrival, he found a perfectly good black and white cow tied to a tree. A hurried search failed to reveal to him the presence of another cow—red in color and dead in point of fact—that lay behind another tree in the same pasture.

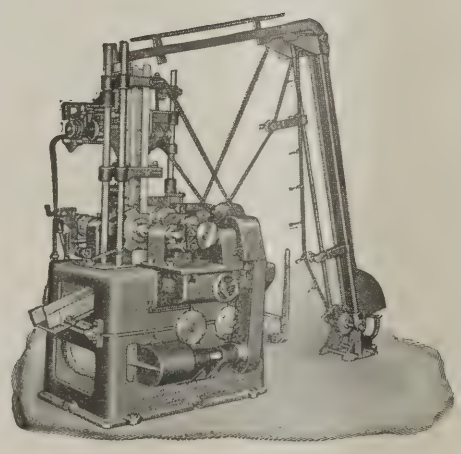
But this dead animal boy was a regular go-getter and was not to be daunted or deterred by trifles: he pulled out an automatic pistol and shot that black and white cow, put her in his hurry-up wagon and drove off in triumph!

All the news of the day savors of the cookoo: A presidential boom for Colonel House has been started in Berlin. That is certainly some place to start it and would appear to rule him out. It is our impression that the one predictable thing about the presidential nomination is that it will be made in America.

A majority of free and independent straw-voters have signified their desire to cast the mantle of Gamaliel on the shrinking shoulders of the world's wealthiest man. (This reminds us that the second richest man in the world is now giving away nickles instead of dimes.)

Kind Mr. Bok, in welfare work, no moral duty seems to shirk. "One hundred thousand bucks!" sezzee "For a pacific recipe. What works so well on magazines should surely serve in larger scenes."

Many peace plans are being submitted in efforts to win Mr. Bok's prize. That of the "No More War Society" is said to contemplate, in effect, that we cast away all means of defense, lie down, shut our eyes and sigh, "Ah, now don't!"



APROPOS of foghorns, shortly after the government installed a siren down near Cape May, a native called at the whistle station to complain of the much-tooted novelty. "The dumb thing blows and blows," said he, "but the fog keeps rolling in just the same." Perhaps we shouldn't expect too much of the new Thunderer.

News comes from Paris that a French savant has succeeded in producing colored silks by feeding dyes to silk worms. From the same source M. Coue is quoted to the effect that he never recommended "Oh, Hell; I'm Well!" as a substitute for "Every day, in every way," etc.

Although General Dawes is out with the endorsement of the study of Latin and Greek, the classics can scarcely claim credit for his engaging vocabulary. Swearing was neglected by the Greeks and Romans. "Odi profanum vulgus et arceo," sings Horace. "Away, away with the profane! They give me a terrible, terrible pain."

General Dawes owes "Hell and Maria" to his native genius, but the hatred of demagoguery, for which he is also remarkable, was no doubt nurtured on the classics.—The Optimist.

AUTOMATIC DOUBLE SEAMING MACHINE WITH END FEED.

This completely automatic machine double seams or crimps ends on all types of round tin or paper cans at a rate of 60 to 75 per minute. It is equipped with automatic feed for ends either straight or curled flanges and has a range of adjustment for 1-½'' to 4¼'' in dia. by 1-¾'' to 6'' in height. The seaming rolls and chucks may be universally adjusted with housings, thereby maintaining perfect alignment when changing for sizes.

This Seamer is equipped with brake which is applied automatically when the drive is disengaged. The chuck spindles are equipped with a positive device which prevents bodies or ends from being double seamed over the chuck. The high speed bearings are fitted with bronze bushings and all parts subject to wear are of hardened tool steel.

The machine is not only adapted for sanitary cans, but also may be used for general line work and operated in connection with our automatic Beader and Flanger. Our No. 20 Double Seamer is furnished for gallon cans and other larger work.

MICHIGAN'S FRUIT PACKS.

Grand Rapids, Michigan, August 7, 1923.

We are in receipt this morning of a letter from the secretary of our State Canners' Association, and thinking it interesting are passing it on to you:

"August 4th, 1923.

Members Michigan Canners Assn.

Gentlemen: The last of the 1923 berries are in the cans, and the canners are takng a breathing spell. Some are through for the year while others will pack string and wax beans, tomatoes, peaches, pears and apples. The canners in the northern part of the state will be packing cherries for sometime yet.

Strawberries—The strawberry crop was short, and the quality only fair. Most packers were unable to deliver 100 per cent. on the 40, 60 and 70 goods. There was a small surplus of 20s and No. 10 water goods when the canners finished on strawberries, but since that time they have been practically cleaned out, and there is not over a half-dozen canners in the state that have any more to offer, and the individual lots are small.

Gooseberries—There are, out of a normal pack of around 40,000 cases, three lots of No. 10s of around 200 cases in each lot remaining unsold in canners' hands.

Black Raspberries—No. 2s in water and different syrups are practically cleaned out. No. 10s water, the surplus is very small as compared with the total pack. Very few red raspberries were packed.

Blackberries and Dewberries—There are several lots of from 200 to 1000 cases, but canners feel confident that this item will move later.

Cherries—Surprising as it may seem, four canners out of every five in Southern Michigan are sold out on cherries. Some were forced to deliver short on No. 10s; others on No. 2s.

The canners north of Grand Rapids, where the season is later, are from one-third to 100 per cent. sold up.

The whole pack of cherres for the state will be around 70 per cent. of last season. This season the cherries were large, well matured, free from blemishes; in fact, the finest quality of cherries we have had in years, and the canners all used exceptional care in packing. The pitting machines were watched very closely, and very few packs will show over five pits to a No. 10 can. The cherries, upon delivery to the plants, were placed immediately in tanks of clear, fresh, cold running water. From the tanks, they were let out on a picking belt, where at least six women to every pitting machine watched to see that not a blemished cherry found its way into the can. The 1923 pack of cherries in Michigan has never been equaled as to quality.

MICHIGAN CANNERS ASSOCIATION,
Secretary."

RENEW YOUR FAITH

From the Optimist of August 1.

IN the swing of a general national prosperity, American business, finance and industry, here and there, show signs of uneasiness. The steel market is not what it might be. The stock market exhibits a fluttering pulse. Grain markets are bloodless There are tremors and symptoms of low blood-pressure.

Men brooding over market charts and price graphs pieced from records of other days following other great wars have noted that thus-and-so happened. Studying their own times in the light of these, they have been gripped by uncertainty.

There have been timorous whispers of a "buyers' strike" and of this and of that, but the pessimistically inclined should take heart of grace and renew their faith in the U. S. A. The

Messenger Tomato Coring Machine

THE coring device shown in cut removes a perfect cone shaped core in any one of three sizes, at option of operator, while the tomato to be peeled is being lifted from receptacle containing it, after scalding, to meet the knife hand of the peeler, doing so with only a slight hesitation of the hand while tomato is being spotted on projecting split hollow cone shown in cut. With core removed before knife hand meets the tomato peeler handles each tomato about 10% faster. The peeled tomatoes will on account of the small core taken out without opening seed cells yield from 15% to 30% more cans per ton. The quality of finished product is improved enough to justify expense of installation in itself but saving in waste will pay entire cost of installation in 6 ten hour days. Why shouldn't the peeler like it? Why shouldn't the canner like it? Will also affect as great a saving when used with a peeling machine as when used with hand peeling. For further information and a demonstration write to

"CORE IT WHILE PICKING IT UP."

latest government crop forecast is worthy of their earnest regard.

These United States are about to harvest crops having a value of considerably more than eight billion dollars. They may come to nine billions when returns from all the small crops are in. This vast sum will be reinforced by gigantic livestock values. The farmer may not be blessed with a bumper crop, but he will not eat husks.

He may have to pay too much for his labor and the things that he has to buy. He may have a few million fewer bushels of corn. There may be a few million bushels less wheat. Wheat may be below a dollar, yet the forecast estimates more than a billion dollar total gain in 1923 crop values over those of 1922.

It is towering evidence of the solid, sturdy, deep economic health of the Nation. The grower may be filled with unrest, but the fields produce. Demagogue and economic heathen rage, but the corn tassels and the cotton boll comes to whiteness, wheat finds the elevators and apples redden.

Should this forecast stand up through the hot winds and cinchbugs of corn belt "dog days," should the boll weevil be no more than ordinarily rampageous in the cotton belt, and if a thousand other matters go reasonably right—and somehow they usually do—then the farmer and, incidentally, the grocer, ought to be sitting right pretty this fall.

The Tomato Stuation.

The peculiar, not to say freakish, weather conditions which ruled during the past spring, have made the tomato outlook somewhat problematical in Indiana and on the Eastern Seaboard. In the Tri-States (New Jersey, Delaware and Maryland) the severe drought necessitated the replanting of perhaps 30 percentage of the acreage.

The delay in putting out these plants will, of course, cause them to be late in maturing, and for them an early frost would spell calamity. The balance of the plants are in good condition for this time of the year and show a heavy set of fruit. The acreage in all three States is in excess of that of last year.

In New York State, we understand that growing conditions are much as they are in the Tri-States, and that the acreage is about normal. While this State produces a large tonnage, it is mostly used in products other than canned tomatoes. There is practically no production of canned tomatoes in New England. We are not informed as to growing conditions in the Virginias.

In Indiana, the late freeze in the central and northern part of the State killed the plants before they were set out, and growers were forced to comb the whole country for replacements. Much trouble was experienced in securing the necessary number of plants, and many were brought from distant and widely scattered localities. Some came from Utah and even from California, while others were brought from Florida. However, practically all of the contract acereage was planted; the loss did not amount to five per cent.

If these plants turn out to be of proper varieties, and if they mature in time, Indiana will have a heavier crop and bigger pack this year than she did last season, as she has from fifteen to twenty thousand more acres planted to tomatoes than she had last year.

Those imported plants in Indiana and reset plants in the East inject elements of doubt into the situation that are unusual

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

at this time of the year. We know of nothing that is subject to more vicissitudes and uncertainties than the canned tomato pack. In the first place, production is peculiarly susceptible to weather conditions and blights; and, secondly, both the grower and canner are at the mercy of a very undependable labor supply. But the conditions existing in Indiana and the East present unaccustomed forms of worry.

All is blithe and gay in Utah and California. The plants are reported to be well advanced and in splendid shape. The acreage is in excess of that of last year.

The scarcity of labor is going to affect production to some extent in all territories and we expect to see a much greater proportion of the crop packed in No. 3 and No. 10 containers. The larger cans save time and labor; moreover, the spread in price between these sizes and the No 2 cans during the past year has impressed itself on those canners who were unfortunate enough to put their whole pack in the smaller sized containers.

That the growing season may be a long one, with moderately warm weather and a moderate rainfall, is the prayer of all who are connected with the production and packing of canned tomatoes.

DR. HENRY AYERS JOINS THE GLASS CONTAINERS.

THE appointment of S. Henry Ayers, bacteriologist of the Dairy Division of the Bureau of Animal Industry, Washington, D. C., to the position of Director of Research of the Glass Container Association, will be a matter of general interest.

Dr. Ayers has long been known in the fields of scientific research, particularly with the problems of the milk industry. A large number of scientific publications, based upon his work, have been published by the Department of Agriculture, and through these he has made probably greater contributions to the milk industry than any other man in this country. Dr. Ayers is a comparatively young man, a graduate of the Massachusetts Institute of Technology, and his work has the endorsement and interest of the entire scientific world.

While Dr. Ayers' work has been largely among milk lines, it has been thorough. When it is considered that milk is one of the most important food products, and that milk is one of the gratest vehicles for propagation of germ life, and that it is necessary to handle milk throughout its course from the farm to the consumer with more care than any other food, and that it must be pasteurized sufficiently to protect human life, and yet must keep the valuable commercial qualities of the milk intact, it will be seen that Dr. Ayers' training in this thorough research when applied to the handling and preservation of the much less delicate though important food stuffs, such as fruits, vegetables, beverages and other foods, will add very much to our scientific knowledge concerning the canning and preserving inustry as a whole.

Dr. Ayers' paper, "The Present Status of the Pasteurization of Milk," published by the Department of Agriculture, is receiving a great deal of attention at present throughout the entire milk industry, not only in the United States, but in Great Britain and Europe. Many of his works have been translated into other languages, so important were they as contributions to scientific thought and practical knowledge.

Dr. Ayers has made an enviable reputation for himself in his work at the Bureau of Animal Industry. There is no man in that great department whose work is more widely appreciated and admired than he. He is a man's man in every respect.

(We take pleasure in publishing the above announcement. It will be recalled that Dr. A. W. Bitting, after retiring from the National Canners Laboratory, formed the Glass Container Laboratory, and with Mrs. Bitting conducted it most successfully. In fact, the laboratory was the beginning one might say, of the influential association now existant. About a year ago Dr. and Mrs. Bitting decided to retire, accordingly, they went to California, established themselves in one of the beauty spots of that fairyland, and settled down to enjoy life. Both are yet young, but both have worked hard, and have earned their time of ease.—The Editor.)

The Saving Makes It Possible

for you to keep your increasing stocks fully insured against fire loss at an extremely low net cost.

In the Canning Industry values increase very rapidly during a short period, and Canners are realizing more and more the wise business economy of keeping these values fully protected against destruction by fire.

CANNERS EXCHANGE SUBSCRIBERS
AT
WARNER INTER-INSURANCE BUREAU

provide this protection at a cost so low as to make it ill-advised for any Canner to assume even a small part of his own risk.

There is every indication that the cost this year will be even less than the average. The accumulated saving for the first six months amounts to over $232,000.00.

Protect your values fully and your savings will increase proportionately.

Address Your Instructions To

Lansing B. Warner, Incorporated.
155 E. Superior St.,
Chicago, Ill.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, AUGUST 27, 1923

WEEKLY REVIEW

Canners Everywhere Are Getting Busy—Everyone Wants to Know What the Packs Will Be—A Glance at Conditions and Prospects—Market Figures Again Appearing—Buyers Are Waiting for Futures.

THE CANNERS BUSY—Just how busy the canners everywhere are might be surmised from the neglect of the Crop Reports shown this week. The industry is following these very closely, but in the opening days of the rush season, when the knots and tangles of a smooth-running plant must be straightened out, the canners have little or no time to fill out report blanks on crop conditions. In fact, they are busy examining the quality and prospects of their own crops, and this keeps them as busy as any man wants to be. The corn canneries are all humming along merrily, and the crop is going into cans in good shape, quality and in fair volume. The yield of the early corn is below expectations, the result of the long drought and severe hot weather. All corn canners, however, we believe, look for better results in the later plantings. We have had a touch of fall weather this week, the days being cold and the nights decidedly so, which will have a tendency to sweeten the corn and improve the quality; and as there have been some nice rains, there is reason to expect that the corn from now on will show improvement in yield. There would seem to be nothing in present indications to promise a big pack anywhere, but it is hoped there will be a fair pack of corn, taking the country over. This result will depend upon the lateness of the fall and the delay of frost, and this week's weather promises neither of these results. If corn comes through to anywhere near canners' expectations, it will be the first crop of thee season to do so. The great corn sections of the West have not heavy acreages, and the crop is not up to normal by a considerable percentage; and here in the East no one familiar with the business expects a heavy pack.

Most tomato canners have been able to begin their season by this time, but mainly in a small way. The tomato yields are very disappointing to date, the quality being fine, but the receipts very light. Most canners have been able to run only a part of a day, and all are hoping for bright, warm weather to bring the crop along in a steady supply. The receipts of tomatoes in this city this week have been very disappointing, the canners getting only a small part of what they took. Prices ranging from 85c to $1.05 per bushel are all out of reason for this time of year, but that is how they have ruled this week.

WHAT WILL THE HARVEST BE?—That question is on everyone's lips, and we are phoned to, written to and asked by canners and others in all sections. The man who would attempt to guess the tomato pack at this time would be a plain, unvarnished fool, for if there is anything more deceptive than our far-famed and festive tomato, we would like to know what it is. From out in California comes the news that the acreage in tomatoes is not large, and since the growers have become possessed of the idea that the balance of the country is to have a small tomato crop and pack, they think the California canners will jump in to fill the breach, and so they have run up the prices on their crops to as high as $17 per ton, as against an early contracted price of $12 per ton. California canners are not in the humor this season to pay high prices for anything, and so they are passing up these high-priced tomatoes. As it is, most of the tomatoes now contracted will be used for tomato products rather than canned tomatoes, and so it is not likely that California will cut much of a figure in the tomato market this season. If they see that there is actually to be a shortage of canned tomatoes in the rest of the country, they can get in, after other tomato canners are through, and produce the goods. But California canners are not going to invest money and wait a long time for its return, and there is not likely to be the kind of shortage elsewhere that will cause them to take this action. Utah has its usual fine crop and will make a normal pack of good size, from present promises. Missouri, which promised to give us a whopping pack of tomatoes, has been burned up, along with Arkansas, and canners there now say that they will be lucky if they get 50 per cent of a crop. To do that the weather will have to behave just about right, a trick it seems not to have learned this season. Indiana, Tennessee and the Central West are anything but easy in their minds over the job of filling their future contracts. The early frosts which killed their home-grown tomato plants made them go South for new ones, and these have not turned out well. Some sections have been drowned out, others burned out, and the prospects there are that it will take their best efforts to fill the orders on their books. Pretty nearly all the reports from Virginia are of a gloomy tinge. They have had wilt and blight and drought, until most Virginia canners are blue on the situation. In the Tri-States the whole thing is a weather proposition. The vines are in quite good shape, healthy and bushy and fairly well filled with fruit, and the acreage is fully up to normal. But it is late, and the cold weather is not ripening the tomatoes as they should, and as we have above stated, the canners are getting only enough for a few hours' run each day. The crop is there, and most well-posted men agree with the estimate made by J. S. McDaniel & Co., of Easton, in the heart of the 'Shore tomato section, made last week, that Maryland and Delaware will do well to produce 5,000,000 cases to supply the very evident need of 7,000,000 cases from these two States. What is true of these two States is equally true of New Jersey, the third member of the Tri-States. Tomatoes are bringing such fancy prices on the market stalls of the big cities that the canners have no chance to get their supply, and until this condition changes, and unless there is a glut period, tomato canning will continue slow. That does not make for a big pack of canned tomatoes. The season is young, and there is time yet, because if the weather stays warm—and the present indication of an early fall and cool weather proves to be a false alarm—they can can tomatoes up until November.

On the other hand, the market is so completely cleaned up of tomato stocks, in all hands clear down to the consumer, that it will take an unusually large pack to put the market back into normal condition. There does not seem to be much chance of over-doing the tomato packing game this season, and none whatever if the tomato canners will pack a good, fair quality of product. Give the people a can of tomatoes which will cause them to be satisfied and want another, and they will pay the price and there will be no break in the market.

THE MARKET—Corn has come back into quotation, and the list looks natural once more. Standard Evergreen is quoted at $1.10 in Baltimore and 5c less f. o. b. cannery; standard shoepeg is quoted at the same price; extra standard shoepeg at $1.20; fancy shoepeg a shigh as $1.50; standard crushed—and it is to be noted that this term is seriously objected to and should be discontinued and this style of corn called "Sweet Corn"—is quoted at 87½ to 95c, with extra standard at $1.00.

Succotash this week is quoted at $1.30 with green beans, and at $1.15 with dried beans.

Sweet potatoes are quoted at 95c for No. 3s factory, and No. 10s are still out of quotation.

Tomatoes—The new packing No. 10s are quoted now at $4.25 to $4.50; No. 3 standards in Baltimore are $1.30, and at factory $1.25; No. 2s, 85c to 90c, and No. 1s at 55c to 57½c.

Other items of canned foods show no changes in their market prices, and both demand and inquiry are slow. The buyers are taking what they are forced to have and nothing more, and they are acting upon this basis in every section of the country. Now that packing is on, they are waiting for their futures and, apparently, intend that they shall come upon absolutely clean floors. It makes a dangerous situation if anything should happen to the crops and packs.

NEW YORK MARKET

Trading Not Regular—News of the Tuna Market — Peaches Show Firmness—Neglecting Spot Fruits—Standard Corn Wanted—Prefer Western Corn—Objections to the Use of "Crushed"—Tomatoes Selling Fairly Well—Shrimp Selling Well—Market Notes.

New York, August 23, 1923.

TRADE Still Spotted—While there has been some improvement in the canned foods trade locally, business is still rather spotty in character, and no broad general demand has developed. Jobbers are operating rather intensively on a few items in the list, but are buying only stocks which they actually need for distributive wants in the very early future.

Interest in Tuna—The new California tuna fish pack has been the chief feature of interest this week. Leading packers are delivering only 15 to 20 per cent on their orders for white meat. Because of the prevailing general shortage, jobbers expect the pack to move out at present prices, $10.00 for halves and $19.00 for 1s f. o. b. California. Reports as to the size of the pack vary, however. Should the pack amount to only 100,000 or 125,000 cases, no difficulty in getting the goods into consumng channels on the present price basis is anticipated. But, should the pack run over 200,000 cases, it is felt that the question will be different entirely.

Glad of Pro Rata—In view of the high prices made for white meat tuna this year, buyers generally are glad of the shortness of supplies. They feel that the retail trade will not buy far in advance of their trade needs on the present price basis. This will mean that the jobbers will have to carry the goods until wanted, probably well into next spring. This will mean the tying up of a lot of money, and this the jobbers are unwilling to do at this time. A few cars of new pack white meat have already arrived here. Wholesale grocers prefer to move their stocks on to the retail trade rather than job it out, but one small block has changed hands at $15.00 per case for white meat.

Bluefin Pack Uncertain—Considerable uncertainty exists in the minds of the local trade as to the bluefin tuna situation this season. No definite reports as to the progress of the pack have been received thus far, but rumors regarding the scarcity of the fish and the curtailed operations of the packers on bluefin have been heard from time to time.

Stopped Skyrocketing Market—One large packer, operating at Long Beach, Cal., it will be remembered, started out this season to "bust the raw tuna market wide open," because competing canners had refused to allow the packer in question an arbitrary percentage of the catch. The canner in question boosted the price for the raw fish more than $100 a ton over the price agreed upon between canners and fishermen early in the season. A few of the competing canners met the price set by the one who started the fireworks. One large factor, probably the largest in the game, could not see the question in this light, however. The canner in question believes that a contract is a contract, whether between fishermen and canner or between canner and distributor. This packer, when he saw some of his catch being diverted to competing canneries, immediately started suit against fishermen who were violating the terms of their contracts with him, and attached the vessel of one of the fishermen. This stopped the market boom, in so far as his fishermen were concerned, and helped to settle the general situation.

Cling Peaches Firm on New Pack—A strong market for new pack California cling peaches is reported on standard grade. The demand for this grade has been so heavy during the past several weeks that many of the independent packers are now refusing to book orders on straight standards. It is known that several large blocks of straight standards have been put up to packers during the past few weeks, and have been turned down by them.

Spot Fruits Neglected—The spot canned fruit situation is a puzzling one. Stocks offering in the local trade are not excessive, fancy grade being entirely cleared in many instances. Notwithstanding this situation, the demand during the past few months has been so insignificant that considerable selling pressure has developed in some quarters of the market. Holders are anxious to clear out spot holdings before the new pack begins to arrive on the market. Distributors, however, are not anxious to extend any more support than necessary at this time, so are holding down their purchases to actual needs, shopping the market thoroughly when making purchases to bring out the lowest priced stocks available.

Salmon Market Steady—A steady tone prevails in Alaska salmon on the spot position. Opening prices on new pack are expected to be named by the Alaska Packers Association in the near future, but independents have already booked a good business on the basis of $1.20 for chums, $1.30 for pinks and $2.25 for reds. One Chicago factor has sold reds in the New York market at $2.15 for new pack. Stocks of Columbia River salmon are scarce, and the trading is looking for an extremely high resale market next spring, when the heavy demand gets under way.

Standard Corn Wanted—Standard corn has met with a continued good inquiry during the past week, and the market here has held firm at $1.00 per dozen, ex-warehouse. New pack is being bought in a small way at 90 to 92½c for prompt shipment.

Prefer Western Corn—The Canning Trade's local representative has heard several buyers during the past week, in inquiring for standard corn, tell their brokers that they preferred Western standard to Maryland or Delaware packed standards. Buyers state that the pack of standard quality by the Western canners last season averaged up better than that of the Southern pack.

Object to Labeling—Buyers in the local market also object to the method of labeling Southern corn since the Bureau of Chemistry ruling barring the "Maine Style" designation. Some of the packers are marking their goods as "Crushed Corn." Buyers state that this form of labeling is not popular with either retailers or consumers, the "Crushed" designation on the can arousing the opposition. "Sugar Corn," however, is a popular form of labeling, and canners should give the question of the labeling of their corn pack serious consideration.

Tomato Sales Fair—A little improvement in the demand for new pack tomatoes was reported during this week's trading, and the market remains steady as to price. Distributors are buying a little more in anticipation of their fall demand at present prices, believing that bottom has been reached. The sales of early packed tomatoes for prompt shipment were rather light this year, owing to the differential in price between the early pack and the regular 1923 pack. Buyers took no chances of carrying over early packed goods to compete

with their deliveries of regular pack, and so bought only for immediate requirements. First shipments of regular pack are expected to start coming through shortly, as some of the canners have started operations on the main crop.

Sardines Still Scarce—Sardine business is necessarily quiet at this time, owing to the scarcity of the canned fish available for immediate shipment. The run of herring is showing a little improvement, but the canners are not yet getting enough fish to enable them to work their plants to capacity.

Shrimp Sales Good—An active demand for fall pack shrimp has been noted this season, both the regular canned shrimp and the glass goods going well. The sale of most of the pack is being handled through the canners' co-operative sales agency, Marine Products, Inc., and that organization is handling the business in such a way that there is little or no danger of over-selling, with consequent forced pro rata deliveries on the new pack.

Notes—H. F. C. Killian is spending several weeks in Wisconsin, visiting pea packers which he represents here.

Allan Bacon, of Bacon & Trubenbach, is back after a three weeks' vacation spent in Wisconsin and in Canada.

Walter J. Townsend is spending his vacation this year bass fishing in the Canadian woods.

George A. Mendes, well-known canned foods broker, is on a three months' visit to Europe. He expects to return early in September. Since the start of his tour, early in June, he has covered the principal points of interest in Italy, France, Switzerland, England, Scotland and Belgium.

Walter B. Timms is making great progress in his recovery from his recent operation.

Walter Weisl and Hayden Dudley, former partners in the defunct firm of U. H. Dudley & Co., and now operating as Dudley & Weisl in Boston and Philadelphia, were in the market this week.

T. J. Gorenfio, of the Brunswick Canning Company, of Brunswick, Ga., was here this week, stopping wth North & Dalzell, his brokers.

"NEW YORK STATER."

ST. LOUIS MARKET

Market Conditions Dull—Few Small Orders for California Fruits Placed—Packers Look for Tomato Business—The "Ozark Apple Clearing House."

St. Louis, August 23, 1923.

THERE has been no change in the canned foods business here for some time. The market is dull, and promises to remain so for a while, unless something unforeseen happens to change the situation. Many of the canned foods brokers, while business is quiet, took advantage of conditions to go away on their vacations. There are two or three in each house absent, and probably this has been one of the reasons, as much as anything else, that has caused the quietness.

According to information obtained, there is a general scarcity of spot offerings. Some futures have been booked, but buyers are not anxious to obligate themselves for large offerings. They are more inclined to go slow and purchase what they want in small quantities and get them often. This seems to be the general policy pursued.

Weather conditions in this section have been good, except more rain would improve conditions. There has been a little betterment in garden truck, and this means more canning will be done.

Fruits—It looks at this writing as if the fruit crop will be goood. Possibly not quite as good as last year, however. Still, there will be plenty. According to some of the brokers interviewed, the jobbers are commencing to take a little interest in California fruits as offered by packers, and they are placing some orders, not large ones, however. They are picking up small stocks to fill their immediate requirements only. Their purchases are limited and just enough to last them for a few weeks. Information has reached here that so little of this season's California pack has been sold because jobbers are holding off, hoping for better prices, that the packers intend to shade their opening prices and begin a decline. The packers say that producing costs, excessive prices of labor and other incidentals, has left them a very little margin at the prices set by them, and rather than cut the prices hereafter, the packers will only pack enough for the available market. This may or may not be true.

Tomatoes—Tomatoes seem to be more in the limelight than any other vegetable. If buyers have reached the end of their holdings, they are interested in prompt deliveries. However, few are in this predicament, for some seem to be available when wanted. Packers at one time were afraid they would not be able to fill their orders, but now they want business. The same situation seems to hold good with futures. Jobbers are slow to place orders for futures. Down in the Ozarks, at one time, there was every indication that the pack would be very large. Lack of rain hurt some, and if it does not rain soon, the volume of the pack will be reduced. If it does rain, the pack, it is stated, will be heavy.

Peas—The situation looks better than it did. Standards are in better demand than they were, and few can be had. Some demand for fancy peas is also reported, but the demand is not strong.

Corn—Corn canners in the West have advanced their prices on standard. This is because of the scarcity and also because it is said that only about 75 per cent of a corn crop for canning is looked for in this section.

Asparagus—There is some demand for asparagus, but not so great as to cause buyers to purchase unless prices can be agreed upon.

Fish—The demand for fish is only about normal and just about what it is generally at this season of the year.

Pickles—It is reported that in some sections the pickle situation is somewhat uncertain. Dry weather in certain sections has hurt some, and unless there are good rains the crop may be short.

Milk—General conditions are about the same as they have been. A fine tone prevails, as manufacturers are rather conservative in making offerings, because the cost of fluid milk is higher.

Apples in the Ozarks—The apple crop in the southwest part of Missouri, in the Ozarks, is improving, and with one or two heavy rains will be good. The apple car movement, which carries the crop from the Ozarks, will start along the Frisco in Northwest Arkansas and Southwest Missouri, about August 25. From that time on canners of apples will be busy and will have all they can do.

A number of the leading growers in Northwest Arkansas have organized what is to be known as the "Ozark Apple Clearing House." This clearing house has been established for the purpose of assisting the growers and shippers of Ozark apples to keep in touch with the market situation, rendering as much assistance as possible in connection with the proper marketing and distribution of their apples. Through this clearing house one may be able to secure some very complete information regarding the daily movement. The Springdale Fruit Growers, an apple-growers' association, expect to handle several hundred cars of the leading varieties of Ozark apples.

"MISSOURIAN."

CALIFORNIA MARKET

In Spite of Known Small Stocks, Jobbers and Retailers Are Buying Slowly—None Anticipating Requirements in Advance—Canners Satisfied With Style of Buying—Fruit Pack Will Be Much Smaller Than Last Year—Apricots 45% of Last Year—Quality High—Peach Standards Higher Than Ever—Pears Shipped Fresh—Coast Notes.

San Francisco, August 23, 1923.

BUYING LIGHT—While both jobbers and retailers throughout the country are carrying but small stocks of California canned fruits, buying has been comparatively light since the naming of opening prices. All seem to be in the market, but their purchases are not on the scale of former years, and none are anticipating requirements far in advance. Apparently they have settled on the definite policy of buying as they need the goods, and California canners are content to let them continue along this line, the opinion being general that canners' profits for the year will be heavier if this policy is continued than if the entire pack was to be bought up at present prices. Canners feel that their opening prices are as low as could possibly be made, and that in many cases growers are suffering losses. They do not look for canning stocks to be any cheaper next year, if

they are as cheap, and advances in prices of this year's pack to more than offset carrying charges are predicted. Of course, many canners would like to land some large future orders on which advances could be secured, and in the absence of these, packing is being curtailed. The pack of California fruits will prove much smaller than that of last year, which will be quite fortunate in some instances, and will probably be no more than can be comfortably absorbed, together with the carry-over from last year.

Apricots—The packing of apricots having come to an end, a fairly accurate estimate of the output is possible, and it would seem that this is only about 40 or 50 per cent of that of last year, despite the immense crop. Large quantities of the fruit were dried, and much was permitted to go to waste, which seems unfortunate in view of the need for food products in many parts of the world. Canners secured the pick of the crop, and quite a fine pack was made, from the standpoint of quality, although in some places the fruit was inclined to be rusty.

Peaches—The packing of peaches is under way in all sections of the State where this fruit is grown, and most growers have been able to find a market for their crop. The standards are higher than ever before, and much more fruit is being refused by canners than formerly. Growers have made every effort to raise fruit of larger size, and have succeeded quite well, but more peaches are being found with split pits than in the past. The lack of Tuscan clings, which forms the principal part of the pack, is running about 70 per cent of that of last year, according to the best information available.

Pears—The pack of Bartlett pears promises to be smaller than that of last year, growers having found an unexpected market for their crop in the fresh form. Very large shipments are being made to points in the East and Middle West, and prices are averaging about $50 a ton to growers, or considerable more than canners are paying. The result is that deliveries to canners are lighter than was expected, but most operators are getting about all they desire.

Early Vegetable Statistics—The Canners' League of California, through the offices of Secretary Preston McKinney, is gathering figures on the season's pack of asparagus, spinach and peas, and these will probably be available about the end of the month. It is expected that the pack of asparagus will prove about the same as that of last year, the cold spring having hindered the growth of the crop. While the output of spinach will be large, based upon the pack of the past few years, it will be much lighter than was expected, unfavorable weather having been responsible for the light crop. Similar conditions prevailed with regard to peas. There has been an especially good demand for asparagus and peas, with more packers making pro-rata deliveries. The reduced pack of spinach will enable packers to sell their surplus from last year and the new pack without any trouble.

Loganberries—The lack of interest in canned loganberries by the wholesale trade has resulted in almost one-half of the Oregon crop being left unharvested. Packers have goods left from last year and were unwilling or unable to make a large pack this season. Some growers have converted their berries into juice and will attempt to realize something from the crop.

Crab Meat—The packing season on Japanese crab has come to an end, and leading importers declare that the output is smaller than was expected a few months ago, but that the quality is excellent. So far jobbers have not placed large orders, but an increased business is now expected.

Tuna—The tuna packing season in California has been delayed, and the market has not really opened. Some packers have been paying extremely high prices for fish, and if prices are based on early costs, they will be very high. Some sales have been made at the rate of $12 for white ½s, but business so far is limited in volume, and in keeping with the pack.

Salmon—Several shipments of Alaska salmon from Bristol Bay points have reached Seattle, but none of the salmon packers of the San Francisco fleet have arrived with their cargoes as yet. No suggestions have been made as to what opening prices will be, but sales of Alaska reds at $2.15 have been made by several small packers. This is a little below last year's opening prices named by the Alaska Packers' Association, and is about in line with prices on old pack fish that have been quoted for some time by outside interests.

Figs—The packing of figs in California has been delayed by cool weather, and the plants of the California Peach and Fig Growers' Association were not opened until about the middle of August. The crop promises to be a normal one.

Coast Notes—Eugene M. O'Neill, San Francisco, Cal., has been appointed selling agent in this territory for Japanese crabmeat packed by the Hale Company.

The canning and jobbing trade is well represented on the Domestic Trade Committee of the San Francisco Chamber of Commerce, named by President Colbert Coldwell to carry on the program of commercial development that has been outlined. Among those appointed to serve are. J. C. Goode, of the Virden Packing Company; Charles Haas, of Haas Bros.; A. M. Lester, of the California Packing Corporation; C. B. Loveless, of the William Cluff Company, and J. H. Newbauer, of J. H. Newbauer & Co.

"BERKELEY."

CHICAGO MARKET

Market Improving—Canners Unable to Fill Futures Booked—Washington and Oregon Fruits Short—Michigan Fruits Closely Sold Up—Indiana Packing Fine Quality of Tomatoes—Iowa 1922 Pack Corn All Gone—Canned Foods Situation Never Before So Strong.

Chicago, August 29, 1923.

WHERE is a perceptibly improved market for canned foods in Chicago and in the Central West. Brokers report that buyers have nearly all returned from their vacations, and that in checking up the orders that their salesmen have sold for future deliveries they have discovered that their future sales to retail grocers aggregate a much better volume of canned foods than they supposed.

Future Situation—They also find that canners are advising that they will be unable to deliver the quantities that they have contracted for of the 1923 output in full, and that they will be compelled to pro rate deliveries in many instances. This situation applies especially to peas, berries, graded string beans, and it will possibly apply, a little later on, as conditions will develop, to tomatoes and to fancy grades of corn.

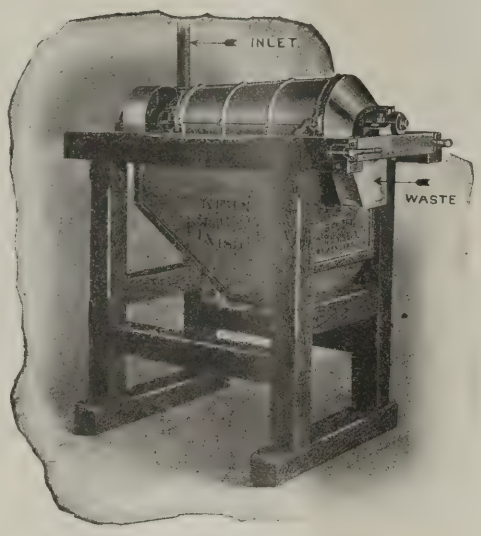
Northwestern Fruit Short—The situation in relation to canned fruits in Washington and Oregon of the Northwest is rather unsatisfactory. Their deliveries in strawberries, Cuthbert red raspberries, Royal Anne cherries and Bartlett pears are to be short, for various reasons, and there will be no surplus of any kind of canned fruits in that section of the country beyond sales, except, possibly, a few black raspberries in water. No. 10 cans, and some loganberries in water, No. 10 cans.

The Michigan Fruit Situation shows a very closely sold-up pack of berries. There will be a small surplus in the hands of a few packers on black raspberries of No. 2 cans in syrup, and a few black raspberries, No. 10 cans, in water.

Cherries—Quite a quantity of red, sour, pitted cherries was packed in Michigan this season, and, in fact, the Montmorencies, their last pack of cherries, is not yet quite finished. There are still some cherries for sale, and sales were made to Chicago jobbers last week at $8.50 per dozen, f. o. b. Michigan canneries, for Montmorenci cherries.

Samples which were exhibited show fine quality, and the the cans, ranging from 72 ounces to 78 ounces, cut-out cherries, drained in the usual way.

Apples—The packing of early apples in Michigan is progressing to some extent, and Dutchess apples, which are a very fair quality, have sold at $3.25 per dozen, f. o. b. Michigan canneries, and it is reported that sales in a few instances were made as low as $3.00 per dozen.



It is said that Michigan canneries are about sold out on canned peas of the 1923 pack, and that there are very few peas in that State in first hands.

Peaches—There are very few Michigan packers who are offering canned peaches of he 1923 pack, and they have not yet named firm prices. The peach crop in that State is rather irregular in production. The latitude is high and the climate is not altogether favorable to the heavy production of peaches.

Winter Apples—The pack of fall or winter apples in Michigan is likely to be improved, as that State has quite an advantage in supplying the Chicago market in the way of freight rates, which are low, being made so by the competition of the boats and water routes. There are no canned apples of the 1922 pack in the possession of wholesale grocers or bakers, as they have used up all the stock available, and will have to replenish heavily for future use.

Pork and Beans—The prices on canned pork and beans now being made by Michigan and other canneries are quite attrac-

SMILE AWHILE

WHAT DID THE ENGINEER SLIP HIM?

A green brakeman was making his first trip up the Sierras. The train was going up a very steep grade, and with unusual difficulty the engineer succeeded in reaching the top. At the station, looking out of his cab, the engineer saw the new brakeman and said, with a sigh of relief:

"I tell you what, my lad, we had a hard job to get up there, didn't we?"

"We certainly did," said the brak eman, "and if I hadn't put on the brakes, we'd have slipt back."—Carl A. Fanton.

DOING HIS BEST

Miss Kriss (in stalled car)—Pardon me, but do you happen to have a spare plug?

Farmer Brown—I don't chaw, lady, but I can oblige you with a cigar.

8 2 MUCH

I often sit and medit8
Upon the scurvy trick of f8
That keeps me still a celib8
Oh, cruel f8.

I want a 10der maid sed8
To love me and be my m8!
My 40 2de is not so grh
I cannot w8.

Oh, f8 be9! Be4 2 L8,
Relieve my awful single st8,
And when I've 1 this maid sed8
We'll oscul8.

—John R. Hanlon.

HOW DID HE KNOW

Magistrate—You are charged with being drunk. Have you anything to say?

Culprit—I've never been drunk in my life, sir, and never intend to be, for it always makes me feel so bad in the morning.—Pall Mall Gazette (London).

THERE'S A TOUGH TIME COMING, BOYS

Pity those luckless lads who always have to light cigarettes the first thing when they get up in the morning. Some of them may go to Heaven, and an authority on the subject tells us smoking isn't allowed there.

DON'T FALL FOR THIS!

"Nearly everybody has a well-developed bump of curiosity."

"And what does it lead to?"

"Why, in this case, it leads to turning the paper upside down."—J. L. Cassidy.

STRICTLY BUSINESS

A speaker at a minister's meeting in Boston told the story of a negro clergyman who so pestered his bishop with appeals for help that it became necessary to tell him that he must not send any more appeals. His next communication was as follows:

"This is not an appeal. It is a report. I have no pants."—Houston Post.

AND JUGGLES WITH FIGURES, TOO!

First Student—A thermometer certainly is a clever instrument to be able to tell temperature so well.

Second Student—It should be; it has a college education.

First Student—A college education—how so?

Second Student—Well, isn't it graduated with many degrees?—Roy H. Cantor.

WHY HE DIDN'T BUY-CARBONATE

"Two penn'-worth of bicarbonate of soda for indigestion at this time of the night," cried the infuriated chemist, who had been aroused at 2 A. M., "when a glass of hot water would have done just as well!"

"Weel, weel," returned Sandy, hastily; "I thank you for the advice, and I'll no' bother ye after all. Good night."—Max P. Huy.

THE CANNING TRADE

THE JOURNAL of the CANNING and ALLIED INDUSTRIES

EDITORIAL

NEXT!!

> That writer who says there is no logical reason for the steady increase of divorce should study the pile of tin cans in the alley.—
> North Adams Herald.

AND WE MUSTN'T DEFEND 'EM—And there are those among the "party of the second part" who object that canned foods are actually defended; that the trade papers talk always in favor of the canners. Well, we must confess we have always felt a leaning towards the under-dog; have always felt like coming to the assistance of the one attacked by everybody—and certainly everybody seems to attack canned foods—the while they eat them eagerly and smack their lips while doing so. So, grocery journals, rave on, for we purpose to continue fighting for the canners and canned foods—even if the canners won't. Wouldn't it be a sad day for the wholesale grocers, the retailers and all others handling canned foods if canned foods were removed from their list of supplies! How the profits on their business would shrink—and the people suffer!

ARE THE CANNERS EASY MARKS?—From the above and from much that we have said in the past few weeks, it may easily be seen that the canners are long suffering; patient to the last degree; perfect Christians, one might say, in that they always, under all circumstances, turn the other cheek when smitten on the one; perfect gluttons for punishment. And their fame in this respect seems to have spread throughout the world, and it would seem they are considered as "easy marks." Below we reprint in full a copy of a letter just received by one of the wide-awake canners of Pennsylvania. Mr. E. G. Ruff, operator of four up-to-date canneries, and a little too wide awake to be caught on such bait; or possibly owing to the active season on corn and tomatoes unwilling to stop to pick up a mere hundred thousand dollars as profit. Whatever the reason for refusing such a tempting offer, he sent it to his very good friend, Robert A. Sindall, past President of the Canning Machinery and Supplies Association, and rather active these days in keeping canners going with all they need. "Bob" is rather fond of the dollar, as witness the large number he has and is steadily adding to, but though supply men are notoriously liberal in entertaining the canners, Bob had no hankering after Spanish money, and he thought of the poor, impecunious Editor, and what a God-send a few dollars always are, and he sent it to us, that we might reap the harvest. Of course, we were bound to get our share of it, but the point is that the rich benefactor in Spain turned to the canner first in his appeal. And here is what he says:

Madrid, 19-7-923.

Dear Sir:

Being imprisoned here by bankruptcy, I beg your aid to recover a sum of 360,000 dollars I have in America, being necessary to come here to raise the seizure of my baggage, paying to the Registrar of the Court the expense of my trial and recover my portmanteau, containing a **Secret Pocket** where I have hidden one check for that sum.

By reward I offer you the third part viz: 120.000 dollars. I cannot receive your answer in the prison, but you must send a cablegram to a person of my confidence who will deliver it me.

Awaiting your cable to entrust you all my secrets, I rest

Yours truly,

R. de STF.

First of all answer by cable, not by letter, as follows:

LOUIS DIAN,

Lista Telegrafol, El Escorial-Spain.

——— Ruff.

The highest direction if wanted."

The letter was mailed in Madrid, Spain, July 20th, 1923, properly post-marked, etc.

Now don't rush. The line forms at the right; have about $20,000 in cash held in your right hand. so as to deliver quickly without question or delay.

To think that this age-old, moss-grown, hoary old hoax could be resurrected at this late day, to appeal to canners may be a compliment to the industry, but it is a little hard to see. In passing we might remark that some years ago quite a number of eminent gentlemen parted with good coin of the realm under this very pretext, or at least the daily papers reported such, as showing how "easy" Americans are. And now it's the canners' turn. There is more than a laugh in this; there is something worth thinking about. Not all the robbers are in jail in Madrid.

THE REAL CURE FOR "CANCELITIS."—It seems that the cure we proposed in our editorial of August 20th, like all cures, is questioned by high authority. In answer to that editorial, we had a reply from one of the leading canning concerns in the country, in which the President of it said:

> "You are correct in saying 'there is no co-operation and no confidence among canners.' I would go further and say that most canners are cowards, and that a great deal of this cowardice is due to lack of information in regard to their business."

What the writer means, of course, is that not being well and fully informed too many canners feel afraid of their ground, and hence will not take steps to protect themselves. That is the fear engendered by ignorance, producing cowardice and imposition. Our advice was that canners should better inform themselves—remove that ignorance and fear.

But now comes another view and well worth taking. This time it is from that prominent New York State firm of canners, S. E. Comstock & Co., of Newark, N. Y., and they say:

Newark, N. Y., August 28, 1923.

The Canning Trade.

Gentlemen: Several days ago we were startled by a headline in a New York Journal of Commerce, edition of Tuesday, August 21, 1923. It read: "Canner Finds Cure for Cancelitis." Knowing something of the ravages of "Cancelitis," we read the article with considerable interest, believing that we were about to learn something new.

The "cure" proved to be a law suit. There is certainly nothing new about that, and it is not a "cure." Suits based on breach of contract have saturated the courts for a thousand years, and we still have "Cancelitis."

It strikes us that the canner who valiantly fought his case in the courts overlooked a real "cure" in not reporting his case to the Wheeler Service Bureau. That is a real specific for "Cancelitis," as we have found to our profit.

If it does not neutralize the germ of "Cancelitis" in specific cases, it so isolates it that no one else is in danger of infection by the same germ.

We have appealed to the Bureau on six occasions in cases more or less identical with the one described, where a law suit seemed the only means we might have for relief, and in all of these cases we have procured the desired relief without reference to law, without expense, anxiety, loss of time or interruption to our business.

We think that is a real "cure," and it is astounding to us that there should be any canner who is not availing himself of the Wheeler Service Bureau, and, by his membership, making the "cure" that much more certain.

It probably never occurred to the canner who won this law suit that the "germ" which had attacked him is left alive and kicking, and free to attack, at will, any one of three thousand other canners.

We might be the next victim, or any of our neighbors.

We would not know that we were dealing with a "Cancelitis" germ until the rash broke out.

If this case had been submitted to the Bureau, and adjustment refused, the whole industry, or as much of it as is co-operating with the Bureau, would have the same protection. They would have the "germ" identified before being exposed to it.

That would be real sanitation, and that is what is needed in the industry, not for the protection of us canners alone, but for the protection of every individual in the industry—wholesale grocers, brokers, shippers, specialty manufacturers and canners—all alike.

NORWEGIAN BRISTLING ARE STILL SCARCE

FOR the first six months of 1923, Norway exported 10,800,000 kilograms of sardines and other canned fish products. Of this total 7,946,600 kilograms were from Stavanger, 1,010,000 kilograms from Trondhjem and 881,056 kilograms from Bergen. For the year 1922, there were exported from Bergen 2,601,000 kilograms of sardines and other canned fish products.

The prospects this season are not encouraging, Consul G. N. Ifft, Bergen, informs the Department of Commerce. Up to July 1st most of the canneries at Bergen, as well as at Stavanger and Haugesund, were working with minimum forces. From July 1st to 14th, 9,100 baskets of bristling, valued at Kr. 68,972, were delivered to the Bergen canneries by west coast fishermen, required here, was drawing supplies from both the west coast and Stavanger, which uses about eight times the raw material and from the Christianiafjord, where the bristling had appeared in unusual quantities.

Unusually extensive preparations have been made for the season's bristling fishing in all the west coast fjords, but the catches up to date have been small, but of excellent quality.

COLONEL SISK BEGS FOR QUALITY

MAYBE those Maryland—and other—canners who flaunt what we may say about the need of quality in canned foods, will listen to one right in their midst, who knows canned foods and canners. Here is what A. W. Sisk & Son, of Preston, Md., said on August 23rd:

"To the Packers of Tomatoes:

Brokers being in direct touch with the consuming markets see and hear many things that never reach the packer. Often we receive letters of complaint and see orders that belong to the Southern packers being placed elsewhere. We can not broadcast every incident of this kind, but as the 1923 season opens we think it in order to repeat a letter received last June from one of our best representatives. A part of the letter reads as follows:

> "The writer has wondered at different times when we have cut samples of Southern packed tomatoes how the Southern packer manages to pack them so poorly, and why there is not a concerted effort on the part of your canners to pack better tomatoes than they do."

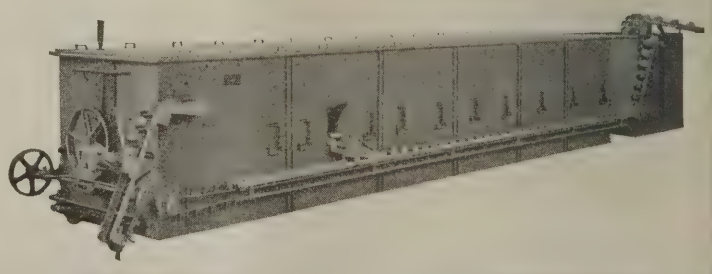
The writer of the above letter is located in one of the best markets for Southern tomatoes in the United States, and a market that belongs to us, but on account of the poor quality of the Southern tomatoes, Indiana packers secured the bulk of the business at even prices and on a higher freight rate.

This condition should not exist, as we are losing many of our markets for Southern tomatoes, due to canning activities developing near the consuming centers; hence it is important that we hold our nearby markets.

Let us this year try to improve our quality by packing only ripe tomatoes with a good body. COLOR is an important part of the quality. You may pack good tomatoes, but there is likely room for improvement. Don't use the argument with yourself that your quality is better than your neighbor's, for your neighbor's quality may not be passing muster. You do not hear of the trouble the other fellow has; he tells only the good things.

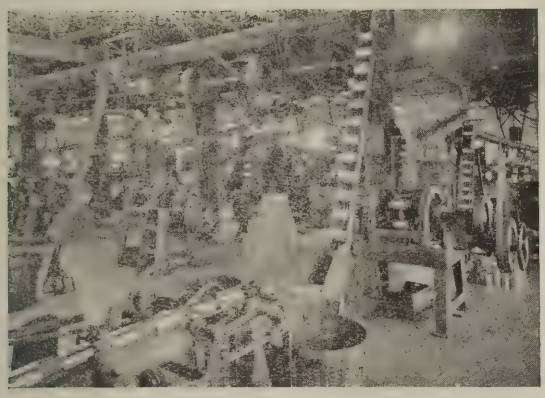
Your buyer likes quality and your broker appreciates quality, for he desires to sell only good merchandise and wants everyone pleased. Rejections are expensive and unpleasant to everyone, including the broker. There is satisfaction and compensation in having repeat customers, so let us strive to improve the quality of Southern tomatoes this year, always remembering that buyers do not consider tomatoes first class unless they are red."

PRESERVES YOUR PRODUCT AT ITS BEST



Luscious fruits and tender vegetables retain their exquisite fresh flavor and appearance when processed by quick quality cooks in A–B Continuous Cookers and Coolers.

Each container sterlized uniformly with uncanny precision enhances your reputation as a Canner, for each customer perceives you have not only selected the best raw materials but also the most efficient means to preserve them at their best.



Write for yours today.

Conditions Of Crops In All Sections

Crop Reports By The Canners

[Notice—If canners would but recognize the opportunity offered through The Canning Trade for a free exchange of this highly important information, this page would grow to several pages each week. Trouble is, when a canner is asked to report on his crop conditions, he grows fearful that the information will get to the buyer, and so he refuses, or neglects, to send in a report. Truth is, the buyers get the information in other ways, and sometimes wrongly, and the only result from the canners' refusal is that fellow-canners are kept in darkness. And some rejoice in that. It is a huge mistake for the canners to act this way. If all canners would be free, and honest, in reporting exact crop conditions, it would tremendously benefit the entire canned foods market—not hurt it. And to lie in such reports is to simply cheat yourself playing solitaire. If the crops are there, the peak will come from them, and just when you think the market should be about free of goods, those goods come creeping out, market advances are checked and doubt spread, hampering all operations. If all canners knew the crop conditions of others, all could operate more intelligently, guiding their courses accordingly. The canner who withholds his crop information is like the ostrich that hides its head in the sand and thinks no one can see him. Don't be an ostrich.

Every week we send out hundreds of return postals, get back a few. Don't wait to be asked by mail; take this invitation and frequently report your crop progress. Rest easy as to who sees these—for 90 per cent of our readers are fellow-canners, and the other 10 per cent are brokers and a few buyers. We earnestly invite you to help make this a most important Bureau, and we feel that we can count upon you.—Editor.]

Fruitland, Md., August 29—Outlook good for 75 to 90 per cent of a crop in this section. Vines seem to be well loaded. Wilt and blight have developed, however, in part of the patches.

Grasonville, Md., August 27—Tomato acreage below normal. I find that tomato patches are spotty; in other words, on one end of a five-acre patch you will find a good lot of tomatoes, on the other end as good as nothing, and the vines are good. In other words, there will not be over one-half crop, and some of them will be late.

Nottingham, Pa., August 29—Corn was normal. Tomatoes are two weeks later than last season. There will not be as large a crop here this season as last. 1922 average was 10 tons per acre. I am expecting the tomatoes to ripen and come in a bunch.

Woodbine, Pa., August 27—Southeastern Pennsylvania needs rain very badly. The corn crop, both early and late, is drying up. Our early plantings are all in the cans with a 50 per cent of a pack. The late corn will not do as well, owing to dry weather. Beans were half a crop, and I fear tomatoes will be no better. The blight and dry weather are getting in their blows right now. Tomatoes are late. We have not packed anything worth mentioning at our four factories, and every day makes the season shorter.

Bridgeton, Pa., August 29—The pack of corn in this section will be 75 per cent of normal, not more and maybe less. Acreage about normal. Tomatoes, hard to say yet. We are sure the pack will not be a large one. Much depends upon early frost. Acreage also about normal.

Hicksville, Ohio, August 27—If frost holds off to September 25th, we will have 100 per cent crop. Tomatoes are late. The vines are set heavily with fruit. Nothing but early frost will shorten our crop. We are having cool weather in these parts.

Norwalk, Ohio, August 27—Our corn at this time is looking very good, and our prospects are for a full pack. Weather conditions, however, have been such that some of our acreage may mature faster than we can handle it, and if so, it will be necessary to pass up some of our acreage in order that we may pack fancy quality. We have completed our Golden Bantam pack with a full crop and will make full deliveries. At this time our tomato crop is just about two weeks late. We are getting in our first tomatoes today. Our vines, however, are well filled with fruit, and if we do not have an early frost we should have a normal crop. We had two nights during the past week in which the temperature dropped to 40 degrees.

Plainville, Ind., August 27—Our tomato acreage in Daviess county is up to normal in number of acres set, but we think the excessive rains of the last two or three weeks have cut our crop fully 50 per cent. With favorable weather during September and the first week in October, we might get more than 50 per cent yield.

Brownsburg, Ind., August 28—The tomatoes in Indiana are going to be about 50 per cent of normal. We lost the season's bloom on account of hard rains and cool evenings. There is not a plant that has packed any and will not until September. Corn is good in spots and we are packing a good quality.

Gibson City, Ill., August 27—Corn pack will be less than expected. Too early to make accurate forecast. However, it is certain that yield will be less than we expected.

Menominee, Mich., August 23—Pickles, 50 per cent. Tomatoes, 65 per cent. Corn, 90 per cent. Beans, dry, 100 per cent. Apples, 100 per cent. Beets, 25 per cent. Beans, green and wax, 50 per cent.

Rogersville, Mo., August 20—Acreage normal or a little more. Early crop damaged 25 per cent and late crop not more than 60 per cent normal. Present outlook, pack may not run more than last year, notwithstanding a larger acreage.

Marshfield, Mo., August 24—I see in the last Canning Trade, in the St. Louis report, that the 100 canneries near Marshfield, Mo., would put up a very large pack of tomatoes. This is a mistake; we have a large acreage, but the yield will not be large, owing to blight and other causes.

Richland, Mo., August 27—Pack very light, 50 per cent below estimate 60 days ago, account of dry weather. All sold at 80c doz. f. o. b. factory. Acreage below normal

Wiggins, Miss., August 22—Our cucumber crop was harvested during the months of June and July and was only a 50 per cent crop, due to the excessively rainy weather and other unfavorable weather conditions during the harvesting season. Our bean crop was also cut to 30 per cent of a crop, due to the unfavorable weather conditions. The fall crop is coming along nicely.

Denver, Ark., August 21—Crops look very unfavorable. Corn fired to the ear. Tomatoes damaged by hot sunshine. Crops cut short by extremely hot weather. Acreage short, account too much rain at time plants should have been set.

Hoopeston, Ill., August 28—Corn prospect normal or somewhat better than normal. Our acreage somewhat larger than usual. Weather cool last two weeks. Plenty of moisture.

RATE OF PRODUCTION MORE THAN ANYTHING ELSE DETERMINE PROFITS

EVERY day more emphasis is placed by authorities upon the importance of increasing the rate of farm production. Several inter-related factors are at work to accomplish that end. Increased taxes on farm property, decreased labor supply, higher labor costs, lower market prices, all tend, or should tend, to cut down the cultivated acreage and intensify the rate of production on the remainer.

Therefore credible evidence coming straight from farmers themselves and demonstrating the dependence of profits upon rate of production is especially interesting just now. According to the Ohio Extension Service, "Twenty-eight Scioto county farmers, who have been keeping books on their farms for the past five years, find that yields to the acre and the quantity and kind of livestock kept, had more to do with profit and loss than any other factors."

The five best-paying farms had averaged for the five-year period five bushels of corn, three bushels of wheat and 600 pounds of hay per acre **more** than the other 23 farms.

"They also fed their stock more liberally, showing an average feed cost per animal $11 higher than the other farms. **It paid to do so.** They recovered $150 on every $100 fed to livestock, as compared to an average recovery of $110 for all 28 farms."

The same was true of poultry. Whatever was grown on the farm, it paid and paid well to feed properly and liberally.

"Not greater total production, but greater production to the acre, or the cow or the hen, was what made profits. It cost about as much to feed a poor cow or hen, or to work a poor acre, and the per unit cost of the product in this case often ran so high as to exclude profit at present prices."

MAINE MARKET

(*Continued from page 31*)

First, we had a late, cold spring and a bad planting season. This was followed by extreme hot weather and no rain, so that the crops got a poor start to begin on. Now we have had cold weather, still without rain, and slight frosts in some sections. As a result, all vegetation is very tardy, somewhat dwarfed in size and showing a light yield. There is still hope, however, as a hot September will mature such crops as have withstood the battle to date.

Statistics recently published in the local newspapers from the New England Crop Reporting Service gives the 1923 sweet-corn acreage in Maine as 13,695 acres, and estimates a 75 per cent yield on this acreage, providing the rest of the season is favorable. It will interest many canners in other sections to note that, while some factories here have 350 acres or more, the average per factory is only 152 acres.

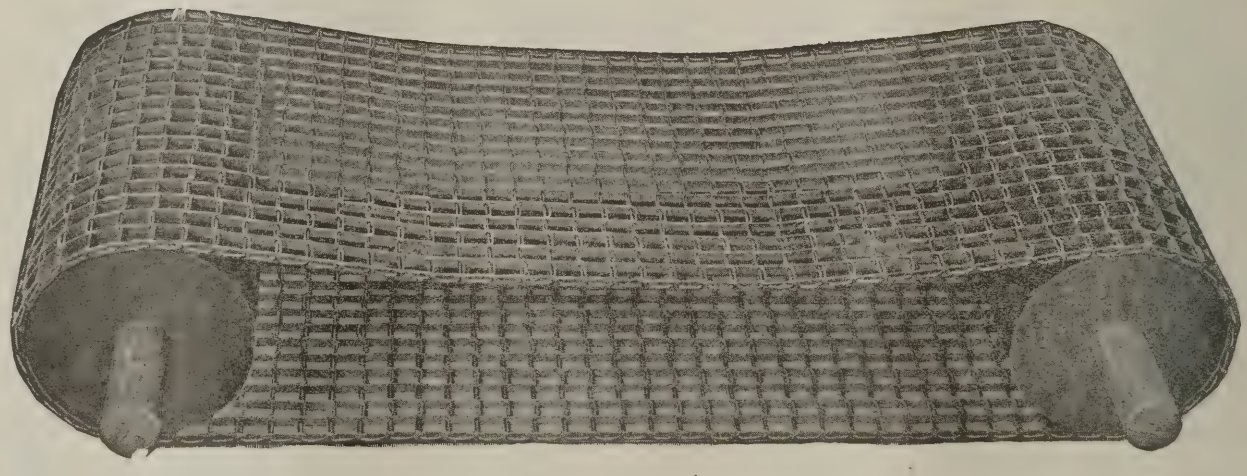
The corn situation is "the same, only more so," with the continued cold weather. At best the season will open very late, not before the 10th in any locality reported yet. And if the prophecy of the oldtimers comes true, and we have frosts on the 7th and 24th, there isn't much hope of securing even 75 per cent yield. Farmington, Me., which supports five corn-canning plants, reports its acreage in good condition. This also applies to Fryeburg, in another section of the State. In the matter of price, there have been no changes announced because of the fact that canners are loath to offer more goods under present uncertain conditions. If any of them are lucky enough to have surplus goods at the end of the canning season, those goods will be worth a premium. The corn promises to be of very fine flavor and quality this year, so doubtless a large per cent of fancy grade will be produced, thus helping out the matter of pro-rata deliveries. The last quotations on future corn were $1.37½ and $1.65 on Crosby and Golden Bantam, although slight advances over these figures have been obtained recently on current sales. There is no carryover from 1922 in first hands.

The canners operating on string beans have the slight advantage over corn canners in that their grief is pretty well over. Canning began about ten days to two weeks later than usual, and will continue a week or so more in those locations where the yield has been good. The bean canners added labor troubles to bad weather, as it has been almost impossible to get the beans picked fast enough to keep the factories running. No one is willing to estimate the probable amount of the pack, nor of the possibility of short deliveries from any or all canners.

The blueberry crop is now estimated to be 75 per cent of normal, but probably the pack will fall below this figure, owing to the low prices paid to the pickers and their disinclination to work under present conditions. Work at present is rushing, against the possibility of a frost, but the canning season will not last as late as usual. Now come the usual rumors of price-cutting, but quotations from the regular canners seem to stick at the first prices, $8.50 and $1.20 for tens and twos in water.

Orchard reports show no more promise of a big apple crop. The early fruit is small in size and quantity, though very well flavored. No estimates give more than 70 per cent of a normal crop, and that refers to the number of individual apples, rather than the number of barrels, as the small size of the fruit will mean many more apples to the barrel. Orchard conditions are rather uneven, as one or two locations show fairly good crops, while others report no fruit worth harvesting. Canners are now inspecting and buying, although factory operations in Maine will not begin until the middle or last of October. The regular nice grade of Maine apples has been marketed at $3.75 per dozen, and sales have been satisfactory, especially in view of the light yield.

"MAINE."



M. D. HOPKINS TO REPRESENT THE MAX AMS MACHINE COMPANY IN CHICAGO

The Max Ams Machine Company, manufacturers of the well-known line of Ams automatic can-making machinery and sheet metal working machiery, announces that, beginning September 1st, its Chicago office at 20 East Jackson Boulevard will be in charge of Mr. M. D. Hopkins.

Mr. Hopkins is well known to can makers and packers of the Middle West, having for a number of years represented that territory.

The headquarters of the Max Ams Machine Company are at 101 Park Ave., New York City.

FORECASTING THE DATE AND DURATION OF THE

Best Canning Stage For Sweetcorn

By CHARLES O. APPLEMAN

The University of Maryland Agricultural Experiment Station
College Park, Maryland
May, 1923

BULLETIN NO. 254

NATURE gives to green sweet corn the quality most desired for table use or for canning, but does not wait for man's convenience to obtain the corn in this condition. The chemical composition of the corn changes rapidly during ripening, so the best canning stage is usually of very short duration. One of the most important problems confronting the canner is to catch nature in the act of taking the corn through the best edible stage, and also to predict the approximate length of time the corn will retain its highest quality. The data presented here in a summary manner, are intended to serve as a practical guide not only for predicting the date, but also the duration of the best canning stage for green sweet corn. For detailed discussions of experimental methods and procedures, consult paper by Appleman and Eaton.[1]

The Best Canning Stage.

There is some difference of opinion regarding the chemical composition that gives the most desirable quality to green sweet corn, especially for canning. The sugar content is usually given first importance, as sweetness is a desirable quality and, moreover, the flavor appears to be associated with the sugar content because the corn certainly acquires a decided flat taste after the sugar has been reduced to low content either on the stalk or in storage.

The percentage of starch is claimed by some to be of equal, if not of even greater, importance than the sugar content, as it must be sufficiently high to give body to the corn. The corn must also possess the proper degree of succulence. Since the starch increases as the sugar decreases, the most desirable stage for canning would seem to be a wise compromise between sugar content and other constituents. As a basis for the predictions given in this paper, the corn is considered to be in the best canning stage when it has a sugar content of 5 to 6 per cent and a starch content of 10 to 11 per cent. The actual percentages would depend upon the water content, which would vary between about 76 and 78 per cent, according to climatic conditions.

An arbitrary distinction has also been made between ripening and maturing of corn. The corn is considered ripe after growth of the kernels ceases and the ratios of the various chemical constituents become practically constant. The maturing of the corn consists essentially in the loss of water from the kernels, so its rate would depend largely upon the climatic conditions controlling evaporation.

The chief changes in the percentage composition of the solids in the corn during ripening consist in the depletion of sugars and the increase in starch. The term starch as used here includes not only true starch, but also much dexterin and small amounts of similar substances. In the very early stages of ripening sugars like glucose predominate, but rapidly disappears as cane sugar increases up to a certain amount, after which it decreases as the starch increases. However, as ripening proceeds, the increase in the percentage of starch is much greater than can be accounted for by the decrease in the percentage of sugars. From the beginning of kernel formation until the end of the ripening period there is a continual movement of sugar from the plant into the kernels, where it is transformed into starch. The storage of starch in the kernels is the resultant of a number of complex processes, but it seems safe to conclude that the rate of starch formation in the kernels is the controlling factor for several supplementary processes in the ripening of sweet corn.

The changes in the percentage of fat, crude fiber, and proteins, occur during the very early stages of ripening. For the remainder of the ripening period these percentages remain fairly constant, although their actual amounts increase with the growth of the kernel.

Effect of Season on the Rate of Ripening.

Stowell's evergreen corn, grown from home-selected seed, furnished the material for this study. Two crops of corn were planted, so that the first crop would ripen in August, and the second in the cool autumn, the same source of seed being used for both crops. For each experiment 50 ears, representing as nearly as possible the same stage of ripening, were carefully selected in the center of the field and numbered consecutively. The husks were not yet firm and the silk was still green or red for about one-half inch beyond the tip of the husks. The remainder of the silk was, as a rule, brown but not dry. The kernels were small and spherical and the spikelets were still in evidence as the rows of kernels were in pairs and somewhat separated from adjoining pairs. The exudate from the kernels was opalescent or cloudy, but not milky. This stage of ripening was designated as the premilk stage and is a fairly distinct stage and not difficult to judge.

The changes in percentage of moisture, total sugars, and starch, during ripening of the two crops of corn are shown in Table 1. Each percentage represents an average of four determinations.

The decrease in the ratio of total sugars to starch was found to be a good measure of the rate of ripening. An examination of these ratios in Table 1 shows that the corn of the early crop, six days after the beginning of the analysis, had arrived at the stage of ripening considered most suitable for canning, while the corn of the late crop required fifteen days to arrive at the same stage. In other words, the rate of ripening was two and one-half times faster in the corn of the early crop than in the corn of the late crop. This difference in the rates of ripening for the two crops was found to be due to the prevailing temperature.

Table I.—Comparison of Early and Late Crops of Sweet Corn in Respect to Changes in Percentage Composition in Equal Lengths of Time.

Time from first examination Days	Early Crop				Late Crop			
	Moisture	Total Sugars	Starch	Ratio of Sugar to Starch	Moisture	Total Sugars	Starch	Ratio of Sugar to Starch

By means of accurate temperature records in the fields it was possible to develop a mathematical equation by which the rate of ripening in days, could be calculated for any prevailing mean temperature. The data presented in Table 2 shows the calculated number of days required, at different temperatures, for corn to pass from the premilk to the best edible stage, also the days it may be expected to remain in this condition. Each temperature would represent the average of the daily mean temperatures for the corresponding ripening periods.

Table II.—Calculated Rates of Sweet Corn Ripening for Mean Temperatures Ranging from 60 Degrees F. to 85 Degrees F.

Average daily mean temperatures. F°.	Time required for corn to pass from premilk to best canning stage. Days	The canning period. Days
60	14.5	5.0
61	14.0	4.5
62	13.5	4.5
63	13.0	4.5
64	12.5	4.0
65	12.0	4.0

82	6.5	2.0
83	6.0	2.0
84	6.0	1.0
85	5.5	1.5

If the temperature data are not available less reliable predictions can be made by using the mean of the daily normal temperatures for the nearest station of the United States Weather Bureau. The normal temperature for a particular day of the year is the average of the mean temperatures of this calendar day for a period of twenty years. The daily normal temperatures for the period from 1886 to 1905 have been calculated by Biglow.

Reliability of the Nail Test for Predicting the Composition of Green Sweet Corn.

In practice, it has been customary to resort to inspection of certain physical and structural characters of the corn to determine when it is ready to pull. One of the tests commonly used for this purpose is the so-called nail test. In the manipulation of this test the thumb-nail is thrust into the kernel and if the exudate is milky the corn is said to be in the milk or best edible stage, but if dough is forced out of the kernels, it is said to be in the dough stage and too far advanced to give the best quality to green corn.

In order to determine within what limits the chemical composition of the corn can be predicted by the nail test, it was applied at different stages of ripening, and samples were taken from the ears for analysis.

In this study four stages were indicated by the nail test and designated as follows:

(1) The premilk stage. The exudate from the kernels is cloudy or opalescent, but not white and milky.

(2) The typical milk stage. The exudate is milky, and the kernels are white.

(3) The early dough stage. In this stage a little pressure by the nail is required to force out the creamy contents, which also contain a little dough.

(4) The dough stage. At this stage of ripening only dough is forced out of the kernels by the nail, and the kernels are also beginning to show considerable yellow color.

D. LANDRETH SEED CO.
Established 1784
Bristol, Pa.

The corn of the early crop, picked when the nail test indicated the typical milk stage, showed a much greater range in the percentages of moisture, total sugar and starch, than the corn of the late crop in the same stage. The data from both crops indicate for each stage, less variation in the percentage of total sugars than of starch.

It is quite evident that the reliability of the nail test is greatly influenced by the rate of ripening, and also by the rate of water loss by evaporation. The corresponding nail test stages of crops ripening under different climatic conditions vary both in uniformity of composition and percentage composition. In warm weather the nail test alone is not a reliable means of predicting the best canning stage, since the corn may show wide variation in composition while it gives the typical milk test. This test is most reliable when applied to crops which ripen slowly in the cool autumn.

Summary.

After green sweet corn has reached the prime canning condition it deteriorates very rapidly, especially in warm weather. It is, of course, necessary to get the corn into the cans with great dispatch, but it is of even greater importance that the corn be in the best canning stage when it is pulled. The corn may be doctored with sugar and starch, but the natural flavor and succulence which nature gives to the corn cannot be replaced after it is once lost.

The data presented in this paper are intended to aid the canner in predicting the approximate date when a crop of sweet corn will be in the best canning stage, and also the number of days the corn may be expected to remain in this condition. These predictions are based upon experimental proof that for a certain period the rate of sweet corn ripening is controlled by temperature.

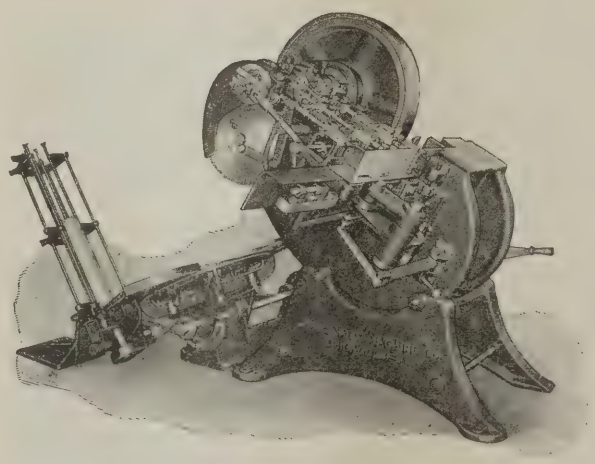
The data particularly emphasize the great rapidity of the chemical changes in sweet corn as it ripens, especially when high temperatures prevail. For this reason, sweet corn requires very much closer attention in warm than in cooler weather. In some sections, other things being equal, the average quality of the pack could be improved by extending the canning period a little later in the season, so as to include the cool nights of late summer and early autumn.

CHAMBER OF COMMERCE TO CONDUCT AGRICULTURAL BUREAU

CREATION of a Bureau of Agriculture was announced on August 18th by the Chamber of Commerce of the United States. The bureau will function as a part of the Chamber's Natural Resources Production Department, one of eight departments which carry on the activities of the National Chamber. The manager of the new bureau will be William Harper Dean, of Washington, formerly with the United States Department of Agriculture.

"The new bureau," according to the announcement, "has been set up by the National Chamber to function upon agricultural problems as agriculture's lines of interest cross or touch those of business in general." The Chamber feels that the inauguration of this work is a step forward in the direction of new constructive service.

"In keeping with the general policy of the National Chamber, the new bureau will make no effort to formulate on its own initiative any plans to offer for adoption by either agriculture or other industries, but rather to serve as an investigator of their common problems, and to offer the results of these studies for such action as they may seem to warrant."



Mr. Dean brings to the new bureau a wide experience, gained from many years of active agricultural work. From his farm home in Virginia, where he grew up, Mr. Dean went to Virginia Polytechnic Institute, specializing in entomology. His post-graduate studies were taken at the University of Louisiana. For about six years he was employed as entomologist in Virginia, Georgia, Louisiana and Texas. The United States Department of Agriculture then secured him to make special entomological studies in the Southwest.

For the past few years Mr. Dean has been devoting most of his time in writing about agricultural subjects. He has written many articles on some of the aids that science is ready and able to give to farming.

Mr. Dean was, perhaps, one of the first war correspondents on record representing an agricultural publication. One of the leading agricultural journals in the country sent him to France and England to report the story of the war's reaction on farm-

Automatic Strip Feed Press

ARRANGED WITH CURLING AND STACKING MACHINE

We illustrate one of our several types of Automatic Strip Feed Presses equipped with direct connected Curling and Automatic Stacking Machine used for producing sanitary can ends.

This equipment comprises a complete unit for the rapid production of all sizes of sanitary can ends up to No. 3, or similar work requiring a curled edge after leaving Press. A larger size unit is supplied for No. 10 can ends.

The Automatic Stacker is designed to be placed adjacent to any of our various end producing machines where it is desirable to stack the ends as discharged. All or any part of this machinery is furnished to meet your requirements and may be operated separately or attached to your present equipment.

ing and those who live by farming. His investigations of agricultural conditions have also carried him into nearly every State in the Union.

THE CRAB-CANNING INDUSTRY OF JAPAN

THE annual production of canned sea foods in Japan is approximately 1,300,000 cases, valued at approximately $11,500,000, Commercial Attache James F. Abbott, Tokyo, reports to the Department of Commerce. Of this amount, canned salmon constitutes 700,000 cases, valued at $6,500,000. Canned salmon is an important item of export, and the export of canned crab is increasing in importance. The crab-canning industry was started in Japan about 22 years ago, with a very small output. The output increased until a high point was reached in 1917, the pack of that year being 272,874 cases of four dozen cans. The output in 1922 was 135,000 cases. The principal crab-canning districts are Kamchatka, Karafuto, Maritime Province, Numero, and Rijiri. Production of canned crab for 1923 is estimated at 140,000 cases. Of this quantity, approximately 100,000 cases will be for export and the remaining 40,000 cases for domestic consumption.

ATLANTIC COAST APPLE GROWERS' CAMPAIGN FOR BETTER MARKETING

Southern Growers to Participate.

LARGE apple growers in Virginia, Maryland and Pennsylvania are planning to exhibit their fruit in New York City next fall in the Eastern Apple Exposition and Fruit Show. This will be the largest fruit show ever held in the East and will occupy two floors of the Grand Central Palace, that covers an entire block, near the Grand Central Terminal, New York City.

The Exposition is the dramatic feature of an educational movement for the better grading, packing and marketing of fruit extending over all the Eastern apple-growing States. The Eastern apple, so delicious in flavor, has lagged behind the Western apple so long in methods of handling that in most Eastern cities it has practically disappeared from the fruit stand, and is only to be found in the back of the grocery store along with potatoes and turnips. This is an effort to get it back on the fruit stand.

The first floor of the Exposition Building will be taken up with educational exhibits by States, and commercial exhibits of individuals and co-operative marketing associations, showing only such fruits as the growers are prepared to sell in quantity, graded and packed exactly as they are selling commercially. Orders may be taken and goods sold on the floor. Honey, maple syrup and nuts will also be exhibited and sold in commercial pack.

The second floor of the Exposition Building will be occupied by allied industries: canned foods, dried fruits, vinegar, cider, farm implements and equipment, fertilizers, nursery trees, fungicides, insecticides, wrappers, labels, containers of wood, glass, tin and fiber. Most of the space has already been taken.

The Legislature of New York State and some of the New England States made liberal appropriations to assist the growers of their States in this educational program that includes an educational committee in each State and an organized plan to market all fruits as near home as possible to save transportation costs. In Massachusetts, where the Legislature made no appropriation, the State Horticultural Society, with the aid of manufacturers, business and Chamber of Commerce men, raised their own funds. In Pennsylvania the Exposition movement centers around the Burke County Association. Anyone desiring space or to get in touch with exhibitors from their State should write to Mr. A. R. Rogers, Director of the Eastern Apple Exposition and Fruit Show, Grand Central Palace, New York City, or to one of the following members of the Executive Committee: C. D. Matthews, Director North Carolina Horticultural Service, Raleigh, N. C., or Thomas E. Cross, Chairman, Lagrangeville, New York

TENEX DRY PASTE For Canners

It makes more paste per pound

"The longer it sets the thicker it gets."

Contains no acid, will not stain expensive labels.

WILL NOT SPOIL.

Processing of Corn and Pumpkin

By *W. D. Bigelow*

DIRECTOR, RESEARCH LABORATORY

NATIONAL CANNERS ASSOCIATION

Circular Number 8-L

WASHINGTON, D. C.

August, 1923

THESE products are alike in that their heat penetration is slow and a relatively long cook is necessary for their sterilization. For this reason, the size of the can exerts a profound influence on the length of process. This influence is not fully appreciated in the industry, and the process that is usually given Nos. 1 and 2 cans of corn and pumpkin is relatively much more efficient than the process given No. 10 cans of the same products. In this respect corn and pumpkin are widely different from products of more rapid heat penetration such as peas, string beans and beets. The latter products heat quickly to the center of the can, and the size of the can makes relatively little difference in the length of process necessary for their sterilization.

The influence of initial temperature on the time necessary for sterilization is vastly greater with products of slow heat penetration like corn and pumpkin than with products that heat quickly to the center of the can like peas and string beans. In order to maintain a high initial temperature, it is obviously important not merely to fill corn and pumpkin into the can hot, but also to process the filled cans with the least possible delay. For this reason a breakdown of the line should not be permitted to delay the processing of these products. Whenever a breakdown of more than momentary duration occurs, any partly filled crate at the closing machine should be placed in the retort and processed immediately.

Corn.

The range of processes used with corn extend from relatively light cooks, which incur appreciable loss from spoilage, to relatively heavy cooks, in which the spoilage is reduced to a minimum. The former gives a better color, but requires far more care in cooling and storing the canned product. The processes given below should be regarded as minimum. Other methods of retort management are given later which will give a cook of the same efficiency as those given in the No. 10 cooks in the table, and will give a better color in some localities.

Minimum Processes for Canned Corn.*

Can number	Process time at retort temperature of 240 deg. Minutes	245 deg. Minutes	.50 deg. Minutes
1	65	55	50
2	90	80	70
5	150	130	120
10	180	160	145

*Corn cooked by these processes must be thoroughly cooled to prevent spoilage by thermophiles.

The above cooks for Nos. 5 and 10 cans are theoretically of somewhat lower sterilizing efficiency than those for Nos. 1 and 2 cans. In actual practice, however, they probably have substantially the same sterilizing value, because the larger cans are filled at the same temperature as the smaller cans and, on account of their size, they cool less in the time intervening between the closing and processing of the cans.

As already stated, the cooks given above are intended as minimum cooks even for corn packed in those districts where the color is believed to be especially sensitive to heat. Canners whose corn will stand a longer cook will incur less danger of spoilage by somewhat increasing the processes given above. Where the color of the corn will stand it, for instance, a cook of 80 minutes at from 245 to 250 degrees is advisable with No. 2 cans. With such a cook there is more latitude for occasional variations in factory practice. There is less danger of spoilage when corn is not thoroughly cooled before it is stacked in the warehouse or is stored for a time in a hot warehouse thereafter.

In considering the process to be used with corn the role played in this product by thermophilic bacteria should be kept in mind. The spores of some thermophilic bacteria are so resistant to heat that they are not entirely destroyed by any process used in canning corn, especially when they are present in the raw product in considerable number. The lighter the process used in canning the corn (the lower the process in temperature or the shorter the cook) the more spores of thermophilic bacteria are left alive.

Thermophilic bacteria grow and cause spoilage at very much higher temperatures than other bacteria and grow very slowly, if at all, at temperatures below 100 degrees F. If corn is cooled so that the average temperature of each can is less than 100 degrees F. before being stacked in the warehouse, the spores of thermophilic bacteria not killed in the process remain dormant in the corn for long periods of time unless if is stored at very high temperatures. From this it is apparent that the lower the process employed with corn the greater the necessity of cooling.

It is not sufficient to merely pass the corn through a cooling tank. The temperature of the cooling water must be carefully watched, especially during rush periods. It is important also to shake a can of corn from time to time as it emerges from the cooling tank and note the relative temperature of the can after shaking. If it is warm to the touch, the contents of the can are over 100 degrees F. If the product is stored in the warehouse in solid blocks in that condition it is likely to remain for several days at temperatures that permit the growth of thermophilic bacteria and cause the spoilage of the corn. Either swells or flat sours may result according to the nature of the bacteria present.

Where the water supply is insufficient for adequate cooling, the growth of thermophilic bacteria may be prevented by stacking the corn in narrow tiers or placing it in shallow piles over night. It may then be stacked in solid blocks in the warehouse the following day, after it has entirely cooled. The influence of this method of handling is illustrated by the procedure that was formerly usual in the industry when much lower temperatures and shorter times of processing were in vogue than those now practiced. Canning plants were then of small capacity and it was customary to leave the corn, after processing, in shallow piles over night. It was thus air cooled within a few hours after processing and before the thermophilic bacteria not killed by the process could multiply and cause spoilage.

Corn is not completely sterilized in any practicable process. The spores of a very few thermophiles remain alive in some cans. When corn is stacked in the warehouse in solid blocks before it is cooled below the average temperature of 100 degrees, these bacteria are likely to grow and cause spoilage.

Alternate Processes for No. 10 Corn.

In districts where the color of the corn is especially sensitive to processing especial difficulty is experienced with No. 10 corn. Under these circumstances some canners find it advantageous to incur the additional expense necessary to change their retort temperature during the processing and thus prolong their cook in order to avoid heating for so long a time at a relatively high retort temperature. Under these circumstances, the following combinations of processes will be found to be the equivalent to the processes given above for No. 10 cans:

Process No. 1—Blow steam through the retort for two hours and 20 minutes without pressure. Then heat the retort to 240 degrees and continue for two hours at that temperature. The total time of this process is four hours and twenty minutes.

Process No. 2—Cook two hours at 240 degrees, then blow off to 222 degrees, and continue at that temperature for 90 minutes. The total time of this process is 3½ hours.

SPECIALISTS IN THE MANUFACTURE OF
MARKING - STAMPING & STENCILING DEVICES
FOR THE
CANNING, PRESERVING AND PACKING
INDUSTRY.

CASE STENCILS — RUBBER LOGOTYPES — CHECKS
STENCIL INKS — STEEL CAN TYPE — TICKET PUNCHES.

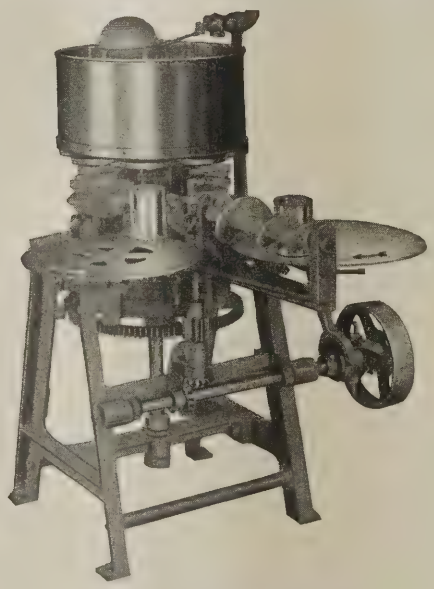
Process No. 3—Cook two hours at 245 degrees, then blow off to 226 degrees, and at that temperature continue for 45 minutes. The total time of this process is two hours and forty-five minutes.

Process No. 4—Cook 105 minutes at 245 degrees, then blow off to 222 degrees, and continue at that temperature for 95 minutes. The total time of this process is 200 minutes.

In comparing these alternate processes, we find that it is a saving of time without loss of sterilizing efficiency to heat the retort to a relatively high temperature at the beginning of the process, and thus heat the center of the can as rapidly as possible.

Pumpkin.

Pumpkin and squash should always be processed under pressure. Pumpkin and squash are identical as far as their heat penetration is concerned and require the same process. They should always be processed under pressure and the higher the retort temperature the shorter the time necessary for their sterilization. The processes given below for different retort temperatures are substantially equivalent to each other. The cooks below were based on an initial temperature of 140 degrees, and it is important that the products be filled into the can at at least that temperature. The heat penetration of pumpkin is so slow that an exhaust has little value in heating the contents of the can. The product should be so handled in preparation for canning that it is filled into the can at a high temperature, and the cans should be sealed and processed as promptly as possible after filling. With the larger sizes of cans and especially with No. 10 cans, a process temperature of about 240 degrees is advisable. A higher process temperature is likely to exert an undue strain on No. 10 cans. This strain is greater with pumpkin than with corn, because the filling temperature is usually lower in the former.



Processes for Pumpkin at Various Retort Temperatures

Can number	Process time at retort temperature of 235 deg. Minutes	240 deg. Minutes	250 deg. Minutes
1	70	60	45
2	85	70	55
2½	105	90	70
3	115	95	75
5	145	125	105
10	195	170	140

Thermophilic bacteria cause less spoilage in pumpkin and squash than in corn because the most resistant thermophilic bacteria will not grow in pumpkin. There are thermophilic bacteria that do grow and cause spoilage in pumpkin, however, and the same precautions mentioned above regarding the cooling of corn are applicable to pumpkin for the same reason, though in less degree than to corn. Care should therefore be taken that pumpkin and squash be thoroughly cooled before they are stacked solid in the warehouse.

CANADA'S DAIRY INDUSTRY DECLINING

A SERIOUS situation existing throughout the Kingston dairy district of Canada is due to the practical loss of Canada's best customer for butter and cheese—Great Britain—says Consul Felix S. S. Johnson in a report just received by the Department of Commerce. For the five months period ending May, the decrease in butter from this province has been almost a million pounds, as compared with the year 1921, and in cheese about 50 per cent for the same time. This condition has seriously affected the dairying industry of this consular district. By reference to the statement of exports from this district one sees that owing to the extremely low price of Canadian cheese, it has been possible to export to the American market and undersell the American cheese a few cents a pound.

AYARS ROTARY SYRUPER

With new improved valve
Cannot mash fruit
No metal touches metal.
New rubber makes new valve
No Parts to wear and leak

AYARS ROTARY EXHAUSTER

Takes No. 1 to No. 10 cans inclusive without any changing. Cans come out on delivery disk in a single row.—
Well and substantially built.

The Saving Makes It Possible

for you to keep your increasing stocks fully insured against fire loss at an extremely low net cost.

In the Canning Industry values increase very rapidly during a short period, and Canners are realizing more and more the wise business economy of keeping these values fully protected against destruction by fire.

CANNERS EXCHANGE SUBSCRIBERS
AT
WARNER INTER-INSURANCE BUREAU

provide this protection at a cost so low as to make it ill-advised for any Canner to assume even a small part of his own risk.

There is every indication that the cost this year will be even less than the average. The accumulated saving for the first six months amounts to over $232,000.00.

Protect your values fully and your savings will increase proportionately.

Address Your Instructions To

Lansing B. Warner, Incorporated.
155 E. Superior St.,
Chicago, Ill.

The Markets

BALTIMORE, SEPTEMBER 3, 1923

WEEKLY REVIEW

Raw Tomatoes Are Dribbling in This Week—Glut Week, If It Ever Comes, Has Been Postponed—We Are Not Having "Tomato Weather"—Corn Pack Disappointing to Date—Quality Packing the Rule—Market Quiet and No Changes.

THE OUTLOOK—If one judged the tomato situation by the receipts of raw stock at this market this past week, he would be justified in feeling mightly blue as to anything like a real canned tomato output for 1923. Cannery buyers stand around waiting the few struggling and long-strung-out loads of tomatoes, dribbling in a few at a time, and not enough to keep one big house running full time, much less all of them. These buyers feel blue and discouraged, and think that the tomato crop has been badly hurt by the frequent and excessively heavy driving downpours of rains we are having—and they may be right. Considering that the tomato crop is at least two weeks late, the heavy, driving rains of this past week will have the same effect upon the tomato crop as if they came in the first two weeks of August in a normal season; and, as we have often said, such rains at that time mean the early ending of the tomato harvest. They may not hurt the green and ripe tomatoes then on the vines, but they cut off all hope of later yields, knocking off blossoms and small fruit. And it has been too cold this week for the finest development of tomatoes.

Travelers among the canneries of this section—the supply-men and others—all report conditions in the counties about the same as they are here in Baltimore, the crop ripening very slowly and coming to the factories in not large enough quantities to make a full day's run. You will recall that last season all hands watched for the 15th of September as the dreaded day when the bottom was to fall out of the tomato market (it fell out, but it blew upward and not down—see Biddle et al.), and this year all have predicted and waited for the 1st of September as the opening of the tomato glut. That day has arrived and there is no glut; and at this time of writing there is no promise that there will be any such glut—unless the weather turns scalding hot, as soon as this goes to press, and keeps hot for the next month or so. The vines are there, and they are fairly well fruited; but there is a touch of autumn about the air that does not look like "tomato weather." This is not a prediction—we are just trying to make real tomato weather arrive by saying that it is not here. If you know tomatoes, you know that nothing can make a liar out of a man as quickly or as surely as an attempt to predict a tomato crop.

We can add nothing to our last week's summary of the tomato situation, for there has been no change. The pack is on, but it is dragging everywhere—here in the East and out West, and wherever tomatoes are handled. If there were any life, vim and snap to trading conditions, there could be found, in this situation, every element for a bullish market. But the market being dead, the situation is viewed without interest, and the patient waiting goes on. And if the tomato crop follows suit to all others this fretful year, and proves only a mere percentage of what is expected and needed, the buyers will not worry—they will just go on waiting, paying the prices asked and taking their usual retail lots, to the end that they may insure frequent turn-overs in their stocks.

CORN—The corn pack, so far, is way below expectations and is disappointing to the canners. The early corn has yielded only about 50 per cent of normal, and while many of these canners hope that the late crop will be better and up to normal in yield, there are many of these now reporting that that condition cannot be expected from present outlook. As with tomatoes, all reports say that the quality is fine this year, and present weather conditions promise a continuance of this high quality, but there is immense room for an improvement in the quantity. Maryland has put up some of the finest quality corn she has ever packed, and is packing it carefully and well, but it will take a late and very favorable season to let them come out anywhere near whole. In the Central West some of the canners fear that the season is bunching up on them and that the corn will all come in at once. If this happens, it will mean the loss of some acreage, because the canners do not intend to try to rush the pack, or, at least, to handle more than they can take care of to produce fancy corn. That is the right spirit, and it will pay them better to leave the surplus on the stalks, and keep their entire pack in the high quality class rather than rush the pack and lower the quality.

Our readers will find a very interesting article on "The Best Canning Stage of Sweet Corn," on page 12 of this issue, from the pen of Prof. Appleman, of the University of Maryland. In this article the writer calls attention to the need of taking the corn at the right stage, and he shows the length of time that the corn may be left before pulling. Maryland is among the leaders in the production of high-grade field corn, and, understanding corn as they do, this article may be taken as an authority of the highest kind. It ought to be read carefully and kept by every canner of corn.

Ohio has been making a hard drive to raise the general standard of its corn pack, and they expect to see decided results this season, and we believe they will. Secretary Roy Irons, of the Ohio Canners' Association, has put out some broadsides on this, and recently got back an answer that is well worth quoting. All corn packers, no matter where they may be located, must make quality their watchword this year, and this writer's suggestion may help. He says:

Dear Sir:

We are indeed much pleased to notice the letters which you are getting out, urging the Ohio corn canners to put up "quality goods."

In this connection we might offer a little suggestion which may be of some use. Our own experience has

been that to secure fancy corn it is most necessary to start right with the grower. Ordinarily the grower is not equipped sufficiently to handle his entire crop when it should come into the factory. We have made arrangements with practically all of our growers to help them harvest their crop, and we are furnishing additional wagons and help so that they can get their corn in the day it is ready.

This year we are using large wagons and tractors to haul these wagons in, and are harvesting quite a few acres for the growers, making a differential, of course, in the price.

If a farmer has twenty-five acres of corn, we have often found that he will get the first ten or fifteen acres in as it should be, but the last ten acres get beyond the fancy stage simply because he cannot get it in the day it should come.

We have done more work with the grower the last two or three years than we have ever done, and we certainly find that it is paying well.

We believed that it might be a good thing if you would urge some of our corn canner friends to look into this method.

With best wishes, we are,

Cordially,

THE MARKET—There are no changes to report in market prices of any articles this week. Demand has been of the same slight kind, and such orders as were filled were for immediate shipment to supply absolute needs. It is in this that the real strength of the situation lies: Stocks are cleaned out as they never were before, and prices ought to advance rather than decline, and we believe they will.

NEW YORK MARKET

Market Shows Slight Improvement—Salmon Quotation Out—The 1922 Grape Fruit Pack—Maine Corn Two Weeks Late—Steamship Lines Handling Intercoastal Trade—Notes.

New York, August 30, 1923.

MARKET Livelier—Demand has shown a gradual broadening out during the past week, and business is on the increase in practically all divisions of the market. Jobbers have come to the conclusion that they have waited long enough and they are beginning to cover rather more extensively. Nothing in the nature of a boom is getting underway, however, and the buyers still profess to be rather skeptical as to the outlook. Nevertheless, they are buying in much better quantities.

More Tuna Than Expected—More white-meat tuna is available than had been expected, and buyers who were looking for 15 to 20 per cent delivery are being assured by their packers of 50 per cent and more. As a result of this, confirmations have been rather lighter than would have been the case otherwise. With ones bringing $19.00 per case, buyers are unwilling to tie up too much capital in them. The trade may not take them at the high prices ruling, buyers feel, and, again, the goods may have to be held in warehouse here until spring, adding at least another dollar to their cost before moving them out. Many buyers feel that they would prefer to risk having to pay a little more later on than stocking at today's prices.

Bluefin Wanted—Bluefin is meeting with a heavy demand this year, owing to the high prices on white meat. The extent of the probable bluefin pack is very uncertain, however, and it is believed that the output will be very light when the pack winds up. Italian style tonno is attracting more attention this year, and sales have been good.

Name Salmon Opening—Most of the leading independent salmon canners have opening prices on new pack, although the Association prices are not yet available. The general opening is as follows: Red Alaskas, talls, $2.25; flats, $2.65; halves, $1.65; Alaska Medium Reds, talls, $1.40; flats, $1.65; halves, $1.00; Alaska Pinks, talls, $1.25; flats, $1.35; halves, 90 cents; Alaska Chums, talls, $1.20; halves, 85 cents; Puget Sound Sockeyes, flats, $4.50; halves, $2.50.

Wedding Bells—Arthur P. Williams, president of R. C. Williams & Co., Inc., was married at his home, 105 West 72nd street, a short time ago to Mrs. Bertha Estelle Kublitz, writer and literary critic, of New Windsor, Md. Mr. and Mrs. Williams are sailing on the Mauretania for a short honeymoon trip through England and France, and will return to New York on September 25.

Canned Grapefruit Pack—There were approximately 500,000 cases of grapefruit canned last year, according to C. E. Stewart, of the Florida Citrus Exchange. Florida packed 250,000 cases of this total, Porto Rico being second with 200,000 cases, and California last with 50,000 cases. The call for grapefruit in the local market has "backed up" a trifle during the past month or so, but the product is reported to be going well in interior markets. The low prices at which fresh grapefruit is selling in New York is given as the cause for the drop in sales of the canned product here.

Tomatoes Quiet—Demand for prompt shipment tomatoes has eased off, owing to the nearness of delivery time for the new pack. Some of the packers are ready to send through some of their early shipments now, and the main pack is expected to get under way very shortly. Stocks on spot are not heavy, but jobbers are endeavoring to stretch them out to carry them over into the season for new packs.

Maine Corn Very Late—Maine's corn crop is more than two weeks late this year, and the pack is not expected to get under way until towards the middle of September, although normally the canneries would be opening up this week. Very little additional corn is being offered, as canners generally are unwilling to book more business under present conditions. A little Crosby could be had at $1.37½, however, it is believed. The spot market is bare of fancy Maine corn.

Standard Corn Wanted—The demand for standard corn has held up rather well during the past week, and $1.00 per dozen, ex-warehouse, continues the inside price on both Southern and Western pack. New pack standard is available at 90 cents, f. o. b. cannery, for immediate shipment, and there has been a little buying on this basis.

Peas Are Strong—Many wholesale grocers go into the new season with only limited stocks of peas on hand. Many of them gave the market the absent treatment early in the season, firm in the belief that they could pick up all they wanted later on at prices better than the opening. The abnormally late spring in Wisconsin, however, upset all calculations, and there has been a boom in the market. Many of the packers, unable to give their buyers more than a small delivery on standards, have given them extra standards at the price of standards, and jobbers have been able to piece out their stocks a little in this manner. The inside price on any peas for factory shipment now is $1.25, with very little obtainable even at this figure.

Report Bean Pack Curtailed—Frost coming at the height of the bean canning season in Maine is reported to have damaged the pack to some extent, and consequently a pro-rata delivery is looked for from many canners this year. New York State packers are practically withdrawn from the market, and Southern canners have also booked sufficient business to take care of their expected pack this season.

Standard Peaches Firmer—The market for new pack standard cling peaches has strengthened decidedly on the Coast. Canners who had been offering standards in assortments at prices 10 to 15 cents under the opening basis, have now advanced to the opening, and most of them are refusing to accept business on straight standards. The spot fruit market, however, continues quiet and upset as to price, with a weak undertone prevailing.

More Tonnage Available—Several new steamship lines are entering the intercoastal trade, and there are now more than 1,500,000 tons engaged in the handling of freight between Atlantic and Pacific Coast ports, via the Canal. A good part of the California and Northwestern canned foods pack is now handled by the water route, and shippers are wondering whether or not the entry of the new lines into the service will have any effect upon rates.

Notes—Walter B. Timms is back at his home at Elizabeth, following his recent operation.

John Kane, canned foods buyer for Wm. T. Reynolds & Co., of Poughkeepsie, N. Y., was in the market recently.

Walter J. Townsend, well-known broker, is back on the Street, after a pleasant vacation spent in the Canadian woods.

"NEW YORK STATER."

ST. LOUIS MARKET

Corn in Demand—Indications of a Good Crop—Missouri Tomato Acreage and Standing Ozark Fruits and Vegetables Will Net a Fortune.

St. Louis, August 30, 1923.

THE canned foods situation is showing an improvement, but it is still not showing much activity. There is some demand for goods, but most of the purchases are small. There is still much hand-to-mouth purchasing.

VEGETABLES—Corn—While corn is much desired, buyers will not purchase until they can secure concessions. Holders of corn are not inclined to do that. Nearly all packs are being held at firm prices. Canners in some sections are working on their new packs. Standard corn stocks are light, and with a better demand now than some time ago, jobbers are looking to see what they can find, but those who have any are holding on to it. Regarding the new corn crop in Missouri, there will be a good one in the northern section of the State, but in the southwestern part, unless it rains soon, the crop will be light.

Tomatoes—The situation is unchanged. Jobbers are stocking up in a small way only, awaiting their shipments of futures to arrive.

Peas—The marget is firm, and buyers quickly grab any Wisconsin peas that are offered. Nearly every jobber is in the market for more than he has.

Fruits—Jobbers continue to make inquiries for California canned fruits, but are not interested to place orders just at present. They are marking time for quotations. Packers are just as stubborn and continue to hold out. Spot goods are moving fairly well, but orders ore small. Prices, however, are well maintained. Fancy fruits are scarce and cannot be had.

Fish—All fish are moving about as usual at this time of the year.

Milk—No material change is noticed in the canned milk market. Prices continue as they have been for quite a while.

Corn Conditions—Again referring to the corn conditions in this territory, indications point to a good crop in Northern Missouri, all of Iowa and the central, northern and eastern portions of Nebraska. In Southern, Central and Southeast Kansas and in Southwest Missouri everything depends on a good rain soon. Rains came exactly right for Iowa corn. Nebraska will have a late crop.

Tomato Acreage—Missouri is increasing her acreage of tomatoes, planting this year 12,000 acres. This approaches that of 1919-1920, when 13,000 acres were planted. The maximum tomato acreage in Missouri was 17,000 in 1918, and the smallest, 4,300 acres, in 1921. The early season was too wet for the best culture of the crop this year, and July and August were too dry. The best producing counties were Webster, Stone, Wright, Douglas, Howell and Greene. Missouri ranks seventh in tomatoes grown, and raises 5 per cent of the total and only 3 per cent of the national packer supply. For this reason it is urged that producers sell only to domestic canners, and thus save freight costs and at the same time aid the home industry.

Ozark News—Farmers of the Ozark region will reap a fortune of more than a million dollars this year as a result of the unusually large fruit and vegetable crops, according to a survey recently made. With the $300,000 strawberry crop out of the way, the railroads are preparing to handle the smaller berries. Then will come the peaches. Although many of the peaches in the neighborhood of Poplar Bluff were killed, it is estimated that 500 carloads will be handled by the Frisco and Missouri Pacific Railroads. Besides, there will be a very large pack, as most of the canners in that section—and there are many of them—are preparing to go the limit in their pack.

Canners' Accounts Solicited for Tip-Top Buyers.

CALIFORNIA MARKET

Canners Busy on Pears and Peaches—Pear Growers Finding Crisp Market for Fresh Fruit—Fresh Fruit Shipments Make Record — Some Canners Short on Futures—Peas of Lower Grades Heavily Reduced—Better Grades of Salmon a Light Pack—Packing Sweet Potatoes—Coast Notes.

San Francisco, August 30, 1923.

CANNERS BUSY—The packing of peaches and pears is in full swing in Northern and Central California, with the output proving rather less than had been figured on. While there has been no excessively hot weather, fruit has ripened with a rush and the canning season is shorter than usual. The pack of pears is being cut down by the unexpected demand for the fruit for shipping purposes, and the high price being realized by growers. Shipments in the fresh state are much heavier than ever before, and high prices have lasted much later than usual. More than 6,000 cars of pears have left the State to date, or about a third more than a year ago. Shipments of deciduous fruits in general have passed the 18,000 car mark for the season, as compared with 10,000 cars for the same time last year. Shipments of plums so far have totaled more than 5,200 cars. The demand for the fresh fruit has relieved the pressure on canneries to a marked extent and has been most heartening to growers.

The Market—The market for California canned fruits is showing some increased activity, but buyers are not yet placing large orders for future needs. Some operators in the southern part of the State have found that they have sold short on peaches and apricots, which were packed in limited quantities there, and have come into the market to secure their requirements. They have bought rather freely of standard cling peaches and have found some packers unwilling to sell these in straight lots. The pack of peaches in the northern half of the State is running to the higher grades, canners limiting the quantities of No. 2 fruit they will handle. It is generally conceded that the output of fancy and choice grades will be at least as large as that of last year, but standards, seconds and water grades will show a material falling off. The pack of pears is proving lighter than that of last year and there is but little likelihood that it will make any material gain the rest of the season. The plum pack has proved quite heavy, but the demand for this fruit is showing a steady gain, and the movement of the entire pack is assured. Canned pineapple is arriving in large quantities from the Islands, but there is little to report on this fruit, the estimated pack having long since been disposed of.

Salmon—Opening prices on new pack of Alaskan salmon have been named by the Griffith-Durney Co., of San Francisco, the quotations being for goods f. o. b. Seattle. The prices are: Alaska red talls, $2.25; medium reds, $1.35; and pinks, $1.25. This concern reports that advices from Alaska indicate that the pack of chum salmon will be very light. In the Ketchikan district the pack of salmon has been large, as has also been the case around Chatham, but some of the Bristol Bay plants, where the best fish is packed, have had but a light run. The first vessel of the San Francisco fleet to return from the Far North has been the Bristol Bay Packing Company's steamer, the Costa Rica, which brought down a cargo of 26,145 cases. Late advices indicate that the Bristol Bay pack will be about 300,000 cases less than that of last year.

Tuna—Opening prices on tuna fish have been named by California packers, and these proved rather lower than was expected, considering the extremely high price being paid for fish. They were also lower than the tentative prices put out a short time ago by some of the smaller interests. The opening prices follow: Fancy white meat, ¼s, $6.25; ½s, $10, and 1s, $19; yellow or blue fin, ¼s, $4.50; ½s, $7.50, and 1s, $14; striped, ¼s, $4; ½s, $6, and 1s, $11. The pack of white meat is increasing and the outlook now is that buyers will have their orders for this grade filled in fairly good shape.

Sweet Potatoes—The packing of sweet potatoes will soon be under way and prices on these have been named by Libby, McNeill & Libby as follows: No. 1, 70c; No. 2½, 95c; No. 1 mashed, 55c; and No. 2½ mashed, 80c. Much of the sweet potato crop in California is grown in the vicinity of Atwater.

Figs—Kadota fig growers in the vicinity of Planada, Cal., are making arrangements to form a co-operative organization to handle this crop. The growers will co-operate with the

Beckwith Company, of Planada, which is under contract to erect a fig-preserving plant for the season of 1924. This year's crop will be shipped to the Beckwith plant at Reedley.

Coast Notes—For the first time an intercostal steamer is loading canned salmon in Alaska for the Atlantic seaboard. The steamship Commercial Traveler is taking a large shipment of salmon aboard at Petersburg and Ketchikan and will complete her cargo at San Francisco, where California canned fruits will be added.

The tomato crop in the San Ramon Valley, near San Francisco, is reported to be of unusually fine quality this year and shipments to the canneries will be commenced early in September. Cool weather has been the rule in the tomato-growing districts this season and the crop will come on a little later than usual.

Libby, McNeill & Libby, who secured a lease on 5,000 acres of land on the island of Molokai, in the Hawaiian group, some time ago, is planting 1,000 acres to pineapples this season. The work is being directed by L. E. Arnold, manager of the Hawaiian interests of Libby, McNeill & Libby. The fruit will be shipped to Honolulu to be packed, no plans for the construction of a cannery on Molokai being contemplated. The Eckart paper-mulch process will be used on all the plantings made there.

Mrs. James D. Dole, wife of the president of the Hawaiian Pineapple Company, Ltd., Honolulu, T. H., was a recent arrival at San Francisco. R. S. West, treasurer of this concern, is also making a trip to the mainland.

H. E. MacConaughey, who has been in charge of the sales division of the Hawaiian Pineapple Company, Ltd., for some time, has been elected vice-president of this concern.

BERKELEY.

CHICAGO MARKET

Market Shows More Activity—Car-lot Orders Again the Vogue—Kraut Canners Withdraw From Market—Most Tomato Canners Out of Market—Wisconsin Promises Fair Pack—Corn Statistics Must Be Rightly Considered.

Chicago, August 31, 1923.

THE Chicago market continues to show activity in canned foods, and snappy buying on a "Sellers' Market," and brokers are busy trying to find for the wholesale grocers the goods they need and must have for their private labels. Car-lot orders, which were scarce as mastodons' teeth three months ago, are now as plentiful as soft-drink parlors.

Sauerkraut—The kraut canners and packers have all withdrawn from the market and are naming no prices spot or future. It seems to have developed at the National Kraut Packers' Convention last Monday, held in Ohio, that we are going to have a poor crop of late cabbage, and that kraut packers have sold a lot of futures at prices that look too low. The pickle packers have also withdrawn all prices, and despite the fact that the crop-reporting bureau of the United States Department of Agriculture issued a report this week stating that the acreage planted in cucumbers was double that of 1922, the pickle packers have withdrawn all prices, spot and future, and say that the yield will be the shortest had for many years.

Canned Tomatoes—Indiana and Michigan canners have nearly all withdrawn tomatoes, and are naming no prices on futures. They have no spots on which to name prices. The Roy Nelson Canning Company, which operates eight or ten canneries in Missouri and Arkansas, writes to the trade as follows:

"Crane, Mo., August 24th, 1923.

"To Our Customers:

"Last week we had very hot weather over this territory, with very little rain anywhere, and tomatoes suffered severely; but this week we have had much cooler weather and rain over probably three-fourths of the tomato territory in Missouri and Arkansas. The cool weather and rain is going to be of very material benefit to the crop, and if we can get seasonable weather the balance of the season, this district should have a good pack of tomatoes. We can't have near the crop we expected six weeks ago, but of the nine lives usually attributed to the tomato crop, only two or three have been extinguished. The best reports we can get from other districts are some good and some bad—they are probably about equal. Considering the larger acreage that has been planted, no doubt there will be a right good pack of tomatoes, depsite the fact that some localities have suffered from unfavorable weather conditions. We have had rain over fully 50 per cent of our acreage, and we believe now our pack will be somewhere near the same as last year.

"Our quality so far has been rather poor, but we expect a slight improvement with the cooler weather we are having. I have visited quite a number of factories the past week, and the quality seems to be about the same everywhere."

It should be remembered that the Missouri and Arkansas packed canned tomatoes have a market usually in Oklahoma, Texas, Missouri and Kansas for all the canned tomatoes they can produce, and that but few of them ever get to the Chicago market.

The freight rate from Missouri to Chicago is about the same as that from Maryland to Chicago. Missouri packs some fine canned tomatoes, however, and so does Arkansas, and they don't put any surplus water or tomato puree in the cans.

Canned Corn—Canned corn is about sold up of the 1922 pack, and is getting hard to find. Sales were made of a few odd carloads to close out the factory holdings at Illinois factories this week at 90c f. o. b. cannery ,and the quality was standard only, and only standard.

I see that the United States Agricultural Department estimates that there is a larger acreage in corn for canning by 35 per cent than the acreage of 1922, but that corn for canning does not mean that there will be that much more canned corn.

The statistics are like those of the cucumber crop reported from the same source—accurate enough as to estimated acreage, but without taking crop conditions into consideration, and then corn for canning covers all the roasting ears that are being shipped to the market and eaten these days, and for which we city people pay the growers a much higher price than the canner can afford to pay.

Iowa and Nebraska canners have sold so far 1,555,928 cases of canned corn for future delivery from the 1923 pack, and they only packed 1,939,000 cases last year, and their orders are coming in now more rapidly. In 1921 they packed only 1,190,000 cases, far less than they have sold out of the new 1923 crop for future delivery.

The total spot stock in Iowa and Nebraska of canned corn of the 1922 pack is now less than forty thousand cases, made up of small less-than-carload lots at the various factories.

Canned Peas—In relation to canned peas, the story has been written, and there is nothing further to say. New York may have some unsold peas, but Wisconsin has very few, and Indiana has none. Michigan may have a few thousand cases unsold, but if that State has any, they are being held off the market for higher prices.

The Western Canners' Association will hold its fall convention in Chicago early in November, and the several sections of the National Canners' Association will probably meet with it—Corn, Tomato, Pea Sections—and probably a session of the National Kraut Packers' Association will be held at the same time.

Called or informal sessions of the National Canning Machinery and Supply Association and of the National Food Brokers' Association may be held at the same time and place.

The exact date in November will probably be announced next week, with particulars as to headquarters, etc. There will be no canned foods exhibits.

THEY ADULTERATE VACUUMS

We know a chap who received a gross of vari-colored electric light bulbs the other day. They were fitted with corks and contained liquid matter of an exceedingly "high voltage."

He was all lit up while the "current" lasted.—L. Hanson.

JUST TO AMUSE BABY

It was a sultry afternoon and the sun beat fiercely upon the city pavements. The carpet merchant leaned flabbily against his goods.

Two women entered the store and in the arms of one there basked a crowing infant.

"Can you show us some carpets" asked the woman with the baby.

"Madam, I can," said the storekeeper.

And he did. Again and again he did. Roll after roll he spread before their critical eyes. The perspiration rolled down his cheeks.

At last. "Don't you think," said one, glancing at her watch, "that it is time to leave?"

"Not quite, dear," said her friend, patting her infant fondly on the cheek. "We've plenty of time to catch the train and baby does love to see him roll them out!"

DIFFERENT NOW

"I understand your wife wouldn't permit you to carry a latchkey when you were first married."

"That's all over with," replied Mr. Meekins. "Henrietta doesn't care whether I have a latchkey or not. I always stay in the house nights to let her in when she comes home."—Washington Star.

PRETTY SOFT

Two boys visited a doctor's office. They had no sooner closed the door than one of them placed his hand over his ear and jumped around, first on one foot and then the other, exclaiming: "There he goes; there he goes!"

When asked what was the matter, he said he had an insect in his ear.

The doctor placed the boy before a window and with a concave mirror threw a bright light through the ear speculum. The insect saw the light, crawled out to the edge of the speculum, and the doctor picked it off with his fingers.

"Thank Heaven! How much is it?" asked the boy.

He was told one dollar.

The other boy, who had been watching the proceedings, exclaimed: "One dollar! Why, that's a bit stiff. You never took out that insect. It walked out."

LONG LEASE OF LIFE

Th edoctor looked him over, spent some moments in profound cogitation, and then delivered the bad news:

"You must diet."

"Ugh!" grunted the patient.

"You must eat less," the doctor explained.

"Aw, doc."

"I tell you, my friend, you are digging your grave with your knife and fork."

The patient brightened visibly at this.

"Oh, well, with those implements it is going to take a long time."

Vol. 47 BALTIMORE, SEPTEMBER 10, 1923 No. 3

EDITORIAL

RIGHT WAY TO SETTLE THE SWELL ALLOWANCE—We have had it unofficially pointed out to us that whereas the committee members from the Wholesale Grocers' side of the question, apparently heartily agreed with the suggestion, made by canner members of that committee, to establish warehouses for the assembling of spoiled foods and helped set the movement afoot for the approval of the food authorities, when they met with the retailers in their National Convention, they very vigorously and determinedly opposed the appointment of such warehouses We say our information came from unofficial sources, but in a way that we trust implicitly. And this is only what might be expected, for the wholesalers are anxious to be entirely free of the handling or considering of swelled canned foods. It's a nasty mess, they say, and they want no more of it. Compared with the ease and comfort, not to say delight, of merely charging the canners with losses as they occur, or of pocketing the allowance whether or not losses occur, one can hardy blame them for standing pat for a flat allowance and no proofs. But the canners cannot endure under such an arrangement; it would financially bankrupt the strongest of them, and it is ever the strong ones against whom such claims are made—it is so much easier to collect from the good firms.

If we are going to adhere to the customs of 1860 and base our present day trading operations on the unknown and untried conditions then existant in the canning of foods; if we are going to throw into the discard all the wonderful strides made since the early days of canning, the progress in scientific investigation and the improvement in machinery as well as processes; if we are going to continue to guarantee the goods as if we knew no more about the art of preserving now than we did in 1860, then, since the Government will not permit the return of the goods claimed as swells, the canning industry will have to set up its own machinery, establish a Bureau in the National Canners Association and give full time and attention to this one question. This Bureau will then stand responsible for all swell claims, and all such claims must be made to it. They can rapidly develop a smal corps of experts, who will examine the goods and pass upon them, making prompt settlements on all claims. Instead of giving this one-half of 1 per cent, or one-quarter of 1 per cent, or whatever the final amount demanded, the buyers turn it into this Bureau. That will finance the Bureau, and at the end of the year, after expenses have been covered, the residue may be returned pro rata or credited on the next year. Since the canners are granting the allowance to the buyers, with no prospects or hope of return, financing this Bureau in this way will not only not cost the canners anything, but they will have the chace of a return. The buyers cannot object, for certainy the guarantee of the Association, comprising the bulk if not all of the canners, is better than that of any single member. The Association has all the machinery at hand for the handling of all such cases, and so it can give speedy attention to all demands. Both the buyer and the seller may feel sure of fair and prompt treatment, and after a year's trial, or so, we will know definitely just what percentage of loss canned foods may rightfully be charged with. We hesitate to say this, for fear of driving the jobbers away from the idea—though they have nothing whatever to do with it, as it rests entirely with the canners—but we do not believe this Bureau would have any amount of work after the second year. To our mind, here is the real solution of this swell claim matter: pay the allowance into your Bureau instead of into the coffers of the wholesale grocers or others, and let the Bureau handle all these questions.

The National Canners Association will gladly lend itself to this work, because it means a big benefit to the canners. But the thing is to get action. Something must be done, for every day they are signing up more and more on this flat allowance, and soon the entire industry will be hog-tied and done for. Write to Secretary Frank E. Gorrell, Washington, and let him know where you stand in this; express your opinion; get behind this movement and the Bureau may be formed at the fall meeting of the Board of Directors of the Association.

IF YOU COULD BUY SOLID SILVER FOR LESS THAN PLATE—Is the heading of one of the best sales arguments we have yet seen emanate from a canner's office. Everybody knows that Frank Gerber, er-President of the National Canners Association, is a live wire and hustler, but in the following we think he has added further glory to his reputation. Here is what the circular says:

> A similar opportunity is offered the housewife, and you can profit by putting her in position to take advantage of it.
>
> Next Saturday morning sell this proposition to the salesmen:
>
> FRESH LIMA BEANS used to sell for $1.80 per dozen, while Standard Peas were about 90c to $1.00. As a consequence the housewife did not include the Limas in her every-day diet, but used them when she wished to indulge the family in a little luxury.
>
> Now, Standard Peas are selling for about $1.35. MISS MICHIGAN FRESH LIMA BEANS are to be had at the attractive price of $1.05. What will she do if afforded an opportunity? Well—
>
> Put this up to the salesmen, show them samples—tell the story—
>
> We'll bet we get an order—and repeaters.
>
> Send now if you want the MISS MICHIGAN FRESH LIMA BEANS on hand Saturday morning.

> Fremont, Neb.

APPRECIATION—Just as we reached this stage of the editorial our letter-man handed us this:

"Inclose $3.00 for my subscription to the best-informed journal of its class in the country."

That's awfully nice, and we certainly do appreciate it; and what's more, we are going to dig harder than ever to find more and more good information for the best industry on earth, as exemplified by such men as the above writer. He kindly offers to keep us informed on conditions on his section—that's what we want—and from all our big, and rapidly growing, family.

SECRETARY GORRELL DOES FINE WORK—Our entire industry felt deeply shocked when the unfortunate illness and untimely death of Presient Harding was, unwittingly, ascribed to the eating of canned foods. We believed this could not be true, but the prominence of the man and the excitement in the public mind at the loss of our President, made it almost impossible to correct the error. Moreover, the statement had come from high authority, a member of the Cabinet and a fellow-traveler on the trip with the President. Fortunately, the newspapers did not give much attention to the statement, and it is safe to say that the vast majority of the people never knew that his death had been ever mentioned as due to eating canned foods. But there are always a certain number of scare-head writers who eagerly grasp and preserve for future use such incidents as this, and these men had to be silenced by facts. Secretary Gorrell faced a huge task when he attempted to get retraction from the doctors in charge of the late President, but in his usual diplomatic way he kept persistently at it, and has succeeded in having all three of the doctors attendant upon the President—Drs. Sawyer, Cooper and Wilbur—state that canned foods had nothing whatever to do with his illness and death. It is not that these men were unwilling to state what they knew to be the truth, but the original statement having been attributed to a fellow-doctor, a member of the Cabinet, it brought about a delicate situation not easily handled. The daily papers everywhere have carried the retraction, and so the industry is cleared of this highly unfavorable blot against its fair name. It stamps our popular Secretary as about as neat a diplomat as can be found.

SOWING DISCORD AND SUSPICION—We regret to note some of our trade journals sowing the seeds of discord and religious and racial antagonisms, because there is too much of that in the air today without being added to by our usually clear-thinking and level-headed trade journals. The late President Harding will live long in the hearts of his countrymen, because of his kindly heart and broad, charitable instincts, for his true conception of American liberty. His address at Colorado Springs in July, 1923, will go down in history, and we would recommend to these misguided journals these two passages from one of his last public addresses:

> "I tell you, my countrymen, the world needs more of the Christ; the world needs the spirit of the Man of Nazareth. If we could bring into the relationships of humanity, among ourselves and among the nations of the earth, the brotherhood that was taught by the Christ, we would have a restored world; we would have little or none of war, and we would have a new hope for humanity throughout the globe."
>
> "If we are going to make of this America of ours all that the fathers sought, if we are going to make it true to the institutions for which they builded, we must continue to maintain religious liberty, as well as civil and human liberty. As you remember, we builded on the foundation of civil liberty, and we capped that with the stone of human liberty, and the third fundamental was religious liberty. The United States never can afford to deny religious freedom."

CONGRATULATIONS—Our E. C. of the West made a wonderful clean-up, as evidenced in its last edition; washed its face and hands, and it now looks, almost, as nice as The Canning Trade.

TO OUR CONVENTION PROGRAM BUILDERS!

"Uncle Jerry," one of our well-known Baltimore writers, says in The Farmers and Merchants Messenger—and we desire, most heartily, to pass it on to all speakers at Canners Conventions, soon to meet:

> "Oratory may be all right, but horse sense has it licked. Edward Everett, who made the principal adress at Gettysburg, talked for two hours and twenty minutes. No one recalls what he said. Abraham Lincoln used 268 well-chosen words. They wil live for generations."

FREIGHT RATES & SHIPPING NEWS

Traffic Bureau

THE CANNED GOODS EXCHANGE OF BALTIMORE

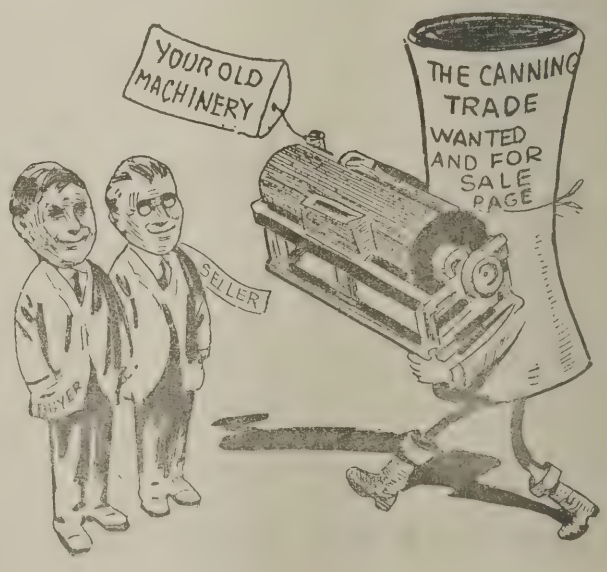
Effective September 20th, the Merchants and Miners Transportation Company has extended the application of rates on canned foods to include condensed or evaporated milk, in metal cans; also when containing vegetable fats or chocolate and malt. Clyde Line tariffs, effective on or about the same date, carry similar extension, and in addition, prepared cocoanut, other than dessicated, in metal cans.

The Southern Pacific Company has filed formal petition with the Interstate Commerce Commission to be permitted to make drastic reductions in its rates from New York piers to Pacific Coast, so as to bring its services in competition with the inter-coastal steamship services operating through the Panama Canal.

Recently the Interstate Commerce Commission granted permission to the Southern Pacific to reduce the rates on about 94 commodities from New York to the basis in effect from Chicago at the time the hearings were begun, namely, September 4, 1922. The Southern Pacific is dissatisfied with this permission, hence now propose to actively meet the all-water rates.

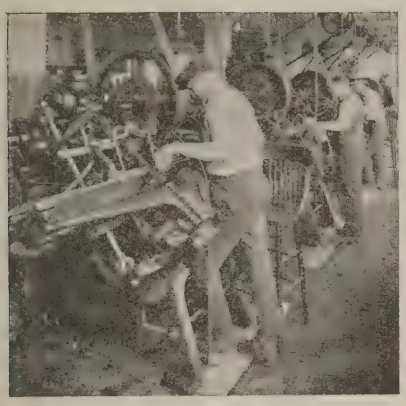
A NEW LAKE AND RAIL SERVICE

THE Baltimore and Ohio Railroad Company announces the opening of a rail and lake route to and from points on its line east of McSpadden, Pa., and Thornton, W. Va., via West Fairport, Ohio, in connection with the Rutland-Lake Michigan Company, through Chicago, Ill., and Milwaukee, Wis.



The rates applicable in connection with this service are the usual lake and rail differentials under the stanard all-rail rates.

East-bound rates will be found in Agent Jones' Tariff I. C. C. No. 1415, effective June 28th, 1923.



West-bound rates will be found in Agent Wilson's Tariff I C. C. No. 105, effective July 2nd, 1923.

Copies of these tariffs, or information regarding the service, etc., will be furnished by representatives of the Baltimore and Ohio Railroad, or the Rutland-Lake Michigan Transit Company.

There will be three sailings per week in each direction.

Conditions Of Crops In All Sections

Crop Reports By The Canners

Darlington, Md., August 30—Tomato crop is fair in this section. Will run 85 per cent normal, with a large acreage and fine raw stock; will be in full running next week.

Pennington, N. J., August 30—The tomato acreage with us is above the normal, and we have prospects for a good yield. We will not open before the first week in September, and the size of the pack depends entirely upon the season. It may be very large or very small, all depending upon frost.

Verona, N. Y., August 27—We have normal acreage. Corn crop looking fair Earing fairly good. Weather too cold and dry for best results in growth. Probably have 75 to 80 per cent pack.

Homer, N. Y., September 3—Extreme dry weather has greatly reduced pack of beans. We are nearly through, with just a fair pack, but will have to have water in order to amount to much.

Oswego, N. Y., September 4—Owing to the severe drouth and hot weather, our bean pack has just been completed, with the pack 50 per cent of normal. The Bartlett pear crop is estimated at 20 per cent and apples not much more. Prices being paid to farmers for both of these fruits are extremely high in comparison with last season.

Washington, Ohio, September 4—Corn coming into plant in good shape. Acreage running normal. Prospects good for a fair pack.

Sheridan, Ind., September 4—The best we can expect will be 50 per cent of normal on tomatoes; corn, 75 per cent.

Summitville, Ind., September 3—Canning crops of all kinds very short. Tomatoes will not exceed 50 per cent of a pack. Hardly started to pack anything yet, and fully two weeks late. Nothing but a very late fall will give us more than a 50 per cent pack.

Streator, Ill., September 1—Corn, 75 per cent yield on 75 per cent acreage, as compared to 1922. Quality, good.

Seattle, Wash., September 1—The Northwestern packing season is swinging into its last stretch. Oregon is well started on blackberries and Washington is now beginning.

The packing of Bartlett pears has been in progress in both States for two weeks.

Prunes will begin to ripen in Southern Oregon in about ten days.

Apples will not be ready for canning until early October.

The canneries are progressing into this late season in a state of mind that we have never seen paralleled in the industry.

Heretofore, Northwestern canners have been an aggressive bunch of young men, ambitious to make just as big a pack as possible. Right now, they are flat and indifferent. They all have a fair volume booked of the late items, and they do not seem to care whether they book any materially increased volume or not.

The situation is well summed up by one of the most experienced of the canners: "I mae a heavy pack of all of the early items. My total is somewhat larger than last year. The general experience was not satisfactory, but I made a little money, provided my customers take immediate delivery on their contracts. I have no surplus of anything, and I would just as soon quit this season right here. I will pack the orders that we have booked for blackberries and apples, and then we will close the plant and take a rest. I do not want any additional business on these late items unless I can get it at prices that will earn me a profit. Why should I take a chance on a loss on my season's operations and wear myself out packing a lot of merchandise that the wholesale grocers do not want to buy?"

That is just the way the canners feel. They have had a trying year because of the mental attitude of their customers, because the market has not been disposed to pay them a profitable price on anything.

Some of them are just a little bit tired of being nagged by their banks, who are after them every week to make certain that they do not over-pack.

They would like to rest now and prepare for what they believe will be a good season in 1924.

They can see the shortage of spot stocks and they feel that general market conditions in 1924 will be the reverse of 1923.

The total pack of syrup grade of fruits and berries in the Northwest to date is somewhat heavier than last year, and it is a remarkable fact that this pack is more cleanly sold than it was last year.

The pack of No. 10 items to date is much less than last year. This is because the trade did not develop its future requirements and the canners refused to again put themselves in the position of being compelled to make sacrifices in order to clean their stock.

To appreciate the extent to which the pack to date has been sold, you ought to come out to our office and read the spot list of all of the canners.

When one of the big canners offers a spot list of only 18 items, with all but three of them less than one-hundred-case lots, you can appreciate that there has been a real clean-up.

Packing conditions in regard to the four (4) items now in the canneries are as follows:

Blackberries—Outlook for a pack about one-quarter less than the short pack of last year. A number of the canners tried to buy blackberries at 3½c, which would have permitted a $5.00 price. Without exception, they will find that the pickers will not bring in any volume at this level. They are being compelled to decide whether they want blackberries at 4c or be content to make a very small pack. The No. 10 blackberry market is on a very definite $5.50 level, with a few small factories disposed to take business at $5.25. A number of the larger canners will refuse to take business at less than $6.00. They are packing their orders and quitting. A few small canners will probably pack some excess above orders, but the larger packers, without exception, are not going to repeat last year's experience of making an excess pack and selling at a loss.

Bartlett Pears—The Northwest for the first time in history is in a reverse position on Bartlett pears. Heretofore, California canners have paid such a high price for Bartlett pears that the Northwest canners have been able to figure their stock at lower prices and have been able to under-quote California. This year the California canners pooled together and forced a price from the growers of $35.00 per ton. They tied up a considerable tonnage at that figure and have been making a moderate pack of pears. When the pear season was actually in progress, the fresh market took Bartletts at a higher level than the canners' price and California canners have had trouble in getting deliveries on their contracts. The Northwest canners took their cue from California and refused to contract until they could get pears at a California level. The fresh market spoiled their plans. A few orchards were purchased at $25.00 per ton, which meant $35.00 to $40.00 per ton delivered at the canneries. Then the damage to the New York crop became a market factor and the canners found that they were unable to buy sufficient pears to fill their contracts. They kept raising their bids against the fresh fruit market until now their Bartlett pears are costing them $55.00 per ton delivered at their canneries, and several of the larger canneries are still short on Bartletts, wth the season approaching an end.

Apples—The general tone of the future apple market in the Northwest is very much stronger than it was two weeks ago. Part of this is because of the damage to the New York crop by a severe wind storm an part of it is because the canners are beginning to soberly figure their costs and to doubt the wisdom of packing apples at $4.00 when that price does not pay the overhead expense of keeping their plants open. Also another reason for the strengthening is that the two canners who were fighting each other trying to book a volume of apples at $4.00, have both decided that $4.00 apples are not worth fighting for, and that there really isn't much glory in taking on a volume of business that rewards a large measure of grief and labor and returns no profit. The pincipal apple packers of the Northwest are firm at $4.25. Most of them will pack just the business they can get at that figure and will pack no more. With increased costs of labor and cases, this price is equal to the $4.00 price of last year. The tardy buyers who waited last year for bargains and have been recently paying $4.50 to $5.00 for apples, should take a leaf out of this experience and carefully pick good packers with whom they can make a satisfactory contract now. They stand to take no loss in contracts on the present markets and they stand to be without satisfactory apples if they do not arrange to have them packed. It is our observation that the total volume of No. 10 business as booked by the country is far below the volume that will be required.

CHICAGO MARKET

Never Enough Fancy, Graded String Beans to Supply Demand Corn Canners Striving for Better Quality—Wisconsin and Michigan Sold Out of Peas—Tomatoes Wanted for Prompt Shipment—Michigan Peach Prices.

IT is reported that the beet crop for canning purposes in Wisconsin is not doing well, and canners of beets are reluctant sellers and brokers are finding difficulty in placing additional business on canned beets.

There are a number of canneries in Wisconsin which pack graded or sized Refugee green beans, and there are several canneres in Michigan which also pack such beans, using the No. 1, No. 2 and No. 3 size to grade and pack whole in the can, and No. 4 and No. 5 size for cut beans. There never are enough of these fancy graded beans to supply the demand, and it is reported that New York canneries are buying up all the surplus green beans in Wisconsin and Michigan, apparently being short on the deliveries of contracts which they have sold.

Iowa, Illinois, Indiana and Ohio are all actively engaged in the canning of corn, and the canned corn packing will be at its height from now until about the first day of October. The acreage is stated to be large in those States, but the yield is said to be below the average, and canners are confining their attention chiefly to extra standard and fancy qualities. These conditions will reduce the output of canned corn to a very important extent, and it is doubtful if the pack of canned corn in the Central West will exceed that of 1922.

Canned peas present many difficulties to the buyer who has neglected to purchase his supply and to the broker who has orders from his buyer for most any grade. Wisconsin and Michigan are practically sold out on canned peas of 1922 pack, except scattering and less than carload lots at various factories, which are being held to some extent for filling small orders from regular customers. Indiana is, of course, closed out on canned peas entirely.

A number of canneries which did not pack canned pumpkin last year are putting up a pack of that article this season, from the fact that there is a demand for it from the buyers who have practically sold out down to the floor every case of canned pumpkin that they had.

Canned sweet potatoes are coming into demand, but the demand is not large. It seems very difficult, indeed, to work up a big consuming trade for canned sweet potatoes. The fresh vegetable dealers keep them in sand and various ways for quite a long time, almost until the first of January, and consumers seem to like to buy them in the jacket. An advertising campaign in magazines and consumers' papers of canned sweet potatoes would be very appropriate and desirable just now, in order to place this article, which is of splendid wholesome and economical value, higher in the estimation of the consumers. Canned sweet potatoes never have been advertised or exploited to any important extent with the consumer. If they had, there would be such a demand for them that the canneries would be taxed to their capacity, as there is no article in canned foods more relishable, desirable or economical.

Canned sauerkraut is in an indefinite situation. The kraut packers have learned that the supply of late cabbage, in localities where it is largely grown for kraut-making purposes, is likely to be very short, and they have, therefore, withdrawn all selling prices for both spot and future sauerkraut, and are waiting until definite information is secured in relation to the cabbage crop.

Canned tomatoes are in demand for prompt shipment, especially from Indiana, Michigan and nearby points. Indiana is not offering any tomatoes at present, and it is difficult to place an order in that State for tomatoes in any size cans. Missouri is not making any prices as yet on canned tomatoes, and Michigan is practically withdrawn from the market, and is refusing to take more orders.

Our wholesalers in Chicago are beginning to look to Maryland for supplies, and will probably have to begin to place their orders in the peninsula of Maryland for canned tomatoes.

Canned apples are in some request. Michigan is holding firm for winter stock for $3.25 per dozen for No. 10 cans. New York is holding at $3.50 per dozen for No. 10 cans. Arkansas and Mssouri have not yet named prices on canned apples, b are expected to do so soon.

Michigan canneries have named prices on canned peach of 1923, which are as follows:

Michigan Peaches, 1923 Pack.

Halves.

No. 2½, water	$1.45	No. 10, water	$4.7
No. 2½, 20 deg	1.75	No. 10, 20 deg	6.0
No. 2½, 30 deg	1.90	No. 10, 20 deg	6.5
No. 2½, 40 deg	2.05	No. 10, 40 deg	7.0
No. 2½, 60 deg	2.35	No. 10, 60 deg	8.0

Sliced.

No. 1, 20 deg	$0.90	No. 10, water	$4.7
No. 1, 40 deg	1.00	No. 10, 20 deg	6.0
No. 2½, water	1.45	No. 10, 30 deg	6.5
No. 2½, 20 deg	1.75	No. 10, 40 deg	7.0
No. 2½, 40 deg	2.05	No. 10, 60 deg	8.0
No. 2½, 60 deg	2.65		

Whole Spiced, Whole in Syrup.

No. 2½, 20 deg	$1.65	No. 2½, 30 deg	$1.8
No. 10, 20 deg	6.50	No. 10, 20 deg	6.0
No. 2½, 40 deg	$1.95	No. 10, 40 deg	$7.0

Their prices are about like those of last year, and the crop is said to be, though not large in quantity, good in quality.

The general market on canned foods is active and wholesalers are disposed to buy freely. In fact, they have to buy freely because their stocks are so low that they are beyond a line where they can transact business profitably, and they are compelled to replenish.

WRANGLER.

MAINE MARKET

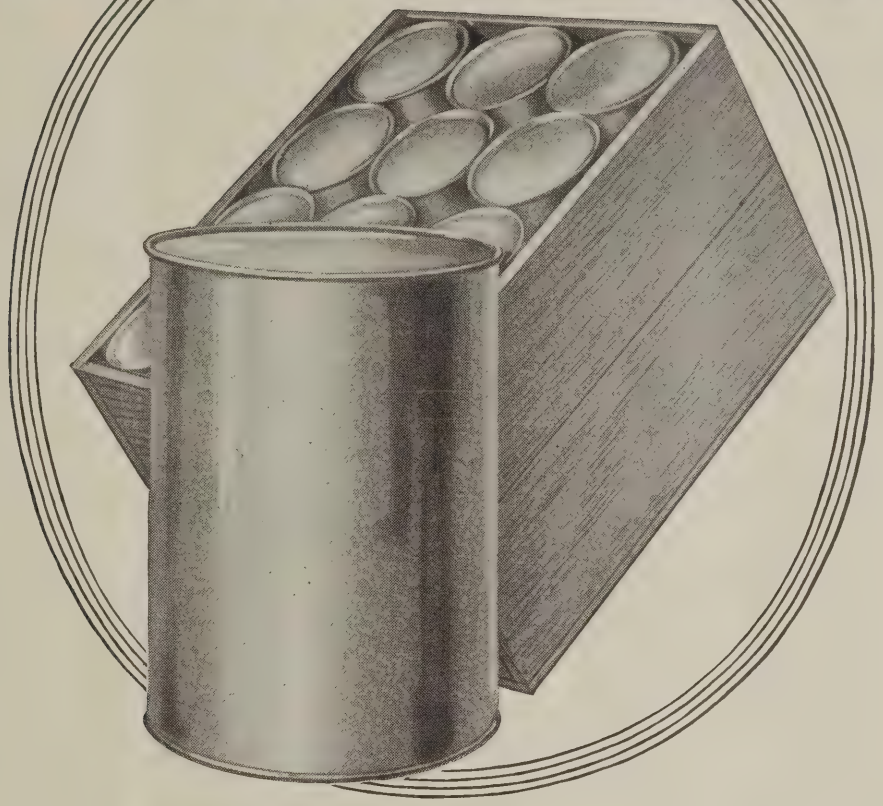
Some Few Factories Begin on Corn—Hoping to Beat the Frosts —String Beans Better Than Expected—Smallest Sardine Season for 40 Years—Blueberries Winding Up— Apples Ripening.

Portland, Me., Sept. 7, 1923.

ALTHOUGH one or two early locations report that corn is coming into the factory in small lots this week, the general date for opening up on the regular pack will be September 11th, about two weeks later than the average date. Such corn as withstood the early difficulties has also survived the recent drought and is in a healthy condition, though aboot two weeks later than usual. The yield per acre, considering the amount planted, will be low this year, but the yield per acre from such pieces as have weathered the summer will produce a very fair average. The moon will be full on the 24th, and that time usually sees heavy frosts, but the whole season this year has been so unusual that we are hoping to get through the corn pack without a freeze-up.

The stringess bean pack is about over, with rather better results than were anticipated, but by no means a satisfactory season. Probably about all of the canners will have approximately 100 per cent to deliver on contracts, but there will be no surplus after these orders are filled.

The sardine problem is very vexing, as the canners have no precedent to guide them this year. This is the smallest season for more than forty years, and even now, when the summer run should be at its heaviest, the fish are not coming in fast enough to keep the factories running full time every day. Nearly all packers are working now on current orders and have no promise of getting ahead of their sales unless the run of fish continues unusually late.



Prices have been advancing steadily ever since the opening of the selling season, and are quite likely to go even higher unless factory conditions improve quite immediately. Today prices are unsettled, according to how badly the buyer wants a few goods or how many the canner has to sell.

The blueberry pack is stil on, but is nearing its close this week. Should the weather hold good, the late berries might continue to ripen for another week or so, but not in sufficient quantities to make canning profitable. The quantity this year has not been large, but the quality is said to be very good, indeed.

The apple orchards are beginning to show the color of fruit among the leaves, and early fall varieties are now to be had in the markets. Maine canning will not commence until after the first of October at least, and in many factories not until November. Our winter fruit is late in ripening, and very little fall fruit is canned here.

MAINE.

HEEKIN CANS

Heekin Cans Meet Every Requirement

For years the Heekin Can Co. has made good on its contracts in both quality and service.

Many large canners are enjoying their canning seasons and saving money by using Heekin Cans. For these cans are exceptionally satisfactory - - the strongest cans made. They prevent loss of time and money.

There is a Heekin Can for every need, from the small fruit and vegetable cans to the large lard or sorghum containers.

Mother nature specifies the crop you will pack. Heekin Cans will be delivered at your door to meet these specifications.

Let us know your estimated canning requirements and we will gladly send you complete information. Write today to

THE HEEKIN CAN CO.

New, 6th & Culvert Sts. **Cincinnati, Ohio**

MEETING OF

The National Kraut Packers Association

Cedar Point, Ohio, August 27, 1923

THE meeting was called to order at 10.25 A. M. by the president, W. W Wider.

Minutes of the last meeting were read and approved.

The attendance exceeded that of last year at this time, and all showed much interest in all the proceedings. In fact, more interest was shown than in the past on advertising.

Mr. C. C. Parlan, representative of the Curtis Publishing Company, Philadelphia, gave a very interesting address on Association Work and Co-operative Advertising through the Association. In a very forcible manner he thoroughly explained how the sales may be increased by co-operative advertising. He held the audience for over one hour, not one leaving the room, showing that his address met with favor by all.

Following Mr. Parlan's address, the secretary read some testimonial letters which showed that the interest of the consumer was still being maintained by the Advertising Campaign. The Secretary also read the list of kraut packers who were supporting the advertising, which showed that there were 15 more firms behind the movement this year than last. He also reported donations from the St. Louis Cooperage Company, Elyria Canning Company and Libby, McNeill & Libby. The Secretary also gave the tentative future schedule of advertising as practically adopted by the committee, which showed that the Saturday Evening Post would again be the leading medium followed by some special advertising in the Elks' Magazine, Normal Instructor, Progressive Grocer and in all probabilities the Journal of American Medical Association. Following this, the Secretary read the crop report, which was very interesting to all, showing that there was considerable damage being done to growing crops by dry weather, disease and insects.

Swells—This matter was again brought up and discussed in the meeting. The members generally felt that they should stand by their motion made at the Detroit meeting. However, it was the feeing of some that we should wait until the Committee of the National Canners Association had reached a decision. But others expressed themselves that as far as the kraut item among canned foods was concerned, that this Association packed 75 per cent of all kraut packed in the United States; therefore felt that the Association was large enough to be able to say what should be done in the matter of swells on sauerkraut.

Grading—Following luncheon, the matter of grading was discussed. After the Detroit meeting, the President appointed three grading committees, the first, termed the Eastern Grading Committee, with B. E. Babcock, chairman. He reported that in the opinion of his committee there should be three grades of sauerkraut, and that they recommend the appointment of a general committee, meaning one from different sections of the United States, and tests made of the lactic acid content, and thought possiby that they would find that this should be the basis for establishing definitions for the grading of sauerkraut. He further related that more harm was done by shipping out kraut not containing the proper amount of lactic acid content; and then, on the other hand, some sauerkraut was left to get too sour, and recommended that the committee be appointed to work out the minimum lactic acid that should be contained in palatable sauerkraut.

Following him, Mr. B. W. Weller, chairman of the Central Grading Committee, reported that his committee had tested 16 cans using the Acetic Testing Outfit, No. 149, and found that kraut varied in lactic acid content, but the committee did not particularly agree on any maximum amount.

Mr. Huppert, chairman of the Western Grading Committee, being absent, the president called on one of the members of that committee, Mr. Hamiton, of New London, Wis., who stated that he agreed with Mr. Babcock that some kraut was too sour and some not sour enough, but in all events kraut must be of fine flavor. The president called on the other member of the Western Committee, Mr. Meeter, who stated that he was not in a position to discuss the matter, owing to the fact that the committee had never met.

Mr. Wallace, of Libby, McNeill & Libby, stated that he understood that the Government required a lactic acid content of 2.04 for well-cured kraut in the tank—that a test of all tanks should be made before packing for shipment, and believes with the balance that a minimum should be set by a committee and then presented to the Association for action. At this point the grading was set aside for a few other matters and later taken up.

In the meantime the President presented the following applications for membership:

Magnolia State Canning Co., Newton, Miss.
Green Bay Canning Co., Green Bay, Wis.
Big Wolf Kraut Co., Shiocton, Wis.
F. A. Kauffman Mfg. Co, St. Louis, Mo
Jacob Dold Packing Co., Buffalo, N. Y.

Associate Member:

The Hauser-Stander Tank Co., Cincinnati, Ohio

They were duly elected.

Mr. Meeter, chairman of the Seed Committee, made a report on the progress of the Disease Resistant Cabbage Seed, stating, in part, that Dr. Walker was now in Washington looking after the harvesting and the seed would be shipped at once; that the secretary had just issued a letter notifying all members of this fact, and for them to send in their orders at once. The varieties available at this time will be the All Seasons and Brunswick. In view of the fact that the Association will not have any surplus seed, it was moved "that this seed be for members in good standing that cut kraut only." Seconded and carried.

The President then stated that for some time the Association had been thinking of adopting a slogan and presented the one submitted by Mr. McMurdy, of the Conover-Mooney Company, "Sauerkraut, It's So Good For You," and they asked for additional slogans, of which many were given.

Following several cans of sauerkraut were then cut and lactic acid test made by B. W. Weller, who had his testing instrument present. Owing to the fact that the results of this testing are still in the hands of Mr. Weller, we are unable to give it. However, recent test was made at this office by Mr. Weller, July 18th and 19th. The first test shows 2.03. This juice was taken direct from a tank, the balance being canned.

The meeting did not adjourn until 5 P. M., and was busy every moment.

AUTOMATIZATION AS SOLUTION TO LABOR SHORTAGE

By Russell B. Williams,
Link-Belt Company, Chicago.

IN a recent issue of a Chicago newspaper there appeared what seemed to me the outstanding cartoon of the year. Divided into two parts, the upper portion of this cartoon illustrated a manufacturer standing in the door of his busy factory, arms outstretched, beseeching the government to let down the bars to immigration and provide him with more labor. The second portion showed a vast army of unemployed men (the result of unrestricted immigration) over which walked a red propagandist sowing seeds of discontent and revolution.

And so it is. Sufficient labor in times of prosperity and progress react upon their former employers in times of depression. And while there are admittedly two sides to the question, there is at the present time a surplus of 500,000 jobs, and all the evidence in the world that the existing labor shortage will continue for some time to come—if not actually grow. However, that same labor shortage may be a blessing in disguise by way of acting as a stem to the flood of communistic propaganda that is growing day by day throughout the country. An army of unemployed men can do more dam-

Emergency Service

Canners unfamiliar with our record for unusual service during the active season are invited to test our facilities, —if for any reason their supply of cans becomes exhausted.

age in one week, socialy, politically and materally, than an acute labor shortage will throughout the course of a year. And if that statement is doubted, just look to our Mother nation—England—where there are a million and a half men without even the prospect for gainful employment—where labor forms a real political party (as powerful in England as the Democratic party is in the United States), and where that labor element holds a recognized and important place in Parliament. Nor is the red complexion altogether lacking in that English Labor party.

But all of this is aside the point. The real problem is: how can we overcome our labor shortage **without** letting down the bars to undesirable aliens and unassimilable foreigners who come to our shores with one of but two ideas—that of fattening their pocketbooks or agitating and promoting the cause of bolshevism. There is a way to accompish this desired end, and, as is the case with so many perplexing problems, the solution is simple. It is merely —**machines** instead of men.

Nor is there, because of present labor union and governmental policies, any other way whereby this end may be attained. The automatization of industry, or the development and improvement of such automatization as has already been made, is the one solution. Returning to a prosperous period always necessitates an increase in our productive capacity and the expansion of our distribution system. And if men are not to be had the only way in which these things can be accomplished is through the introduction of more and more machines.

Economists agitating a "perfection" in our monetary system; theoretical salvation in the form of new laws or consuming the midnight oil in a vain endeavor to better industrial relations, seldom if ever assists in the solving of this probem. There lies before us but one way as the solution for high wages, reduced hours and efficiency, increased production or a lack in the supply of common labor, and that solution is—machines.

It is an American characteristic to boast of our superingenuity. We heard much of what this ability was going to do for us and the world in general back in the warring days of 1916 and 1917. Yet the fact remains that we have scarcely begun complete industrial adaptation or application of labor saving and labor aiding machines. I find no hesitancy in saying that 80 per cent of all the manufactories in the country could save the time of from one to twenty-five men through the installation and use of better designed and more efficient machinery. And while such machinery effects a downward trend in prices (or an upward curve in profits), it does not decrease wages. And it is seldom, if ever, that such application of machinery fails to effect some economies or reduce some costs. Evidence of this is on every hand, for although our mills and factories have not installed one-tenth of the mechanical substitutes needed, few are there that have not had some experience with bettered mchanical mthods.

I have in mind a coal mine operator in Central-Southern Illinois who, beginning immediately after the installation of a gasoline crawler type crane, effected the saving of fifty men a day for a period of 90 days. And fifty men a day at six dollars a day for that length of time meant a very great deal to him. And another instance is of a manufacturer of automatic telephones, who, through the installation of several motors and an equal number of direct, silent-chain drives, effected an economy in labor costs alone of over eighteen hundred dollars a year—or something like a return of one hundred and twenty-five per cent on his investment.

Wagon Loaders Save $17,468.72 Each Year for Large Gas Company.

Says the Chief Engineer for one of Michigan's largest public service companies: "The economy we have effected in the loading of coke with our portable wagon loaders furnishes striking evidence which proves that men and shovels are a modern luxury which should be avoided wherever possible.

"Teams and trucks make money only when performing actual work. Consequently we are always anxious to reduce idling time to the minimum, and here is one of the big advantages of wagon loaders. We figure conservatively that ten minutes is required to load a 4-ton truck when the portable loader does the work. One-half hour would be consumed by four men with shovels in accomplishing the same work. This represents a loss in idle time of twenty minutes per load.

Landreth's Seeds

WHEN you think of Seeds, think of Landreth either for spot or future. We are the oldest Seed House in America this being our 139th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED CO.
Established 1784
Bristol, Pa.

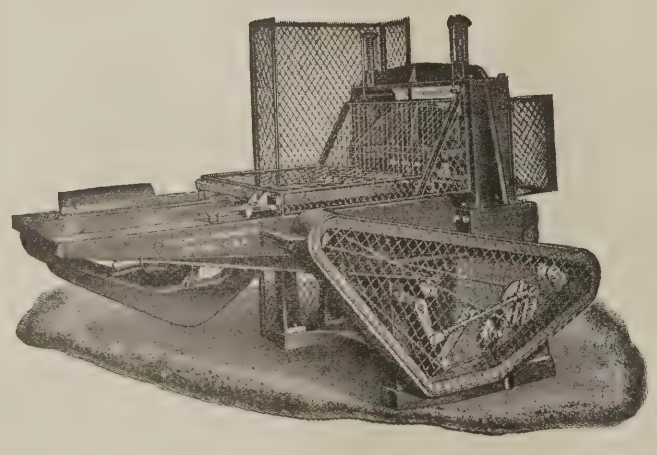
With a motor truck running up costs of at least $16.00 a day, that loss in time amounts to 66 cents a load, or 16.5 cents per ton delivered. The equivalent idling time of a team would mean an added delivery cost of about 10.5 cents per ton.

"Let me list a few figures which show what these loaders are doing for us on a yearly basis. I will figure the hand shovel loading costs with four men on the job, in order to make the possible number of loads somewhere near reasonable in the light of our present deliveries. The loading time would be thirty minutes for each four-ton load, or 8 tons per hour. Figured against our annual tonnage of 60,830, the total hours required would equal 7603.7 at 55 cents an hour for the four men and 70 cents an hour for the yard foreman, whose time would be entirely chargeable in this case, the total cost per hour would be $2.90; or 36.25 cents per ton. Consequently to move our 60,830 tons a year, we would have to meet a total cost of $22,050.88. This figure includes no consideration of the motor truck idling time contingent with this method."

Saving over $17,000 annually through the use of two or three wagon loaders is worthy of anyone's consideration. However, such instances are not rare. I know of another Michigan public service company who, through the use of elevating and conveying machinery, has in the first three years of its operation, eliminated a payroll of $89,856.

But such figures are beyond the comprehension of "the likes of you and me." We had better climb down from the umpty-steen thousand dollar shelf before we get dizzy and fall off. And I imagine the quickest way to get back to earth is to talk about packing houses.

Overcoming a 37.5% Loss in Sausage Machine Production Through Change in Power Transmission.



"Just because the rawhide from which leather is made happens to come from a plant like ours doesn't necessarily mean that leather belt drives are the most efficient for transmitting power to our machines," says the Consulting Engineer of a large packing company in the Chicago district.

"I imagine it would be extremely difficult to find conditions more severe on leather belts than those which prevail in our plant. Water, grease and acids are encountered at every turn, and it is impractical to try to protect leather belts from these ruinous agents. Even so, we have battled our way through a good many years of leather belt usage. The reason for this, of course, was the lack of a better means for meeting our requirements during that period.

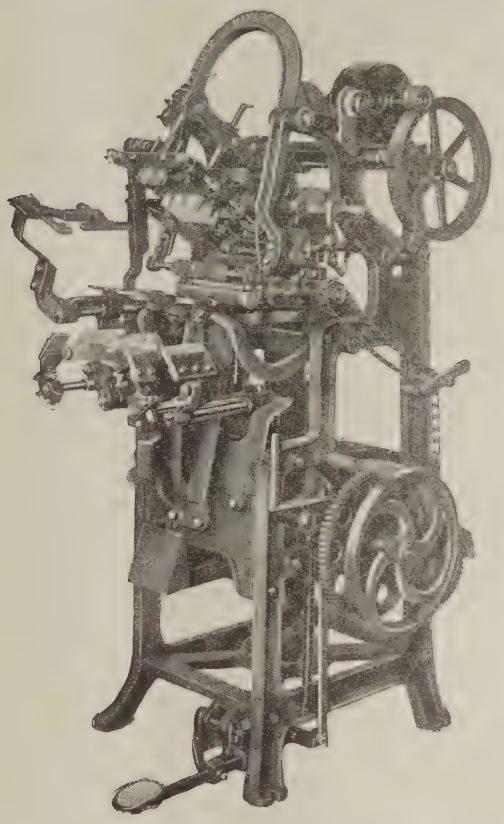
"We operate a large sausage cutting machine with a guaranteed capacity of 100 pounds of sausage a minute. During the days when we used leather belts this machine never reached more than the 65 pound mark. It was an easy thing to check, inasmuch as we could always time the machine and knew the exact amount of sausage turned out. The average production ran about 62½ per cent, or a loss of 37½ per cent below capacty. It was not the fault of the motor. Ample power was being generated, but it never reached the machine. I have seen the time when the belt slippage was so great that the sausage machine would not turn out 100 pounds in five minutes. With a production problem such as this on our hands, we were ready to welcome a practical solution of the problem. Consequently we installed a link-belt silent chain drive. Since then we have been able to obtain full capacity from the machine at any time desired. Fortunately, our requirements during the time we used leather belts very seldom demanded a production equal to the capacity of the machine. When full capacity was required, however, overtime was necessary. This, of course, represented an illegitimate expense and one which we have eliminated by the installation of silent chain drives."

Increasing production is equivalent to overcoming labor shortage. Restricted production means additional investment in labor if ony to maintain a level that should be had through the regular equipment. This point was very well brought out some three years ago by the Pacolet Manufacturing Company in New Holland, Georgia. For several years that company (manufacturers of textiles) had been mantaining losses in production through their type of power transmission. Finally, this type was changed—a change from leather belts to silent chain. A single installation of silent chain covering one spinning frame room meant an increased production equivalent to the addition of 12.7 spinning frames to the floor. And 12.7 spinning frames (at a cost of $150 the frame) realized some-

Automatic Scroll Shearing Machine

An original machine used to cut strips in staggered formation for the making of can ends in our Automatic Strip Feed Presses. This method of staggering permits greatest economy in material, and maintains the high output established by our Presses.

The machine accommodates stock up to 30" x 30" and has sufficient capacity to supply strips for several presses. The material is automatically cut and trimmed while being produced A safety device is provided, which prevents accidental starting of machine, and all working parts are carefully guarded. For all can ends up to No. 3 size the economy of scroll strips exceeds all other methods and shows a saving amounting to as high as 7% according to size handled.



Upon request we will be glad to furnish detailed particulars showing the saving in material this process affords.

thing over $1,900 annually. This was an annual investment return of 27 per cent.

Not long ago I happened to be talking to a chap from East St. Louis, who, during the course of our conversation, waxed eloquent regarding a new gondola car dumper they were about to install at their plant. It seems that this car unloader will accept any gondola of standard design, regardless of its height, width, weight, capacity—that it can be operated by the most unskilled labor—that it requires but a 35 H. P. motor for power, and that it can unload such gondola cars, filled with coal or like material, at the rate of forty an hour! Shades of needless perspiration! Well do I remember the days when I sweat and swore while shoveling coal from a gondola car at the rate of fifteen cents a ton, and by dint of hard work and much backache, doing about one car a day!

Without doubt there are many, many more such instances of labor economy. These are just a few that have come to our notice, and they are set here as examples showing the justifiability of substituting machines for men wherever possible. But all of us know something of the value of labor-saving and labor-aiding machinery and equipment. We know that when wheelbarrows replaced the loads on the backs of men that humanity was benefited immeasurably. And we know that with the electric trucks and tractors which are rapidly supplanting the wheelbarrows, or "Irish buggies," as they are affectionately known to the heavy muscled chaps who run them, the human race will be still more benefited. We know that should we wipe from the face of the earth all of our power-driven machines we would find it impossible to exist, for we could not crowd onto this globe enough men to produce even the barest essentials. But, as said before, we have only begun the application of machinery to industry. We are at least 80 per cent behind our own ability. Let us make use of the machines and devices at hand. Automatization will alleviate the labor shortage, tend to level wages, increase production, better the quality of our product and reduce prices. In the words of K. C. Condit, in a recent issue of the "American Machinist," here is the situation:

"The industries of the United States are certain to be faced with a shortage in the supply of common labor. * * * It is obvious that if this country is to continue to expand industrially, means must be found for doing by machinery the work done in the past by hand labor. The men to operate the machines are at hand, and the capital to purchase them will be found when it is needed. It remains for the * * * manufacturer to install the machinery to do the work of industry. A great duty and a great opportunty lie before them."

GRAPEFRUIT BECOMING POPULAR IN ENGLAND

SELDOM seen a year ago, grapefruit can now be obtained in all the large stores and many of the small ones of Birmingham and other Engish cities, says Consul J. F. Jewell in a report just received by the Department of Commerce. Most English people, once they have tasted this fruit, become very fond of it, and it is believed that a good market can be developed in the Birmingham district. As far as can be ascertained no grapefruit is imported directly into Birmingham, but it is obtained thhough importing houses in Liverpool and London. It is said that a large portion comes from California, and in certain local stores it is sold under the advertisement "Best California Grapefruit."

DEEP SEA DIVERS FURNISHING GELATINE

NEW sources of food gelatine have been developed in Lower California, where great quantities of seaweed are being treated and reduced to a very clear and tasteless vegetable gelatine of high quality, Consul Leighton Hope, Ensenada, informs the Department of Commerce. In recent years there has been from time to time a small quantity of seaweed gathered on that coast and shipped to the United States, but just now it appears to be assuming greater proportions. The weed gathered is known as Gerldeum, and as many af fifteen varieties exist along the Lower California coast. It grows at varying depths from one to ten fathoms or even deeper, and always on rocks, never in sand. It is gathered by

divers working under scientific methods with air pumps and diving bells. The weed is first dried in the sun, then boiled and exposed to a freezing temperature. It is then exposed to the sun or artficial heat, the water evaporated and the gelatinuous product produced.

CAMPBELL'S SUMMARY OF THE TOMATO SITUATION

In "The Optimist" for September.

AS is quite usual at ths time of the year, the outlook for the tomato crop in many sections of the country is still shrouded in uncertainty. In the Tri-States (Maryland, Delaware and New Jersey) it is two weeks late in maturing, but the set is heavy, the plants healthy as a rule, and we believe there is a reasonably good prospect for a fine crop.

Everything will depend on the weather from now on, and much on the length of the season, as possibly 30 per cent of the acreage was planted late. Government estimates place the acreage in this territory at nearly 82,000, an increase of 15,000 acres over last year.

We hear reports of some blight in Maryand, but are frank to say that our own observers have found little to confirm these rumors. Delaware growers predict that the production, per acre, will be in excess of usual and with a largely increased acreage the Blue Hen should have the biggest crop in her history.

The major part of the crop grown in New York State is utilized in products other than canned tomatoes, and its bearing on the production of the latter article is only important in that a crop failure there would result in unexpected drains on the tomato resources of other locaities. We are inclined to believe that production in this district will be in excess of that of last year.

In Indiana and the Central States, prospects are not as rosy as they were three weeks ago. As in the East, the crop is very late. It may be said that both the Tri-States and Indiana look for a heavy glut by the end of the first week in September, and plenty of tomatoes from then on, as long as the weather holds.

Increased production is looked for in Virginia and West Virginia, and also in Missouri and Arkansas, although in the latter States a long period of dry, hot weather has reduced the crop estimate by about 25 per cent. But, even with this reduction, the crop and pack in these States should be large—larger than last year.

Everything continues propitious in Utah and Caifornia. In the favored West, where the sunshine's patting juba to the music of the wind, tomato difficulties seem to be just about unknown (score one for the various Chambers of Commerce, Native Sons and other boomers—official and unofficial).

In considering the situation throughout the country, it should be borne in mind that there will be no can shortage this season; nor can we now anticipate delays in transportation. The strain is off the labor situation and both farm and canning house labor appears to be in good supply

NORMAL CROP DEFINED

AN inquiry recently made by the Fruitman's Guide of New York City as to what is a "normal crop" as used in federated crop reports, is answered to the latter by Agricultural Statistician Ray, of the United States Department of Agriculture at Spokane, Wash., in the course of which Mr. Ray gives the following explanation:

A normal condition at any date is that condition of growth and vitality such as would be expected on that date in a crop starting out under favorable conditions and not subjected afterwards to unfavorable weather, insect pests, drouth, or other injurious agencies. The "normal" is not the same as the "average," for an average crop would be the average for a number of years, poor and bumper crops included. Suppose production had been running along favorably for several years and then a year of almost a total failure, or a year of half production occurred. The "average" of all these crops would give a figure lower than the "normal." Conversely, if a year or two of bumper crops occurred, the "average" would be higher than "normal."—California Fruit News.

MR. CARL E. HUTCHINSON DEAD

CARL E. HUTCHINSON was born in Randolph, Vermont, October 16, 1861. In September, 1918, he had a breakdown, from which he did not recover, and passed away at Waukesha, Wisconsin, on August 26, 1923.

In March, 1864, he came with his parents to the farm now known as Bonnie Meade, in the town of Randolph, Wis. Here he grew to manhood, in winters attending the district school, the Randolph graded school, then spent two terms at Ripon College, and later he attended the Agricultural Short Course at Madison.

For twelve years after reaching his majority he continued to work for the going farm wage at that time. During this period he was instrumental in starting the Bonnie Meade Herd of Holsteins, and 36 years ago helped to haul stones for and build the oldest cheese factory now standing in this vicinity, and was its first secretary.

He remained on the farm until early in 1896, when he moved to Randolph, Wis., and assumed the secretaryship and general management of the Randolph Canning Company, an institution which he had been active in organizing.

The group with which he was here associated were pioneers in the canning industry in the interior of the State, it having been previously claimed that peas could be grown successfully only along the Lake Shore region.

In 1907 he became associated with the Bonnie Meade Canning Company, and in the fall of 1912 he became a member of and assisted in he organization of the Cambria Canning Company. For some time he was vice-president of the Randolph Wagon Works and was ever ready to further and encourage worth-while industrial and financial undertakings, giving them his hearty co-operation and support. His success in a business way was due in no small measure to his industry, firmness and determination.

But, however diligent he may have been in the field of business, this was not his only activity. He was not only an untiring worker, but large-hearted and generous, as many beneficiaries can attest. Feeling himself as having been deprived of such an education as he would have chosen, he assisted

several students through college. He enjoyed serving as a member of the Library Board and aligned himself for the uplift of the community.

When about twenty-five years of age, he united in membership with the Methodist Episcopal Church, and remained a faithful steward and regular attendant and supporter of same.

As a fraternity member, he imbibed the true fraternal spirit. He was raised a Master Mason at Cambria Lodge, No. 152, F. & A. M, and when Randoph Lodge, No. 270, was instituted became a charter member. He joined the Beaver Dam chapter of the Royal Arch Masons and later became a Knight Templar.

He exemplified in a large degree all that is meant by service.

While seeming to enjoy good health, even in the midst of a busy and strenuous life, he was compelled to spend considerable time at Hot Springs, Battle Creek Sanitarium and at hospitals in Milwaukee.

PRESIDENT HARDING'S ILLNES NOT DUE TO CANNED FOODS

DR. C. E. SAWYER, President Harding's personal physician, reappointed by President Coolidge, has made a statement in a leter to Frank E. Gorrell, secretary of the National Canners Association, that President Harding's primary illness was not caused by eating canned foods.

When Mr. Harding was first taken ill, there were rumors blaming canned foods, which caused considerable comment. Later reports did not confirm these original rumors, but Doctor Sawyer's statement sets at rest any lingering doubt.

This was concurred in by Dr. C. M. Cooper, consulting diagnostician, who was called in by Doctor Sawyer immediately upon the arrival of the Presidential party at San Francisco.

Mr. Gorrell's inquiry read, in part, as follows:

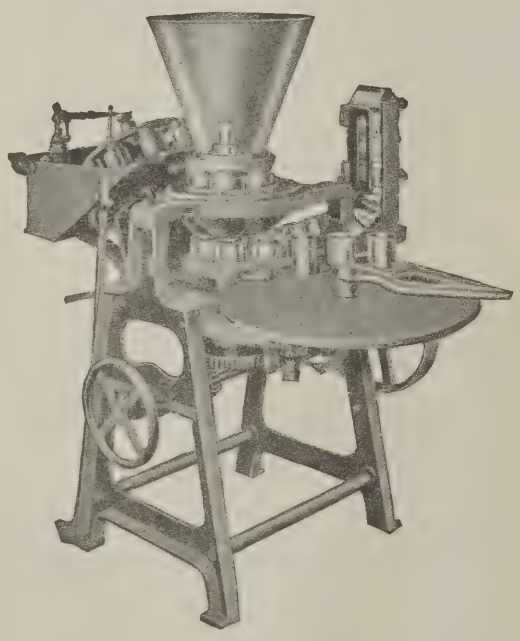
"The people of the United States in general and the canning industry in particular were very much shocked with the published reports that the late President Harding had been made ill from eating canned foods, and it was also stated that other members of the Presidential party on the Henderson had been made ill.

"It has been the custom of the National Canners Association for the past fourteen years to investigate every illness attributed in any way to canned foods. This custom would have been followed in the President's case except that his more serious illness and untimely death came as a shock to the country and the whole world.

"The reaction from this report has created serious concern in the canning industry, because it has during the past fourteen years spent enormous sums of money in scientific research for the betterment of its product. Not only has this research been conducted at its technological laboratories here in Washington, but grants have been made to Harvard University, the University of California, Leland Stanford, and the University of Chicago for similar purposes. These grants have been expended under the direction of able scientific men of international reputation. It is easily apparent that the National Canners Association, which has financed this research, is exceedingly concerned about the reports of the late President's illness.

"It is also our deep concern in this particuar case to ascertain the actual facts as to whether or not in your opinion, as the President's personal physician, his primary illness was caused from eating canned foods, so as to definitely dispel the rumors. Undoubtedly a clear, succinct statement from you would put to rest all of these rumors and end for all time any further discussion of the subject."

Doctor Sawyer's reply was:



"Answering your letter of August 24th, in which you say you wish 'to ascertain the actual facts as to whether or not, in your opinion, as the President's personal physician, his primary illness was caused from eating canned foods.'

"My answer is that President Harding's primary illness was not due to eating canned foods."

Doctor Cooper concurred with Doctor Sawyer as follows:

"I am in entire agreement with the opinion expressed by Doctor Sawyer, and consider that President Harding's illness was in no way due to his having eaten of canned food."

Ayars "NEW PERFECTION" Pea and Bean FILLER

No valves to wear out and leak brine on the floor.
Will not waste brine.
Fills absolutely accurate.
Has positive can feed.

The Saving Makes It Possible

for you to keep your increasing stocks fully insured against fire loss at an extremely low net cost.

In the Canning Industry values increase very rapidly during a short period, and Canners are realizing more and more the wise business economy of keeping these values fully protected against destruction by fire.

CANNERS EXCHANGE SUBSCRIBERS
AT
WARNER INTER-INSURANCE BUREAU

provide this protection at a cost so low as to make it ill-advised for any Canner to assume even a small part of his own risk.

There is every indication that the cost this year will be even less than the average. The accumulated saving for the first six months amounts to over $232,000.00.

Protect your values fully and your savings will increase proportionately.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

The Markets

BALTIMORE, SEPTEMBER 10, 1923

WEEKLY REVIEW

Situation in Canned Foods Is Strong, but Needs Courage—First Week of Tomatoes—Chances of Glut Period Diminishing —Corn Pack Progressing—The Big Pack of Peas About All Gone—Fruit Pack Will Be What the Buyers Make It.

DON'T ROCK THE BOAT—We have come to the time when all canners should take strong hold of themselves and not be carried off their feet by rumors or appearances. Just reverse yourself for a moment and become a buyer instead of a seller; get away from the canning end, and make of yourself a wholesale grocer or buyer. If you wanted to buy tomatoes, for instance, you would look upon the ripening crop as enormous, the pack a veritable Japanese tidal wave, and you would back up your opinions by all the daily paper reports and anything else that would help you get the goods at a lower price. And you would not be intentionally dishonest in this—none of us, when we want to buy, point out the good merits of the thing; we look for the blemishes and faults and try to reason from them why the price should be lower. That is but natural, and that is all the buyers are doing now, and backing this up by examples of canners who have cut the prices, not knowing, and not caring, that such cuts are made because these canners are forced to get ready money. Ever since the earliest days of canning one has seen these weaknesses during the canning season, and always there are a lot of canners carried off their feet and induced to sell at or below cost in the belief that the whole structure is likely to fall. If there is any weakness in the canned foods market today, it is strictly a personal weakness and not a market weakness. The market is strong, stronger than any man in the industry has ever seen it before at this time, if the real situation is studied and understood. Let the unfortunate weak canner sacrifice his goods for the money he needs, if he must; but don't join him through fear. If you do you merely help to produce the very condition you are afraid of. Sit tight and keep your feet under you. Generally speaking, all indications point to a stronger market later, rather than a weaker one.

TOMATOES—This week came nearer to witnessing a glut condition on this crop than any so far this season. The weather had been so cold and unfavorable that, as we before stated, tomatoes had merely dribbled into the canneries. The last days of August and the first few September days turned hot, the tomatoes ripened fast, and they came with a rush to the canneries up to Thursday of this week. The daily papers sent their inexperienced reporters into the sections, and they came back and wrote scare heads "Huge Tomato Crop Forces Prices Down" and the like, because one day's receipts of this kind seem enough, to these men, to engulf the whole country in tomatoes. On the contrary, old tomato growers and canners were fearful that the whole crop would be brought on with a rush and ended there. The rain of Wednesday night and Thursday put a check upon this and may help the situation out materially, and it is hoped it will. It would take a month of this kind of rush to make the pack needed, and if there is anyone brave enough to say that the canners will get that month of glut and rush work, we are willing to let them say it, for we won't.

Thos. J. Meehan & Co. pointed out in their circular last week that the early pack of tomatoes in these Tri-States last year amounted to one million and a half cases, whereas this year's early pack amounted to but 300,000 cases. The season is more than a month later than last year, for it will be recalled the tomato canning season ended last year in early September, despite the saying that tomatoes can be packed up to the middle of October. If we continue the erratic sort of weather we have had all season—and there is no good reason to expect any other sort, the Tri-States will simply not be able to pack enough tomatoes to fill its future orders. During the rush this week canners were able to buy on the open market, from uncontracted growers, tomatoes as low as 17c per basket on the Shore; but in Baltimore the low price was 35c per bushel. The middle of the week saw a check on this, and the prices steadily advancing. Contracted tomatoes were taken by the canners at from 25c to 30c per basket, and all houses had a chance to run at full speed. Local canners have tired of high-priced raw stock, and from now on the prices will have to range low, or the canners will handle light.

The condition of the entire Central West on tomatoes might be summed up by a report from Missouri just at hand and which reads:

> "Crop prospects very poor, for our county has not packed over 20 per cent of normal to date. Vines are good, but rain now would be most too late to make much of a pack. Our district will probably get 50 per cent of normal."

That report about covers the condition in all heavy tomato-canning regions, for good vines without fruit cannot make a crop or increased pack, and it is too late for blossoms and further fruiting.

The sudden flurry in raw stock receipts drove the canned tomato prices down this week, and locally they are quoted as follows: No. 10s, $4.15 to $4.25; No. 3s, $1.22½ to $1.27½; No. 2s, 85c to 90c; No. 9s are still out of quotation, and No. 1s are quoted at 55c to 57½c.

CORN—The corn pack has been making fairly satisfactory progress; but, as our crop reports show, hardly any section expects a full pack. And reports are coming to hand showing that fancy shoepeg, for instance, will be short, and that canners may not be able to deliver above 75 per cent on orders. There is but little heard of a chance for surplus corn, most canners being chiefly concerned in getting up their futures. There is need of a good corn pack, but, judged from reports at hand, there seems little chance of enough corn, and no chance of getting too much. As a rule, we understand the quality is very fine, and

at the canners are taking unusual pains with it. The market is airly strong and shows no price changes from last week. Standrd shoepeg is quoted at $1.10 to $1.15, extra standard shoepeg ; $1.20 to $1.25, with fancy held at $1.40 and up. Standard weet corn, or the so-called crushed, is quoted at 90c, and it is ard to find a good article anywhere in the country at a lower gure. Old corn is cleaned up better than ever known before, nd all the new corn that can be produced of good quality is eeded.

PEAS—It is early to report the pack of peas for 1923 cleaned up, and yet that seems to be the condition. As an evidence of this, it need only be mentioned that standards which sold reely as futures at 90c to 95c are strong today at $1.25 and anted. On top of this, rumors are beginning to circulate to ne effect that the pea pack of 1923 is but little smaller than the ig pack of 1922. New York State surpassed its pack of last ear, and is reported as having produced 2,535,000 cases No. 2s, s against 2,137,000 cases in 1922; 1,382,000 cases in 1921 and ,381,000 cases in 1920. Wisconsin did not equal its 1922 record, nd, of course, all pea canners were short of their intentions for he year, as they aimed to considerably increase the pack of peas verywhere, and the increase is needed. The fact that the mar-et will take and consume a big pack of peas by this time of the ear is certain indications that more are needed. Pea prices are ery firm and rather inclined to advance than to decline, and they nay be expected to continue to climb.

SWEET POTATOES—This crop is beginning to get attention and the demand for good sweet potatoes has so considerably increased in late years that much attention is needed. They re quoting well-known brands at $1.00 to $1.05 for No. 3s, and 3.25 for No. 10s, f. o. b. factory, for both.

FRUITS—It begins to look certain that the fruit pack will be what the buyers make it, as the canners will not put time and money into the goods without the orders on their books. And this is extending even to apples this year.

THE MARKET—Uncertain crop conditions have made the buyers take more interest in the market, and there is more inquiry and some demand. It is thought demand will increase as the jobbers better realize conditions and the almost certainty of no appreciable surplus in any line of canned foods.

NEW YORK MARKET

Buyers Extending Operations — Occasional Fair-Sized Orders Noted—Strike Troubles in the A. & P.—Old Experienced Operator Points Out Blunders of Wholesalers—Tuna Gives the Market a Shock—Tomatoes Weaker— Some New Flat Swell Allowances Proposed by Jobbers—Market Notes.

New York, Sept. 6th, 1923.

BUSINESS More Active—Despite the holiday this week, there has been an active inquiry for canned foods of all descriptions, and wholesale grocers are extending their buying operations materially as they begin to cover for their trade's fall requirements. While the jobbers are still buying in rather small lots, there have been a few sizeable transactions reported, and it is evident that distributors' stocks are now so low that they are faced with the necessity of immediate building up of their stocks.

Strike Ties Up A. & P.—The large distributing plant of the Great Atlantic & Pacific Tea Company in Jersey City has been tied up by a strike of porters, handlers and shippers. The violence of the strikers has been so marked that police protection has been extended the plant. The A. & P. has cancelled all shipping instructions on canned foods destined for their Jersey City warehouse, and has announced that it will abandon Jersey City as headquarters. It is reported that the chain organization will even give up its manufacturing plant in Jersey City. The company now has large warehouses in the Bronx and in Brooklyn, and it is understood that it has been steadily cutting down on the number of its retail stores supplied from Jersey City. The trade here is now greatly interested in a rumor to the effect that the A. & P. will establish its buying offices in New York City

The Canned Foods Situation—The Canning Trade's correspondent this week talked with an old-time member of the canning trade who has just completed a thorough investigation of the canned foods situation all over the country. Discussing the present situation, this observer, whose name cannot be given here, said: "Jobbers are not buying much this year, and they will find out to their sorrow later on that they have been badly fooled. They cannot understand how it is that despite the fact that they have not been operating with their normal freedom that the markets continue steady. The answer is that the chain stores have been buying and have stabilized the markets, and the chain stores are now getting in right where the jobbers will have to hustle for supplies at higher prices later on. The packs of practicaly everything will be fairly large this year, but the goods are moving out as fast as they are being packed. The answer to this is that the canners are packing quality this year as they never have before; the goods are going out as packed, and they are going right into consumption. The pack of peas in Wisconsin is much larger than the trade believes; in fact, it will total only about a half million cases less than last year's heavy pack, yet there are no first-hand offerings. This state of affairs will soon be typical of the entire line of canned foods."

Japanese Crabmeat—The Japanese earthquake disaster has failed to affect the market for Japanese crabmeat. The new pack has practically all been shipped here. Prices this week are quoted lower, at $32.50 per case for ones, and $34.00 for halves, the reductions being made to enable the trade to sell crabmeat in competition with canned lobster.

Canned Foods Exonerated—The trade here was greatly interested in a Washington dispatch, printed in several newspapers, to the effect that Frank E. Gorrell had secured from Dr. Sawyer, who attended the late President Haring, a statement to the effect that canned foods were not held responsible for the fatal illness of the late Chief Executive.

The Tuna Situation—The trade is greatly upset over the tuna situation. One packer a short time ago reported the pack closing with only about 170,000 cases packed. Now a well-known canner comes out with the statement that 250,000 cases have already been packed, and intimates that it is entirely possible that by the time packing is over the production will be twice that of 1922. As a result buyers who went in heavily at the opening prices of $10.00 for halves and $19.00 for ones are seriously concerned over the situation, while buyers who cut down their early purchases are congratulating themselves upon their foresight.

Canned Tomatoes Cheaper—With Maryland and Delaware now on the regular run on tomatoes, the market has weakened. Standard 1s are offering at 55c, 2s at 82c, 3s at $1.22½, and 10s at $4.00. The most strength is shown in 1s and 10c. However, other sizes are also displaying unlooked-for firmness. Buyers who placed buying orers early this week for 2s, packer's labels, at 80c, have had no success in securing the goods, while packers are equally firm in turning down business on 3s below $1.22½. It is reported that some of the packers are apprehensive over the outlook and are buying from competing packers to secure enough tomatoes to fill future contracts, booked on 100 percent delivery basis. From the information available here, this situation does not appear to be justified, save in a few cases where packers have oversold, or local conditions have cut down the crop.

Swells—Considerable uncertainty continues on the question of swells Some canners are granting one-half of 1 per cent in lieu of swell allowance, while others are refusing to do this, and are selling on the old swell guarantee basis. The National Wholesale Grocers' Association is advising its members, in booking new contracts, to arrange for a flat allowance in full consideration of all swells and spoilage in all sizes of tins excepting No. 10s, as follows:

One-quarter of 1 per cent allowance on peas, string beans, corn, pumpkin, spinach, beets, succotash, lima beans, red Alaska, pink and chum salmon and tuna fish.

One per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes.

One-half of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.

In No. 10 tins, the percentage to be as follows:

Three-eighths of 1 per cent allowance on peas, string beans, corn, pumpkin, beets, succotash and lima beans.

One and one-half per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes.

Three-quarters of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.

The buyer to have thirty days after notice of arrival by transportation company in which to make claim for spoilage caused by hidden defects or rejection of the shipment. The above plan to be a final settlement of all losses incurred by the jobber, with the following exceptions:

Should there be swell development on or before August 1 of the year following the pack in excess of double the above-mentioned percentages, the matter shall be settled by mutual agreement or arbitrated under the rules of the National Wholesale Grocers' Association, the National Food Brokers' Association and the National Canners' Association.

This plan is, of course, ideal for the wholesale grocers; the canners, however, will have something to say about it, and it is safe to assume that the canners will protest strenuously over the percentage asked by the wholesale grocers. However, the plan is a concrete expression of the attitude of the wholesale trade, and will give the canners and grocers something to work on in arriving at a mutually satisfactory agreement.

Salmon in Demand—New pack salmon is meeting with a good inquiry. Notwithstanding the action of the Alaska Packers' Association in naming a tentative price of $2.35 on reds, many packers continue to offer at $2.25 f. o. b. Settle, for prompt shipment. Pinks for shipment held at $1.25, with chums at $1.20.

Sardines Scarce—Maine sardines are in exceedingy limited supply, and packers are holding firm at the recently advanced prices. Stocks in canners' and distributors' hands are very light, and canners are able to take care of only a limited prompt shipment, owing to the shortage of fish.

Notes—Considerable interest attaches to the annual convention of chain store operators, which will be held here next week.

L. Oppenheimer, New Orleans canned foods broker, is visiting in the market this week.

Wm. Hills, Jr., vice-president of Butler & Sergeant, Inc., in charge of canned foods sales, is back this week after a ten-day vacation spent at Shelter Island.

"NEW YORK STATER."

CALIFORNIA MARKET

Routine Trading Only—Advances in Prices Looked For—Apricots Getting More Attention—Tomatoes of Fine Quality—Interest in Salmon Prices—Fig Canning on Coast—Coast Notes.

San Francisco, Sept. 6, 1923.

THE MARKET—Trading in California canned fruits is still largely of a routine character, with purchases running to small lots, indicating that large buyers are anticipating immediate requirements only. Here and there a small packer is quoting a lower price to get quick action, but in general prices are being well maintained and an upward movement seems more probable than any decline. In fact, this is already in evidence in some lines, where the pack is definitely short, and a strong buying movement is expected to set in shortly. So far weather conditions have been quite ideal for growers and canners, there having been an absence of any extremely high temperature, and crops have been harvested without much loss. That there may be early rains, however, was suggested by the showers which fell in the San Francisco Bay district late in August. These did no damage and have been followed by clear weather.

Apricots—Inquiries for canned apricots have been more frequent of late and a buying movement on this fruit is expected to materialize shortly. The pack for the year will not exceed one-half of that made in 1922, and has not run as largely to the high grades as desired by packers, there having been much of the crop off in both size and color. The pack of Bartlett pears is also proving lighter than was expected, the demand for the fresh fruit for shipping purposes having kept up later than usual. Canners are still operating on cling peaches, but the output will be definitely smaller than a year ago. However, the better grades, which are the ones in demand, are being packed in larger proportion than a year ago.

Tomatoes—Some of the finest tomatoes ever grown in the San Francisco Bay territory are being offered in the fresh markets and canning operations will be under way at an early date. There is a good demand for tomatoes for shipping purposes and good prices are beig offered growers. A considerable portion of the expected pack has already been disposed of by canners, especially by those who have not made advances on opening prices. The market on tomatoes may be regarded as being strong, and heavy shipments will be made this season into the territory east of the Mississippi River.

Salmon—Opening prices on Alaska salmon are expected at an early date, as vessels are now arriving in numbers at San Francisco with cargoes of the new pack. Some operators are soliciting business on the basis of $2.35 a dozen for reds, or a little more than last year's prices named by the Alaska Packers' Association. Packing operations on Bristol Bay are over for the season and the latest advices from there indicate that the output is about 275,000 cases less than that of 1922. The pack of red fish in Central Alaska is also reported to be short, according to the Griffith-Durney Co. The packing of salmon on the Columbia River came to an end the last week in August, and the output is but little larger than that of last year, which was considered a lean season. The value of the pack, however, is high, being estimated at more than $6,000,000, much of the catch having run to high-grade royal chinook salmon. Most of the fish were taken by gill netters and trollers. Among the vessels of the San Francisco fleet which have arrived with cargoes of canned salmon from Alaska have been the ship Arapahoe, belonging to the Alaska Packers' Association, a vessel formerly belonging to German interests and purchased from the United States Shipping Board, and the bark St. Katherine, owned by Frank B. Peterson. These vessels brought more than 48,000 cases of canned salmon into port.

Figs—The canning of Kadota figs is in full blast in the San Joaquin Valley and a much larger pack is expected than was made last year. The Beckwith Company, operating a plant at Reedley, Cal., is handling about double the tonnage handled last year, and other concerns are making a similar record. A total of about 5,000 acres have been planted to this fig in California, but all will not be in bearing until 1926, when it is expected that at least 2,500 tons will be handled by the Beckwith Company alone Two Eastern selling representatives of this concern are credited with having already disposed of 60 per cent of the estimated pack in New York, Chicago, Detroit, Cleveland and Minneapolis. Growers are receiving five cents a pound for Kadota figs on the trees and canners are contracting for fruit until 1930 at a minimum price of four cents a pound. So far there has not been enough canned Kadota figs to supply the demand, and no serious efforts have been made to create a general interest in this product. As soon as more fruit is available the Beckwith Company plans to put out another grade and market it at a popular price It is arranging to erect another cannery at Planada and has designed a plant that can be enlarged from year to year.

Coast Notes—The directors of the California Olive Growers will meet at Fresno early in September and at that time will consider the adoption of a trade name for the products to be put out by it. "Sun Garden" has been suggested as a suitable name, and it is believed that this will be selected. The association is in control of about 90 per cent of the olive acreage in the State, according to T. B. McKelvey, organizer.

E. S. Gregg, chief of the transportation division of the United States bureau of foreign and domestic commerce, recently addressed interested members of the San Francisco Chamber of Commerce on the subject of packing for export, illustrating his talk with lantern slides.

Alfred Gabrielsen has been appointed manager of the newly-formed export sales department of the California Prune and Apricot Growers' Association, and will shortly leave on a trip to Europe to establish a marketing organization.

E. A. Stuart, president of the Carnation Milk Products Company, was a recent visitor at San Francisco from Seattle, Washington.

C. M. Kline, a wholesale grocer of Philadelphia, Pa., is paying the Pacific Coast a visit, and was in San Francisco late in August.

J. Scharman, recently visited the Pacific Coast headquarters of the American Can Company at San Francisco, from Los Angeles, Cal.

"BERKELEY."

ST. LOUIS MARKET

larket Improving—Poor Crop Conditions Making Buyers Uneasy —Tomato Situation Does Not Look Favorable—Corn May Be Short—Fruits Dull—A Summary in Detail of What This Territory May Do in Canning This Season—Showing One Way "Statistics" of Packs Are Found Out.

St. Louis, September 6th, 1923.

THE Market—Business in canned foods is commencing to show an improvement. Jobbers are commencing to make inquiries for the most important staple canned foods. Prices on peas and corn are particularly asked for. These inquiries are, no doubt, caused by the many unsatisfactory reports from producing points as to the progress of crops. The reports state that crops are later than usual, in some cases as much as two or three weeks, and that the yield is much smaller than it was last year. This is particularly true in regard to the tomato pack. Corn in many sections has been greatly helped by recent rains, but in other parts of the country it has suffered much by the dry weather. It is stated by many jobbers that they are having quite a call for assorted cars. Nearly every item on the list is being mentioned in the request. Orders are very frequently accompanied by the request that they make quick shipments. The reason for this is that country retailers and also many of those in large cities are not in the market to buy more than is sufficient for their present or very near present wants. It is very seldom that an order for one straight commodity is placed, and if this article is called for, it is for such as peas and corn. Both of these are scarce. Peas, in particular, are much wanted.

VEGETABLES.—**Corn** — Canners everywhere, when they can, are rushing their packs. They continue to hope for better results in later planting than those planted early in the year. Everything depends on the weather. If there is a late fall, they have some hope.

Tomatoes—It is the general belief of most of the canners of tomatoes that buyers will not be able to get all they want. Not only will they find the supply short, but buyers will not be able to get them on terms favorable to them. This fact is given out by brokers who personally know the prevailing conditions. It is generally admitted that in Indiana and Ohio, unless the weather is propitious during this month—September—there will be a short pack of good standard tomatoes. The reports from this section are not all in, but the latest information available is to the effect that the Missouri pack will have only a fair pack at best.

Fruits—Very little interest is being shown in California fruits as yet. There would be more attention given if the packers were inclined to modify their views on prices. This, however, they are not inclined to do. The report that there will be some price cutting in the future in California fruits is another thing that is influencing the market.

Pickles—The demand for spot large bulk sour pickles has been so great that but few can be obtained. It will be hard to supply the demand until the new crop can be cured and available for use. This will not be for some time. There is a steady movement of sweet pickles. The better grade is not to be had. Bottled pickles are moving freely. For several months packers have been behind on orders, and this has benefited the sellers. The cool nights, for several weeks, have set the crop back. The size of the coming crop depends much on the weather during this month. Unless it is favorable for growing, the crop may be shorter than anticipated and may not pan out more than 50 or 60 per cent. As the result of a light carry-over, the market is firm.

Fish—There is a normal demand and stocks are about as they usually are at this time of the year.

Milk—There is a continued quietness in the canned foods market. Prices remain as they have been for quite a while.

Statement Showing an Estimate of the Fruits and Vegetables to Be Canned in Frisco Territory in Missouri, Season 1923

Billings Canning Co., Billings, Mo., 8,000 cases tomatoes.
Bois D'Arc Canning Co., Bois D'Arc, Mo., 10 cars tomatoes.
Cedar Gap Canning Co, Cedar Gap, Mo., 15 cars tomatoes.
Diggins Canning Co., Diggins, Mo., 12,000 cases tomatoes.
A. Shaver, Seymour, Mo., 5,000 cases tomatoes.
McMahan & Hart Sup Co., Diggins, Mo., 6,000 cases tomatoes.
Case Canning Co., Franks, Mo., 3 cars tomatoes.
Fordland Canning Co., Fordland, Mo., 10,000 cases tomatoes.
New Stone Canning Co., Fordland, Mo., 10,000 cases tomatoes.
Finley Canning Co., Fordland, Mo., 2,000 cases tomatoes.
Gerster Canning Co., Gerster, Mo., nothing.
Case Canning Co., Hancock, Mo., 5 cars tomatoes.
Napier Bros., Hutton Valey, Mo., 1 car tomatoes.
Sarcoxie Canning Co., Sarcoxie, Mo., 5 to 8 cars tomatoes.
McMahan & Hart Sup. Co., Seymour, Mo., 50 cars tomatoes.
Bollinger Canning Co., Seymour, Mo., 10 cars tomatoes.
Hillside Canning Co., Seymour, Mo., 20 cars tomatoes
S. H. Johnston & Son, Seymour, Mo., 20 cars tomatoes.
Star Canning Co., Seymour, Mo., 5 cars tomatoes.
E. B. Julian, Seymour, Mo., 5 cars tomatoes.
Marionville Cng. Co., Marionville, Mo., 10,000 cases tomatoes.
Marshfield Sup. Co., Marshfield, Mo., 60 cars tomatoes.
Popejoy Canning Co., Marshfield, Mo., 10 cars tomatoes.
J. W. Greer & Son, Marshfield, Mo., 3 cars tomatoes.
G. W. Clift, Marshfield, Mo., 30 cars tomatoes.
D. M. Mackie, Marshfied, Mo., 3 cars tomatoes.
Moore Canning Co., Marshfield, Mo., 4 cars tomatoes.
H. G. Davis, Marshfield, Mo., 3 cars tomatoes.
Lake Lilley Cng Co., Mountain Grove, Mo., 20 cars tomatoes.
Case Canning Co., Niangua, Mo., 40 cars tomatoes.
Whittenburg Canning Co., Niangua, Mo., 15 cars tomatoes.
Cantrell Bros. Canning Co., Niangua, Mo., 15 cars tomatoes.
Thomas C. Miller, Niangua, Mo., 5 cars tomatoes.
C. S. Robertson, Niangua, Mo., 3 cars tomatoes.
Rader Canning Co., Niangua, Mo., 3 cars tomatoes.
Neosho Canning Co., Neosho, Mo., 10 cars tomatoes.
National Canning Co., Northview, Mo., 10 cars tomatoes.
Eslick Canning Co., Northview, Mo., 4 cars tomatoes.
Frazee & Bush, Olden, Mo., 8 cars tomatoes and blackberries.
Bridwell Canning Co., Ozark, Mo., 16 cars tomatoes.
Nixa Canning Co., Nixa, Mo., 16 cars tomatoes.
Riverdale Canning Co., Ozark, Mo., 9 cars tomatoes.
Strafford Canning Co., Strafford, Mo., 5 cars tomatoes.
Roy Nelson Canning Co., Wayne, Mo., 15 cars tomatoes.
Curry & Graham, Wayne, Mo., 6 cars tomatoes.
West Plains Canning Co., West Plains, Mo., 4 cars berries and tomatoes.

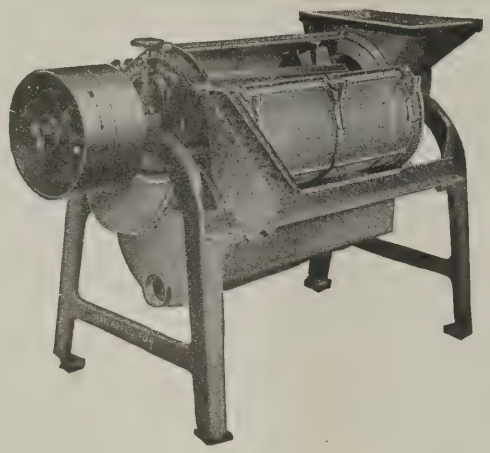
36 cars empty cans reported as being shipped into territory.
On basis 600 cases to the car, total product canned equals 595 cars.

Statement Showing an Estimate of the Fruits and Vegetables to Be Canned in Frisco Territory in Arkansas, Season 1923

Elkins Canning Co., Elkins, Ark., 30 or 40 cars tomatoes.
Morton & Co., Farmington, Ark., 30 cars tomatoes.
Morton & Co., Farmington, Ark., 30 cars apples.
Morton Canning Co., Gravette, Ark., 3 cars tomatoes.
N. B. Sikes, Cave Springs, Ark., 5 to 8 cars tomatoes.
Prairie Grove Vgr. & Pres. Co., Prairie Grove, Ark., 25 cars apples.
Total—125 cars.

Statement Showing Fruits and Vegetables to Be Canned in Frisco Territory of Missouri, Season of 1923

Burnham Canning Factory, Burnham, Mo., 8 cars tomatoes.
Farmers' Co-op. Cannery, Enson Frazee, manager, Burnham, Mo., 8 cars tomatoes.



Chadwick Canning Co., Chadwick, Mo., 8 cars tomatoes.
Case Canning Co., Crocker, Mo., 20 cars tomatoes.
Ellston & McClure Canning Co., Exeter, Mo., 12 cars tomatoes.
C. F. Baggett, Miller, Mo., 6,000 cases tomatoes.
Bridwell Canning Co., Peirce City, Mo., 4 cars tomatoes.
Case Canning Co., Phillipsburg, Mo., 25 cars tomatoes.
Bridwell Canning Co., Republic, Mo., 35,000 cases tomatoes.
Ed Leehr Canning Co., Republic, Mo., 5,000 cases tomatoes.
Case Canning Co., Seeper, Mo, 2 cars tomatoes.
Case Canning Co., Swedeborg, Mo., 2 cars tomatoes.
Stoutland Canning Co, Stoutland, Mo., 2 cars tomatoes.
J. P. Coons, Stoutland, Mo., 1 car tomatoes.

Arkansas, Season of 1923.

Elm Spring Canning Co., Springdale, Ark., 10 cars tomatoes.
Hindsville Canning Co., Hindsville, Ark., 10 cars tomatoes.
Tontitown Canning Co., Tontitown, Ark, 5 cars tomatoes.
Appleby Bros., West Fork, Ark., 25 cars tomatoes.

"MISSOURIAN."

(*Markets Continued on Page 10*)

The Indiana Pulper

Is a Modern Hercules

This machine will handle more tomatoes, pumpkin, squash, apples etc., than any machine heretofore offered the canning industry. It does all this in a sanitary, economic, efficient way. By its use your yield and profits will increase, worries and labors will be lessened. The capacity is unlimited.

A team mate to the above is the Indiana Pulper Finisher. This machine will pulp and finish 5000 bu. of tomatoes in a day.

SMILE AWHILE

CAN'T GET AWAY WITH IT

If Tommy arrived at school late once he arrived late a hundred times. The school teacher began to tire of this sort of thing, and when Tommy started staying away for whole afternoons she began to be very suspicious.

"Next time you stay away I should like you to bring an excuse from your father," she said one day after the boy had again been absent without leave.

"I don't want to bring an excuse from father," said the boy.

"Why not?" asked the teacher.

"He's no good at them. Mother always finds him out."

A DAILY JOB

Spark Plug—I got fired today.
Battery—That is nothing. I'm discharged, also.
And tomorrow they'll do it again.—Carl Hawkins.

A CAUTIOUS BUYER

It was a cold, wet night and the rain was streaming down in torrents. On every side nothing was to be heard but the monotonous drip-drip of the water from the soaking trees.

Presently, round the corner of the road came a miserable-looking beggar, who approached the big house and timidly knocked at the door.

The owner opened it himself.

"Excuse me, sir," he said. "I am tired and wet and cold; could you give me a dime for a bed?"

"Well, I'll have to look at it," said the householder. "Bring it in."

COSTUME

"Don't you think you had better order a new dress suit before you go back to Washington?" inquired the solicitous daughter.

"I dunno," answered Senator Sorghum. "Us farmers and other toilers are coming so strong in the halls of legislation that I'm thinking of taking only a few extra suits of overalls."

SOLVED AT LAST

Said a man who was trying his best to appreciate good music: "When a piece threatens every minute to be a tune and always disappoints you, it's classical."—Christian Register.

VAMPS—FLAPPERS—MICROBES

"Man's greatest troubles are caused by bacteria and microbes," says a prominent physician. Every true woman should resent being called names like those.

BANK IN PERIL

In one of the banks the other day a girl clerk in the accounting department called a customer and said:

"I just wanted to inform you that your account is overdrawn eight cents"

There was a long pause and then an excited feminine voice inquired:

"Gosh! Do you have to have it this morning?"—Youngstown Telegram.

ENLIGHTENMENT

The guests at a dinner party were being bored by a snob with a loud voice who wanted everyone to know that his family belonged to the aristocracy.

At last an old man asked him what he meant by aristocracy.

"Well," replied the snob, "I should describe the aristocracy as those who do not work for a living."

"You surprise me," said the old man. "I always thought people like that were called tramps"

THE HIGHER THE FEWER

The Wife—I see by tonight's paper that Paris says women are going to wear their dresses longer.

The Husband—It's a good thing. You never wear a dress over a month.

THE CANNING TRADE

THE JOURNAL of the CANNING and ALLIED INDUSTRIES

Established 1878

PUBLISHED EVERY MONDAY BY

THE TRADE COMPANY

ARTHUR I. JUDGE . . . . . Manager and Editor

107 South Frederick St.

Baltimore, Md.

Telephone Plaza 2698

Packers are invited and requested to use the columns of THE CANNING TRADE for inquiries and discussions among themselves on all matters pertaining to their business.

Business communications from all sections are desired, but anonymous letters will be ignored. ARTHUR I. JUDGE, *Editor.*

THE CANNING TRADE is the *only* paper published exclusively in the interest of the *Canned Food Packers* of the United States and Canada. Now in its 45th year.

TERMS OF SUBSCRIPTION.

Payable in advance, on receipt of bill. Sample copy free.

One year,	$3.00
Canada,	$4.00
Foreign	$5.00

Extra copies, when on hand, 10 Cents each

Entered at Postoffice Baltimore, Md., as second-class mail matter.

Vol. 47 BALTIMORE, SEPTEMBER 17, 1923 No. 4

EDITORIAL

THE TASK IS NOT HOPELESS—We have put that heading to this editorial because our experience and the experiences of many others all tell us that it can't be done, that the effort is useless, that the time and energy expended upon it are all wasted, and that the reason for these doleful opinions is that the canners will not listen, that the canners will not co-operate, that the canners have absolutely no confidence in fellow-canners, and that they are in this sad position because they are not well informed and will not take steps to inform themselves; that they cannot be made to listen and comprehend, to read and to understand, and then to follow this by effective action. But as we have often been called the "incurable optimist," we are going to live up to that reputation as regards canned foods and their troubles or difficulties; and we hasten to confess that we find no trouble whatever in reaching the conclusion that the task is not hopeless.

What is it that has caused this brainstorm, this dilmma?

FIRST, THE SWELL ALLOWANCE—The canners are being sold into bondage everywhere and in all sections on this matter, allowing the half of one per cent as demanded by the jobbers as a discount on the invoice at the time of sale. The jobbers just recently issued their ideas as to the percentages that should be allowed on the various goods as quoted in our New York market report last week, and which is as follows:

> Swells—The National Wholesale Grocers' Association is advising its members, in booking new contracts, to arrange for a flat allowance in full consideration of all swells and spoilage in all sizes of tins excepting No. 10s, as follows:
>
> One-quarter of 1 per cent allowance on peas, string beans, corn, pumpkin, spinach, beets, succotash, lima beans, red Alaska, pink and chum salmon and tuna fish.
>
> One per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes.
>
> One-half of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.
>
> In No. 10 tins, the percentage to be as follows:
>
> Three-eighths of 1 per cent allowance on peas, string beans, corn, pumpkin, beets, succotash and lima beans.
>
> One and one-half per cent allowance on all vegetables and fruits packed with seeds or pits, excepting tomatoes.
>
> Three-quarters of 1 per cent allowance on all other fruits, fish and vegetables, including tomatoes.
>
> The buyer to have thirty days after notice of arrival by transportation company in which to make claim for spoilage caused by hidden defects or rejection of the shipment. The above plan to be a final settlement of all losses incurred by the jobber, with the following exceptions:
>
> Should there be swell development on or before August 1 of the year following the pack in excess of double the above-mentioned percentages, the matter shall be settled by mutual agreement or arbitrated under the rules of the National Wholesale Grocers' Association, the National Food Brokers' Association and the National Canners' Association.

Analyzed, what does this mean? Simply that the goods are guaranteed for a full year (August 1st, or the beginning of the next canning season) instead of the previously customary six months' guarantee, and which the canner supinely permitted the buyers to stretch into a full year; and that if a spoilage larger than the amount allowed for occurs, the canner pays for it. In other words, the canner's guarantee follows the goods indefinitely, and he pays all spoilage, as he should, if it is his fault; but the jobber keeps in his pocket the whole amount of the discount if there should happen to be no spoilage, as is generally the case.

As you know, this whole discussion has come about because the canners have been denied the right of examination of their goods when claimed as swells through the action of the Government prohibiting the return of swelled canned foods. Obviously, then, if this prohibition ruling could be gotten around the trouble would be solved. It can be gotten around by the establishment of zone warehouses, where swells can be accumulated and kept under Government supervision, but be open for examination by the canners. The canners do not want swelled goods again; they merely want to assure themselves, after many sad experiences, that they are their goods, that they are swells, and that the claims are just. The Government will not deny the canners this right, and we have reason to say we believe the Government is ready to grant the request for these zone warehouses. It merely means that instead of returning the goods to the canners, as formerly, they must be sent to a nearby warehouse. No reasonable jobber can object to this, as it is merely a continuation of an age-old story. It is the right policy because it enables the jobber to prove his claim, and the canner to assure and insure himself. Why, then, has it not the hearty endorsement of every canner? Can't they stand together on such a matter as this? Get the zone warehouses established, as the food authorities are willing to do; then stand behind your goods for whatever spoilage they may show as due solely to your fault.

We have advocated—and we believe it is time that it be done—that the canners stop guaranteeing their goods, except that they be in prime, merchantable condition at the time of sale. The majority of canners are heartily in favor of this, but they fancied a difficulty in case the jobber should claim undue spoilage in some lot of goods, asking how can we get proof? The warehouse is the answer. And that is what we mean by standing behind your goods. Pack good goods, deliver only good goods, and let them become the property of the buyer at the time of sale. The one exception that can be made to this—and it is trifling in the extreme—is where a lot of goods suddenly develop heavy spoilage. If such a thing should happen, there is not a canner in the country who would not willingly make good,

and there are plentiful laws on the books which will compel him to do so if he happened not to do it willingly.

But it takes concerted effort, co-operation and a thorough understanding of the situation by the canners to do this—and some backbone.

This discussion may be growing tiresome, but it takes a lot of discussion to get anything across nowadays, and we believe the canners will ultimately do the right thing and protect themselves. At least. they have been shown where their interests lie, and, as we said at the beginning, the task is not hopeless.

UNFAIR SELLING METHODS—The discussion which raged around the activities of the Biddle gang last season at this time was not without good results. The brokers sat up and decidedly took notice, and those who needed it mended their ways, and there has been a different attitude exhibited generally toward the canners. Of course, the Biddle move threatened the very foundation of the brokers' business, and they had to stir themselves or be pushed out. The arousing did them all good, and now they are found fighting the canners' battles, as they should, at the same time giving the jobbers fair treatment and consideration, also a duty of the broker. It is the brokers, for instance, who are now complaining about the unfair selling methods of a member of their clan. They say that this broker, who was a very prominent figure in the year-old Biddle aggitation, resident on the 'Shore, in the midst of the great tomato-canning region, is again out cutting tomato prices without good cause, and they further allege that the contracts are made in the name of a canning firm that does not exist. That name is the Halley Packing Co., a firm whose name does not appear in the latest Canners' Directory, and which all the brokers complaining say they have tried to find, without being able to do so. We know nothing whatever of the contention, and merely quote the open discussion as it happened on the floor of the recent meeting of the Canned Goods Exchange; and we quote it for this reason: We are about sick and tired of seeing the tail wag the dog in the selling of canned tomatoes and other products. Ever since the earliest recollection of the writer—and that runs back to the time when the canned tomato output was mighty small, and all other items were in keeping with tomatoes—the whole market could easily be thrown off its feet and sent scrambling downward by the report that the Tadpole Canning Co., of Squeedunk, had sold 25 cases of No. 2 tomatoes at 82½c when the market was 85c. The brokers had a very large share in such idiotic action—that the market should be shaded on account of an insignificant sale by an insignificant canner, but if the canners had been half as big as the tadpole in question, they would have told the broker offering business on such a basis to go where sterilization is never in question. Every line of industry has its gnats and fleas, but no other line of industry allows them to be the governing influence. And why do the canners? Simply because they are not informed; will not inform themselves, except from one side, and that against them; and will not listen to their disinterested friends and well-wishers. It is a pleasure for us to record that many brokers now are siding with the canners and trying to protect them against unnecessary losses—trying to tell them the real, actual condition of the market; and many brokers have been engaged in that sort of work for years, but the canners pay no more attention to them than to their trade journals or others who give them unbiased and uncolored information. Again back of this is the distrust of every canner for his fellow-canner, and an obstinate refusal to pull with his fellow-canner. So long as the industry can be kept in single, solitary units, each one going it alone, it will be preyed upon by shrewd buyers, and the goods taken away from it without profit to the canners. That is their strong point now—they know that the canners are disorganized, and that they can be stalked off, one at a time, and slayed as they please. Now, we do not hint at any combination of canners, any central selling agency, or any such plan; none of them are worth a tinker's damn so far as the canning industry is concerned. It is too easy for another farmer to get into the canning game, and no corner could ever be held until the ink dried. And we don't want combinations or corners. We want each canner to realize that he is a business man; that he is but one unit in one of the greatest and best businesses in the world today; that he owes it to the fellow-units in that business to keep well informed and to act in co-operation with the other units. If the canners will not work together to protect themselves, nobody will protect them, and they won't deserve protection. The industry must stand up for itself; stand on its own feet; have confidence in the members composing the industry and pull together. That is all that is needed; but that is the one thing that the canning industry is most conspicuously without. It all comes back to a question of information—reliable, dependable, disinterested information—and that is equivalent to saying that the canners must read more carefully, keep up to date and have confidence in what they read. Canners who now read should induce others to read so that all may have the information.

NOW WILL YOU PACK QUALITY?

THE following circular letter was sent out by the Natonal Kraut Packers Assocaton to all its members; but you will note it applies to canners of all kinds of foods. Read it, and above all, take it home to yourself. It presents the situation exactly as this:

Clyde, Ohio, September 7, 1923.

Every little while we receive a coupon for the booklet, "Sauerkraut as a Health Food," from different sections of the United States with the following questions: "Where can I get some? None in this neck of the woods." Always we have answered that it can be obtained at any grocery, meat shop or delicatessen store, and if they could not obtain it at any of the above named places, to advise.

If a reply is received that they are not successful, we immediately look up and write two or three jobbers nearest the point of inquiry and inform them of the situation They would reply thanking us for calling this to their attention which has always closed the matter.

However, we recently received several inquiries from the southeastern section of the United States covering three states and we wrote several jobbers in these states, stating that consumers were writing in from their section that they could not get sauerkraut and kindly calling the jobbers' attention to our advertising campaign and at the same time usually saying surely their salesmen were not calling the retailers' attention to this item, and by not doing so, they were losing sales and profits on the item of sauerkraut, etc.

Under like circumstances, we received a letter from a wholesale grocer in a well-known city in Florida and reproduce it in full.

....., Fla., August 29, 1923.

Attention: Mr. Roy Irons

RE: Consumption of Kraut in this section.

National Kraut Packers Association,

Clyde, Ohio.

Gentlemen: We are not prepared to tell you whether or not the consumption of kraut is increasing, but we are prepared to tell you that three or four years ago people were eating a little kraut and discontinued it because there was but a few packers that put out a quality that was fit to eat. This condition, not only existed in the manufacture of kraut, but other lines of canned foods, and the public will have to learn again that canned kraut is good to eat.

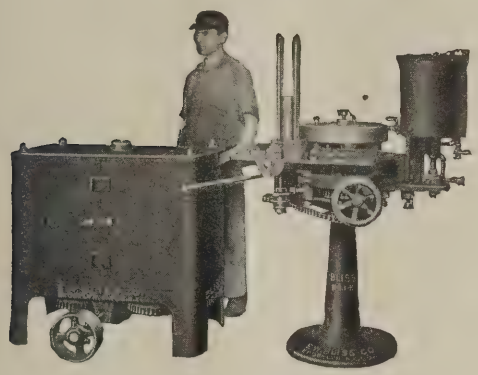
Yours very truly,

L—C—C.

By A. B. C.

We surely got a "hot shot" this time.

He relates that "three or four years ago people were eating a little kraut and discontinued it because there was but a few packers that put out a quality that was fit to eat."



In our reply we had to partly agree that in the past there, no doubt, had been some poor kraut sold, but in the main assured him that his broker could secure good samples from which he could select and purchase good kraut on which he would be able to do a nice business.

But, Mr. Kraut Packer, especially kraut canners, for the good of the business and for YOUR OWN GOOD, don't pack and sell any poor off quaity sauerkraut from this time on. DUMP IT. Evidently this party is a quality buyer—wish all buyers were—then there would not be any chance of poor quality getting out and stinging the consumer.

Remember, you may stng the consumer first, but he will sting you last. In this case, the consumer, retailer and jobber have all been stung—now who is suffering.

If consumption is increased, it will have to be on quality kraut—"off" kraut will bring the sheriff to your door.

An Increasing Field

Ability to place the finest foods of the world within the reach of every one has created a large field for the canning industry.

This field is yearly increasing in size as better methods and greater care conserve the natural flavor and rich, wholesome, nutritiousness of delicious vegetable, meat and fruit foods.

Among these better methods and greater care the use of

Wyandotte Sanitary Cleaner and Cleanser

ranks as one of the greatest contributions to high quality canning production because it,

1—Insures distinctive, wholesome, sanitary cleanliness to containers and equipment.

2—It rinses freely leaving no foreign substance to injure the color or flavor of the product.

3—It guards against preventable causes of fermentation.

4—It is harmless, easy to use, quick in action, and most economical.

Indian in circle

in every package

These qualities are positively guaranteed or your money will be returned.

It cleans clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan

Conditions Of Crops In All Sections

Crop Reports By The Canners

Take Time—

To send us a brief word, at least, as to the progress of the pack in your section to date, and as to prospects. Others are doing this, as you see below.

You welcome all possible information—Exchange, then, with your fellow canner, and here is the way.

The crying need of this industry is more information. Give a little and you will get much. Let us hear from you.

——The Editor.

Hopkins, Va., September 7—The acreage of tomatoes in this county is not over one-half normal this year. The fruit is the best we have ever had.

Belair, Md., September 7—Tomatoes worth nothing. Grower receives three cents box after hauling and picking is paid. Baltimore canners are all blocked and the grower is at his mercy for boxes.

Preston, Md., September 8—Our estimate on our pack of corn at Mount Airy was originally 125,000 cases. We now estimate 90,000 cases, and are about half through packing. The first estimate was based on an average yield per acre for that section. Consequently our corn pack will be short at least the amount stated.

Deerfield, N. J., September 8—Tomato crop is fair. Pack will be small on account of labor shortage.

Melrose, Mass., September 10—At our blueberry factory, Bucksport, Me., we packed about 60 per cent of the canned blueberries which we packed last year. We believe the dry season had a great deal to do with the shortening of the crop. The crop of apples is yet to be determined. From what information we get in our immediate locality, we believe the crop is way below the average.

Rochester, N. Y., September 10—The New York State pea pack was a very satisfactory one, both as to size and quality. The dry, cool weather has had a very unfavorable effect, especially on beans and corn, and to a considerable extent also on tomatoes. The corn and bean crops apparently will not be over 50 per cent of normal, and tomatoes probably not over 75 per cent. The final results of all of these products, of course, will depend very largely on the weather which we will have this month, and on the hold-off of frost. As to fruits, the red, sour, pitted cherry pack was about 85 per cent of last year. The pack of sweet and white cherries was somewhat larger than usual. The pack of black and red raspberries was much less than last year, although I haven't yet received the exact figures. The pear crop will be an extremely light one, canners paying as much as 4½ to 5c a pound for their pears. The apple crop will be considerably less than normal and very much poorer in quality than usual, due to prevalence of scale and scab.

Phelps, N. Y., September 10—Prospects for cabbage crop here are quite poor. We had no rain for nearly six weeks, which will make cabbage head up small. We had a good rain Saturday and Sunday, which will help somewhat. Shippers are buying cabbage here at $25.00 per ton, which makes it too high for kraut factories. It looks as if canned sauerkraut will be high the coming year.

Notasulga, Ala., September 10—We have no canning crops except blackberries and potatoes. The potatoes are very short, most of the farmers having put their potato acreage in cotton this year. Our plant will not run this season. The blackberry crop was short, and we got about 40 per cent of a normal pack.

Waldron, Ind., September 4—Looks as if our pack would be normal. Three other factories in our section will not have quite their average crop. One factory at Shelbyville will have more than they had last year.

Selma, Ind., August 25—Tomato crop about 50 per cent of a normal crop, and maybe more. It does not look good for a half of a pack. A late fall would help out.

Waverly, Iowa, September 10—Corn is green and nice. Pack about normal. Will have 10,000 cases surplus. Dry weather cut many places short. Crop not as large in Iowa by 25 per cent as expected. Demand is stronger.

Fayetteville, Ark., September 10—Tomato crop badly damaged by drought and heat. Had little rain from June 10th to September 1st. Have had rains and, with favorable weather and late frost, will pack 60 to 75 per cent of what we should have. There will be a light pack of apples.

Marshfield, Mo., September 5—The tomatoes in this county have not improved any in the last ten days. I think the tomato season is about over, and the pack will not be a large one. Norreally the packing should go good until October 10.

Pemberville, Ohio, September 11—Acreage normal. Crop prospect 65 to 75 per cent. Quality of tomatoes for pulping extra fine. Rush is now on. Looks like a short season. Everything ripening at once and plants dying. The quality of the late plants is not so good.

FREIGHT & SHIPPING NEWS

AN ATTRACTIVE rail and lake service between Baltimore and Chicago, Milwaukee and points west thereof has recently been made effective by the Baltimore and Ohio Railroad in connection with the Rutland-Lake Michigan Transit Company, operating vessels between West Fairport, Ohio, and Milwaukee and Chicago, by which the following rates apply:

Classes						
1	2	3	4	5	6	Rule 26
121	105½	82½	58	48½	40½	66

Canned foods take fifth class rate in carloads and Rule 26 in less than carloads. The above rates include marine insurance on the lake. Also the option of either 30 days free storage on the dock at Chicago or Milwaukee, or absorption of switching charge for private siding or team track delivery to any point within the switching limit at either Chicago or Milwaukee. Average time in transit by this route is from 6 to 8 days.

The Merchants and Miners Transportation Company have established reduced rate on empty tin cans in cartons, carloads, of 34c, Baltimore to Savannah, minimum carload weight 10,000 lbs.

In a recent decision the Interstate Commerce Commission has ordered a reduction in the basis of rates to and from Brownville, Texas, and points grouped therewith served by the Gulf Coast Lines and the San Benito and Rio Grande Valley Railroad. The new basis of rates will be governed by prescribed differentials to be added to the Texas Common Points rates.

The following changes in rates on canned foods will be effected November 1st by Pennsylvania Railroad tariffs from Baltimore, Washington, Frederick and other Maryland points to New York and Brooklyn deliveries, Trenton and Wilmington, an increase of a ½c 100 lbs. in carloads.

From Pennsylvania Railroad points on the Eastern Shore of Delaware and Maryland, reductions of 1c in carloads and ½c in less than carloads, to points on the Gettysburg and Harrisburg Railways will be made. Also rates from points in the same territory to sections on the Susquehanna and New York Railroad will be reduced.

Effective September 30, the Baltimore and Ohio are establishing reduced rates on jelly in glass from Jessup, Md., to Atlantic City of 27c; Camden 22½c; Dover, Del., 27c; Philadelphia 22½c; Rochester, N. Y., 30½c.

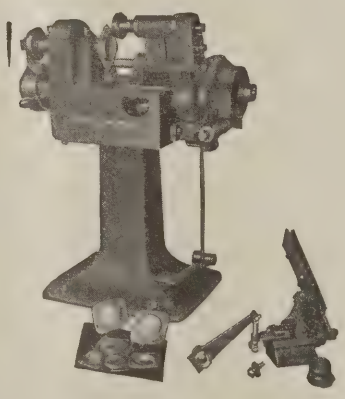
THE CANNING TRADE

BALTIMORE, MD.



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

We make every machine for "can-making."

CAMERON CAN MACHINERY CO.

240 North Ashland Avenue CHICAGO, U. S. A.

Chicago Market

(*Continued from page 31*)

If the corn canners do not take advantage of the situation—not to profiteer, but to get their price, a fair and remunerative price, for their output—they are poor business men.

It is hardly worth while talking about canned peas. Buyers must take what they can get, and be thankful that they can get any at all.

Salmon—Some buyers seem to think that red Alaska salmon is too high in price, at $2.25 f. o. b. coast for No. 1 tall. They are not buying it freely and are inclined to recall the before-the-war prices, when it was purchasable at $1.35, and they say that there has been an enormous decline in fresh meats, that a pound can of salmon must now be retailed at 30 cents, and that fresh pork, veal, sausages, etc., can be bought for less money.

It might be said, however, that retailers could sell red Alaska salmon in cans at 25 cents, but they do not, unless in some of the chain stores. The lower grades of salmon can be retailed at 18 and 20c per pound can, and are, and that fact alone is what has brought them into demand.

Apples—Michigan canned apples in No. 10 cans are offered at $3.12½ and $3.25 f. o. b. canneries for well-packed apples of the "Wealthy" variety, and the fruit opens up in good color and flavor, and cans are well filled.

The late or winter apples are held at $3.85 to $4.00 per dozen cannery. The market with pie bakers and wholesale grocers is bare of canned apples, and there is some buying every day.

Michigan lima beans are being offered at very low prices, and the Fremont Canning Co., Fremont, Mich., has issued a circular letter to the trade, asking attention to that fact. They pack fine lima beans, and when lima beans (green) are offered at lower prices than canned peas, the consumers are going to take the lima beans in preference.

Pork and Beans—There is a prospect of low prices on canned pork and beans this winter and spring, as Michigan hand-picked white beans are selling at $5.60 per hundred pounds f. o. b. Michigan elevators, which is just about 35 per cent lower in price than they were at this time last year.

California Dried Peaches—The 1923 price for practically peeled California dried or evaporated peaches has been announced. and it is low, ranging from 7¼ cents to 11 cents per pound, as to grade.

By practically peeled is meant that they are prepared by a process that removes the fuzz from the peeling and makes the fruit about as acceptable to the consumer as the hand-peeled fruit.

All dried fruit prices are very low this season, and that fact is having an effect upon the demand for canned fruits. However, canned fruits seem to be doing very well and are selling about up to expectations, especially for the choice and fancy grades.

California Fruits—All California producers or growers are making heavy reductions in their prices this year. Most of them are proportionately greater than the fruit canners, although a heavy crop of fruits was produced on the Coast. For illustration, the Almond Growers' Association, of California, has just announced a price for the 1923 output, ranging from 20 to 25 per cent lower than last year's price. This I mention merely as an illustration of the rather wise policy of the growers' associations of that State, which aim to put their products into quick consumption and popular use. Congress gave them in the last tariff better protection against foreign or imported almonds, but they have not taken advantage of it, but have lowered their prices, and their output will be sold out in a few days.

California growers have formed selling and packing associations in most of their lines of production—dried fruits, raisins, almonds, walnuts, beans and several other articles and lines, and they have taken the sale of their products out of the hands of a clique of exploiters who used to prey upon the growers and producers to an extent that had almost impoverished them.

Convention Rates Named—The Western Canners' Association will hold its fall convention at the Hotel Sherman, Chicago, on Tuesday, Wednesday and Thursday, November 6, 7, and 8, 1923, about a week earlier than usual. Arrangements are being made for a big attendance and a good convention. Railroad rates of one and a half fare will be obtained, and it is likely that several sections of the National Canners' Association will hold joint sessions at the same time and place. A program of strong speakers is being secured, and many have already accepted, among whom are J. H. McLaurin, President of the American Wholesale Grocers' Association; Royal F. Clark, First Vice-President of the National Canners' Association; J. W. Hill, Pre ident of the Western Canners' Association; Clarence Tourma President of the Indiana Canners' Association, and others.

"WRANGLER."

MAINE MARKET

But Few Shops Working on Corn—An Unprecedented Season-Half Pack Seems Best That Can Be Expected—Buyers Frantic for Information—Blueberry Pack Is About Done—Sardine Canners Are Short of Help.

Portland, Me., September 14, 1923.

TODAY, when the Maine corn-canning season should be its busiest, there are comparatively few shops that a running to any extent, perhaps a dozen more where a litt preliminary work has been done or part-time work for sever days, and many where no corn has been hauled in from the field Even the oldest canners have seen no season like 1923, and ev the youngest never want to see another. From the usual plan ing season until now the weather has been abnormally-somethi all the time, first too cold and too wet, then too hot and too dr then cool and too dry, and still cool and dried up. Acreage e perts who are in the habit of estimating the time of maturi and the amount of yield are now predicting a 50 per cent pa as the maximum, and not that if we should have another co turn this month. There have been seasons when the frosts he off until the 5th or 10th of October, and our best hope now is th this will be another like that. In the meantime short buyers, those who have left their purchases altogether to chance, a flooding the State with frantic inquiries for more goods on the present contracts, or new contracts altogether, but there is corn to offer today, and there is no price in sight on any sma clean-ups that might come on the market after the season is ove

The blueberry pack will doubtless finish this week, ma factories having already closed down. The pack has been per cent of last year, as nearly accurate as it is ever possible make such statistics. The quality has been very fine, both the fruit and in the factory methods, and buyers are pleased wi the shipments they are receiving. Prices have been held at $1. and $8.50, but during the past week one or two have made lower figure than this, owing to the fact that the price to t pickers was cut 33 per cent, and this allowed a material redu tion in the cost of the goods. Such canners as were not ab to get their berries at the lower price are doubtless obliged hold their quotations at the original figure. This pay to t pickers has been very unsatisfactory to them, and it is doubtf if the arrangement can be renewed another season. In fact, is increasingly difficult to get pickers to work at any figure, a that is an element to be discounted in preparing for anoth year's work.

Another industry which is suffering from the help proble is the sardine canning—already a very sick man from lack fish. The season as been so poor and the work in factories irregular that many families have moved away to larger tow where employment could be had at other trades. And as princ pally all of the sardine canneries are in small towns and depen ent upon local help, this is a serious condition. The pay to pac ers and other workers has been advanced, but even this fails produce the help needed. The run of fish is holding a little be ter than it did a month or so ago, but is nowhere near sufficie for regular work. Canners are still behind on their orders a are not soliciting new business. The demand is steady and mo than enough to take care of the present pack at prices rangi around $4.00 for standards.

The first encouraging word we have heard in the cannir business comes from the State pomologists who have lately su veyed the apple orchards. The fruit is said to be coloring u much better in the past fortnight, and the proportion of fan fruit will be larger than first estimated. Even at this the pr duction wil be small, and with an increased amount going in barrels for the market, the canners see their supply of appl diminishing. Buyers are now going through the State after cid apples, but are finding it hard to get a price named on this gra of fruit.

CINCINNATI, OHIO

A CORRECTION AND A SUGGESTION

The Urgent Need of an Intelligent Label Clearly Shown —The People Want to Know, but Can't Tell Now.

SECRETARY W. E. NICHOLOY, of the Wisconsin Pea Canners' Association, has called our attention to a slight error in our recent comments on the Wisconsin State Labeling Law. This should be noted.

But of greater interest and importance is the weakness he calls attention to in the labels as now used. In a word, a canned foods display today merely invites the ridicule of the visitors and the retort: "Well, why don't you say so on the label?" Take this home to yourselves, canners, and then tell us how long you are going to continue this senseless method of labeling your goods. When will you label them intelligently?

The Secretary says:

Dear Mr. Judge:

I read with interest your editorial on Wisconsin labeling laws in the August 27th issue of The Canning Trade, and I regret exceedingly that it is necessary to advise you that you have not properly interpreted General Order No. 11R. I wish it were true that the quality also had to appear on the label, and I believe that it will be within a reasonably short time. However, General Order No. 11R of the Wisconsin Department of Markets requires only that the size, number and variety must appear on the label. In order that you may be fully posted as to this new order, I am enclosing a copy.

We conducted a canned foods exhibit in the Horticulture Building at the Wisconsin State Fair last week which would have been very interesting to you. You would have been able to write volumes on the importance of proper labeling and the appreciation by the consumer of same. Knowing that you are taking an active interest in this question, I am going to trouble you with rather a full description of our exhibit.

We had a booth 16 feet long and about 12 feet deep, with counters on all four sides. On the back counter against the wall, in pyramid forms, we displayed all available Wisconsin labels—peas, beans, beets, corn, kraut and sturgeon Bay cherries, also Wisconsin blueberries packed at Humbird. These displays were also carried out on the side counters. At the left-hand of the front counter, with a demonstrator in charge, we displayed and sampled Sturgeon Bay cherries. Next to this display we had a large glass jar, holding approximately two gallons, filled with all of the various sizes of peas. Next to these sampling dishes we had six glass bottles, each bottle containing a different size, from Size 1 to Size 6, with a neat little card on each bottle showing the size number. Next to these we had sampling dishes of corn, beets and kraut, and at the right end of the counter we had another large glass jar containing the various sizes of beets. This made a very beautiful display, but to the thousands of men and women who daily passed this booth the educational features were most interesting. The pea section of our exhibit attracted unusual attention, not only from the women, but from the men also.

We talked to people from 28 different States. We explained to them how peas were harvested, how they were vined or threshed, how they were graded to size, the care used in the final inspection at the picking tables, thorough washing processes, the preparation of the brine or liquor and the processing of the peas and brine together in the cans. We also explained to them the difference in the two principal varieties of peas and the difference in the three qualities.

Very few people realized that peas were graded to size, and also graded for quality. They were anxious to learn and their expressions of appreciation proved to me conclusively that it is impossible to estimate the possible consumption of canned peas, once they are labeled intelligently and truthfully. People like canned peas, but they want good peas.

Over 90 per cent of the consumers still feel that in order to get good peas they must buy the small sizes, the smaller the better. We fed them peas, principally fancy 4, 5 and 6 sieve sweets. The common expression was "We never tasted such peas!" "Where and how can we buy them?" We explained to them fully Wisconsin labeling laws as effective June 1, 1924. I regret that every canner, wholesale grocer and retail grocer in the United States of America could not have heard their expressions of appreciation. One lady from Massachusetts remarked that what she had learned at our exhibit was worth the entire cost of her trip.

But, after all is said and done, why shouldn't we tell the truth on our canned foods labels, not only peas, but every other item of canned foods. Have we or the wholesale grocer who markets our products under his own labels any reason for withholding the truth from the consumer? It is to them that we all owe our business existence.

NICOTINE DUST KILLS CUCUMBER BEETLES

John E. Dudley, Jr.,* H. F. Wilson and W. D. Mecum,

Agricultural Experiment Station, Madison, Wis.

THE striped cucumber beetle is a constant crop hazard. It causes damage estimated at from $3,000,000 to $5,000,000 annually to the cucurbit crop (cucumber, melon, squash) of the United States. This insect not only injures the plants by its feeding, but also transmits the wilt and mosaic diseases. Although the loss to individual growers is seldom seriously felt, because the plantings are small, yet the total annual loss is great.

Most Insecticides of Little Value

Many insecticides used in the past were found to be powerless against the cucumber beetle. Nicotine dust, a new form of insecticide, has proved decidedly successful in the control of the beetle during two years of trial.

Over 60 different insecticides were thoroughly tested at this station during the past seven years. A few of them were of some value in repelling the beetle, yet none were worth recommending as a satisfactory control. Even the stomach poisons ordinarily used against chewing insects were not effective in killing this pest, although they showed some repellent effect, because the beetle is more or less repelled by any foreign substance on the leaves. Therefore, so long as the foliage was kept quite well covered with dusts or sprays, the plants remained fairly free of beetles, but to keep them constantly covered proved a costly undertaking, for as soon as rain or wind removed the material or new growth appeared the beetle flew right back from nearby gardens. Beetles are nearly always on the move and trying to keep them away from a patch of cucurbits is almost a hopeless task.

Nicotine Dust Best—Tests over a period of two years have clearly shown that nicotine dust is a decided success in the control of the striped cucumber beetle when properly applied. During the growing seasons of 1921 and 1922 various forms of nicotine dusts were given severe tests under field conditions to find what combinations would stand up best in general use. Nicotine sulphate was combined with gypsum, sulfur and several forms of lime, and all the combinations were more or less effective in killing the beetle. In addition to these a new material was developed at this station in 1921, which promises to be more effective than the simple mixture of nicotine and lime against the beetle, as well as against several other insects. This material was made of nicotine sulfate, 1 part, monohydrated copper sulfate, 5 parts, and hydrated lime, 14 parts.

In testing the various materials each one was used frequently against hundreds of beetles, confined in large cages, and on plants in the open. The different results obtained for the same strength of material in different tests are due to variations in the weather, amount of dust applied, size of plants, and freshness of the material.

Nicotine-Lime 5 Per Cent—With nicotine-lime containing 5 per cent of nicotine sulfate the percentage of beetles killed varied from about 10 in one test to 96 in another. The average percentage was 60 to 85. This material appeared to be rather unstable, and killed many beetles in some tests and only a few in others. As its success in killing depended upon its absolute freshness and the most favorable weather for its application, this dust is not as satisfactory for general use as some others.

Nicotine-Lime 10 Per Cent—Nicotine-lime containing 10 per cent nicotine sulfate carried twice the amount of nicotine and cost a half more than the previous dust, but the percentage of killing obtained with it was much more consistent, running from

83 to 98, with an average of 90. While this dust loses strength just as rapidly as the 5 per cent dust and is affected the same by the weather, yet it contains enough nicotine to kill a large percentage of the beetles even when it is not strictly fresh and when used in unfavorable weather. Therefore, except for its greater cost, it is preferable for general use to the 5 per cent dust.

Nicotine-Copper-Lime 5 Per Cent—This new combination, nicotine-copper sulfate-lime containing 5 per cent nicotine sulfate, appeared much more stable and killed more consistently than the 5 per cent nicotine-lime. The percentage of beetles killed varied under different conditions from 63 in one test to 100 in several tests, and averaged 85 to 90. Pulverized copper sulfate in this dust rendered the nicotine less volatile, and therefore greatly reduced the rapidity of its escape from the dust. Whether its greater effectiveness against the cucumber beetle was due to a reduction in the loss of nicotine, or to a slower rate at which nicotine was given off after coming in contact with the insect's body, is not known at this time, but it is probably a combination of the two.

Nicotine-Copper-Lime 10 Per Cent—Nicotine-copper sulfate-lime containing 10 per cent nicotine sulfate was used in only one series of tests and proved completely efficient as was expected. Ten per cent of nicotine was found to be more than necessary when copper sulfate was present.

Nicotine More Effective With Certain Carriers

In a series of tests to determine the best carriers (fillers) for the nicotine, six different substances were used; hydrated lime (calcium hydrate), air slaked lime (calcium carbonate), unslaked lime (calcium oxide), gypsum (calcium sulfate), sulfur, and copper sulfate with hydrated lime. Mixtures containing hydrated lime or unslaked lime, both of which reacted with the nicotine sulfate liberating nicotine, did not kill as high a percentage of beetles as did mixtures containing gypsum or copper sulfate. Mixtures containing air slaked lime or sulfur were about half way between. When a small amount of unslaked lime was added to the hydrated lime, the loss of nicotine was greater and the killing effect less than when the unslaked lime was left out.

When any form of lime was used as a carrier the resulting dust was light and dry. With gypsum, however, there was a tendency for the dust to absorb moisture, which made it heavy; therefore a combination of gypsum and hydrated lime appears to be superior to gypsum alone.

Against certain insects which are easily killed by nicotine fumes, such as the aphides or plant lice, a dust in which the nicotine is liberated quickly appears to be most effective. Against the cucumber beetle and certain other insects, however, the best results have been secured by using a dust in which the nicotine is rather stable.

Nicotine Dust Loses Strength Rapidly

All dusts containing nicotine should be kept in tight, metal cans all the time and the can should always be covered except when dust is being removed. As these things are not always done, a test was made to determine the effect upon the nicotine when dusts were exposed in shallow dishes for different periods of time.

Dusts containing hydrated and unslaked lime which, when fresh, killed 100 per cent of the beetles treated, after being exposed for three or more days killed only 40 to 70 per cent of them. This loss of nicotine was greatly increased when dusts were exposed in a damp place.

When dusts containing sulfur, with 2 per cent nicotine sulfate, were exposed to the air for 24 hours, the percentage of beetles killed dropped from 60 to 30.

When dusts containing copper sulfate were exposed to the air the loss of nicotine was very much less. After six days' exposure the killing effect dropped from 100 per cent to only 90 per cent. Even this loss of nicotine is appreciable and could be prevented.

Dust Cucurbits Early

The time to kill the cucumber beetle easily, quickly and in large numbers is when it first attacks the small plants. Beetles congregate in large numbers on the squash, melon and cucumber plants and feed ravenously on the first thick leaves or cotyledons. The beetles are in a small area, are usually quite sluggish, and a few good puffs of dust will kill 95 per cent or more of them. These first beetles produce the thousands to follow, and if 95 per cent of them can be killed, there is little danger from the progeny of the other 5 per cent. When vines are beginning to run there is much more area to be dusted, the beetles are more active on account of the warmer weather and the num-

ber killed will be scarcely more than 60 per cent to 70 per cent.

There is a period of from 7 to 10 days in which the beetles can be profitably and easily controlled. After this period it takes constant effort and considerable expense to protect the vines from beetles.

Dust Co-operatively

It would be better if growers in the same vicinity would dust at the same time to secure uniformly good results, for beetles soon find their way from the half-eaten, untreated patches to the clean ones. Dusting is not done just to protect the vines, as is spraying for the codling moth, but to kill the beetles in order that they may not cause later trouble. If every curcurbit grower who is less than one mile from his neighboring growers will faithfully dust for the beetles at the right time, there should be litte further trouble that year from beetles or from the wilt. Beetles may fly as far as two miles, but the majority seldom go over three-fourths of a mile.

Dust Properly

In order to be sure of killing the beetles under all conditions, a nicotine dust containing at least 5 per cent of nicotine sulfate (2 per cent of pure nicotine) and preferably 10 per cent (4 per cent of pure nicotine) should be used. According to R. E. Campbell* many growers prefer a 10 per cent nicotine dust, as they are much surer of overcoming the beetles before any escape. Dust should be purchased in sealed cans direct from a dealer and must be fresh, that is, not held over from a previous year. A hand duster is necessary for applying the material properly and may be purchased from any of several firms manufocturing dusts and spray machinery If a duster is not available the material may be shaken from a cheesecloth sack directly over the beetles, but this method is decidedly inferior to a duster.

Before plants have started to run, dusting may be made more effective by the use of a canvas cone which is quickly dropped over the plants to prevent the escape of any beetles, and also to keep the dust from blowing away. This cone is helpful in dusting other plants such as cabbage, cauliflower and small tomatoes. The plants should be approached carefully, so that no beetles will fly away, and heavy puffs of dust should be blown directly on them.

W. H. White† states, "As the insects are very active and take flight at the slightest disturbance, an apparatus which will throw a good volume of dust with force . . . is necessary." Apply enough dust to each hill to cover all the beetles and to fill cracks in the ground where they may be hiding, for it is a great deal quicker and cheaper to dust thoroughly when plants are small than to wait until there is a mass of foliage. Nicotine dusts are most effective against the cucumber beetle when the air is still and the temperature is 65 degrees F. or higher. Nevertheless, it is important to attack the beetles as soon as they gather on small plants in order to kill them off and save the seedlings.

Usually three applications of dust at two day intervals are sufficient to rid the plants of beetles, provided nearby patches are similarly treated. The usual amount of dust to use when plants are small is from 12 to 16 pounds per acre. At the present price‡ of 5 per cent nicotine-lime dust ($16.00 per hundred), 14 pounds yould cost about $2.25 per acre per application. Dust containing more than 5 per cent of nicotine sulfate does not seem to be on the market at present. While dusts containing copper sulfate, gypsum, or some other inert carrier are more successful against the cucumber beetle than the active dusts, they also do not appear to be manufactured at present. One dust containing copper sulfate, lead arsenate, lime and nicotine sulfate 5 per cent is quoted by one firm at $20.00 a hundred.

The ordinary nicotine-lime dust containing 5 per cent nicotine sulfate is very effective against the melon aphis (or louse) which occurs in such vast numbers during July and August on melons and cucumbers.

END STACKING MACHINE

The End Stacker shown is designed to be placed adjacent to any of our various sanitary end producing machines where it is desirable to stack ends as discharged. It is also well adapted to any work such as baking powder, lye or cleanser bottoms, or any ends having straight or curled flanges. This device is built in two sizes, and being entirely automatic, receives and places the ends in a neatly stacked form. The object of this Stacker is to eliminate hand stacking and possible damage caused by excessive handling.

Adjustment is also provided to vary the height of the intake chute so as to correspond with the discharge of the machine to which it is attached. The can ends as received are stacked automatically from the bottom. The hopper has sufficient capacity to accommodate 36'' of ends and is so constructed that they may be removed without interfering with the continuous operation of the machine. The adjustment for different diameters is very simple and can be accomplished in a few minutes. The complete apparatus requires very little floor space and is provided with grooved pulley that allows it to be operated direct from the adjoining machine.

SUCCESSORS TO

GEO. W. ZASTROW

THE HAWAIIAN PINEAPPLE PACK OF 1923

WE have not as yet seen official figures, but we take the following from daily papers, especially Coast papers:

Although the pineapple pack of the Hawaiian Islands this year will be about 750 000 cases less than the peak production of about 6,000,000 cases of 1921, higher prices will bring the total revenue up to nearly $30,000,000, substantially the same figures of the record season.

This year's pack has all been sold, the demand being in excess of the supply, it is stated by A. H. Tarleton, executive secretary of the Hawaiian Pineapple Packers' Association. The industry is on a sound basis, according to Mr. Tarleton. The decrease of production this year under that of 1921 is accounted for by the fact that in the practice of the policy of rotating the growing areas the acreage in bearing is just now less than what it formerly was. The planted acreage, however, is being constantly enlarged. Marked developments are in early prospect, it is stated.

Plans of the Hawaiian Pineapple Company, of which James H. Dole, of Honolulu, is the head, for planting 15,000 acres on the island of Lanai are being gradually worked out. This company already owns and operates a plantation of 10,000 acres on the island of Oahua. It purchased Lanai from the Baldwin interests several months ago, the consideration being $1,100,000 cash. The company is now having surveys made for harbor and port facilities and other improvements involving a total expenditure of several million dollars. The island is said to be ideally suited for successful pineapple culture. Until purchased by the Hawaiian Pineapple Company the island was used as a cattle ranch by the Baldwins.

Libby, McNeill & Libby, Ltd., have taken a lease on 5,000 acres on the island of Moloki and will convert it from raw land into a pineapple plantation. Planting will begin this fall.

It is predicted by some men who are interested in the pineapple industry here that the time is not far distant when the growing of this fruit will to a considerable degree displace the production of sugar. In support of this view it is pointed out that the Haiku Fruit and Packing Company recently purchased the lands of the Kipatula Sugar Company in the Hana district and is preparing to gradually substitute pineapples for sugar cane. It is the ultimate aim of this company to put up approximately 500,000 cases of pineapples a year.

The gradual unfolding and expansion of the pineapple industry in Hawaii is not lacking in romance and human interest. Since the first 12-acre patch was planted by Mr. Dole in 190 and a practical demonstration was given that the fruit could be successfully grown here the acreage devoted to pineapples has increased by leaps and bounds. It is the confident belief of Mr. Tarleton that within the next few years the total annual pineapple pack of Hawaii will have reached 12,000,000 cases, or double the present annual production. The work of washing, trimming, slicing and canning the fruit is done by machinery. The women and girls simply operate the machines. Most of the employees are Japanese, Chinese, Koreans and Filipinos.

With the increase of acreage the construction of additional canning facilities will become necessary. The present membership of the pineapple association embraces the Pearl City Fruit Company, Ltd., Hawaiian Pineapple Company, Ltd., Hawaiian Fruit Packers, Ltd., Libby, McNeill & Libby, Ltd., California Packing Corporation, Ltd., all of Honolulu; Haiku Fruit and Packing Company, Ltd., Pauwela Pineapple Company, both of Haiku, Island of Maui; Hawaiian Canneries Company, Ltd., of Kapaa, and the Kauai Fruit and Land Company, of Kalaheo, both on the island of Kaui; Baldwin Packers, of Lahina.

Many different problems in growing and marketing the fruit have been met with and largely overcome, according to Mr. Tarleton. From the beginning of the industry the thing uppermost in the minds of the growers was to produce the highest possible grade of pineapples. To do this scientific research is going on constantly.

In the earlier stages of the industry fears were entertained by the planters that the market was limited and that overproduction was to be guarded against. It is now regarded as proved that the demand for the fruit by the people of the United States alone can never be filled unless there is a development of possible pineapple growing areas in other parts of the world, and

USE

HAMACHEK IDEAL

VINERS AND VINER FEEDERS

For Better Pack of Peas at Greater Profit

FRANK HAMACHEK, KEWAUNEE, WIS.

Manufacturer of Ideal Viners, Viner Feeders and Chain Adjusters

ESTABLISHED 1880

ANNOUNCEMENT

TO ALL PACKERS OF PEAS AND PORK AND BEANS:-

Every canner of peas and pork and beans well remembers the first appearance of the Hansen Sanitary Pea and Bean Filler in 1917. The machine was so radical in design and operation, and so small in size that at first everyone doubted its practicability.

However, the canners were soon convinced that the principles were correct and in a short time almost every filler in the United States was a HANSEN. Never before has any machine experienced such sensational success.

Mr. Hansen has now developed an entirely new machine, much smaller in size and with features even more radical than the original filler. The machine has been fully tested in actual operation and is pronounced by canners as a one hundred percent success. It is a filler which will quickly pay for itself and is absolutely fool-proof.

Can you conceive of a pea and bean filler which has **NO BRINE TANK** and which is so constructed that it is impossible to waste any brine? A machine which when compared to other pea fillers **HAS LESS THAN ONE-HALF THE PARTS,** only **ONE-HALF** the gears, **ONE-HALF** the bearings, **ONE-HALF** the shafts, **ONE-HALF** the clutches, **ONE-THIRD** the brackets and supports, - no float valve, no funnel rubbers, no stuffing boxes, and **OCCUPIES LESS THAN ONE-HALF THE FLOOR SPACE.**

A discussion of the almost unbelievable features of this new machine will appear in this publication in succeeding issues. No wide awake canner who aims to eliminate waste and lower production costs can afford to miss a single issue.

Hansen Canning Machinery Corporation
Cedarburg, Wisconsin.

(Continued next week.)

WATCH THIS SPACE.

even should that take place the Hawaiian growers feel that they have advantages which will enable them to maintain their present leadership.

Just now some attention is being given to the possibilities of the industry in the Philippines, it is stated. The California Packing Corporation, because of inability to acquire additional producing acreas in Hawaii, has sent an expert to the Philippines to investigate the situation there with the view of extending their operations to those islands.

At this time there are approximately 50,000 acres planted in pineapples in Hawaii. This area produces approximately 144,000,000 cans of pineapples a year. These cases are packed in cases of twenty-four cans to each case. With the development of the industry it was found practical to utilize the product to the fullest limit. This includes not only the slides, but the pulp and juice; also the crushed waste after it has come through the rollers. This waste is allowed to ferment and is then distilled, with a recovery of 94 per cent pure alcohol. One company, the California Packing Corporation, uses this alcohol for motor fuel in its automobiles, and also for the manufacture of vinegar.

WHERE ARE THE SARDINES?

THE lack of sardines is causing the Spanish canneries of the delicacy at Vigo some embarrassment, says Consul Henry T. Wilcox, in a report just received by the Department of Commerce. The fish canners are working on sprats, but the demand for this kind of fish is not great. A serious problem has arisen on account of the scarcity of fish. One fish packer has closed down his factory and others are expected to do so.

BIG FIELD OF SPANISH OLIVES

THE Spanish olive harvest during the 1922-1923 season totaled 1,539,551 metric tons, while the oil yield was 289,114 metric tons, American Consul Frank Anderson Henry, Barcelona, informs the Department of Commerce. While it is too early to make any forecasts as to the next olive crop, which will be harvested during the closing months of this year and the first of next, it is believed that the yield will be higher than that of 1922-1923. Spain is now the greatest olive oil producing country in the world, its output amounting to about 50 per cent of the total, but exporters are confronted with a number of difficulties which tend to hold down foreign trade. Increasing costs of cultivation, owing to a higher valuation of lands, higher wages and cost of machinery and fertilizers, have somewhat of a depressing effect. The price of containers is also high in Spain. The depression of currency in other oil-exporting countries, such as Italy, France and Portugal, places Spain at a disadvantage in the export market, as does also the depreciation of currency in the consuming countries of Central Europe. Much olive oil was formerly sold in bulk to France and Italy, where it was refined, packed and shipped under special brands, but the increased cultivation in Algiers, Tunis and Italy has had an unfavorable effect on this trade.

THE CANNERS ON TRIAL

Need For Carefulness and Intelligent Labeling Becoming Urgent.

REPEATEDLY we have warned the industry that it is up before the bar of public opinion and must be ready—not to defend itself, but to properly testify in its own behalf. All the world wants to know more about canned foods, and some of the more active have grown tired waiting for the canners to tell them, and are searching out on their own account.

For instance, here is a clipping taken from The Waterloo (Iowa) Tribune of September 4th. It is a very fair statement; far above the average in accuracy, although not free of errors or at least wrong impressions. Will you observe that the public is told to note canned foods carefully? What will you, as a canner, do to help properly inform the host of women who want more information? At least, you might label your goods so that she can know what she is buying. She can't know that from the kind of labels you are using today.

Don't stop at a mere reading of this—read between the lines and see where your duty lies. The article is reproduced just as it appeared, and was sent to us by a good friend and reader of that section:

Women Shoppers Are Careless In Making Purchase Of Can Foods

Just as Important as Buying Good Fresh Fruit, Says Experienced Buyer.

With the aid of her eyes, trained thru steady shopping, the trained shopper can "see thru a can." And she doesn't need an X-ray either. Even after long years of buying for the family table the great majority of housewives have still failed to learn how. Many local housewives who are as particular as can be when shopping for fresh foods, nevertheless will walk into a grocery store, say to the clerk, "Give me a can of this or that," and think no more of the matter.

Very few Waterloo women know or don't realize that there is just as much room to display judgment in selecting canned products as any other commodity," says one woman expert; "the sooner we women come to recognize it, the sooner we'll be 'batting 1000' with our canned dinners"

"The first point about learning to know canned foods is to let our experience teach us. 'I got a good can of peas or pineapple last week,' says the careless housekeeper in this regard, but I've forgotten what kind it was.' "

A good buyer never forgets "a good buy." And there is only one way to be sure that you won't forget, especially those items which are only occasionally on the bill of fare, and that is to keep a record. It is a very simple matter, and gives lots of satisfaction to keep a list of the canned products which you have found on trial to be exactly what you want, as to quality, quantity and price.

Such a litte thing as the number of slices or pieces in a can of fruit, for example, may mean a lot in the way of economy. If one size or grade has an even number of servings for your family it may prove a big saving—of room in the ice box and the actual waste of food. It is far more important to know just what size of can for each different food product will best meet the needs of her table than most housewives seem to understand. The garbage man gets a great deal more from the back door of the woman who buys hit or miss than from the home of the shopper who has learned the lore of the tin can.

Canned foods products are always graded to the trade as "standard" and "fancy," often with some intermediate, an "extra fancy," and sub-standard grades. "Fancy" always rates higher than "standard," and it will simplify things for you to remember that. But the standard usually has almost, if not suite as much food value as the higher priced grade. Fancy grades of peas—to illustrate—may not be any sweeter than the standard, but they are more uniform in size, and make a prettier dish.

The housewife doesn't have much to worry any more about the actual adulteration of canned products. The pure food laws have taken care of that, especially for foods which enter interstate commerce. It is well to remember that the United States laws can govern only products which cross state boundary lines, so the large scale canner is always subject to more pure food regulation than is the purely local enterprise.

But the decomposition of foods, due to incomplete sterilization at canning time, is an ever present problem, especially if the goods are not known to be the product of factories maintaining high standards of sanitation. The label, or brand, is one help then in avoiding trouble with ptomaine and other poisons. The taste, odor and general appearance of contents, also help to detect advanced decomposition when present. If you are suspcious of a product, puncture the top slightly, and watch for an escape of gas. If this is noticeable, it is unwise to use the contents All high class grocers will be glad to have you return spoiled goods, as it gives them a chance to check up on their stock.

PRESERVES YOUR PRODUCT AT ITS BEST

Luscious fruits and tender vegetables retain their exquisite fresh flavor and appearance when processed by quick quality cooks in A–B Continuous Cookers and Coolers.

Each container sterlized uniformly with uncanny precision enhances your reputation as a Canner, for each customer perceives you have not only selected the best raw materials but also the most efficient means to preserve them at their best.

Write for yours today.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

Avoid cans that are "swelled" to any marked extent—with convex ends. Where the ends are still flat, or concave, it is a fair sign that the contents are in good condition. This applied to almost everything, except in the case of soured corn, which is very hard to detect without opening.

Cans that are rusty, or have soiled wrapper, are just as well to leave alone, unless you have an "explanation that seems plausible, and from a grocer who is worthy of your confidence.

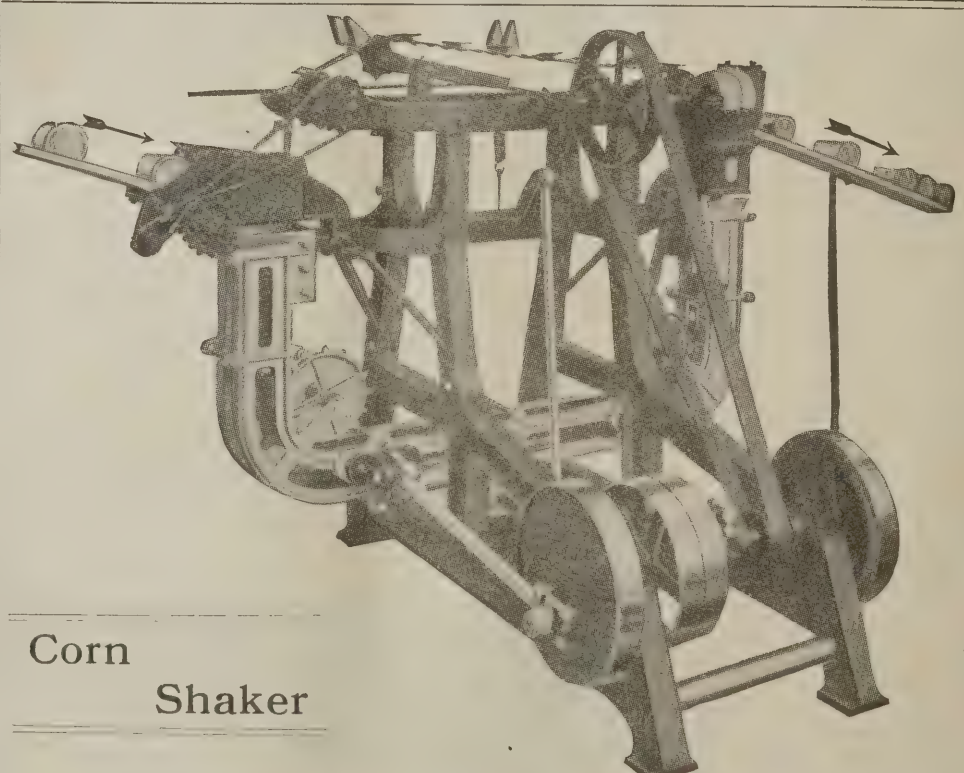
Some housekeepers keep in a kitchen note book their experiences with various sizes and grades of canned foods, the number of slices or portions, amount of extra water, quality, color, and such other facts as will help them to do their future buying more economically and wisely.

AND NOW THE DAILIES SING THE PRAISES OF TOMATOES

HERE is an Editorial as it appeared in the News of Baltimore, one of our great dailies, on September 5th, 1923:

The Third Vegetable Crop

The Massachusetts Department of Agriculture has just issued a fine panegyric on the tomato that deserves our attention. It tells about the tomato being one of the few vegetables of American origin that has attained great commercial importance. It recounts how the production has gone on until "at the present time the tomato occupies third place among the vegetable crops in value, being exceeded only by white and sweet potatoes."



These are the three leading vegetables in Maryland. The last census reported tomatoes in Maryland on 58,083 acres with a value of $4,286,591. The same report showed that one-fourth of the total crop value of Maryland was in its vegetables, and in the Maryland list the tomato was second. Thus in bulk the tomato looms big. And it is even more interesting in its various merits. Let us quote from the Massachusetts experts. The tomato is a good appetizer, the richest of all foods in the vitamines and of great value in the feeding of children and as a protective food for elderly people. Tomatoes place a minimum tax on the digestive system. And the praise proceeds:

> Besides its richness in vitamines, the tomato contains three important acids—malic acid, the same as that which is present in apples; citric acid, the wholesome acid that exists in lemons and oranges, and phosphorc acid. Malic where fresh fruit and vegetables are indicated; citric acid is beneficial to the kidneys; phosphoric acid is valuable when neuralgia and other disorders of the nervous system are present.
>
> Finally, the tomato is as nutritious canned as when served raw. It is a vegetable of parts.

If canners were more "on their toes" and playing th game as they ought to, striving to further their own interes and eager to make converts to the use of canned foods, the would call on their local papers, show them articles like this and be surprised to find the publishers glad to get them an eager to learn more about the goods. Help popularize canne foods by making your local people know what they have i their midst—an up-to-date cannery, producing fine foods.

ARGENTINE GOVERNMENT BUYS MEAT-PACKING PLAN

SUBJECT to the confirmation of the legislature, the sale o the Anglo South American Meat Packing Establishmer (owned by the Vestry interests) at Zarate to the gover ment of the Province of Buenos Aires is reported at the Arge tine capital. According to Consul General W. Henry Rober son in a report to the Department of Commerce, the sum in volved is said to be approximately 1,500,000 pounds sterling The plant is equipped to slaughter 1,500 cattle and 4,000 shee daily, in addtion to 300 cattle for canning purposes. It has i own port and comprises an area of 375 acres, is well equippe and capacious and is regarded as one of the most moder meat-packing establishments in the country.

Corn Shaker

Black Discoloration in Corn.

Mr. Corn Canner :-

If you are troubled with Black Discoloration in your corn here is a remedy- use our Corn Shaker.

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

AYARS MACHINE COMPANY --- SALEM, NEW JERSEY.

Brown Boggs Co. Ltd., Hamilton, Ont. Sole Agents for Canada.

The Saving Makes It Possible

for you to keep your increasing stocks fully insured against fire loss at an extremely low net cost.

In the Canning Industry values increase very rapidly during a short period, and Canners are realizing more and more the wise business economy of keeping these values fully protected against destruction by fire.

CANNERS EXCHANGE SUBSCRIBERS
AT
WARNER INTER-INSURANCE BUREAU

provide this protection at a cost so low as to make it ill-advised for any Canner to assume even a small part of his own risk.

There is every indication that the cost this year will be even less than the average. The accumulated saving for the first six months amounts to over $232,000.00.

Protect your values fully and your savings will increase proportionately.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, SEPTEMBER 17, 1923

WEEKLY REVIEW

Market Weakness in Tomatoes All Due to Need of Money—Tomatoes Should Be Strong—Heaviest Canning Season Now Here—Corn Pack Will Not Be Up to Expectations—Peas in Strong Position—Fruits Are Gaining in Strength.

CUSSING THE EASTERN TOMATO CANNER—Just about all the rest of the country, outside of the Tri-States territory, is busy, right now, damning the tomato canners of this last-named locality because of their lack of backbone as evidenced in the price-cutting on new-packed tomatoes. All the rest of the country is worried how to get up enough tomatoes to fill contracts now on hand, and hence there is nothing like a cut price to be noticed, and, if the truth were told, tomato canners in the Tri-States who sold any amount of futures are not yet out of the woods. But it cannot be denied that tomato prices have been cut this week and the latter part of last week. Nothing unusual in this, of course; it is just the same old recurrence of every tomato-canning season—when the fellow short on cash uses up his little pile, he is forced to go on the market and sell some of his product, no matter what the price, or what happens to the market, so that he can get some more money to pack some more goods. No use raving or gnashing your teeth about him—he's there, and always will be there. The fellow to be pitied is the canner, with sufficient financial backing, but with no business judgment at all, who allows himself to be carried away by the impecunious canner and who sells his goods along with "the hard-up." He knows, or he ought to know, that the "hard-up" has no choice; that the amount of goods thus sold, and often the quality, is very low; and if he could stop to think, he would see that if he left the market to this "hard-up," his wants would be supplied, and he would be out of the way as a disturbing element. But that isn't the way tomato canners operate, as a rule.

While there has been a nice little glut of tomatoes this week and the latter part of last week—beautiful stock coming in in good quantities and keeping all tomato houses busy—not only in the Tri-States, but pretty much everywhere just now, everyone knows that it would take an extreme prolongation of this glut to overpack the market. Before that time can possibly come, frost will be here, even if the tomato plants had the fruit on them to continue their yields—and they haven't. It is all ripening pretty much at once, but a kindly Dame Nature—as is always her wont to take care of the canners—is checking the rush of the ripening tomatoes by cool nights, heavy dews, some rains and other weather tricks which serve to hold back the flow, make the tomatoes better and give the canners a chance, with their lessened labor supply, to handle the tomatoes well. It will be time enough to worry about this "glut" after it has passe its first month, not in its first week. The New York trader wh can paint the world red with two baskets of tomatoes, and wh at the sight of a scowload of tomatoes will run yelling that th deluge is on, will do well to quiet himself and think and reaso sanely that to produce the needed 15,000,000 cases of canne tomatoes the factories must work hard and long, night and day for about six weeks. That means about two and a half millio cases a week. Now we've had one week of it, and we need fiv more weeks.

Prices on new-packed canned tomatoes have gone off thi week to No. 1s, 52½c; No. 2s, 80c; No. 3s, $1.22½; No. 10s, $3.85 and there are reports of prices from 2½c to 5c per dozen les than these prices. There has been no amount of goods sold a these prices, because the buyers are taking in their futures an are not buying spots. Most canners will not touch business a these prices; in fact, it is next to impossible to get business placed at such figures, for there ought to be plenty of buyers who are too smart to pass up such a gift. From other sections than the Tri-States the reports come that the tomato pack wil run from 60 to 75 per cent of normal, and all expect the season to end quickly. All prices in the West and elsewhere are held very firm, with tomato canners refusing to consider further business.

CORN—All reports say that the corn pack is making nice progress and is of very fine quality, but that the yield is disappointing. It begins to seem certain that the corn pack cannot run above 75 per cent of expectations, and the market needs more than this would produce. Maine is getting into its corn, but the cold weather that has been moving across the country from the West, with snow in upper Michigan and very low temperatures in Northern United States and lower Canada, make the outlook very uncertain for Maine and for some other corn sections which counted upon the late crop. Temperatures ranging in the low forties are not good for the corn crop, and it begins to look as if we might expect fall and early frosts. Illinois seems to be the only State that expects anything like a fair pack this season, and that State is always sold up as futures. Iowa will fall short of its normal pack, according to report, by 25 per cent or more, and other corn sections say the same thing.

The corn market holds very firm, with a tendency to higher prices. The figures will be found on their regular page, and there is no need to simply pad out this by quoting the numerous prices there given. Suffice it to say that the corn market is unchanged in prices this week.

BEANS—The string bean crop has had a hard time of it this summer, and as a result good beans will be found good property this fall and winter. No section seems to have been able to get a satisfactory crop and pack, and the season, except for some small fall string bean canning, is over. On the other hand, the dried bean market has been weak and the prices easy. As a result, baked beans of all kinds have ruled dull and the prices low. The market for all kinds of beans has been very quiet this week, and there are no changes to note in quotations.

Lima beans have attracted more canners this season than usual, and there will be quite a good-sized pack, of fine quality, and the prices are ruling low. It is certainly an unusual thing when lima beans can be quoted lower than standard peas, but that is seen this season.

PEAS—Spot stocks have worked down to such small compass that the holders of any surplus feel very secure in their position. Buyers know that if they want peas they must pay the price and not argue. There are no changes to be noted in the market this week.

KRAUT—Those who cut kraut are complaining that the market stall demand for cabbage is so strong that the prices are kept out of their reach. Canners of kraut have had to wait for their contracted cabbage, and that is not yet ready. Everything seems to point to a shortage in canned kraut this season, as against a heavily increased demand.

PUMPKIN—This will soon be coming upon the tables, and from what we can understand the crop is in very good condition. Pumpkin is heavily packed only in one or two sections, and they see to it that a fine article is produced to fill the orders usually on their books in advance. Pumpkin must be of good quality or it had better not be packed at all. No. 3 size of pumpkin is marked out of quotation this week.

FRUITS—There are some fine peaches coming to market now, but are high in price, and the canners are too busy with tomatoes to give them much attention. In the West peaches are being packed on order, and already we hear complaints of shortages in jobbers' stocks of the medium and cheaper grades of peaches and other fruits. The chances seem good for fruits to recover completely this fall and to pass into the strong and high-priced class.

No. 10 apples are quoted at very low prices, and the canners are not attracted. Unless demand improves, the canners will touch them very lightly, if at all. The fruit packs in New York State are well mentioned in our crop reports.

OYSTERS—The new season opened with September 1st. Very few are coming to market, and the prices are considerably higher for raws than last season.

NEW YORK MARKET

Business Active—Tomatoes Weaker—Corn Lower—Fruits Stronger—Standard Cling Peaches Scarce—England Not Buying Canned Foods—Sardine Situation Badly Mixed—Canned Prunes Gain Favor—An Observation on the Swell Claims. Notes.

New York, September 13, 1923.

BUSINESS ACTIVE—Despite the absence from the market of many Jewish buyers this week, owing to the two Jewish holidays, there has been an active demand for canned foods, and the market has livened up considerably Distributors are now operating on a more extensive scale, and transactions are in larger volume.

Tomatoes Weaker—With the tomato glut now on, the market has weakened for prompt shipment, and is now quoted at 52½ cents for 1s, 80 cents for 2s, $1.20 for 3s and $4.00 for 10s. It is reported, however, that business on 10s has been confirmed at $3.90 per dozen, although canners have turned down bids at $3.75. Buyers are watching the market carefully, and those distributors who did not operate extensively on futures are now picking up tomatoes wherever offered at bargain prices.

Corn Also Declines—Standard corn has also weakened under selling pressure, and is now available at 85 cents per dozen, f. o. b. Maryland cannery, although many packers continue to quote at five cents over this figure. There has been a good business in standard corn, stocks in the hands of distributors being light.

Canned Fruits Strengthen—Considerable interest attaches to California fruits this week. The California Packing Corporation yesterday announced that it had withdrawn prices and offerings of No. 1 choice cherries, No. 1 choice pears, and No. 2 choice pears. It is also reported that further withdrawals are in order during the next few days, and it is believed that some advances in prices may be scored.

Standard Cling Peaches Scarce—Standard cling peaches are extremely scarce in first hands, and the market is stronger as a result. One of the leading independent packers, during the early part of the season, informed the writer that he would pack only enough peaches this year to take care of the orders he had on his books, and would not pack any surplus. A report today from this packer, showing the spot fruits he still has to offer (which, by the way, are very limited on all varieties) show that standard cling peaches are entirely out. Judging by the firmness in the market on the coast, other packers are in a similar position.

The British Market—Great Britain is normally a heavy buyer of California canned fruits. This year, however, England has bought practically nothing, and is not expected to be a factor in the American market until late this winter or early next spring. British buyers have fairly large stocks of California canned fruits on hand, and in addition are carrying a heavy supply of Australian fruits. Australian Government representatives are seeking to speed up the movement of the Australian fruits, and it is reported that the British buyers are incensed against the California packers, being of the belief that the California postings on canned fruits, which resulted in heavy British purchasing from the 1922 pack, were misleading. Much capital has been made out of this reputed antagonism of the British buyers to California, but it is believed that the quality of the American pack will hold the British market, whatever the personal feelings of the English distributors may be.

Sardine Situation Chaotic—Reports seceived from Maine on the sardine situation show that the market is in chaotic state. Canners have paid as high as $42.50 per hogshead for fish, and the supply is inadequate even at this high price. Canners are packing now, whenever fish are available, against orders already on their books, but most of them are withdrawn from the market.

Seacoast Account to Ashenfelter—An incident of considerable interest to the local trade occurred this week when the Seacoast Canning Company announced the appointment of H. H. Ashenfelter, Inc., as their New York sales representatives. The Seacoast account was formerly handled by U. H. Dudley & Co., who recently went into bankruptcy.

Canned Prunes Popular—California canned prunes are meeting with increasing favor in the New York market, parcularly the No. 10 goods, which sell to the bakery, restaurat, and hotel trade, where they are taking the place of the dried prune in many instances. The California Prune and Apricot Growers' Association, after several years of packing and experimenting, are now canning a product which has met with universal favor, and their packing capacity is being taxed to take care of the business which is coming in.

Call For Canned Foods Weeks Support—Leslie Lieber, of St. Louis, general chairman of the Canned Foods Week Committee of the National Wholesale Grocers' Association, has issued a call to local chairmen of the canned foods week committee for co-operation during the 1924 campaign In his letter, Mr. Lieber advises: "You should call together all of the wholesale grocers and retailers and advise them of the coming campaign and be prepared to lay your plans for the campaign. The National Brokers' Association will appoint a representative in your market who will be asked to confer with you so that there will be a complete alliance with the brokerage interest representing the canners. Similar arrangements will have to be made for the coming year in reference to funds to carry on the local campaign, as was done last year. this, of course, will be subscribed to by wholesalers, brokers and retailers so that proper advertising can be carried forward during the week. Advertising material is similar to that furnished by the National Committee last year. Further information and suggestions will be forwarded very shortly from time to time."

Chains to Meet—The National Chain Store Grocers' Association convention here next week will attract considerable attention from the canning and brokerage trades. It is expected that problems of particular importance to the relations of canners and chain store buyers will be taken up at this meeting.

Another Convention—Many canners of specialty products will be represented at the annual convention of the American Specialty Manufacturers Association which will be held in Minneapolis, September 26-28, inclusive. The New York delegation leaves on a special train on Monday, September 24th, and will meet the Chicago delegation on Tuesday, the entire party leaving Chicago Tuesday night on a special train of six cars for Minneapolis.

Swells—While both the canners and the wholesale grocers have announced their platforms for the handling of swelled canned foods, no general agreement has as yet been announced. In view of this uncertainty, it is interesting to note the progress of negotiations between buyers and canners with respect to the swell guarantee clause. Packers who have a reputation as quality canners are having no difficulty in getting the buyers to regard the entire swells proposition from the canners' standpoint, while the canners who in past have packed rather indifferent quality or who pack to sell at a price are being forced to accept the wholesale grocers' terms in respect to swells. The moral is obvious.

Salmon Firmer—Red salmon has been advanced to $2.35 by a large independent, following the action of the Alaska Packers' Association in naming a tentative price of $2.35 on reds of the new pack. Pinks remain unchanged at $1.25, and chums at $1.20. It is reported that pinks have sold at concessions, and that the pack will be a good deal larger than earlier reports had indicated.

Peas Scarce at $1.25—Standard 2s sweet Wisconsin peas are scarce at $1.25, and most packers are holding at $1.30 for this grade. There are a few packers, however, who are still willing to close out small surpluses at the $1.25 price, and no general advance to the $1.30 basis can be looked for until these holders have cleared.

Notes—H. F. C. Killian, well-known broker, has returned from an extended visit to Wisconsin, where he made a thorough survey of the canned pea situation.

Joe Diflo, spot canned foods buyer for R. C. Williams & Co., is about to join the ranks of the swingers of the mashie and niblic, having accepted a challenge to do golf battle with Clarence Stewart, the label king.

George A. Mendes, prominent West Side canned foods broker, has returned from an extended European tour, looking the picture of health and happiness.

It is reported that approximately 30,000 cases of crabmeat, awaiting shipment, were destroyed by the earthquake at Yokohama.

G. W. Glick, manager of the New York office of Mailliard & Schmiedell, has left for a visit to the San Francisco headquarters office.

Harry V. Butler, well known throughout the canning trade, and for nearly thirty years connected with the brokerage trade here, died a few days ago at Memorial Hospital, of cancer.

"NEW YORK STATER."

CALIFORNIA MARKET

In Spite of Smaller Packs and Lower Prices, the Market Is Poor —Chain Stores Buying Better Than Others—Half Apricot Pack—Pear Pack Disappointing—Japan Needs Food —Rice Growers Refuse Speculators and Continue to Sell at Original Prices—San Francisco Repaying Japan's Hospitality of 17 Years Ago—The 1923 Pack of Vegetables.

San Francisco, September 13, 1923.

THE Market—The canned foods market, especially on California fruits, is scarcely as active as would seem to be warranted from the statistical standpoint. Prices are much lower than for several years, the pack on many varieties will be short, and great care has been taken not to pack heavily of grades on which there is a hold-over. Chain store buyers seem to be viewing the situation more clearly than most others, and are buying more freely, but all business seems to be of a more or less immediate nature. Canners who quoted extremely low prices to attract early business have disposed of their packs, and holdings are now being firmly held, with every prospect of early advances on some varieties. Large operators have refused t make concessions, and are well satisfied with the general situa tion, suggesting that prices are certain to advance more tha enough to cover the cost of carrying the goods. Some buyer seem to question the report of a small pack of apricots, since th crop was such a large one, but the fact remains that the outpu will not exceed 50 per cent of that of a year ago. The fruit ra to very small sizes, and high grades are even now difficult t locate. In peaches the reverse is true, the pack running to th better grades, but the pack will be lighter than last year. Th pear pack is proving disappointing, from the standpoint of th canner, there having been such a splendid shipping demand fo the fruit that growers have not made expected deliveries. I was thought that a late pack might be expected, but such ha not been the case.

Japan Needs Food—A flurry has been exprienced during th past few days in the spot canned foods market through the de mand for goods for shipment to the devastated area of Japan Purchases of condensed milk, salmon and similar goods hav been made by relief organizations, and are now on their wa across the Pacific, the first relief vessel having left five day after the news of the disaster. No increase in prices on Cali fornia products intended for shipment to Japan will be counte nanced, a splendid example in this direction having been set b the organized rice growers of the State. The demand for rice has been lagging, and a surplus holding has been offered fo some time at a low price, without takers. Following the news of the earthquake and fire, speculators immediately offered t purchase the entire lot at a substantial increase in price, know ing that it would be in demand. The growers refused to make sales to these interests, and are selling rice to the relief organizations at the price set by them originally. San Francisco business interests are turning their attention to the raising of a relief fund, but have refused to accept the quota of the Red Cross for this city. This quota is $100,000, but the goal set by the local committee is $500,000, and a substantial portion of this has already been raised, the first $100,000 having been forthcoming within a few hours. San Francisco remembers what conditions were like in this city seventeen years ago, but the suffering then is barely to be compared with that being experienced in Japan. At the time of our disaster Japan sent $250,000 for relief, and San Francisco alone plans to double this sum. The local canned foods trade is represented on the Citizens' Committee for Japanese Relief by Frank E. Booth, of F. E. Booth & Co.; Joseph Durney, of the Griffith-Durney Co., and R. I. Bentley, of the California Packing Corporation, while the canmanufacturing trade is represented by M. J. Sullivan. The American Red Cross has authorized the purchase of great stores of supplies in this city, and a number of vessels are being loaded with necessities. Shipments during the next few months are expected to tax the facilities of this port, the gateway to the Orient.

Pack Statistics—Under the direction of Preston McKinney, Secretary of the Canners' League of California, statistics covering the 1923 output of asparagus, peas, spinach, artichokes and Brussels sprouts have been compiled. The entire pack of these was made in Northern California, with the erception of spinach, of which 109,612 cases were packed in Southern California, according to figures furnished by S. W. Cunningham, Secretary of the Southern California Canners' Bureau. The pack for the State was as follows: Asparagus, 1,519,756 cases; peas, 223,923 cases; spinach, 1,383,831; artichokes, 4,323 cases, and Brussels sprouts, 3,500 cases. The output of asparagus was a little more than was generally believed would be the case, the cold spring leading many to express the belief that last year's pack of 1,239,839 cases would not be passed. Increased acreage and a longer packing season aided in making the showing. Peas showed a marked falling off from last year's output, having been 1,180,525 cases, but had crop conditions been normal the pack would have passed the million and a half mark by a comfortable margin.

Salmon—Definite opening prices on Alaska salmon have not been named by the leading interests. The Alaska Packers' Association is quoting Alaska red talls at $2.35, but the price is subject to change without notice, and is not made a general opening price. No price has been named on pinks, and none is expected for some time. Outside interests are offering pinks in this market at $1.25 and $1.30, and some small lots of reds are available at $2.25. The Griffith-Durney Co. recently issued a circular on the salmon situation, in part, as follows:

"As far as reds are concerned, the pack at Bristol Bay is over, and is 275,000 cases less than produced in that district last year. The pack of reds in Central Alaska is very short, in some places bordering on failure. Figuring the carry-over today with the carry-over of a year ago, the visible supply of Alaska reds

s at least 600,000 cases less than it was at this time last year. Great Britain bought very little Alaska salmon in 1922, but the records show that there were marketed during the calendar year rom September 1, 1922, up to date, slightly more than 2,000,000 ases Alaska red talls. In view of the fact that the visible sup- ly is 600,000 cases less than a year ago, together with the in- reased cost of packing, you can readily appreciate that packers re justified in holding reds at $2.35."

Coast Notes—The California Packing Corporation has rought joy to many apricot growers in the San Francisco Bay listrict by forwarding checks for an additional $10 a ton for ruit purchased at $25 a ton. Considerable fruit was purchased t this price, with the understanding that if market and sales onditions would warrant it, and added sum would be given. Opening prices were made on the basis of $25 a ton for apricots, ut the California Packing Corporation realizes that this meant loss to many growers and has made this substantial increase.

The Herbert Packing Co., of San Jose, Cal., which put up nore than 15,000 cases of cherries this season under a co-opera- ive agreement with the California Cherry Growers' Association, as succeeded in marketing a fair part of the pack, and it is be- ieved that there will be no trouble in getting rid of the lot. The pack in California is held to be about the same as that of ast year, while the pack in the Northwest showed a marked falling off. The membership contracts with growers expires this ear, and the California Cherry Growers' Association is conduct- ng a campaign to renew them.

G. H. Bradt, president and general manager of Hunt Bros. Packing Co., San Francisco, has received word from a sister in Japan to the effect that she had escaped injury in the Japanese disaster, having been at Kyoto, one hundred and twenty-five miles from Tokyo.

No further shipments of Japanese crab meat are expected by San Francisco importers this season, there being a need for all food products at home.

The body of John Henry Winters, who died two months ago in Alaska, has been brought to San Francisco for interment. He had been with the Alaska Packers' Association for many years and went north this season as superintendent of one of its canneries.

"BERKELEY."

ST. LOUIS MARKET

Market Improving—Demand Spotty—Buyers Seek Tomatoes at Prices Unobtainable—Missouri Pack Will Be Satisfactory—Futures Arrivals Check Spot Buying—Very Little Fancy Corn Being Offered—Peas in Fair Demand.

St. Louis, September 13, 1923.

MARKET Improves—The canned food market is better than it has been, but there is still somewhat of a quietness prevailing. The outlook, however, is brighter, but the jobbers are not buying as they should. The demand is spotty. The volume of sales, generally, is greatly disappointing because the majority of the orders call for goods for immediate use. They are limited to odd lots. This same degree of buying has prevailed for some time and as there has been a greater liquidation than replacements, it looks as if the time was not far ahead when buyers will be compelled to purchase. Fears of an overpack and low prices have not been realized. The small amount of buying has caused prices to range so close to cost of production that it would appear that an advance will surely come, when future stocking up commences.

Vegetables—Tomatoes—Buying orders for new pack standard 2s tomatoes, have been placed, but brokers cannot place the business at the prices specified. Most of the packers are holding out for more money. Spot goods are not large and are getting lower every day. Missouri canners are speeding up their pack as fast as possible and advices state the pack will be satisfactory. Buyers generally have covered for their immediate wants and trading has quieted down somewhat. Shipments of tomatoes on future orders are beginning to start and buyers are holding off from taking spot goods until the future order shipments are in and they know just where they stand on the market.

Corn—There is a satisfactory call for corn and the demand is for standard as well as the higher grades. Fancy corn from every section is in favor of the packers. Very little is being offered, because most of the canners have booked about as much business as they can fill. Advices from Maine are a little shaky. Buyers are uncertain over the situation in that state. The pack is expected to start within a few days. It is feared that frost will come before they can pack, and if it does, the crop will be seriously damaged and the pack will be cut down materially.

Peas—There has been only a fair demand for peas. Still they are holding their own remarkably well. Ever since the season opened, the demand has been so good by all lines of buyers, that nearly all the available supply of the most desirable sieves have been absorbed.

Beets—It is hard to find our beets, as in some sections the crop has run to smaller sizes, owing to the drouth.

Asparagus—There is only a quiet call for asparagus, and little shading of spot prices is reported.

Canned Fruits—Very little spot business on cling peaches is being done, most of the buyers are awaiting the coming of the new pack from California. Improved conditions are reported from that state. The price cut long done by the independents, has come to an end, and the market now seems to be dominated by the larger packers. Jobbers have not bought as much as usual, thus far this season and it is the opinion of the best informed canners, that before long, there will be a spurt of buying. It is then thought that the market will be stronger.

Apples—There is a fair demand for gallon apples with prices unchanged.

Apricots—There is not much of a call for apricots, and those sold are at former prices.

Pineapples—There is a fair demand only of business being done on pineapples, with a steady market prevailing.

Milk—The demand for canned milk is much the same as previously reported. It is of a routine tone, with unchanged prices.

Fish—According to advices received by brokers, the salmon situation on the coast remains unchanged.

"MISSOURIAN."

CHICAGO MARKET

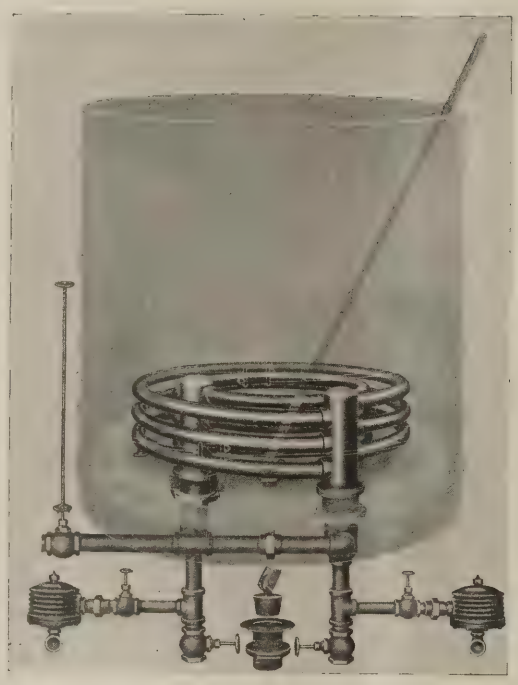
Market in Good Shape—Big Pack Tomatoes Required as Carryover Is Exhausted—Corn Cheaper Than Tomatoes—California Producers and Growers Make Big Slashes in Prices—Western Canners to Meet November 6, 7 and 8.

Chicago, September 14, 1923.

THE market is in better shape as to buying on the part of wholesale grocers than it has been previously for two years. The retail grocers also seem to have imbibed the knowledge that there is a sellers' market in canned foods, and that if they want their fall and winter supplies of the proper quality and at the right price, they must buy now.

The situation in relation to the canned pea output has demonstrated that those who waited for lower prices did not find them, and paid higher prices, and then found difficulty in getting the grades and qualities they wanted, and frequently had to be satisfied with something they did not want.

Tomatoes Needed—It does not matter how many cases of canned tomatoes are packed this year, for if all the canneries pack to their full capacity, every case will be needed, and they will all be taken at prevailing prices, provided the canners do not try to force them on the market and break the price.



There are no canned tomatoes of the previous year's pack left and floors and shelves are empty. Twelve million cases are required to feed the consumers, and I do not think there will that many packed.

Corn Cheap—Canned corn is the cheapest of all the canned vegetables, and is even cheaper than canned tomatoes, the situation being reversed in that respect from former years, when canned tomatoes were cheaper than canned corn. The pack of 1922 is sold and gone. There are a few scattering less-than-carload lots in Iowa; a few cars in Wisconsin, or part cars; none in Ohio or Indiana, and scarcely any in Maryland or Virginia, as I am informed.

(*Markets Continued on Page 10*)

LANGSENKAMP

Kook - More - Koil

These coils have no equal for quick cooking, with their use in Cypress and Enameled Lined Steel Tanks, the average cooking time is reduced one half, also making scorching as antiquated as use of flint and tinder.

We also manufacture:

Copper Steam Jacket Kettles
Kern Lightning Finisher
Indiana Pulper Finisher
Indiana Chili Sauce Machine
Indiana Pulp Filler
Washer, and Sorting Tables
Cypress tanks for cooking
Enamel Steel tanks for cooking
Spice Buckets
and other canners equipment.

SMILE AWHILE

WORKING ANGEL

Mother (to her six-year-old daughter)—Jane, dear, go up stairs and get mother's fan.

Jane—But, mother, I'm afraid in the dark.

Mother—Pshaw, there's nothing going to hurt you. Besides your guardian angel will be there.

Jane—Well, there's no use of us both going after the fan Let him get it.

HARD QUESTION

"Carry yer bag, sir?" said an eager urchin to a man or Forty-second street, hurrying toward Grand Central Station.

"No, thanks!" replied the man, shortly.

"I'll carry it all the way for a dime," persisted the lad.

"I tell you I don't want it carried!" retorted the man.

"Don't yer?"

"No, I don't!"

"Then what are you carrying it for?"—The Continent.

"Well, nobody cares for me. I guess I'll have to go out in the garden and eat worms." Bessie, aged four, had heard her father jestingly make that remark a number of times without any other response than to love him vigorously, but there came a day when she asked in a whisper: "Daddy, do you like worms?"

"Well, I can't say that I do," was his laughing reply.

"Neither do I," confided Bessie.

FASHION

"Odear, odear, odear," sighed Mrs. Gimme, "here the fashion experts say a woman must have one corset for each gown. What shall I do?"

"If I may suggest, dearie," said Friend Husband, "you got one corset, ain't you? Well, then, all you gotta to do is just sell your extra gowns an' you're in style again."—Richmond Times-Dispatch.

POLITE TO THE LAST

Warden (to murderer in electric chair)—Is there anything you would like to do or say before I push the fatal button?

Thoughtful Murderer—Yes, kind sir, I would like to get up and give my seat to a lady.—Punch Bowl.

HOPE IT ISN'T A SHOOTING STAR

He—Mademoiselle, you are the star of the evening.

She—You are the first to tell me so.

He—Then allow me to claim my reward as an astronomer.

She—How so?

He—To give my name to the discovered star.—Felix Kohn, Paris.

HIGH LIVING

Over across the big pond they claim that all Americans are either fools or cranks and that is the reason why they are always charged more than visitors of other nationalities. To prove this, Parisians tell stories like the following:

An American called at a hotel one day and asked what the charges were, and was told that they were 30 francs on the first floor, 20 on the second and 10 on the third.

"Thank you," said the traveler, and turned to go.

"Doesn't that please you?" asked the landlord, unwilling to lose a guest.

"Yes, your prices are all right," was the reply, "but your hotel isn't high enough."—St. Louis Star.

QUALIFIED AS PURCHASER

Two south-end residents were discussing pre-prohibition days when saloons were plentiful along Columbus street. One of them was able to recall a very vivid experience which had happened to him when he was about twenty-two years old.

"I was standing out in front of a saloon on Front street when a man came out of the saloon, walked up to me, and in a very serious mood attempted to sell me a green giraffe."

"Well, what did you do?" his friend asked.

"Oh, I went into the saloon, bought a couple of drinks and came out and bought the giraffe."—Columbus Dispatch.

THE CANNING TRADE

EDITORIAL

HERE'S GOOD NEWS—One of our good friends, noting our editorial remarks last week, feared that we were growing weary of the discussion on this matter of the Swells Allowance, and, in Biblical terms, admonished us not to grow weary of doing good, but to keep on with the good work, to the end that the industry might understand the very "innards" of this proposition. He figures it out in this way: There are about five billion cans of foods produced annually; but let us take about half of this amount and call it one hundred million cases at an average valuation of $4.00 per case. This represents a total value of $400,000,000. One-half of one per cent on this amounts to $2,000,000. Careful computation of the actual losses back over a period of years as long as ten, together with laboratory and scientific data, would show the losses due to swells on this amount of goods as about $400,000. Therefore, an allowance of half of one per cent would mean a pure gift of $1,600,000 to the buyers every year. It actually amounts to more; but that is a quite tidy sum, and is the underlying motive for the big drive now on to get that flat allowance. That is what all parties at interest, except the canners, are striving to save for the industry. It is a right nice morsel to turn under the tongue, well worth complete digestion—and it is real, not visionary. When the canners grasp this fact there will be no further argument heard about a flat allowance of half of one per cent.

CROCODILE TEARS—When the proposition to establish zone warehouses in which to store swelled canned foods, under Government supervision, but subject to inspection and examination by the canners, was made, the jobbers, with tears in their voices, begged the canners not to go to this wanton waste of good money, not to incur this evtremely heavy expense—and it was even hinted for the benefit of the backward-looking canners—that it was just another move to establish another bureau in the National Canners' Association, with fat salaries attached. There are so many "backward-looking" canners in the industry, and so many trained in the art of biting the hand that feeds them, that this latter bait was taken eagerly; and when we first heard of the warehouse, our first thought was of the cost, we will admit. But when the jobber becomes solicitous about losses by canners, we know it is time to stop, look and listen. The words of Shakespeare in his play "Julius Caesar," just before the murder of Caesar, come back to us: "Cassius doth bow too low." And so we set out to look and to listen in this matter of the establishment of warehouses, and here is what we find:

> The Advisory Council of the National Canners' Association favors the plan; the Bureau of Chemistry will sanction the warehouses; most State food authorities are in hearty accord with the plan, and some of them enthusiastic about it; 13 regional warehouses have already been decided upon, and others will be added as required, and the present staff of the National Canners' Association, through the Research Laboratories, without addition, will be able to make the examination of the goods in these warehouses, and will do so. (Thus it will be a scientific, official investigation.) If other warehouses have to be opened, and should it happen that cases of spoilage should develop in unusual numbers, it might be necessary to appoint an assistant. But this latter is unlikely, and the present indications are that the Association force as it now stands can handle the examination of the goods and pass upon them, and it would be a foolhardy person who would question the findings of these scientists.

We think that is good news, because it means a thoroughly satisfactory settlement of this long-muted question—satisfactory to the man who seeks only reembursement for actual losses, and does not try to make a profit out of misfortune; and it brings into the examination of these swelled goods the power and certainty of scientific research, and eliminates inexperience, guesswork—and worse.

It means that where the canner is at fault he will have to pay for his mistake. It likewise means that where the wholesaler or jobber maltreats the goods while in his possession, the canner will not have to pay for such maltreatment. How long the buyers will submit to this scientific determination of their swell claims we do not know, but your guess is as good as another's. Our guess is that they will stop quite short; that the jobbers will begin to exercise some care other than the saving of a penny or two per dozen in the purchase of canned foods; that guarantees to the retailers, now very scarce, will become totally extinct, and that claims for spoilage of canned foods will be absorbed just as the jobbers absorb losses on almost all other items as a matter of business. Then will come the day for the careful canner of quality goods, and the absence of all this bickering and argument over a trifling amount of goods. Isn't that good news? It is not coming; the warehouses have been established and the thing is here. It is only for the canners to make use of it.

A NEGRO FEAST—Do you know what a negro feast is? In case you do not, we hasten to explain that a negro feast is one of the imagination; one which makes the negro lounger on the New Orleans levee say to another lounger: "Gee, I wish I had a million watermelons," to which the other replies: "Well, George, if you had a million watermelons you'd give me a hundred, wouldn't you?" "No, I wouldn't give you none." "Ah, you'd give me ten, wouldn't you?" "No." "Well, just one, wouldn't you?" "Look here, nigger, if you'se too lazy to 'magine your own watermelon feast, you don't deserve none." Here is a literary banquet—the only kind editors can afford in the days between Conventions, prepared by Henry L. Mencken, whom everybody loves and everybody cusses, but everybody reads in The Baltimore Evening Sun; and because many of our readers have experienced the delights of the hotel he mentions, we believe all will read what he says with as much delight as we did.

He was speaking of poor meals and poor hotel service, and he said in the Evening Sun of September 17th:

"What is the matter with our keepers of inns and eating-houses? Do they believe that travelers who come to Baltimore come to eat precisely the same banal rubbush that is dished up to them in Omaha, Kansas City, Philadelphia and Albany? Do they think that their customers actually prefer the cookery of Pullman dining-cars? If not, then why do they cling so absurdly to the same old round of obvious and impossible dishes—the same dreadful soups, fish entrees, joints and sweets that are everywhere on tap in this god-forsaken land? Why do they offer bogus sole and Long Island bluefish, when Norfolk spots are so much better? Why do they offer insipid roast lamb, when roasted Maryland ham stands to it as Betelgeuse stands to a wart? Why clammy, imitation French pastry, when Maryland pies, made by honest blackamoors, are the best in Christendom? Why broiled lobster, which only harlots eat, when steamed Chesapeake crabs are a million times as delicate and charming? Why, above all, bad pseudo-French bread and rolls, when the home-made bread of this imperial Free State has been famous for 300 years?

"Permit me to say at once that, in all this tirade, I specifically except the Rennert Hotel, and, perhaps, to avoid controversy, one other. At one period of my life, when I was younger and happier, I lunched at the Rennert every day for five years running. In all that time I never drove a tooth into a bad dish, and in all that time I never saw or heard of a dish that was not thoroughly and unmistakably indigenous. The cooks at the Rennert, all of them Aframericans of a very high tone, not only do not know how to make French sauces, German soups and Italian Ragouts; they look upon all such things with inexpressible loathing; their one and only aim is to cook Maryland victuals in the Maryland manner as well as it can be done by mortal hands.

How many times I have taken strangers to the Rennert for lunch or for dinner! And how many times I have seen them melt and sob over a plate of Chesapeake shad-roe with bacon, or a fragrant mess of jowl and sprouts, or an oyster pot-pie, or a platter of boiled turkey with oyster sauce (it is to the common roast turkey of the United States as Rudolfo Valentino is to Cal Coolidge), or a slice of Virginia ham with new cabbage, or a large tray of fried chicken with corn cakes, or a Susquehanna wild duck delicately done, or a bowl of chicken gumbo soup, or, best of all, a tub of crab soup, either creamed or shore style! Eating such things, to most Americans, is a colossal experience. they never forget it. Today, which happens to be my birthday, I have received at least 100 affectionate picture postcards from former guests. Some of them have not enjoyed the honor of eating at the Rennert since 1912, and yet they are talking of it yet. And for a plain reason. When strangers come to Baltimore, they want to tackle the delicatessen that, in more civilized days, made Baltimore famous. They don't want to feed on cold consomme, chicken a la king, French pastry and endives. They don't want spaghetti and sauerkraut, sauce Bernaise and Bohnensalat, Linsensuppe and roast beef. These things they can get anywhere, in all bad American eating-houses. What they want in Maryland is the whole incomparable repertoire of Maryland masterpieces—Maryland beaten biscuit, Maryland soft crabs, Maryland oysters, Maryland fried chicken, Maryland duck, Maryland hog-meat, Maryland cabbage, Maryland blackberries in Maryland pies."

Is it any wonder Maryland became the mother of the canning industry, that all our citizens in other States might partake of Maryland's incomparable foods?

NEVER TOUCHED HIM

A young man, springing into an overcrowded moving train, trod on the toes of an old gentleman in a corner seat. "I'm very sorry," he said.

Old Gentleman (hand behind ear)—Eh?

Young Man (more loudly)—I beg your pardon.

Old Gentleman—Eh-h-h?

Young Man (shouting)—I trod on your foot. It was an accident—an accident.

Old Gentleman (catching last word only)—An accident! You don't say so! Anybody hurt?

SWELL WRONGS

[Note—The following is from one who has very carefull followed the discussion of the flat allowance for swells, and wh has become so wrought up over it that he broke out in verse.—The Editor.]

There is going the rounds a
Poem inspired by the gay
Distributor opposed to the plan
Of inspecting every "suspected" can.

This comes as an aftermath, a
Hangover from distributors gay
Who seem to fear the warehouse plan
Will make less likely the "suspected" can.

'Tis true returning the label
Makes them doubtless quite able
To claim many a "suspected" can.
Therefore, why the warehouse plan?

Of course, no way has been discovered
To keep the cans properly covered
With the labels, and thus prevent
Removal unless there is spoilage of content.

Why, bless you, they have a plan
Of taking care of the "suspected" can,
And that is to allow one-half per cent.
But with this alone they are not content.

Although the canner may pay and pay
The one-half per cent for many a day
And the actual swells be nothing, or less,
He's riding to a fall, a pretty mess.

Soon he will get a nice, big bill
For "suspected" cans; then's when he will
Find the one-half per cent is only meant
To cover spoilage of less than one-half per cent.

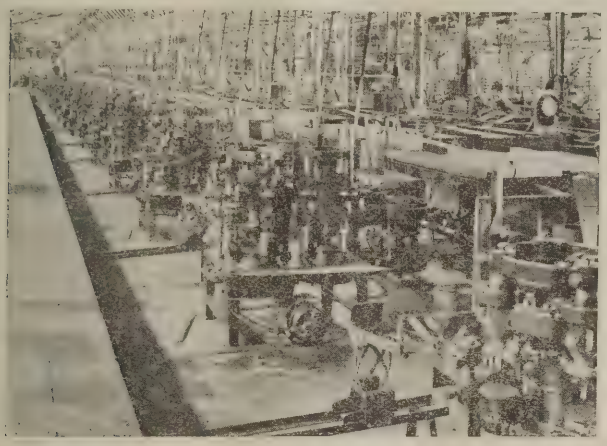
Evidently some distributors will not stay hitched
To any agreed plan. They hastily ditched
Their former agreement to submit the can
Charged with being bad to the inspection man.

I do avow that the distributors 'poet
Who with alert mind and facile pen wrote
"Swell Rites" composed the prettiest of songs,
But should have named it "Swell Wrongs."

FREIGHT RATES & SHIPPING NEWS

Traffic Bureau

THE CANNED GOODS EXCHANGE OF BALTIMORE



A PROPOSAL to readjust the carload rates on canned foods condensed milk, etc., from various points in Wisconsi and Minnesota to Eastern cities, is set forth in a recen bulletin issued by the Western Trunk Line Association.

Effective October 10th, reduced rate of 27½c per 10 pounds will be established by the Chesapeake Steamship Com pany on flavoring or fruit syrups, in bulk, in barrels or kegs or in jugs, boxed, in carloads (minimum weight 36,000 lbs.) from Baltimore to Norfolk, Portsmouth, Richmond and point taking same rates; also to points on the York River.

Effective October 10th, transcontinental rates on canne foods from New York piers of the Southern Pacific Compan to Pacific Coast points, will be reduced to the basis of the al rail rate from Chicago to the Coast, namely, $1.30 per 10 on 40,000-pound carload minimum, and $1.05 per 100 pound on 60,000-pound minimum. Since the tariffs naming thes rates have been filed with the Interstate Commerce Commis sion, some protests have been made against the reduction b Western shippers and railroads, but unless the Interstate Com merce Commission formally suspends the tariffs the abov rates will become eiective.

Effective October 4th, the Mississippi-Warrior Rive Barge will establish the following rates on canned foods, ca loads, from shipside New Orleans: To Chicago, Ill., 29c pe 100 pounds; to Evansville, Ind., 35c; to Louisville, Ky., 35c to Milwaukee, Wis., 41c.

Conditions Of Crops In All Sections

Crop Reports By The Canners

Take Time—

To send us a brief word, at least, as to the progress of the pack in your section to date, and as to prospects. Others are doing this, as you see below.

You welcome all possible information—Exchange, then, with your fellow canner, and here is the way.

The crying need of this industry is more information. Give a little and you will get much. Let us hear from you.

——The Editor.

Port Clinton, Ohio, September 13—Tomato crop is good, but three weeks late. Large acreage. Think pack will be short on account of weather.

Lebanon, Ohio, September 15—Nearly all packers in Southwestern Ohio had finished packing corn by the 14th of September, which was fortunate, as two heavy frosts have affected the sweet corn very much, making it unfit for canning purposes. It is estimated that the pack through this valley will be about 75 per cent of normal. It is reported that several factories have sold out their entire output, and a few will have a small surplus, which they are not willing to dispose of at the present prices.

Lebanon, Ohio, September 17—Canning season ended September 12th. Acreage about 75 per cent of normal. Good quality corn. Had heavy frosts, so was fortunate that we were almost done canning. Have small surplus.

Hanover, Ind., September 17—Both tomato acreage and crop normal. Season practically over.

Princeville, Ill., September 17—Our pack will be about 40,000 cases corn. This will be about 75 to 80 per cent of a full crop. Drouth locally is what cut our crop. A recent frost may cause us to abandon 10 to 15 per cent of our late acreage.

Lucedale, Miss., September 17—Acreage less than normal. Okra short. Beans fair. Sweet potatoes, short crop.

Elizabeth, La., September 15—Our bean acreage for 1923 spring crop increased about 20 per cent over 1922, but crop almost complete failure, due to excessive rains and cold weather. Unable to contract acreage for fall pack of beans. Farmers put most of their land to cotton, which is turning out a very poor yield. Sweet potato crop turning out very short, also. Less than half usual acreage and not over one-third of average yield.

Kaysville, Utah, September 11—Acreage of tomatoes normal in this loclity. Crop not over 75 per cent of norml. It looks as if the rush will be over this week, as the tomatoes are not on the vines. Beans about 30 per cent of average. It looks as if Utah will not have any surplus tomatoes to offer. Some canners will not be able to fill all their orders without buying.

Mayer, Minn., September 11—My factory burned to the ground on August 6th, after I had canned 5,000 cases of fancy early Crosby corn, but the fire destroyed it all. The Corn crop was very good here, and if this would not have happened I would have packed about 20,000 cases, but now I have none. Some of the corn was hauled to the Watertown factory and was canned there.

MERCHANDISE VERSUS MERCHANDISING BROKER QUESTION ATTRACTS MUCH ATTENTION

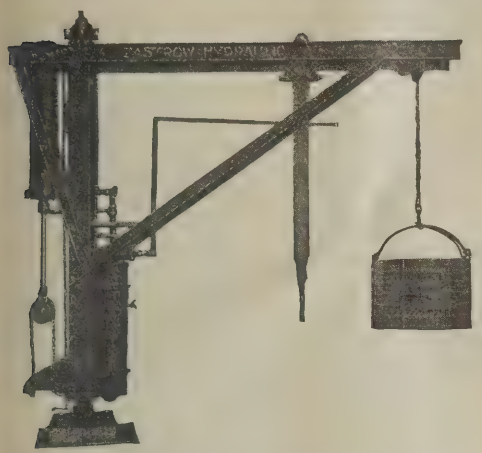
From California Fruit News

AN editorial appearing in California Fruit News a few weeks ago entitled "Brokers Cannot Satisfactorily Represent Both Their Clients and Themselves" has attracted a quite large interest among jobbers, as well as packers, in the lines with which we are concerned. We have probably never received so many personal communications upon an editorial of similar length, and all of the comments have been not only favorable, but insistent that the position taken be reiterated from time to time, as opportunity offers, with a view to as much accomplishments as possible.

It is, of course, a fact that at present the great bulk of the food brokers in the United States are purely such and are not merchandising on their own account nor concerned with any of the several subterfuges and operations taking them out of the strictly brokerage class. We believe, also, that the number of brokers operating otherwise, to the disadvantage of everyone concerned, is steadily growing less. Still, it is apparent from the corespondence that we have been getting on this article that there is much too much abuse yet of the title of broker. The National Wholesale Grocers' Association went so far as to do California Fruit News the considerable honor of reprinting in full and circulating among its members our editorial of last June on this subject.

It would seem to us that while the jobbers of the country are those most active (and have been for some time) in developing propaganda against the merchandising broker, as compared with the merchandise broker, and have made considerable headway in this, still the manufacturer or seller who appoints the broker and furnishes him with his goods to sell is the one who is really the most penalized if his broker representative is in competition with him as the owner of the same or similar goods, rather than a strictly brokerage and commission agent. Also, it is more easily within the opportunity of the manufacturer and seller to regulate this situation—where it needs improving—than any other factor.

That our readers may know what a number of people engaged in their own line think of the case of brokers who are not strictly and purely brokers, but who are concerned in merchandising on their own account in some one of the various ways that are to be noted at times, we give the following extracts from some of the correspondence reaching us on the subject as argument from trade in the matter:



"Your article is very correct as far as it goes, but it does not go far enough. The merchandising broker is very industrious in securing orders, and is also very industrious in soliciting accounts to represent in his market. He will call on some good account that is already represented in the market in which he operates, and in order to secure this account, he will volunteer to buy one, two or three cars of goods for his personal account, provided that purchase will also carry the seller's account along with the purchase. This system has been worked times innumerable. Another evil you do not mention is that of the broker representing a number of competitive accounts. It seems to us to be hardly different, whether a broker represents himself and some client, or represents several competing clients. It is ridiculous on the face of it to expect to get the best of trades that may come in the path of your broker if he is representing five or six other accounts of the same sort. He cannot give all of them the best of his business as it comes up. I commend you for your article and hope you will keep it up until the needed benefit is derived from it."

"I was very glad to see your article of a few weeks ago on the question of brokers who operate on their own account. My own ideas on this have been very strong, and I believe it is only a question of a short time when this phase of the brokerage business will have to be faced by the National Food Brokers' Association. The solution rests both with the packers and the wholesalers, as neither is required to deal with brokers whose practices he does not approve. A broker who owns goods on his own account is naturally inclined to take any particularly attractive offer for such goods rather than what he may be selling for someone else. The whole thing is wrong from any angle, and I am glad you put your ideas in print."

"The merchandising broker buys merchandise to make money—any other theory is absurd. When he buys and sells goods, he is a merchant pure and simple, and if he wants to be a merchant, he has a right to be one. But the merchandising broker—that is, one who tries to be both a broker and a merchant—must be a broker to one buyer and a merchant to another, and the two positions are absolutely irreconcilable. He should not try to work both sides of the street. When you think of the splendid opportunities for money-making enjoyed by the broker-merchandiser, it is not surprising that the combination is attractive to some of the brightest minds in the business. Consider: he surveys the whole field of distribution, and he can be a merchant when the market advances, or he can be a broker when it declines. If there are any advantages in a dual business or personality, the broker-merchandiser enjoys them all. He can be just as much one thing or the other, as the law and his conscience will permit. He comes nearer to being monarch of all he surveys than anyone known in commerce. From the viewpoint of pure selfishness, what a grand and glorious feelin'!"

"Manufacturers, canners and wholesale grocers do not employ lawyers who represent competitive interests they do not employ doctors whose methods as practitioners they do not ap-

23

prove; they do not affiliate in religion or politics with people with whom they do not agree; then why should they select for a confidential relation in their business men whom they know to be interested personally in the markets on one side or the other? Even if we ignore all the laws against deceit, and all the rules of personal and business ethics, and grant that the merchandising broker has as much right to his business and his business methods as the manufacturers and distributors have to theirs, there is absolutely no reason left why those who buy and sell for their own account should be selected to discharge the confidential duties of a broker. They will not be selected by manufacturers and distributors who are alive to their own interests and the public good."

As to a broker purchasing merchandise for his account, the minute he does that he ceases to be a broker, and at that particular moment he should cease to receive the support of manufacturers. A manufacturer who thinks a mercandising broker has his interest at heart is only 'kidding' himself, and any buyer who purchases merchandise owned by a broker does not deserve the name of 'buyer." The minute a broker purchases in the market food commodities on his own account, at that moment, in our judgment, his functions as a broker representing manufacturers cease to exist and he comes into a direct competition with the wholesale grocer, and should be classified as a wholesaler rather than broker. When a manufacturer's agent undertakes to buy merchandise on his own account, he immediately ceases to be a manufacturer's agent. You can't serve two masters."

"A merchandising broker is usually more interested in buying merchandise than he is in selling direct for the manufacturer. He is an uncompromising bear all the time on the commodities which he is accustomed to handle. While we look upon a merchandise broker as an economic necessity, a merchandising broker is a parasite upon the plant of commerce, and the efforts to exterminate him should be as vigorous as the fight against citrus cancer, scales and other plant-destroying organisms. We are, indeed, glad to see a movement in this direction started."

"I am against the merchandising broker. I do not believe that any broker should carry stock on his own account, for the reason that the temptation to sell it to any Tom, Dick or Harry cannot be resisted by the average fellow who is the owner and possessor of merchandise, especially when it will yield him a margin."

"If the merchant-brokers can succeed in securing the acquiescence of their customers among the wholesale grocers to buying and selling on their own account for any reason whatever, the bars are down—it will be impossible to distinguish between the man who is representing himself and the man who is representing his principal."

"California and the Pacific Northwest are pivotal points, and if we can get ringing resolutions condemning the practices of the merchandising broker passed by canners, packers and wholesale grocers' associations there, it will go a long way in helping to win a fight in which all wholesale grocers and all canners and packers who market their products through wholesale grocers are vitally interested. The manufacturers and canners are more interested in the subject than the wholesale grocers. In a fairly large market wholesale grocers can protect themselves against the merchant-broker by the element of competition. Manufacturers and canners living at a distance are helpless."

"We have hoped that the matter was receiving the attention of the canners and wholesale grocers of California, but we had seen no evidence of interest in the subject until this editorial. We are greatly encouraged. One or two flagrant abuses of the position occupied by the merchandising broker came to our attention several months ago. We began to correspond with other wholesale grocers, and we found that they, also, had the same idea of what was going on, and that they also considered conditions dangerous. From neglect we are suffering an important hazard to develop. More than 90 per cent of the wholesale grocers we have approached take this view of the matter."

LEAVES

By F. H. Bilderback, Bristol, Pa.

I have oft admired the verdure
Of the tree in different climes,
Basking, eating, sleeping
'Neath its branches many times.
But the leaves that I recall most,
And 'round which my memory cleaves,
Are the leaves in the old homestead—
The oaken table leaves.

CALIFORNIA MARKET

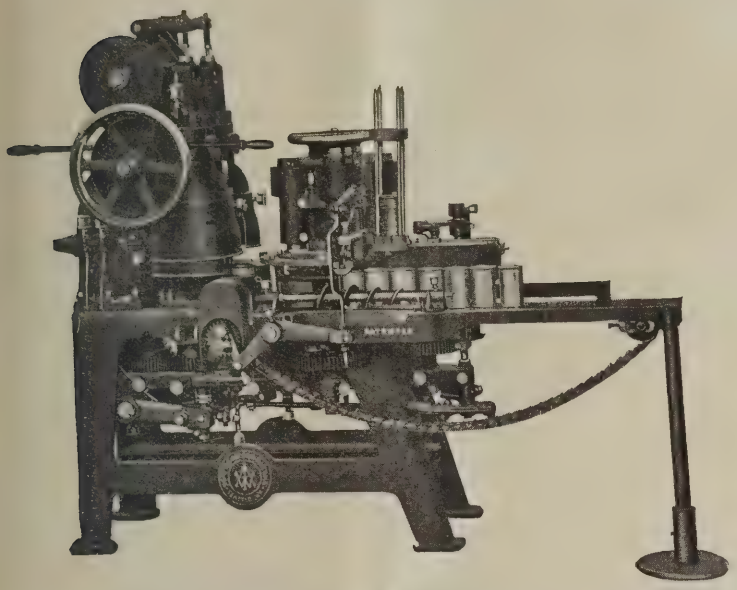
(*Markets Continued on Page 10*)

James D. Dole, president of the Hawaiian Pineapple Company, Ltd., Honolulu, T. H., arrived recently from the Islands and will shortly leave on a trip to Europe, accompanied by Vice-President and Sales Manager H. E. MacConaughey, of the San Francisco office. This concern will shortly move its local headquarters to the fourteenth floor of the Matson Building, on lower Market street, which will be headquarters for Hawaiian interests in general. "BERKELEY."

MAINE MARKET

A Blankety-Blank Season—Sardine Pack Short—String Bean Pack Uneven—Blueberry Pack More Satisfactory—Corn Season on the Bum—Severe Frost Has Killed Much of the Crop—Some Factories Cannot Start Until the 24th.

Portland, Me., September 21, 1923.



PERHAPS the best way to describe the Maine canning situation would be to leave about half a column blank. It has certainly been a blank year—or blankety-blank. There has been no branch of the industry to enjoy a successful season, and some of the lines have been utter failures. The first canning of the year was done April 15th, when the sardine season was legally opened, but to the present time work has been very light, expenses high, and all contributory conditions unfavorable. Today sardines are selling at $4.00 and better for standards (quarter oils keyless), and the current pack is not sufficient for the current demand, so that no surplus for winter consumption can be piled up. Canners are having difficulty in keeping their help for the broken time which has been necessary, and are paying very high wages at this time. The legal canning season lasts until November, and it is hoped that the run of fish may be heavier during the next few weeks.

A survey of the string bean pack shows uneven conditions in various parts of the State, which are attributed to the local showers which were enjoyed in some sections, and lack of them in others. One shop, which had never packed beans before, got a very good yield, indeed; another not far distant, where the farmers had been growing beans for years, did not have a 25 per cent yield. The lucky ones who had small sales and a good pack have been able to clean up their stock at high prices, one canner now holding a small clean-up lot at $1.35. There are several who will not be able to make full delivery on stringless beans, and the percentage varies widely with the different canners, owing to the comparative amount of sales and pack. Had the sales been up to the average, none could have made full delivery. The pack was around 50 to 60 per cent of normal.

The blueberry pack was more satisfactory in the matter of quantity and quality than any other article packed in Maine this year, but other conditions were unfavorable, and the canners are feeling far from satisfied with the season's business. Additional expense was incurred this year by an inspection system, making the packing costs high. And the market has not been as settled as it might be, so that prices have not compared with packing costs. Today the majority of the canners are quoting the opening prices of $1.80 and $8.50, others have sold at $1.70 and $7.50. The amount held in first hands is not large, but for so many, many years—in fact, right up to 1922—blueberries were always delivered short and the demand so exceeded the supply that the canners are obliged to readjust their marketing plans.

The corn season is on—on the bum. We had a severe frost on Friday night of last week, and in some sections of the State the entire crop was practically destroyed. In other sections the damage was limited to part of the acreage, and one or two fortunate locations report no serious injury up to this time. So many of the Maine canners have factories distributed over the various sections of the corn-raising belt that they will all be able to produce more or less really fancy corn, owing to this unevenness in frost damage. The writer visited several factories this week and saw some very nice corn being packed. Some factories will not begin to cut corn until at least the 24th; others began as early as the 6th, but have had no steady work. The weather man promises warm days for the next week, and that will go far to help out the present critical situation. Rain is still needed—in fact, any very hot days before we have rain will be disastrous. "MAINE."

Who Pays the Bill —

When the average Closing Machines go out of adjustment, which often happens?

There are always a few minutes time that defective seams are run, before adjustments are corrected. "Swells" and "leakers" later in the Warehouse are the result.

A TROYER–FOX Non Spill Closing Machine with its fixed adjustment and large heat treated tool steel rolls, will save a large share of this loss.

Let us send you confirming data.

Seed Improvement Considered at Important Conference in Chicago.

N. C. A. Raw Products Research Bureau Reports Conference Action.

AT a meeting in Chicago on September 14th, called by the International Crop Improvement Association, careful consideration was given to plans for seed legislation and for increased activity by the U. S. Department of Agriculture on matters relating to seed improvement.

The conference went on record as approving the amendment of the Seed Importation Act and endorsing the proposal of the U. S. Department of Agriculture to expand its vegetable and field seed studies. The action of the conference and the list of organizations represented are embodied in the following resolutions:

Whereas, the International Crop Improvement Association has called together for conference officers of: The U. S. Department of Agriculture, American Farm Bureau Federation, the Vegetable Growers' Association of America, the Official Seed Analysts of North America, various State Departments of Agriculture, State Experiment Stations and Agricultural Colleges, the National Canners' Association, the American Seed Trade Association, the Wholesale Grass Seed Dealers' Association, Association of Commercial Seed Analysts;

And, Whereas, these representatives have conferred with regard to ways and means of securing better seeds for American planters and have united on a course of action;

Be It Resolved, that this conference endorse the plan for increased activity on the part of the U. S. Department of Agriculture on research and investigation looking to improvement of vegetable and field seeds as outlined in the following statement from Acting Secretary of Agriculture C. W. Pugsley:

"August 15, 1923.

"With reference to the Department's attitude on seed legislation and with special reference to the Capper Bill, criticism that resulted because of the difficulty of realizing that the Capper Bill was permissive and not a highly centralized endorsed plan for regulatory control of seed handling, has suggested the advisability of allowing the Capper Bill to lapse, suggesting instead, first, a revision of the Seed Importation Act to provide certain authority for administrative consideration of sampling and controlling imported seed and of coloring such seed as are of doubtful agricultural value; and, second, to urge upon the Director of the Budget and Congress increased appropriations for the more general sampling and testing of seed in commerce, to investigate quality and varietal purity, and to increase our co-operative work with the State experiment stations, crop improvement associations and individuals in the development and maintenance of high-quality seed."

Be It Further Resolved, that the good offices of the members of this conference be tendered the Secretary of Agriculture in supporting the Budget recommendations suggested in the foregoing statement.

Be It Further Resolved, that members of this conference recommend to the organizations that they severally represent that similar approval of this procedure be expressed promptly and forwarded to the Secretary of Agriculture.

Be It Further Resolved, that this conference recognizes the primary responsibility of the several States to their citizens in the regulation of intra-state commerce in seeds, and to the end that such commerce may be controlled effectively and with justive to all; that the so-called uniform State Seed Law as framed by the Official Seed Analysts of North America, the Wholesale Grass Seed Dealers' Association and the American Seed Trad Association, be urged for enactment in States in which it ha not yet been adopted.

Finally, Be It Resolved, that copies of these resolutions b sent to the Secretary of the United States Department of Agr culture, the Secretary of the American Land Grant College Ass ciation and the Secretary of the Association of State Commi sioners of Agriculture.

INTERNATIONAL CROP IMPROVEMENT ASS'N.

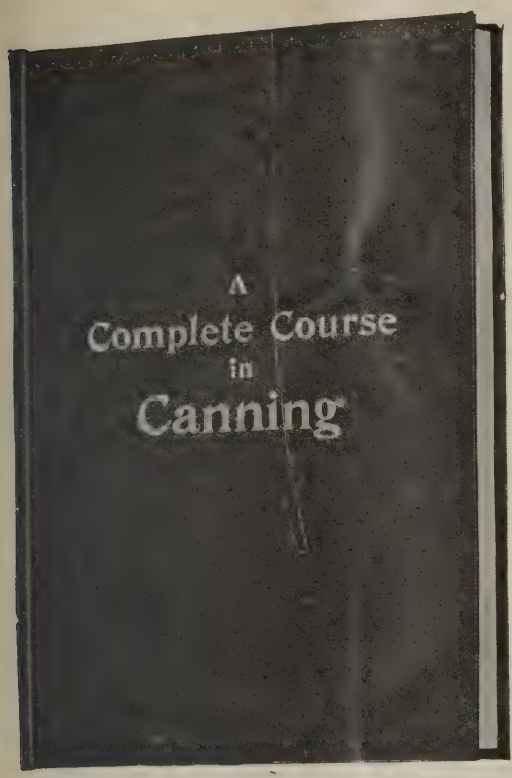
September 13, 1923.

The feeling was general that if the Department of Agricu ture were enabled by appropriate legislation and budget actio to carry out the program proposed, the results would be of ine timable value both to seed buyers and to the more progressiv elements in the seed producing and distributing trades.

The Bureau of Raw Products Research of the National Can ners' Association has been keeping in close touch with the de velopment of the Department of Agriculture plans on this whol matter. The organization of comprehensive field trials of varie ties of vegetables used by canners will be possible if funds ar appropriated by Congress to finance this important work. Studie of the nomenclature of vegetable varieties are also contemplate the result of which will be to correct the present chaotic cond tions which the same variety is often sold under many differe names. Much of the work which the Department of Agricultur now proposes to do was provided for in the Capper Bill intro duced last session in Congress. The feeling of the Chicago con ference and the expression of the Department of Agricultur indicates that if the funds needed can be furnished through th budget, it will not be necessary to seek statutory legislatio except for the amendment of the Seed Importation Act.

The Chicago conference was notable in that representative of seed-using organizations, the seed trade and farmers' organi zations for seed improvement were all able to agree unanimousl in endorsing a specific program for Federal and State actio looking to the growing and distributing of better seed.

ANNUAL CONVENTION OF THE AMERICAN SPECIALT MANUFACTURERS' ASSOCIATION



Hotel Radisson, Minneapolis, Minn., Sept. 26, 27, 28, 1923

FOLLOWING is the program of the Fifteenth Annual Conven tion of the American Specialty Manufacturers' Association While small numerically in comparison with some of ou other trade conventions, it will rank with any in importance Calling together, as it does, the leading manufacturers of th food industry, the opportunity is given to meet the men who ar directing the affairs and fixing the policies of these great crea tors and suppliers of our household needs. A splendid progran has been prepared, which includes a list of brilliant speakers, an a gala time is promised those attending this gathering of Busi ness Optimists at Minneapolis.—Editor's Note.

CONVENTION SCHEDULE

BOARD OF DIRECTORS' MEETING

DUTCH TASTE FOR SOUPS

Not Unlike American; Possibility of Creating Demand for Am ican Canned Product—Dutch Not Acquainted With the Clam and Have Small Knowledge of Oyster— Like Color and Life in Advertising.

By Vice-Consul J. Stanford Edwards, Amsterdam

A STUDY of the Dutch market for soups, as compared w the American, and of the prices of the varieties used in United States, shows the possibility of creating a large mand for American canned soups in the Netherlands. While tax on imported canned foods is $0.10 per kilo (United Sta currency), this would be overcome by the difference in cost

tween the Dutch and American products and by the profits accruing from large sales. Extensive advertising, especially in Dutch home periodicals and newspapers, would be necessary.

Distinct Preference for Well-Known Varieties—A preliminary study should be made of Dutch requirements. However, it is known that some of the soups that will best suit the Dutch palate are vegetable, oxtail, mock-turtle, real turtle, Londonderry, cream, vermicelli, chicken, pea, bean, and all bouillons. Soups strictly to be avoided are oyster and clam, clam chowder, and fish chowders. These soups should be avoided in considering exports to the Netherlands because the Dutch are not familiar with clams, and oysters are so little used by the people as a whole that there would probably be no call whatever for oyster soup. Moreover, it is likely that the Dutch who use oysters now and then would consider an oyster soup highly dangerous, for, unlike Americans of the inland States, they have probably never eaten conserved oysters.

In place of the puree of tomato, so popular in the United States, there should be offered some kind of bouillon or vegetable soup flavored with tomato. A strong tomato flavor is not liked in the Netherlands. The tomato is used only as a relish, as flavoring, or as a sauce. If the tomato puree as now used in the United States were put up for Dutch consumption it might be well to label it "Tomato sauce," with the legend under the name to effect that "properly diluted it will make a delectable soup." Thus the Dutch objection to a strong tomato taste might eventually be overcome through the excellent quality of a sauce, such as the undiluted American product.

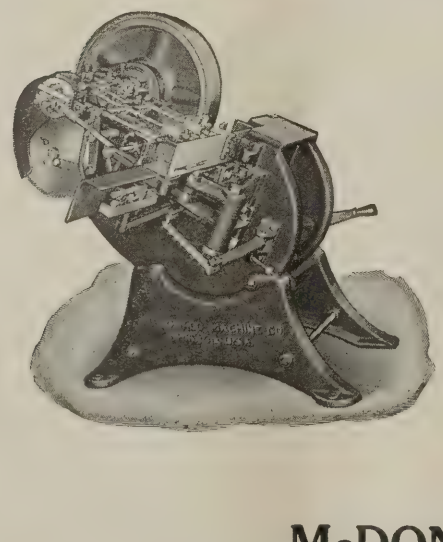
Directions Should Be in Dutch—Picture Labels Desirable—In all advertising, while the trade names and titles can be in English, all the directions should be in Dutch. It is a fact that the people of the Netherlands speak foreign languages as fluently as any people, and if the directions were made for the European Continent in German, French and Italian, it is likely that many Dutch families could understand all three. However, if the campaign for canned soups were pushed, it would be better to have all the directions in Dutch, thus avoiding anything that might limit or prejudice their use.

Manufacturers need have no fear of employing too many or too bright colors in their labels and posters for the Netherlands market. Though a northern race, the Dutch have a liking for brilliant tones, especially red, yellow, green and purple. Poster however, should be artistic, as their sense of the picturesque an romantic is highly developed. Pictures of nature have a stron appeal. In their own posters one often sees fields of grain c flowers, of pastures with cattle. They are also lovers of spor especially on the water. Bicycling also is one of their chie diversions. A poster showing bicycles in the background woul make a very effective appeal.

It is true that the Dutch are not thoroughly accustomed t conserved foods of all kinds, but no people can long remain proo against a good article at a low price. If they can be convince that a good soup can be had for a reasonable sum, they will bu it as generally as the American people have done. The accom plishment of this result in the Netherlands is chiefly a matter o low prices backed by etxensive advertising.

The climate of the Netherlands, like that of most norther countries, is adapted to the use of soups. It is damp most of th year, and the summers are cool.

SPANIARDS LIKE TINNED FOODS



Promising Demand Developing in Seville District for Edibles i Cans, Including Milk

Department of Commerce, Washington.

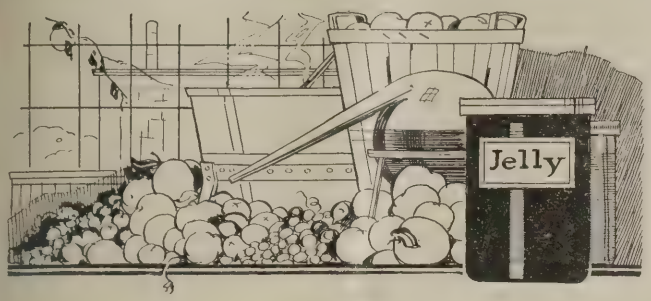
WHILE the food standards of the majority of people i Southern Spain are very simple, a promising demand ha been created for preserved foods, and every grocery stor is stocked with a creditable assortment of canned and dried food stuffs, says Consul W. C. Burdette, Seville, in a report to th Department of Commerce. The fruits, jams and preserves on th Seville market are largely from Valencia, Spain. Marmalade i much used, but is prepared by the individual housekeepers fron the inexpensive Seville sour oranges. Crushed pineapple is sol in No. 2 cans at a retail price equivalent to $1 per can.

Canned peppers, peas, string beans and tomatoes proceed from the Valencia and Alicante sections of Spain. The first thre find a ready sale, but the fresh tomatoes available in Sevill throughout the year at reasonable prices curtail any considerabl demand for the canned product. Asparagus, both fresh an

Automatic Strip Feed Presses

One of the most important and essential operations to be considered in making cans is the automatic production of the ends.

To meet the requirements for this very particular operation, we call especial attention to our No. 31 E. Automatic Strip Feed Press, such as shown.



Adjustable for all dies up to and including 6'', either round or square. The press is furnished with change gears for handling 3 to 20 cuts per strip and simple means to accommodate variations in length.

Feed mechanism is automatic, fool-proof and eliminates dangerous hand feeding. Operated in connection with our Presses, we supply Curling Machines and all other automatic can making machinery.

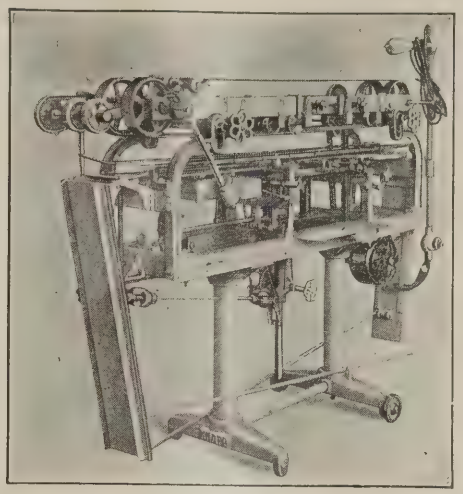
LACTART

in

Jellies and Jams

LACTART has a superior, smooth acidity which blends readily with and brings out or accentuates the natural flavors.

To LACTART is attributed more diatectic value and digestible properties than to any other edible acid.
LACTART is slightly slower than harsher acids in setting jellies. This produces a smooth and even jell body, particularly desirable in spreading jellies. LACTART also inhibits the crysallisation of sugar.



LACTART is in liquid form, ready for instant use. It may be had in one gallon jugs, five and ten gallon kegs and fifty gallon barrels.

The services of the Technical Staff of the Wamesit Chemical Company in the use of LACTART are at your call at any time, without obligation. Let them help you solve your problems

Write today for samples of LACTART to test.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

canned, originating in the Aranguez region, finds a ready demand. Neither lima beans nor sweet corn are sold.

Pickles, sauces, catsups and similar relishes are not much used. The Worcestershire type of sauce in various brands is obtainable, but is used cheifly by foreigners or Spaniards who have lived abroad. French mustard is manufactured in Logrono. The English variety is little used.

Condensed Milk Has Good Sale—Sweetened condensed milk has a good sale in the Seville district. It is used as a food for infants, in the manufacture of ice-cream, in baking, and in pastry making.

Large shipments of sardines, anchovies and similar preserved fish are received from Galicia and Asturias, in Northern Spain. Great quantities of tunny fish are caught off Cadiz and Huelva, but for some reason this fish is not popular in the Seville market. Spanish bonita in half-pound tins is more popular. Alaska and Columbia River salmon finds a fair outlet.

Canned or preserved meats are in little demand. Fresh meat, which is supplied in abundance from the city abbattoirs and is retailed at the equivalent of $0.20 to $0.35 per pound. Because of this preference for fresh meat, it is not likely that the market for canned meats will be at all attractive in the near future.

WHEN YOU MAKE A SPEECH

THE following advice on speech-making appeared in the Washington Herald:

"When you talk, keep your lungs full. It is as hard to speak on an empty lung as it is to work on an empty stomach. One ancient rule for preachers is in point: 'Begin slow, talk low, strike fire, rise higher, retire.'

"Don't be eloquent. Forget yourself. And don't be in a hurry. Remember that public speaking is more deliberate than private. Cultivate shortness. Make your sentences short. When you say a thing once, don't say it over. As near as possible confine yourself to driving home one point. You may have five points to make, but no audience ever remembers so many. Why bother with the other four? Pick out the best one, and stick to that.

"Beware of being to funny. Wit is very dangerous unles you are an expert at it. More speakers spoil their effect by try ing to tell funny stories than by any other fault.

"Be interesting. Be sure that the people hear what you say that they understand your words, and that you are talking abou something that they want to know.

"Keep your face in one direction. Don't turn your bod around to different parts of the audience, as a gardener sprin kling plants with a hose. If you keep facing one way, the peopl outside of that angle can accustom themselves to your voic If you turn about, you will confuse everybody.

"Don't fizzle out. It is a good plan to memorize the word you are going to close with, and have them clear and forcibl Don't just peter out by saying 'I think that is about all I hav to say,' or by mumbling some other inanity. Conclude with wallop."

MANUFACTURED PRODUCTS

ACCORDING to a summary issued by the United States De partment of Commerce, the value of manufactured prod ucas in 1921 was $43,653,283,000, while in 1919 they aggre gated $62,041,795,000. Compared to the value of products re ported for 1914, there was an increase of 80 per cent, but thi was due largely to the rise in prices. Census statistics for 192 relate only to establishments having products valued at $5,00 or more, while in prior censuses $500 was the limit. Howeve in 1921 this latter class of establishments employed only six tenths of 1 per cent of the total number of wage-earners an had an output of only three-tenths of 1 per cent of the tota value of products. Manufacture of food and kindred product is the chief industry of this country, and figures concerning emphasize the rise in food prices. There were 59,317 establish ments with 496,234 workers in 1914 engaged in this industry The value of their products aggregated $4,816,709,664. Th number of establishments in 1921 had decreased to 45,505, whi the number of employees had swelled to 568,733. The value o products, however, had grown to $7,849,607,951. The peak o this industry was reached in 1919, when there were 61,312 estab lishments employing 684,672. The value of their products the

FRANK HAMACHEK, KEWAUNEE, WIS.

Manufacturer of Ideal Viners, Viner Feeders and Chain Adjusters

ESTABLISHED 1880

THE NEW 1924 MODEL

HANSEN PEA AND BEAN FILLER

is the

SMALLEST, SIMPLEST AND MOST RADICAL FILLER EVER BUILT

The New 1924 Model Hansen Pea and Bean Filler, which has been developed and perfected under actual canning factory tests during the past year, is unquestionably the most efficient and perfect pea filler that has ever been built. This machine is by far the smallest, simplest, and most radical, yet at the same time fool-proof.

Years of careful study and experimenting together with our wide experience in building pea and bean fillers have enabled us to develop this new machine which completely overshadows all prior fillers. Every undesirable feature of other fillers and the old HANSEN has been entirely eliminated and at the same time all good features retained and perfected.

As compared with other pea fillers, the 1924 Hansen Filler has LESS THAN ONE-HALF THE PARTS, only ONE-HALF the gears, ONE-HALF the bearings, ONE-HALF the shafts, ONE-HALF the clutches, ONE-THIRD the brackets and supports. It has NO BRINE TANK, no float valve, no air vents, no funnel rubbers, no stuffing boxes, and occupies only ONE-HALF THE FOOR SPACE of any other filler now on the market.

The more gears, bearings, shafts, clutches, collars, brackets and mechanisms the greater the chance of getting out of time, wearing out, and breaking down with resulting delays, which, as a rule, occur during the heaviest part of the pack when every minute means real money. The Hansen Filler is scientifically built, being simple and durable, combining good engineering with good shop practice. As an instance, the funnels, briner and measuring cups are all placed on the same shaft.

All materials are carefully and intelligently selected to best perform the service required of them. To illustrate - it would be much cheaper to make our measuring cups of common brass tubing as on other fillers, but we know it does not contain the right alloys to resist the acid in peas and brine or tomato sauce. Common brass tubing corrodes and turns green; besides it bends easily out of shape affecting the fill. The measuring cups on the Hansen Filler are cast of acid resisting bronze from OUR OWN FORMULAS and machined in one piece.

BRINE TANK ENTIRELY ELIMINATED.

Canners usually spend hundreds of dollars fitting up a screened brining room in a sanitary manner. Why take all this precaution and expose the brine to the flies and dirt in an open filler brine tank ? The 1924 Hansen Filler has a Pressure Equalizer which entirely dispenses with a brine tank and float valve. It is about the size of a No. 10 can, entirely enclosed and cannot run over, wasting brine. The brine is not exposed to the air from the time it leaves the brining room until the can is filled. IT IS IMPOSSIBLE TO WASTE BRINE.

Hansen Canning Machinery Corporation

TIN PLATE

AT the last convention of the National Canners' Association not a little commotion was caused by the report of the findings of the Tin Plate Committee, for one of the conclusions of the report was to the effect that the quality of the tin plate customarily used in the manufacture of packers' cans is not what it used to be.

The Tin Plate Committee went on record as believing that the steel sheets which form the basis of the plate are less pure, more brittle, and that they show wide variations in thickness.

Further than that, it was alleged that the plate mills are not putting as heavy a coating of tin on the plate as they formerly did.

Only recently the Tin Plate Committee has addressed a brief to the Chief of the Bureau of Standards of the Department of Commerce, urging that the Bureau conduct the necessary research to enable buyers of packers' cans to specify, in more definite terms, just what quality and thickness of plate is to be employed in making the cans for their use.

In this brief, attention is called to the rather loose wording of the form of can contract offered by the can companies which obligates the canner to accept cans "of the regular standard style and quality heretofore furnished by the seller in the usual course of its business."

This form of contract usually contains no specification as to the thickness of the plate, the only restriction being that "coke" tin plate shall be used.

Research aimed to increase the fund of knowledge available on this subject is much to be desired, and it will be a decided boon to the canning industry, including the canmakers, if the able staff of the Bureau of Standards will focus its attention upon the problem of determining what kind of tin plate is best adapt for use in making packers' cans.

As for tightening up the specifications of the standard c tract which the can companies offer to their customers, it is so evident that this would be an unalloyed benefit to the cann If you go to a good tailor, it is not always wise to be too expli as to how you want your clothes cut.

In the past the can manufacturers have been willing to p tect the canner against loss in the event that their cans shou prove defective in material or workmanship. This broad gu antee might not be so freely given were the canners to ins upon their right to have cans made according to their own spec cations.

The Bureau of Standards will, it is earnestly hoped, make study of tin plate as related to canners' requirements. The sults obtained may well prove to be far-reaching, for the Bure is unsurpassed in its field of scientific investigation.

The can companies may be counted upon to put the resu to good use. In fact, they are inclined to be more progressi than those whom they serve.—The Optimist.

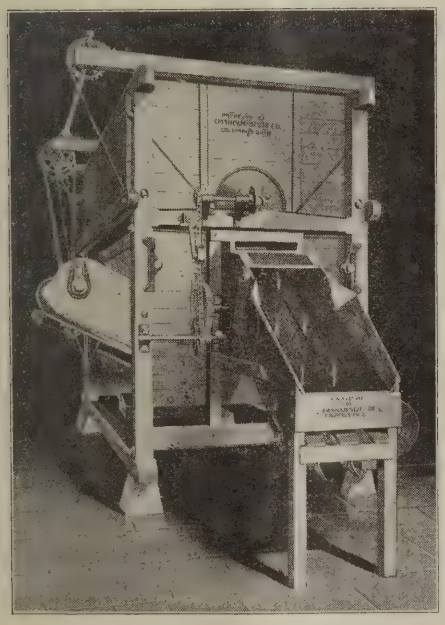
PROGRESS IN STANDARDIZATION BEING MADE

DEFINITE progress in the movement to eliminate waste industry is being made in a number of important line according to a bulletin just issued by the Fabricated Pr duction Department of the Chamber of Commerce of the Unite States.

The bulletin states that "industry is no longer thinking simplification and standardization as activities which may stif initiative or interfere with service to the trade. No confusio can result if it is kept clearly in mind that the objective is t elimination of waste which is today obstructing industrial pro ress."

Here are some of the latest examples of simplification in ce tain lines of industry quoted in the bulletin:

Milk Bottles—A materially reduced schedule of milk bott sizes was adopted on March 6, 1923, by a conference of bott manufacturers, cap manufacturers, and others. Varieties quart sizes were reduced from 12 to 3, pint sizes from 13 to halfpint sizes from 14 to 3, and quarter-pint sizes from 10 to In adition, ten sizes of caps were reduced to one standard. Thes recommendations are to be submitted to the milk dealers f their consideration, after which a final ratifying conference wi be called.



Automotive—Wider recognition of standards for certai automotive accessories and component parts was the keyno

PRESERVES YOUR PRODUCT AT ITS BEST

Luscious fruits and tender vegetables retain their exquisite fresh flavor and appearance when processed by quick quality cooks in A–B Continuous Cookers and Coolers.

Each container sterlized uniformly with uncanny precision enhances your reputation as a Canner, for each customer perceives you have not only selected the best raw materials but also the most efficient means to preserve them at their best.

Write for yours today.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

of a meeting held on March 9, 1923. Automobile manufacturers, accessory producers, service men, engineers and users were in attendance. A very representative committee was selected to make a survey of existing conditions and to bring about the adoption of established standards and development of additional standards for many of the non-competitive parts and attachments. Initial efforts are to be directed toward roller bearings, spark plugs, tires and storage batteries.

Clay Products—The preliminary conference of manufacturers and engineers on April 23, 1923, resulted in the determination to survey the industry for the purpose of eliminating many needless sizes and setting up dimensional standards for sewer pipe, drain tile, flue linings and wall coping. At such time as the necessary data has been gathered and tabulated a general meeting of all interests will be called for final action.

Paint and Varnish—On April 25, 1923, some forty or fifty accredited representatives of manufacturers, jobbers, retailers, consumers and others adopted a simplification program for paints and varnishes. This action will reduce the varieties of containers used in marketing the commodities and also will eliminate many colors and shades of paints, stains, enamels and varnishes. The adopted schedule is substantially the same as that drawn up for war-time operation. The action taken is to become effective December 31, 1923.

Hotel Chinaware—At the request of the American Hotel Association, a joint meeting of hotel operators and pottery manufacturers was held on May 28th, 1923. These two groups determined upon a set of chinaware sizes as standard for hotel use, the resulting reduction in varieties being approximately 700 to 165. This action covers only the size and shape of tableware. Decorations and colors are left to the selection of each purchaser.

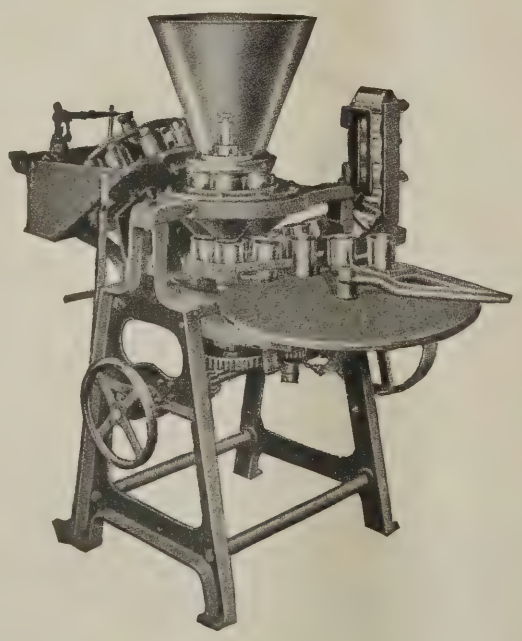
Asphalt—A general conference of asphalt producers, together with road commissioners, State, municipal and highway engineers on May 28, 1923, reduced the varieties of asphalt grades from 102 to 10. Certain definite penetration limits were established for paving asphalt, sheet asphalt and block filler. This simplification is to become effective January 1, 1924.

Face and Common Brick—Not until a survey had been made was it very generally realized the multiplicity of sizes for brick. If any commodity should be standardized dimensionally, it is building brick. This was accomplished on June 21, 1923, at a conference of clay-brick manufacturers, engineers, builders and other interested elements. Two sizes of face brick were retained and one for common brick. The face brick sizes are: Rough brick, 8x2½x3¾; smooth brick, 8x2½x3⅞. For common brick the standard size is 8x2½x3¾.

Woven-Wire Field Fence—One of the outstanding simplification programs was adopted July 12, 1923, at a meeting of retail dealers, farmers' organizations and manufacturers representing 85 per cent of the wire-fence production of the country. Sizes, types and varieties of wire fence were reduced from 552 to 69. This action carried with it a reduction of fence packages from 2,072 to 138. The simplified schedule became effective September 1, 1923, for new production, and stocks of discontinued lines are to be cleared by January 1, 1924.

All of these conferences have been held under the joint auspices of the Division of Simplified Practice of the Department of Commerce and the Fabricated Production Department of the Chamber of Commerce of the United States.

NEW STYLE PACKED STRINGLESS BEANS



ONE of the large wholesale grocery concerns here has just received a car of California canned stringless beans packed in No. 2 tins that have won favorable comment from all those who have examined samples.

The variety of beans used is known as the Kentucky Wonder. The beans, which grow to great length, are cut to the exact length of a No. 2 tin and are packed into moulds, and are then packed solid into cans, as is asparagus.

The writer saw samples cut and was invited to taste them. The flavor was excellent, beans were tender, absolutely free from strings and of good color.

We believe this style of beans and packing will win great favor with consumers and create a demand that will greatly increase the production, which at present is small—The American Grocer.

Ayars "NEW PERFECTION" Pea and Bean FILLER

No valves to wear out and leak brine on the floor.
Will not waste brine.
Fills absolutely accurate.
Has positive can feed.
Does not cut Peas.
Guaranteed capacity up to 129 cans per minute.
No Cams. No Levers.
Has no RUBBERS to catch cans after they become worn.
Only Filler for BAKED BEANS.
Has separate measure and separate saucer. If measure fails to drop part or all the quantity of beans the can will show slack to inspector.

Model made for No. 1, 2, 3, & 10 cans.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, SEPTEMBER 24, 1923

WEEKLY REVIEW

The Corn Pack of 1923 Very Largely Finished—Frosts Ended Some of It—Pack Will Average About 75 Per Cent. of Normal—The Tomato Glut Rapidly Subsiding—Raw Stock Market Again High—Most Canners Still Working on Futures.

CORN—Corn canning for 1923 is over in many sections as we write, and it will be over in nearly all sections, possibly, before our next issue. Maine corn canners will not commence until the date of this issue. Maine has been most unfortunate this whole season, and no crop has come out with satisfaction to the canners—not even sardines. Some few Maine canners began their corn canning this past week, and are considered fortunate that they were able to do so, because they have had hard frosts in that state and a great deal of corn hs been caught and must be abandoned. As it looks today, the canners of that state will consider themselves very fortunate if they are able to get half what they had a right to expect from their season's preparations, and that does not men that their preparations were on a vastly increased scale—they were not. The early season would not permit even full preparations, and then delayed spring, unfavorable summer and now early frosts have completed the cycle of their misfortunes. There is but very slim chance for anything like a surplus of Maine corn this season, and most canners will be short on their deliveries, as it now looks, and the season is pretty nearly over.

Heavy frosts have fallen in the central western corn-canning regions, but many of the canners had finished their work. This is particularly true of Ohio and parts of Illinois, although there was some late corn which the canners counted upon and now must give up. All reports from this heavy corn-canning region say that the pack will be short about 75 per cent of normal. Old stocks are all cleaned up, and future orders will about clean up the present year's pack, with but very little surplus in canners' hands. If the weather turns particularly favorable out there, it is just possible that the present pack of corn may be added to in some slight degree, but it will be slight. Certainly the outlook for canned corn is anything but weak,and fortunate holders of any surplus know the value of their goods. New York State is to be figured in with these central western corn regions, as that state has felt the same sort of weather, and was about on a par with others as to the extent of their pack when the frost came. Of course all sections were not hard hit by the frost, but New York State has not anticipated more than 75 per cent of a normal corn pack and it may drop much below that when it is done.

Western Maryland corn canners have been more fortunate than the others of this section. However they suffered from a most unusual summer with little rain and too much dry weathe until it was to late to benefit the corn crop. On the other han there was a section, one valley, where there was no drought an where the corn crop came through in fine shape. It is the onl place in the country, we believe, where the corn crop did make full yield, and it is a very small locality with one or two factorie in it. Western Maryland generally will get from 75 per cent t 90 per cent of a full pack; the balance of the State and Delawar will not get over 75 per cent, according to reliable reports just a hand, and from what we have seen.

Tomatoes—If one took the daily paper reports or listened t the talk on the street he would form the impression that this sec tion of the country had been buried in tomatoes for the past tw or three weeks. There have been plenty of tomatoes, and fin ones, during this time, and the canners have made the most o hteir opportunity; but it has been just what old, experience growers and canners feared most—the crop was all ripening a once, and, having been picked, is now rapidly disappearing. W have not had the weather conditions to produce an ideal crop that is, one in which the vines are well set with early fruit, an loaded with small tomatoes which come on by degrees, keepin the yield constant and heavy. Blossoms and small fruits were al knocked off by driving rains, and it has been too cold at times t forward the small tomatoes as they should have grown. Possibl nothing tells the true story of the tomato yield like the wholesal market prices for new stock. When canning of tomatoes firs began, about the middle of August, tomatoes were selling in Bal timore at from $1 per bushel up; during the glut they went dow to 15c to 25c, and now they are steadily on the rise, havin reached at this time 70c per bushel for what is termed cannin house stock. No plainer indication of the wane of the glut coul be given than this, and the whole question now is as to the amoun of goods gotten up during the rush. The jobber, of course, like to figure that the pack has been enormous here in the Tri-States because he knows that the West and all the balance of the coun try, even California and Utah, are out of the question so far a any surplus tomatoes are concerned. It is hopeless to look t them, for Utah expects to have to buy tomatoes to cover contract and California will have its hands full supplying local demands Has the Tri-State made up for this shortage? If it has it ha done the most wonderful work ever recorded. We stated las week that it would take six weeks of hard work for all the tomat canners of the country to produce the 15,000,000 cases of tomatoe needed, or an average of 2,500,000 cases per week, and that th about one thousand tomato canners, 90 per cent of whom ar small, can hardly produce that amount. We have since submitte the problem to machinery men and others, and while at first al of them laughed and said of course they can, upon figuring th matter out all of them agreed that it would be all that they pos bsily could do, and that they most likely could not do it. I means an average of about 600 cases per day. The large ones, o course, will do this easily, but the smaller ones will not—not o the average. Or look at it another way: If the average tomat canner packed 15,000 cases of tomatoes—and he does not—h would have to produce 600 cases per day for six weeks to get u his pack. There is no particular value to this except to lay th

fir which seems to be spreading that the tomato pack will be a record breaker. It cannot possibly be; cannot, we believe we can say now, be enough to fill requirements.

THE MARKET—Indiana has been buying tomatoes in Baltimore, and some other large tomato canning states have been buying east also. The result is that buyers are awakening to the actual condition of not only tomatoes, but of every other item of canned food. that the situation is stronger than ever before. Tomatoes are in splendid position—proof, the market has begun to raise, and is now 55c for No. 1s, 85c for 2s, $1.25 for 3s, $4.25 for 10s, and where it will stop only the buyers can answer. Corn is daily growing stronger, and the task today is to find any canner willing to entertain an order. Market prices remain unchanged, but it is just the lull before the storm. String beans are very strong, and will be stronger, the market about normal today. Peas, everyone knows, are in strong position, with the buyers obliged to take whatever they can find. Market prices remain unchanged in this item, but if the buyers are waiting for any weakness they will wait in vain. Sweet potatoes—It is said the pack will be light this season, and the market prices indicate this result. They are strong and tending higher, with $1.05 to $1.10 quoted for No. 3s and No. 10s at $3.25 factory.

The buyers are showing more interest and some good business is coming through The forward-lookers among them are commencing to cover their wants, realizing that they have waited as long as they dare, and possibly too long for their own good. All who know the canned foods market look for higher, not lower, prices as the year grows older. It is said fruits are being neglected, but fruits will follow suit to other canned products, and there will be a scramble for them later on, and the market will advance. The canners have been very conservative in their packing of fruits this season—in all lines and in all sections.

NEW YORK MARKET

Market Activity Rising—Bulls Prevail the Market in General—Frost Causes Considerable Damage to Maine Corn—The National Chain Store Growers' Association Meets —November 6th, 7th and 8th Days Set for Western Meet—New Pack Apples Go Well.

New York, September 20, 1923.

MORE Business—The New York canned foods market is taking on a more active apearance, and there have been developments of general interest during the past week. Buyers are in the market for stocks in increasing quantities, and there is a general realization that early season predictions of short supplies during the fall and winter months are only too likely to be realized.

Southern Tomatoes Advance — Maryland and Delaware tomato canners today advanced their selling prices to 52½ cents for standard 1s, 82½ cents for 2s, $1.22½ for 3s, and $4.00 for 10s, as against previously prevailing prices of 50 cents, 80 cents, $1.20 and $3.80-3.90 for the respective sizes. News reports which have been received from Indiana note a very bullish situation prvailing there, with practically all canners withdrawn, and many of them reported to be planning to pro-rate on deliveries of 1923 pack. As a result of this strong situation, many Chicago buyers have sent part of their tomato business East, and this has helped in large measure to effect the quick price recovery in Maryland. Canners in their letters to brokers are now talking 90 cents for standard 2s tomatoes in the near future, and as an indication of the firmness with which the packers regard the market, it is noted that many of them are refusing to sell at the going prices.

Corn Selling at 85 Cents—New pack standard corn continues to meet with an active inquiry at 85 cents per dozen, f. o. b. Southern cannery. Chain store buyers continue active, and are featuring the sale of corn at 10 cents per can at retail. Spot stocks are not large, and buyers are depending upon prompt shipment of stocks to take care of the business which is coming in from the retail trade.

Maine Corn Hurt by Frost—Frost late last week caused considerable damage to the growing corn crop in the lower sections of Maine, it is reported. Corn growing on the higher levels was affected by the frost, but packers fear that further frosts will cut short the packing season. Fernald, Keen & True Co., of West Poland, Men., estimate that last week's frost damage will cut the pack by 25 per cent. There is an active inquiry for fancy Maine corn, but most packers are withdrawn from the market pending the conclusion of their pack.

Canned Fruits Advance—The California Packing Corporation on Monday of this week issued a revised price list on new-pack canned fruits. The new list noted 5 to 10 cent per dozen advances in many items, while in numerous other lines the orporation announces its withdrawal from the market, having entirely cleaned up the new-pack offerings of the stocks withdrawn.

Independents' Holdings Light—Price lists of the various prominent independent fruit canners in California show that they are in the same position as the Corporation in regard to carryover canned fruits. The supplies of standard quality fruits in particular are very light, and independents who have been cutting the market have now advanced their prices on a basis with the Corporation's original opening.

To Handle Seacoast Sales—The Seacoast Canning Co. has announced the appointment of Melville F. Taylor to handle its sardine and tuna sales. Mr. Taylor is well known in the canned foods trade, having been connected with the canned foods department of Butler & Sergeant, Inc., for the past four years. The Seacoast Canning Co. has just been reorganized, having been affected to some extent by the recent failure of U. H. Dudley & Co. C. W. Patterson, of Austin, Nichols & Co., is now chairman of the board of the Seacoast.

California Asparagus Pack Heavy—According to statistics compiled by Preston McKinney, secretary of the Canners' League of California, the total pack of asparagus in California this year was 1,519,756. California also packed 223,923 cases of peas, 1,383,831 cases of spinach, 4,323 cases of artichokes, and 3,500 cases of Brussels sprouts.

Wisconsin Peas Strong—Many Wisconsin pea canners have advanced the market on standards to a minimum of $1.30 per dozen, f. o. b. cannery, although there are still some offerings to be picked up on the basis of $1.25. Unsold stocks in the hands of packers are reported to be extremely light.

Shrimp Market Strong—Offerings of shrimp for prompt shipment from Gulf canneries are very light, and the market is generally held firm at $1.60 per dozen for 1s, f. o. b. Gulf cannery. A few offerings are reported on the basis of $1.50, although stocks at the inside price are limited. Many packers have withdrawn from the market, having no further stocks to offer.

Salmon Demand Fair—There is a fair inquiry for pink salmon reported on the spot position, the market being quoted on a basis of $1.35, ex-warehouse New York, for new pack. Reds continued unchanged at $2.30, ex-warehouse, under quiet buying.

Tuna Situation Strong—California reports indicate a material shortage of new-pack white-meat tuna, and the market is showing a strong tone. Packing is practically over, and many buyers are being forced to accept pro-rata deliveries. New-pack white-meat halves are offered to arrived New York at $11.25 per case,with new-pack bluefin halves to arrive held at $8.50 per case.

Chain-Store Buyers Here — Many out-of-town chain-store operators are in New York this week to attend the annual convention of the National Chain Store Growers' Association, held at the Waldorf-Astoria on Thursday and Friday of this week. Secretary Alfred H. Beckmann has arranged a varied and interesting program for the convention sessions.

Opening Pumpkin Prices—The California Packing Corporation announces opening prices on 1923-pack California pumpkin as follows: No. 2 tins, $1.15; No. 2½ tins, $1.35; No. 10 tins, $4.00 per dozen, all f. o. b. cannery

Western Canners Meet November 5-8—The Western Canners' Association will hold its fall meeting at the Hotel Sherman, Chicago, November 6th, 7th and 8th. Many brokers from the local market are expected to attend the Western Canners' meeting.

Clean-up of Beans—New-pack State and Wisconsin beans have met with an active call, and canners have very little carryover to offer. Fancy Wisconsin cut refugees are held at $1.75 per dozen, cannery, with extra standard cut green refugees at $1.25 per dozen, cannery. New York cut green refugees, No. 4 sieve, are offered at $1.30, f. o. b. cannery.

New-Pack Apples Sell—There has been a fair demand for new-pack apples, packers in all principal canning sections having named opening prices. Michigan standards are held at $3.25 to $3.50 per dozen, with fancy solid-pack Northwest at $4.00, f. o. b.; fancy solid-pack Michigans at $4.50; fancy New York, $4.00, and fancy Maine. $3.75, all prices per dozen, f. o. b. cannery. The demand for No. 10 apples on spot is rather quiet just now, owing to the competition of low-priced fresh apples.

Coast Salmon Higher—The larger operators in Alaska salmon have followed the action of the Alaska Packers' Association in putting a $2.35 price on tall reds, although few offerings are still to be noted at $2.25. Pinks are showing some easiness, and are nominally held at $1.25-1.30, Seattle, although sales at less than the inside price have been reported. Chums are quoted firm at $1.20, f. o. b. Seattle. "NEW YORK STATER."

CHICAGO MARKET

Weather Has Turned Warm, Affecting Canned Foods Market—Decreased Output of Corn in Iowa and Nebraska—Michigan Canners Beginning to Pack Apples.

Chicago, Sept. 21, 1923.

THE weather in the Central West has turned warm and the demand for canned foods with consumers has been affected by the change. Retailers state that as soon as the green grocery food and to eat vegetables, fruits and mellons, as they come from the farm, garden and orchard in a state of nature. The retailers state that an enormous quantity of roasting ear corn is being consumed. Fine, large ears of Evergreen corn are being sold in Chicago at retail for 25c per dozen, and the average Chicago consumer is wearing his last winter's ear protectors, while he eats corn off the cob and watermelon. Under the circumstances it is difficult to enlist his interest in canned foods.

I have an authentic report from Iowa and Nebraska that the output of six large canneries in those States is 198,000 cases of canned corn less than they had expected to pack.

The canning of corn has closed in those States, and it is reported from good authority that though the canners had prepared for a pack of three million cases, the output will be just a few cases more than two million cases. The price of standard No. 2 corn has been advanced by canners of those States to 95c factory, and some of the canners are buying from each other in order to complete carload shipments to buyers.

Illinois canners are still reported to be selling some standard corn f. o. b. factory at 87½c, but the reports could not be authenticated.

The stuation in relation to Indiana canned tomatoes is unchanged, which means that the canners are not trying to sell their output. Most of them have sold all their pack, and those who have not prefer to hold rather than to sell at the present market prices.

It is evident that most of the wholesale grocers have waited too long in buying and will now have to secure their supplies on an advancing market.

Advances in Maryland are reported as this letter is being written, and that means that the big run is over and the market is strong, and that canners do not longer have to make low prices on canned tomatoes in order to keep the price of raw stock low.

Michigan canners are beginning to pack No. 10 apples and are making a price of $3.12½ to $3.25 for an early variety called Wealthy, which cans nicely and firmly.

For late or winter stock they are asking $4.00 per dozen for the No. 10 size. This last price, however, for heavy-weight apples, to cut out 85 ounces of fruit drained.

No report has been received from Missouri or Arkansas as to prices on canned apples or canned tomatoes. The probability is that they are selling most of their output close at home or to the Southwest, to which locality they have freight rate advantages.

The price for the 1923 crop of California raisins was named this week and it is about 35 per cent lower than the 19.2 prices. I understand that an enormous quantity of raisins has been sold.

The sales to retailers in Chicago have been in the past month or so more than 150 cars of 60,000 pounds each. These sales have been made by a crew of ten men working for the Sun-Maid Raisin Growers' Association of California, the orders being filled through the wholesale grocers.

A broker who sells both canned foods and dried fruits said to me: "Every pound of raisins or dried fruits sold replaces and prevents the sale of a can of fruit." There is said to be a large crop of apricots and prunes in California this season, and the prices on apricots are the lowest for many years, and the price on prunes is likely to be low. I am writing about this dried fruit situation so that canners will know of its influence.

The consuming trade seems to have largely lost interest in canned oysters, salmon, shrimp and domestic sardines and other kinds of canned fish. Buyers state that their sales this past season so far in these lines have been the smallest for years.

Some attribute the fact to the cool and unseasonable weather, some to the very low prices of fresh meats. One man who likes to cast for bass said that the fishing all over the United States had been good and that consumers had caught their own fish. This last statement sounds to me very unlikely. I have tried it and it isn't done. I haven't caught a fish this year that cost me less than five dollars a pound after expenses were paid.

The Western Canners' Association will hold its 79th semi-annual convention at Hotel Sherman, Chicago, Tuesday, Wednesday and Thursday, November 6 7 and 8, 1923. Special railroad rates of one and a half fares have been applied for and will undoubtedly be granted on the certificate plan.

That is, to buy a ticket to Chicago, full fare, and be sure to get a certificate of purchase from the selling agent. That certificate will then be validated at the convention and a ticket to return by the same route will be sold on presentation of the certificate for half the regular fare.

There will be a fine program and the most prominent speakers and officers of the canning industry, wholesale grocers' associations, retail grocers' associations, as well as experts in the line of production and ditribution will be heard.

The important sections of the National Canners Association will probably meet with the Western Canners Association at Chicago, and the National Canned Foods Week Committees will meet there at the same time and place.

WRANGLER.

ST. LOUIS MARKET

But Little Buying—Chain Stores Buying—Buyers Extra Careful—Canners Scarce on Help—Lower Prices Expected on Tomatoes—Good Demand for Corn—Fruits Quiet—Missouri Fruit Crop Short of Last Year—The Vegetable Crops Better.

St. Louis, Mo., September 20, 1923.

THE Market—The canned foods business has been getting along this week as usual. Comparatively little in the way of buying has been done. Quite a number of jobbers have been putting off purchasing because they are of the opinion that there may be a drop in prices because of the jobbers not coming into the market as the canners supposed they would. The drop has not come, up to the present writing, it it looks just now as if the canners are not going to make the concessions expected. The chain stores seem to be the only class that are buying freely of futures this year, and it is probably because of this fact that the canners have maintained their prices.

Jobbers, when they do buy, are doing so very carefully and want to be assured of a profit before they buy. They have been buying in small quantities in a hand-to-mouth manner. They make sure of no losses by turning over their purchases, frequently each time at a margin. This has resulted in the majority of them making a profit. This is the main reason why they do not come into the market. If they can make money by following the course they are now following, why should they take chances for future purchasing? They do not care to speculate when they are successful by being conservative, and do not have to use a large capital.

VEGETABLES—Tomatoes — The overabundance of tomatoes in the market is not far distant at the canneries. It is said that labor shortage is seriously interfering with the activites of canners. A scarcity of help prevents canners taking full advantage of the low prices for tomatoes. Some canners have gotten hold of a lot of cheap stock, and it would not be at all surprising if offers of less than quoted prices be made, at least for a short time. Brokers here say that canners in Indiana have withdrawn from the market, and the same report comes from Michigan. Contracts for early shipments made some time ago are taking care of immediate requirements, but jobbers are not stocking up for their winter needs.

Corn—There is good demand for corn. Fancy Maine has been l out on contract and premiums are being offered with no ers. Minesota and corn from the Middle West has been a d seller, and is being used in place of Maine corn, but even s is scarce on the market. Standard corn is firm and there been a satisfactory volume of booking made.

Peas—Peas have sold well and at firm prices. The demand steady.

FRUITS—Peaches—There is not much of a demand for aches, but prices are being held, notwithstanding. Reports ve reached here that California canners are, as a rule, holding at they have not sold at the prices they opened at. The smaller ners are said to have sold out their stocks.

Fish—Sardines advices received here from Maine are to the ect, quoting a circular letter in the hands of a broker, that e sardine situation is very vexing, as the canners have no cedent to guide this year. This is the smallest season for re than 40 years, and even now, when the summer run should at its heaviest, the fish are not coming in fast enough to keep factories running full time every day. Nearly all packers working now on current orders, and have no promise of get- g ahead of their sales unless the run of fish continues unusu- y late.

Salmon—Buyers here are getting on their early shipments salmon, but they are not offering them for resale.

Milk—Fresh stock of condensed milk is holding steady to m, reflecting the strength of the sugar market.

The situation on Missouri pack of fruits and vegetables is re- cted in the report from the Missouri State Board of Agricul- re, just issued. According to this report, Missouri fruits gen- ally are not as good as last year, while the vegetable crop is tter. Apples are 59 per cent of a full crop, with heavy yields some of the central counties. Grapes at 75 per cent are poor the southwest section, and not as good as in previous years in ner sections. Pears at 63 per cent are quoted as "quite good" a few northwest counties, but unfavorable in most sections. aches are only 40 per cent of a full crop, with quality lower an last year. Strawberries were lighter than last year, due to ring freezes. Blackberries and raspberries were good, al- ough cut in yield by the July drouth.

The canning season of the Ozark tomato factories will end is week, according to reports of farmers and truckers, who clare that their fields are about exhausted and that the picking il be reduced to second and third grade tomatoes and only few of them. Large shipments have been made from Repub- , Billings, Marionville, Ava, Marshfield and Bois D'Arc. Be- use the crop in the Ozarks was greatly reduced by the drouth is year, it is unlikely that the acreage will be increased next ason.

"MISSOURIAN."

CALIFORNIA MARKET

mprovement in Market—Orders More Numerous—Buyers Making a Drive on Cling Peaches—Peach Crop Below Last Year's—Apricots Make a Record—Pineapple Pack Larger Than 1922—Moving Out Steadily—Tomato Canning On, But Output Below Expectations—Spinach Crop Blighted—Coast Notes.

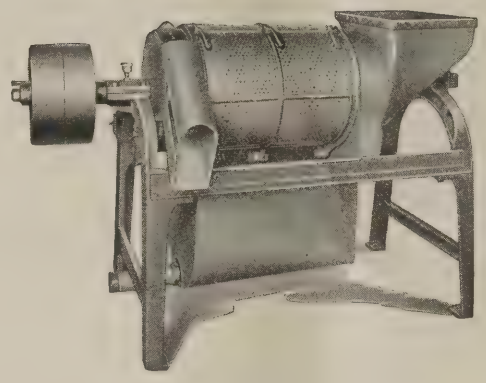
San Francisco Sept. 20th, 1923.

THE MARKET—A decided improvement has been noted in the tone of the California canned fruit market during the past ten days, and orders are becoming larger and more umerous. As the season advances it is becoming more and ore apparent to the wholesale trade that prices cannot be wer and that advances are in prospect, with the result that ture requirements are commencing to be anticipated on a rger scale. Very few have anticipated their needs in full, t most buyers are purchasing fairly liberally. A few items ave been withdrawn from the list already by leading packers nd prices on others have been advanced. Buyers have been ncentrating on standard cling peaches and most of the naller concerns which have been quoting this line at 10c and 5c below the opening prices of the large operators have ad- anced prices and are refusing to accept straight orders for is grade. The latest crop statistics reported by the State gricultural statistician are about in line with the reports that ave been coming from canners from time to time. The crop f apples promises to be slightly larger than last year, but the canned pack in this State is limited. The peach crop is estimated at 384,000 tons, as compared with 420,000 tons last year. The output of apricots was the largest in the history of California, but the dull market and small size of the fruit resulted in a heavy wastage. Production was about 108 per cent of a normal crop, as compared with the ten-year average of 72 per cent. Plums have been a full crop and packing operations on these have come to an end. The olive crop has improved the last month and will be slightly heavier than was estimated in August.

Pineapple—The pack of Hawaiian pineapple this year will be substantially larger than that of 1922, but most of the output has been disposed of and much business is being offered the larger operators which cannot be handled. The premium evil, which proved a blight on the business last year, is now almost entirely missing, and the pack is moving into consumption in a satisfactory manner on the basis of opening prices. The demand for crushed pineapple is greater than the supply, the consuming trade having cleaned up all of last year's pack, together with the surplus from the former season. The Hawaiian Pineapple Company, Ltd., is packing No. 10 crushed as usual this season for the soda fountain, bakery and specialty trade, and is putting up more in this size in proportion to the pack of crushed than in former years. The reasons assigned for the fine showing being made on crushed pineapple are the extensive advertising campaign and the fact that due to closer grading and a better recovery of sliced grades; the recovery of crushed per ton of fruit is slightly less than formerly. Weather conditions have favored the crop this year and the fruit has run to larger sizes, with the result that there will be a better proportion of the No. 2½ size than last year, when a large part of the fruit harvested was packed in No. 2 cans. The heaviest run on Hawaian pineapple is in July and August, but the packing season extends right up to the last day of the year.

Tomatoes—The packing of tomatoes is under way throughout the State where this crop is grown to any extent, but the output is not proving as heavy as expected. Some fine tomatoes have been delivered to canneries, but the yield per acre is declared to be light. Rain has fallen in the southern part of the State, with showers around San Francisco Bay, but no damage has been done to crops. Growers of tomatoes in Alameda county have joined in a seed selection program and are co-operating with the Alameda County Farm Bureau and the University of California in an effort to improve the varieties of tomatoes grown for canning purposes, and San Francisco packing companies are assisting in the movement. The market on canned tomatoes is very firm, with some packers announcing a prospective increase of 5 cents on No. 2½s and 15 cents on No. 10s.

Salmon—The market for canned salmon remains without any marked change, with the trade taking the most interest in Alaska reds. Some packers are asking $2.35 for established brands, but others continue to make sales on the basis of $2.25 f. o. b. San Francisco. Salmon packets continue to reach this port from Alaska with the new catch, but none of the vessels have large cargoes, the largest shipment being one of 85,331 cases on the Star of Scotland, owned by the Alaska Packers' Association. The output of tuna fish is heavier than seemed likely a few weeks ago and deliveries are correspondingly better. The extremely high price of white meat tuna is causing a better demand for the cheaper grades.



Spinach—The fall crop of spinach in California is infected with a blight and nineteen growers in Alameda county were arrested recently on the charge of distributing worm-infested products in Oakland. Experts have been unable to give the scientific name of the worms, but declare that they come from a fly which lives upon the avus of the spinach. Every effort is being made to stamp out the pest, which is the first one with which growers have had trouble.

Coast Notes—The Braelef Goat Milk Company has been incorporated with a capital stock of $500,000, and plans the erection of a large goat milk canning plant at Santa Rosa, Cal, according to L. A. Bridinger, of that city.

The Kings County Packing Company, of Armona, Cal., is making preparations to greatly increase its capital stock and to enlarge the output of its plants.

Work on the olive processing plant of the Wyandotte Canneries, Inc, near Oroville, Cal., is progressing rapidly, and this will be in readiness to handle this year's crop.

SMILE AWHILE

AVOIDING TROUBLE

When the train drew into the station, all the windo open to catch a breath of air, an innocent-looking man a peared around the corner of the station carrying a basket his arm. Hurrying to the window of a smoking car, he exhi ited a black quart bottle which he had taken from a numb in the basket, and, with a knowing wink, said:

"Any gent like to buy a bottle of nice ice-cold tea?"

He sold every bottle, but concluded each sale with: "Be ter wait till the train has pulled out before you take a drin you know, for I don't want any trouble"

The train pulled out and the man was making off when a observant bystander asked him why he had requested the pu chasers to wait until the train had started before taking drink.

"Because," he said, with a sly wink, "them bottles a contained ice-cold tea."

A MERRY WIDOW

An English woman recently wrote to a newspaper tha she began life as A. Mann (Alice Mann). She married a M Husband and so became A. Husband He died and she ma ried again, this time a Mr. Maiden. Becoming a widow for th second tme, she concludes that though born A. Mann, she wi die A. Maiden.—Boston Transcript.

DID THAT SILENCE HER?

The woman had seen the play before, and she was at gre pains to explain the development of the plot to her neighb in the theatre.

Finally the man behind her leaned over and said: "E cuse me, madam, but the people on the stage are making suc a noise that I cannot catch all you're saying."

NO TIME FOR KISSING

Their boat was drifting idly, the sun shone brightly an the sea was serene, while she was sitting snugly.

Then he proposed.

From the opposite end of the craft she gazed at him calml Then she said:

"As a matter of common sense, realizing that we are in thi boat, on water more than 50 feet deep, and that if you were to a as you would act if I accepted you, we would be capsized, I wi decline your proposal at the moment—but, George, row as fast a you can to the shore and ask me again."

That girl will make a good wife.

ALL HE KNEW.

A profesor noted among his students for his caustic wit ha in one of his classes a young man who was both ignorant an conceited. One morning he made a specially self-satisfied dis play of both these characteristics, and the professor said he woul like to see him at the end of the hour.

When he came up after the lecture the professor asked "You are Mr. Junkins?"

"Yes, sir."

"Have you a visiting card?"

"I—I—yes, sir," stammered the puzzled student.

"Then, Mr. Junkins," the professor said dryly, "write dow on your visiting card all that you know and bring it to me to morrow."

APPLAUSE

"I notice that you have the word 'applause' parentheticall introduced through your speeches."

"Yes," replied Senator Sorghum. "We can't always depen on hearing the applause, but we can at least be sure people wi read it."—Washington Star.

EDITORIAL

OSTON BROKERS SWAT CANNED FOODS CANNARD—That canned foods are coming into their own is shown through the daily papers in all sections of the country. In issue we reproduce two glowing testimonials from prominent papers, one respecting tomatoes as a health food, and the r touching upon sauerkraut as another such health food. e two articles of canned foods may be considered as bell-es to the whole list, but the effect upon the public mind, as rds all canned foods, cannot be other than most beneficial. it is time that the whole world learned the food value of ed foods all will agree; but all must as readily admit that world only recently held feelings that were decidedly the rse towards these products, and that a great horde of people inue to regard all things in cans with a deep superstition, it is a superstition and nothing else. An example of this given in the Boston Herald of September 5th, which pub-d one of Dr. W. A. Evans' syndicated articles on health, in h Dr. Evans referred again to food poisoning resulting from mercially canned foods, and intimating that the death of ident Harding was the direct result of eating canned crab t.

It just so happened that the Executive Committee of the ional Food Brokers' Association met the next day, on the 6th, Boston, and the brokers took up this matter, in a vigorous , with the City Editor of the Boston Herald, and he was in-d and accepted the invitation as a special guest at their heon on that day. Canned crab meat was used in the salad ch was served at that luncheon; in fact, the entire menu was al Down East fish party. It is worth repeating: Oysters, chowder, broiled live lobsters, Blue Flag brand Japanese salad, ice-cream, cake, coffee. In addition to the Editor of Herald and the regular Executive Committee members, there e the following guests: Charles P. Whitman, President; W. J. nsend, Vice-President; Paul Fishback, Secretary; H. A. N. y, Paul E. Kroehle, Joseph Keevers and the officers of the England Grocers' Association, the Boston Wholesale Gro-' Association and the Boston Retail Grocers' Association. The lt of this "eating of the pudding" was that the Herald's tor assured the meeting that the mistake of the previous day ld be fully corrected. This is certainly a splendid way of king the paper eat its words.

EEDING OUR "GOBS" FINE STUFF—Immediately after the close of the war we all heard unending tales about the poor "chow" that was served the soldier and sailor boys, all of us connected with the food world could but wonder. ere there was so much smoke, however, we felt that there st be some fire. Then we began to recall the tales told by ege students and others of the poor food that was served m, and, taking it home personally, we began to wonder why grow tired of the same restaurant fare after it seemed so when we first began, and the light begins to dawn upon all us—that we humans are peculiar critters; that we soon grow tired of even the best, and are in constant need of a change. And therein lies the truth of the returning soldiers' and sailors' complaints, as well as of our own grumblings—the complaints are made in all honesty, but the complainent has merely tired of his boarding-house. The food is all right, and many of these former soldiers and sailors as they look back upon it from this distant day admit that it was all right. They can see it now in its real condition.

We have just been going over specifications put out by the Navy for food supplies, and we could not help but feel that if all of us could do our marketing upon the same high plane we would live very much better, though our purses would be the poorer. After going over a long list of beef of various kinds, much of it in tins, sausage, mustards, jellies, etc., all specified to be of the best quality, we find such items as: 100 cases of carrots, No. 2 tins, best quality; 50 cases chicken loaf, 7-oz. tins, best quality; 30 cases clams, 10-oz. tins, best quality; 25 cases gelatine, best quality; 100 cases cranberry sauce, No. 2 tins, best quality; 50 cases oysters, No. 2 tins, best quality; 120 tins of prunes, No. 2 tins, to be "Sunsweet" or equal; catsups and chili sauces, to be "Heintz quality" or equal, and a whole raft of all sorts of groceries all of this highest possible standard. You will understand that these are offers to buy, and that the buying will be done on these specifications, and we hasten to say that these are but repetitions of many such lists we have gone over for months and months, the regular custom of the Government in providing its men with fine foods. It is as it should be, for these boys are entitled to the best the land affords, and we mention it only as a retort to the assertions that their food is slighted and is not of the best. It is to the credit of this industry that all branches of the Government use canned foods to an enormous amount—we might be bold enough to say in preference to all other forms. There are advertising possibilities here which the industry should make use of.

THE TOMATO "BEARS" AGAIN THROW BOOMERANG—If popularity consists in being on everybody's tongue, then Jimmie Colbert, of the Colbert Brokerage Co., of Preston, Md., is the most popular man in the canning industry, not alone in these parts, but in every section of the canned foods world. But we hasten to add that it is a brand of popularity that will relieve him of the need of ear muffs during the coming winter. One well-known canner, and one of the largest, and whom the writer never before heard resort to profanity, broke loose on a strain that would have done the famous old sea captains honor—and Jimmie was the butt of his anathemas. And here is the cause, the following circular:

Preston, Md., Sept. 21, 1923.

To Our Connecting Brokers:

TOMATO SITUATION

Tomorrow ends the fourth week of the tomato glut, and packers for the past four weeks have been running every day, most every night and quite a few Sundays, and most of them will run full next week.

However, the glut is now over, and we are in hopes that after next week things will slow down enough to let

canners get their future sales shipped out, which we are confident they will do just as soon as they can spare the help to label and nail up the goods.

There is no question but what we will have one of the largest packs ever recorded in this section of the country. In fact, it has been so heavy that not one in twenty canners have been able to spare the help to ship out any goods.

There has been a movement on foot recently to boost prices. This has partly been backed by a few canners who sold goods with a guarantee against decline in price to date of shipment and a few speculators who thought our pack was going to be short.

This may be a good movement for everybody concerned, for there is no question but what it will have some influence in keeping some of the buyers from rejecting, which is a natural thing to expect if the market had remained like it was.

They are basing their argument on a tomato shortage in the West. Indiana packed last year 1,312,000 cases of tomatoes, which was the largest pack, we believe, they ever had, and even if they do not pack a case this season, the Peninsula alone will pack more than this quantity in excess of its pack last season. So, you see, there will be plenty of tomatoes to go around, and this year it will pay buyers who are in the market for tomatoes to get prices out of the Tri-States before placing their orders.

Practically every canner that we know will have tomatoes to sell, and will want to sell them just as soon as they can get their present sales shipped out. At the present time there are very few canners interested in taking any orders for prompt shipment.

However, with firm order and buyer's name, we can get straight cars of standard tomatoes, one size only for prompt shipment, f. o. b. Peninsula, at the following prices: No. 1s, 55c; No. 2s, 85c; No. 3s, $1.35; No. 10s, $4.25.

If you get any business on this basis, we will be glad to hear from you.

If there should be a change in the market, we will advise you promptly.

Yours very truly,
COLBERT BROKERAGE CO.

This is but a repetition of last year's fiasco, when the bl was all put on the Biddle Purchasing Co., with Jimmie n tioned as their agent. It is our understanding that this se Jimmie is not their agent, but the result so far as bearing on tomato price, the market is just the same; instead of driving canned tomato prices down it has served to force them up, for the same reasons. Biddle is a buyer, and while fault ma found with his ethics, it should be remembered that to the York City buyer, sitting in his mahogany swivel chair, it t very few tomatoes to make him see the entire horizon aff with tomatoes. But Jimmie is down where the tomatoes gr he is a keen student of the market and of the tomato-can game, and anyone who has followed the course of this crop season must know that there is no good reason to expect a fect deluge of canned tomatoes. He says there have been weeks of "glut." To our knowledge there have been but weeks of glut, tailing over into the third week, which was week of September 17th, the supplies rapidly dwindling from middle of that week, and this week, his fourth week, present actual scarcity and very high prices on raw stock. We checked our ideas very carefully not only with large and posted canners, but with others epually familiar with the si tion and free of any possible bias, and they coincide exactly the best-posted men in the industry. This leaves Jimmie to s alone, and the trend of the market prices, and moreover the ac feverishness of buyers from all sections of the country—a v able deluge of orders for tomatoes on this section of the cou as we write—do not support him in his position.

If this thing keeps up, tomato canners will annually for some bear to break loose, that higher prices may be ins The canners have been cussing the circular, but they need have done so. And now that the canners are through cussing buyers will begin, because they allowed themselves to be l with the siren song of loads of tomatoes and very cheap pr We thought the buyers learned their lesson last year, but they have come back for more punishment and in greater hers this season shows that they did not. We have done best to hold the canners steady and to keep them from lo money, and most of them have followed the advice. Those were stampeded can merely be sympathized with.

Conditions Of Crops In All Sections

Crop Reports By The Canners

Take Time—

To send us a brief word, at least, as to the progress of the pack in your section to date, and as to prospects. Others are doing this, as you see below.

You welcome all possible information—Exchange, then, with your fellow canner, and here is the way.

The crying need of this industry is more information. Give a little and you will get much. Let us hear from you.

——The Editor.

Mt. Morris, N. Y., September 21—Corn acreage is normal. Yield 20 per cent.

Avery Island, La., September 19—Canning crops exceedingly poor here. Okra scarce and other crops practically a fraction.

Vicksburg, Miss., September 24—The green bean crop was a total failure, both spring and fall. The acreage was good, plants luxuriant, but the rains would not let the buds set to fruit. Tomatoes 25 per cent acreage, and 50 per cent crop. 50 per cent of acreage planted to sweet potatoes looks like a 50 per cent yield. Cabbage very poor. Okra crop 75 per cent. Acreage about as usual. Cotton crop 25 per cent. Sugar cane 50 per cent. Acreage for both about as usual. Temperature 46 degrees this morning, almost the frost line.

Grandview, Ark., September 21—The severe drouth during August and the early part of September damaged the tomatoes in this vicinity more than 50 per cent, and unless frost holds off much later than common we cannot hope for half a normal pack. The apple crop here is only fair. There will be some apples packed in Arkansas this season.

Green Forest, Ark., September 24—First half season hot winds and badly sunburnt. Last half to date too much rain, hurting tomatoes very badly. Weather conditions being good for twenty days longer will have 30 per cent pack. We are prorating our shipments.

ADVERTISING AND SELLING

By Charles Coolidge Parlin,
Manager of the Division of Commercial Research,
The Curtis Publishing Co.

Before the National Krout Packers' Meeting, August 27th, 1923

THE most powerful selling force is the merit of the product. Personal selling is, however, a very large factor; advertising is also a factor. The development of any business is dependent upon its sales representatives. The product might be right, the advertising might be right, and yet if the sales representatives were not loyally and enthusiastically putting their efforts behind the selling of the products, the results would be negligible.

Advertising is very definitely to the benefit of each and every salesman. It is not true that when a firm advertises, fewer or less efficient men can be used. As an advertiser you create a greater demand and you can advantageously use the efforts of more men and more efficient men.

Three changes have been taking place which are of vital importance to a sales organization and to a manufacturer.

There has been a remarkable growth in incomes. Incomes from $2,000 to $3,000 in 1921 were two and one-half times as great in number as in 1917. There were more than eight times as many people with incomes from $3,000 to $5,000 in 1921 as in 1915; more than two and one-half times as many people with incomes from $5,000 to $10,000; more than twice as many people with incomes from $10,000 to $25,000; nearly twice as many people with incomes over $25,000.

Another change is taking place. The automobile is tr forming the merchandise map of the United States. A years ago it was very difficult for any manufacturer to re the farm trade. The farmer, limited by the short radius travel of his horse, had to buy what the local merchant ch to sell. Today the automobile enables him to go where pleases This has resulted in the rapid growth of the county-s towns.

In 1920 we made a survey of 144 square miles in Kan calling upon every home and making an intensive study of city of Sabetha, which was the center of that district. It found that 83 per cent of the farmers had automobiles, In ot words, 83 per cent were independent of the village store, 83 cent could go to the place where the product they wanted to was sold,

There is another change more fundamental than any those mentioned heretofore, the development of education, wh is one of the most remarkable revolutions that has taken pl in American life.

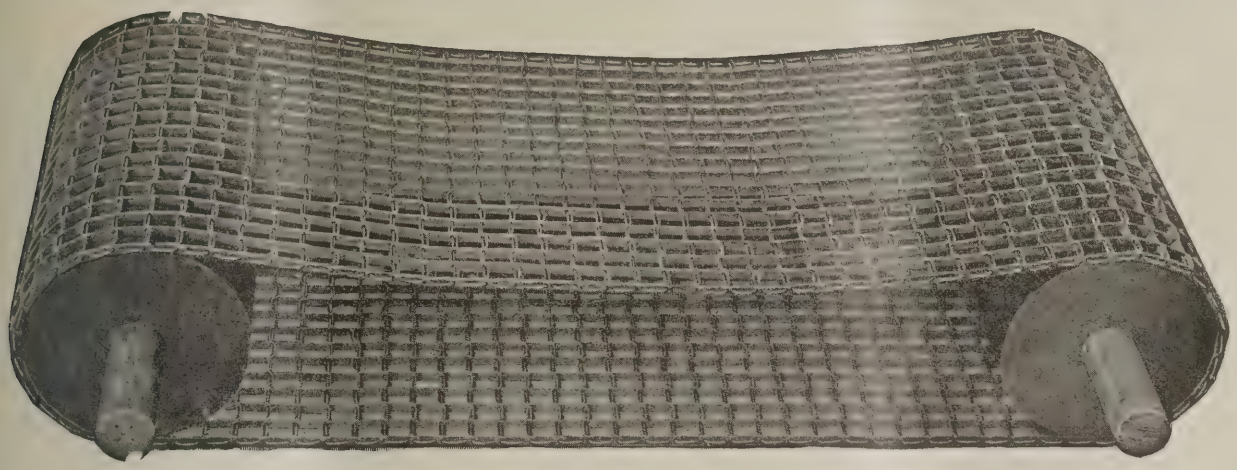
Thirty years ago there were less than 400,000 students rolled in high schools in the United States. Today there are and one-quarter million—not two and one-quarter million of one hundred million people, but two and a quarter million of the small part of one hundred million—who are of high-sch age and have the intelligence to make use of high-school tr ing. There are today enrolled in college more students t were in the high schools in 1890.

This wide-spread development in education has distinct nificance: In the first place, our earning power is being a mented; more people are earning money with which to buy r chandise. In the second place, there is an increasing appre tion of good merchandise; a greater number have increased a ity to understand such a message as you have to give them understand differences in quality. In the third place, it me that the number of people who can be reached with a pri message is vastly increased.

Up to the present time only a relatively small part of population has been able to get enough impact from a pri message to be vitally influenced by it. A great many pe do not read at all. Some people who do read have not suffic intelligence to get an impulse from it which is strong enc to lead to action. These people buy through imitation, or buy what merchants urge upon them, or their more intelli neighbors recommend. But every year our schools are tur out a larger number of people who can think for themselves to whom you can appeal with your message in a way which enable you to build markets.

Along with this remarkable development in education come a striking development in advertising. Advertising come into our lives so gradually and yet with such a pos force that we can hardly conceive of how recent it is.

The task of getting your product into the minds of the sumer is a hard selling task. It will take the very best eff in advertising and the very best in sales effort, but with succeeding month and each succeeding year it will become ea When you have that you have an asset which is worth va more than investment in plants, in raw materials and in fini products.

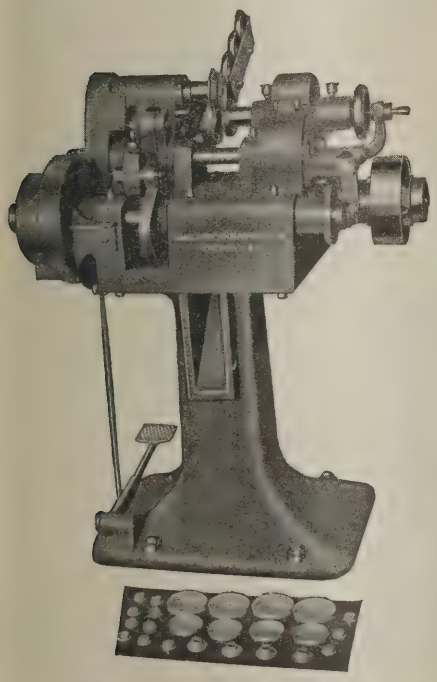


Advertising is a process of education. Advertising is the most powerful force; the merit of the product is. Adve ing is not as powerful as word-of-mouth selling. There are, l ever, two things advertising can do that cannot be done by sonal selling. Advertising reaches a lot of people at once, a comes again and again.

As a result of the war there has been a vast develop of the co-operative movement. During the war many orga tions were brought together. Most of these organizations tinued to exist because they found certain co-operative acti which they could very well agree.

In the first place, they found it was wholesome to ge gether and become acquainted. They found there were ce things they could do without much expense—maintain a re sentation in Washington, look after their interest in the S capitals, look after standardization in methods and sizes. S of these associations utilize national advertising to build markets.

The problems of co-operative advertising are many. is: members have to trust each other enough to go ahead a big program. Another is: they have to trust each other en to let a committee transact a great deal of business. They to agree on fundamentals and leave to a committee the dec of details. One of the most difficult things is that every



HERCULES SANITARY FLEXIBLE STEEL CONVEYOR

ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

We make every machine for "can-making."

CAMERON CAN MACHINERY CO.

240 North Ashland Avenue CHICAGO, U. S. A.

will not come in. Somebody is going to stay out, and those who come in have to bear the burden. The committee must know what it can depend on, because they have to place advertisements a long time in advance. Somebody has to be financially responsible for them. Either the committee must do it personally, or have the backing of commitments on which they can depend.

SALE OF APPLE CIDER IS DECLARED LAWFUL

SWEET cider is due to enjoy a return of popularity through the recent citation of a section of the Volstead law by General Prohibition Enforcement Agent Bauswein. The rural beverage which at one time was liberally consumed not only in agricultural districts, but which passed continuously across the polished mahogany, seems destined to again reach large proportions. Cider presses will figure prominently once more in modern farm equipment, and a sharp jump in the apple market may be expected as a result of the ruling.

Immediately after prohibition the report became prevalent that the law required farmers to "doctor" fresh cider in order to prevent it from gathering that natural kick which would bring it within the pale of the Volstead law.

Inasmuch as the farmers were not supplied with the necessary ingredients for "doctoring" and feared to take chances with the prohibition agents, many of them allowed their apples to rot on the ground or sold them at low prices. The cider presses were relegated to the class of the stein, the growler and other gone, if not forgotten, antiques.

But Bauswein says the farmers misunderstood the provisions of the prohibition law. Under his ruling, published recently, they are permitted to make and sell sweet cider which contains no preservative, provided they sell it before it accumulates the ½ of 1 per cent kick. The section cited by Bauswein follows:

"Sweet cider, direct from the press, may lawfully be sold by the glass or in other small containers without permit, providing it is not combined with any other ingredient so as to produce an intoxicating liquor, and is sold for consumption at the place of manufacture or in such proximity thereto and in such quantities that it will reasonably be expected to be consumed before becoming intoxicating."

Preserved sweet cider is defined as that in which alcoholi fermentation is prevented or materially retarded by the additio immediately on pressing of benzoate of soda in the proportion not less than 4 to 4½ ounces to each barrel not exceeding fift gallons in capacity, or by pasteurizing or sterilization and b immediately placing the same in small, impervious, sterile, seale containers, such as bottles or jugs.

It will be noted that it is stated that sweet cider may sold "at the place of manufacture. This means that anyone ma make and sell sweet cider, and that customers merely need purchase it, set it aside and let nature do the rest. With th growing distrust of the liquors now on the market, it may safe be presumed that those who must have it will welcome the oppo tunity to purchase a stimulant which hasn't so intimate acquaintance with the Grim Reaper.—The Interstate Grocer.

CALIFORNIA MARKET

(*Continued from page 31*)

The Tofanelli Sea Food Co. has been incorported at Sa Francisco, with a capital stock of $25,000, by A. Tofanelli, E. Tofanelli and A. J. Harzfeld.

PUGET SOUND SALMON RUN BREAKS RECORDS

The Greatest Humpback Pack Since 1913 Will Result From the Heavy Puget Sound Catch

By Gill Gordon

In the Seattle Post-Intelligencer of Sunday, September 9, 1923

[NOTE—This interesting description is well worth reading; but daily paper reports if record yields or catches must be taken *cum grano salis*. The Editor.]

THE "humpies" have come, nosing their way by the tens of thousands into the traps and seines of Puget Sound fishermen, a condition that overnight confronted fishery interests with a vast oversuply of salmon, as contrasted with depleted runs that in previous years forecasted approaching extinction of this premier North Pacific Coast industry.

In the parlance of North Puget Sound fishermen, this is the "humpies year"—meaning that the biennial migration of the humpback salmon is on in full force, this pink-fleshed species returning from the ocean to the streams where they were hatched four years ago. An average catch was anticipated this season, but the deluge of humpies that choked traps and purse seines in the last few weeks found the canneries utterly incapable of handling the unprecedented crop, with the result that perhaps 400,000 of this valuable food fish spoiled and were dumped into the Sound or turned into fertilizer.

This condition swiftly brought about a sharp difference in opinion as to fishery conservation measures.

On one hand the State Fish Board, created by the last legislature, is criticized for not acting promptly in coping with the big run, thus averting the loss of 400,000 salmon.

And on the other side the Fish Board is praised, it being pointed out that the deluge of humpies this season is a direct result of the first official conservation step taken by the Board when it organized—that of creating a ten-day closed period each year to permit the fish to reach their spawning grounds in greater numbers.

This ten-day closed period became effective last Wednesday, continuing until next Sunday, after which the 1923 humpback run will be practically over. And when the season ends the Washington humpback pack will have aggregated between 360,000 and 370,000 cans, in the opinion of Capt. Harry Ramwell, of Everett, member of the State Fish Board. This represents the greatest humpback pack since 1913.

Deluge of Humpies—Like an old orchard, its sapless trees suddenly blossoming into a rich harvest of fruit, was the deluge of humpies that flooded the traps and seines of fishermen last week. It recalled to grizzled fishermen the palmy days of ten years ago or more, when Puget Sound waters sparkled bright with the gleam of silver salmon scales; when, on the word of beach Siwashes, one could almost walk across the Sound on the marshalled backs of millions of salmon, back from mysterious ocean haunts and driven by a strange instinct to spawn and die in the streams where they were born.

Anxious to proclaim to the world that one of the three leading industries of Washington is still productive, President E. B. Deming, of the Pacific-American Fisheries, put his scout boat, the Skylark, to the disposal of the Post-Intelligencer corresopndents, and T. G. Randolph, cameraman of the International News Reel, last Monday. En route to the Lummi Island fishing precincts the waters splashed at frequent intervals in the wake of the Skylark; it was the splash of jumping salmon, and they could be seen leaping from the waters far out into the Sound, which, in the Siwash mind, is a sign of "heap big" fish.

And heap big fish they were at the first trap visited—a contrivance of long rows of piling supporting wire network, jutting far out into the Sound from the Lummi Island beach, at the end a circular inclosure with a narrow opening through which the fish entered. Entering this "parlor" sounded the salmon death knell, for within a few hours he would be reposing in several cans, fully cooked and ready for Eastern markets, where Puget Sound salmon is a rare delicacy.

From this trap 6,000 humpback salmon were brailed into waiting scows; 6,000 silver-hued humpies, jumping, twisting, squirming, fighting mad at the fate which led them into a can, instead of the mountain streams of their forebearers.

This same spectacle was unfolded in the other company traps, with the result that long before twilight a small flotilla of barges, each heavily burdened with its harvest of the silver horde, were towed into Bellington Bay and moored beside the Pacific-American canneries.

From water into the can is only a process of hours, and with the canneries immaculately clean, it assures epicureans as fresh a food as the campfire-cooked fish of the nimrod.

This is but the beginning of an even greater humpback run, in the opinion of Capt. Ramwell, while E. A. Seaborg, director of State Fisheries, declares that the acts of the Board in creating spawning reserves and enforcing closed periods will be productive of a rehabilitated salmon industry in the future.

"Next year there will be a world of silver and chum calmon," was the optimistic forecast of Captain Ramwell. "And if British Columbia will co-operate with us, we will bring back the greatest of them all—the fancy sockeye. If Canada will co-operate, we will close sockeye fishing for eight years."

Romance of the Seas—In the romances of the seas the salmon is perhaps the most interesting. River-born, the infant fish, driven by unerring instinct, swim to salt water, then pushing farther on into the ocean, where, in mysterious haunts which science has never been able to definitely locate, they grow to maturity in four years. Then, again driven by an even stronger instinct, they swim back, retracing the exact swim-path they took as infants four years previous. Back to the same stream they go—if they miss the clutch of the cannery trap or purse seine. Leaping waterfalls, braving swift rapids, defying the sharp rocks that bruise and tear their bodies, they somehow reach the pool that is birthplace and grave.

Here, the end of the journey, the salmon deposits its eggs. Then, after hovering over the eggs like a mother over its brood, it dies, its body sinking to the sand bed. Science believes that after the young are born, remnants of the parent fish still repose on the sand bed, providing food for the fingerlings. Here nature has provided an epic of life duty that challenges the achievement of man.

The salmon was almost sacred to the primitive Indian; now it is sacred to the epicurean—when it is in a can.

A NEW CIPHER CODE

THE California Packing Corporation, San Francisco, has announced the publication of its new Calpack Code, which is now ready for distribution and becomes effective October 1, 1923.

This new and up-to-date code succeeds and replaces the codes previously published by the J. K. Armsby Co. and the California Fruit Canners' Association. The various editions of these older publications have been for many years the standards of the world for the fruit and vegetable packing industry, but, due to the many changes which have taken place in the methods of packing and distribution, the need for a more up-to-date code has been greatly felt. We are advised that the Calpack Code has been designed with but one idea in mind—the reduction of telegraphic expense, and the California Packing Corporation claim it will meet all practical present-day requirements of the trade.

According to previous circulars, the lines covered are canned fruits, fruit specialties, honey, canned vegetables, tomato products, pickles, ripe olives, canned fish and sea foods, dried fruits, raisins, beans, nuts, etc. Special attention has been given California and other Pacific Coast commodities. The lists of phrases and commercial expressions are comprehensive in scope. The tables of currencies, numerals, dates, quantities, shipments, etc. are very complete and insure to users of the code substantial savings in wiring on these important subjects. The code words are adaptable to both domestic and foreign communications with the maximum of economy.

A large advance sale has been reported which indicates that the Calpack Code will be used by the trade generally throughout the world, and the publishers anticipate a rapid distribution of the remaining unsold copies of the first edition.

TOMATOES—YEAR-'ROUND HEALTH INSURANCE

A HUNDRED years ago our great-grandsires admired tomatoes as garden ornaments, but avoided them as poisonous "Love Apples." Today they stand in the front row of the most-used and best-liked vegetables—even new-born babies are fed tomato juice to stave off scurvy.

Long before science discovered the tomato's marvelous value as food, the human family was eating it at the rate of billions of pounds and tens of billions of cans annually. Now we know it is rich in iron—a mineral as necessary to blood as air to the lungs. It generously provides lime—another essential mineral indispensable to the building of bone and teeth. "Lime starvation" is one underlying cause of many distressing physical defects.

Tomatoes also are purveyors of potash salts, which help the blood to promptly carry building and repair material to all parts

of the human frame.

Whereas their acidity once was attributed to undesirable oxalic acid, we now know it to be of beneficent citric acid origin—as in the lemon and orange.

The tomato's real triumph as an invaluable food, however, is based on its incomparable service to health as a gold mine of vitamines, those essential food elements so necessary to health.

It has the supreme distinction of being one source of these vital "protective" food elements which is not injured by drying or canning.

This plentiful, cheap and luscious vegetable not only supplies the anti-scurvy vitamines, but also is rich in two other vitamines—the kind that prevents or relieves certain nerve diseases, and the kind that promotes normal growth and development in children and young persons and helps to maintain an even balance of physical fitness in mature folk.

From four to six ounces of fresh or canned tomatoes daily is sufficient to provide the average individual with a fair supply of these three "invisible lifeguards."

Young children may take as much as an ounce a day, though in this, as in all matters pertaining to children's food, dependable medical advice should be sought.

We get vitamines in tomato soups and sauces, and fresh and canned tomatoes are highly useful as defenders against deficiency diseases. Tomato salad, whether made with the fresh sliced or the canned, is a delicious form of defense against germ foes that seek to batter down the walls of health.

Only a fool would think of omitting these glowing red globules of goodness from the daily diet. Whoever wants that measure of body balance which insures comfort, efficiency and profitable living will eat tomatoes in some form daily.

September brings tomatoes in profusion—the best of the year—solid, meaty ones that can be had at little cost. Serve them in plenty, and put them into cans.

Follow the advice of the ancient sage: "In time of plenty provide for the lean years."

Mr. Tomato Canner, says Roy Irons, Secretary of the Ohio Canners' Association, who sends us this from "The Forecast," a health magazine, you cannot arrive at the true value of such a great article. Note the strong terms of expression where he says: "Only a FOOL would think of omitting these glowing globules of goodness from the daily diet." See the advice given in the following: "Whoever wants that measure of body balance which insures comfort, efficiency and profitable living WILL EAT TOMATOES IN SOME FORM DAILY."

This is certainly telling the people to eat tomatoes. One would think the author had been "semed," but we know he hasn't, and to have a voluntary expression from such aneminent dietician as the above, the worth to the industry cannot be measured in dollars and cents.

Back up such men s this by packing nothing but good quality, and the nation will soon consume 20,000,000 cases annually.

THE NEW HANSEN FILLER

OUR readers have all seen the announcement of the New Pea and Bean Filler, just brought out by the Hansen Canning Machinery Corporation, the first product offered from their new factory at Cedarburg, Wis.

When the name Hansen is mentioned in relation to filling machines, the canning industry listens intently, for the Hansen Fillers have made a name for themselves. And now Hansen says that he has surpassed anything heretofore offered as a filler, even his own previous well-known machines. We have not seen this new wonder, and their advertisement describes it so well that we need not here repeat, but they tell us that the machine has been a year under actual working conditions in the factory, and it is, therefore, not a mere theory. That being so, it stands as pretty much of a revolution in filling machines for canners. Hansen canning machinery has always attracted attention because of the fine way in which it is built; and it has spread its fame through the quality of the work it does in the cannery, when most needed, and where the real test comes.

The one feature—that the brine or syrup is covered and kept free from dust or other factory refuse, and cannot possibly be wasted—is in itself enough to recommend it strongly to any progressive canner. That it has fewer parts and, therefore, presents less liability to wear or break down is another that few will miss. So the new Hansen filler is a machine which everyone should look into and learn more about in time for next year's operations.

We are told, also, that they have perfected their can-washing machine, that little contraption which sits between the can supply

and the filler and gives each individual can a thorough cleansing before filling; and if this be so, every canner should install one. Every day that the industry puts off the washing of the cans before filling it is courting disaster in the minds of the public. It should be done before the scandal, as it will have to be done after the scandal. This little washer impressed us very favorably, and now that they have perfected it, no one need hesitate.

FALL PLOWING WILL REDUCE TOMATO LEAF-SPOT OR BLIGHT

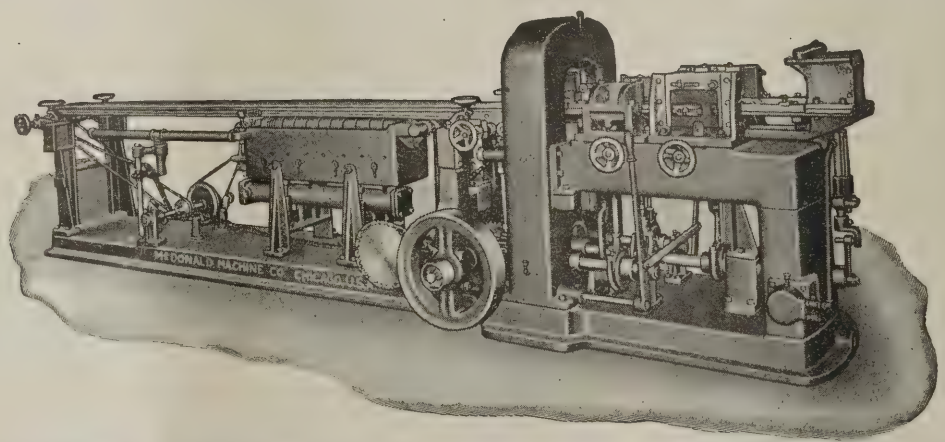
RECENT investigations by Fred J. Pritchard and W. S. Porte, of the Bureau of Plant Industry, United States Department of Agriculture, indicate that tomato leaf-spot, or blight, which causes an average annual loss of approximately 250,000 tons of tomatoes in the Middle Atlantic and Middle Western States, can be largely controlled by thoroughly plowing under all dead tomato vines in the fall to prevent the overwintering of the fungus.

The tomato leaf-spot fungus, as shown by experiments, grows, fruits and overwinters on various kinds of dead plant material, such as weeds, grasses, corn stalks, wheat stubble, and remains of other crops. It overwinters in greatest abundance on old tomato vines, however, as it starts on the live plants when there is little competition with other fungi and obtains a monopoly on this material. During the autumn and spring it thoroughly permeates the surface tissues of the old tomato vines lying partly or wholly on the surface of the soil, and in the summer produces innumerable fruiting bodies and spores. This food supply usually carries it well into the fall, by which time it spreads to other dead plant remains, and hence lives over another winter. By means of this saprophytic existence on dead plant debris, it is able to live from year to year until it finds a favorable opportunity to attack another tomato crop.

Covering the infected tomato vines with soil at the end of the picking season causes the death of the fungus before spring. The vines have to be thoroughly covered, however, to obtain this result, as those left partly or wholly exposed harbor the fungus. If the leaf-spot fungus could be completely prevented from living over even one winter, there would obviously be no more leaf-spot. The more nearly this condition is approached, the less likelihood of an epidemic, for this fungus does not produce spores until summer, and a small amount of it could hardly multiply enough under natural conditions to do much damage in the short period favorable for its distribution.

Plowing the vines thoroughly under in the fall in the preparation of the land for the succeeding crop will prevent an enormous amount of overwintering. This, accompanied by clean culture and crop rotation, should practically control this disease if generally practiced. The use of a rolling colter to cut the vines, or of a curved rod to turn the ends into the bottom of the furrow as they are covered with soil, may aid in the covering. Disking and plowing will not suffice unless all the parts are covered so deep that they will not become exposed.

The Eastern practice of disking tomato fields at the end of the harvest and sowing grain or grass is apparently responsible for much overwintering of this fungus, as this enables it to live and multiply on the tomato vines until the grain stubble or dead grass leaves are available as food.



Owing to temperature limitations, leaf-spot or blight does not usually appear in tomato fields in the Middle Atlantic and Middle Western States until June 15 to July 1. The use of very early plants is, therefore, a means of partially escaping it. This will not apply, however, to the main or late crop. Moreover, it will not aid much if leaf-spot produces early epidemic conditions. The necessity of a clean seed-bed is, therefore, apparent. Horse nettle, purple thorn apple, Jimson weed, ground cherry and black nightshade should be kept out of fields, roadsides, fence rows and other parts of the farm, as they are also hosts of this fungus.

ONE STYLE OF SWELL GUARANTEE USED

THE Kiser & Hoe Canning Co., operating three factories in Ohio, and with offices in Columbus, O., write us as follows:

"In regard to controversy of allowances on swells of canned foods, we would suggest the following, which protects the buyer and canner:

"We guarantee until July 1st the following year. In case of a claim, we have our broker examine the cans, and after the jobber has taken the labels off and mailed to us, he dumps the corn, and we immediately pay for same on receipt of invoice and labels. This is inexpensive, and has not cost us over 1-10th of 1 per cent, and we have followed the above for several years."

NO. 2-C AUTOMATIC BODY MACHINE WITH NOTCHING AND SOLDERING ATTACHMENT.

Our No. 2-C Bodymaker as shown with notching and side seam soldering attachments and automatic blank feed, has a capacity of 150 lock and lap seam sanitary can bodies per minute.

T is entirely automatic high speed machine is adjustable for all sizes of sanitary cans up to No. 3 size. All adjustments are combined so as to maintain correct alignment of working parts when changing for sizes.

The construction of this machine is unusually heavy weighing complete 9000 lbs. and the adoption of crank movements permits a high capacity and insures a smooth operation, free from vibration.

The combination friction and clutch is provided with control levers conveniently located and arranged so that the soldering attachment continues to operate, if the forming mechanism is momentarily stopped.

This is a strictly high speed machine complete, in every respect and embraces many unique features necessary to the requirements of a modern sanitary can making line. For further particulars apply to

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

Baltimore, - - Maryland

It should be noted that before any labels may be returned as indicating swelled cans the goods must first be examined by the local broker, and be passed only by him. There is a degree of protection in this that is necessary.

JUGOSLAV PRUNES LOOK PROMISING

A SLIGHTLY larger plum and prune yield is looked for in Jugoslavia this season, Trade Commissioner Upson has just cabled the United States Department of Commerce from Vienna. The 1923 plum harvest is expected to reach 860,000 metric tons, about 11,000 tons larger than last year's actual production. From this yield of fresh fruit there will be an estimated production of dried prunes of 78,000 tons, of which probably 28,000 tons will be consumed in Jugoslavia and the balance exported. The entire 1922 yield of dried prunes has been disposed of, leaving no carry-over to meet the 1923 harvest. Last year's prunes were taken in large quantities by Germany, Austria, Italy, Hungary, France, Switzerland and England, the exports amounting to 40,000 metric tons. The 1922 production of dried prunes in Jugoslavia amounted to 77,000 metric tons. It is believed that special efforts on the part of the growers, packers and distributors will be made this year in order to produce improved stocks for export.

DANISH CONDENSED MILK BY CO-OPERATIVE PLAN

THE erection of several new condensation plants by the Co-operative Dairies is now under consideration by Danish dairymen, who seem to regard the condensed milk field as very promising. Production and export of Danish condensed milk is steadily increasing, Acting Commercial Attache Sorensen, Copenhagen, informs the Department of Commerce. During 1922, 28,109 tons, of which 3,100 tons were sterilized cream, 500 tons powdered milk, and the remainder condensed milk, were produced. For 1921 the total production was 18,055 tons. During the first five months of 1923, 14,466 tons of condensed milk and cream have been shipped, as compared with 9,527 tons during the same period last year. Considerable quantities of milk which until recently went into the production of cheese are now said to be used for the preparation of condensed milk, as prices obtained and marketing possibilities for condensed milk and cream at present are better than for cheese. The chief markets for Danish condensed milk are England, Austria, France and Germany, but exports at present to over 25 different countries.

1923 BRITISH COLUMBIA SALMON PACK

THE British Columbia canned salmon pack for the 1923 season will run approximately 626,266 cases, according to official Canadian estimates just received by the United States Department of Commerce.

District No. 1, the Fraser River waters, has a total pack of 19,640 cases, while District No. 2, comprising Naas River, Skeena River, Rivers Inlet and Smith Inlet, Bella Coola and Kimsquit and other points in that vicinity, has a pack of 561,747 cases. District No. 3, the Alert Bay District, Vancouver Island waters and mainland waters directly opposite contributed 44,879 cases to the total.

Of the total pack, 290,901 cases are sockeye, 251,164 cases are pinks, 36,123 cases are chums, 29,075 cases are cohoes, 18,181 cases springs, 160 cases bluebacks, and 662 cases steelheads. As each case contains 48 one-pound tins, the 626,266 cases represent 30,060,768 one-pound tins.

SOME LOBSTERS!

LOBSTER canning in the Canadian maritime provinces has been very successful during the present season, according to Canadian advices reaching the Department of Commerce. In addition to a big pack, two record lobsters were taken at River John, Pictou County. One weighed 15½ pounds and the other 12. The larger lobster measured 37 inches claw-spread, and was 34 inches from tip to tip. The claw was 12 inches long, and the circumference of the body 17 inches.

TO IMPROVE ITALIAN RICE CROPS

MORE and better rice is expected from the present Italian crop, says Consul H. Earle Russel, Rome, in a report to the Department of Commerce. The cultivation of rice this year has regained a large part of the area that was lost during the serious agricultural troubles after the war. The greatest

Waste *Versus* Profit

Every $ lost in Waste is a $ less dividends for your Stockholders.

In these days of keen competition, the elimination of waste often-times determines whether your season's business will show a profit or a loss. Canners paying the largest dividends to their stockholders are those who put the peas and brine into the can instead of onto the floor.

The Pea Filler is probably the most important machine in the factory as by the time the peas are ready to be put into the can, they are most valuable as they have absorbed about all the cost that they ever will. A small amount of waste at the pea filler will quickly lose the price of a new machine.

Main Sources of Loss and Waste on Pea Fillers:-

1. **The cans overflow.**
2. **The brine tank overflows.**
3. **Spilling of peas and brine due to cans failing to reach the filler.**

All This Waste is Impossible on the 1924 Model Hansen Filler because

1. **It is impossible to overflow the can.**
2. **Filler has no brine tank to overflow.**
3. **Filler stops automatically if cans fail to reach the filler.**

IMPOSSIBLE TO OVERFLOW THE CAN.

Experience has shown that with fillers where two adjustments are necessary for changing the fill of the cans, the operator invariably changes the fill of peas and ignores the brine. The surplus brine overflows and is wasted.

This is absolutely impossible with the 1924 Model Hansen Filler because it is impossible to get more than a can full of brine. Although the brine can be adjusted to fill any quantity less than a can, it cannot be adjusted so that it will overflow the can.

The Hansen Filler automatically determines the amount of brine to suit the amount of peas in the can, - still when the hopper is empty, a slack fill is shown.

NO BRINE TANK TO OVERFLOW.

The Hansen 1924 Model Filler has entirely eliminated a brine tank with all its mechanisms, float valve, etc., which on other fillers is always a source of trouble. The HANSEN has no valves to leak or tank to overflow, hence all brine which on other fillers is wasted is saved on the HANSEN.

The Hansen briner is not surrounded by the brine but instead, the briner surrounds the brine. On other fillers where the brine surrounds the briner in an open tank, the metal corrodes and pits, causing a leaky and a hard running machine.

AUTOMATIC STOP.

The Hansen Stops Itself Automatically.

This device stops the machine automatically in case a bent can reaches the filler or if the cans stick in the runway and fail to reach the filler. This entirely prevents the tremendous waste due to the spilling of peas and brine so common on other types of fillers.

Actual records of spilled peas and brine because of this cause show that on other fillers without an auto-stop many dollars are lost each season. The Hansen is the only filler equipped with this device and eliminates this form of waste, besides making the filler practically fool-proof and operatorless.

Hansen Canning Machinery Corporation

Cedarburg, Wisconsin.

decrease in areas sown was in 1920, when the rice lands slumped from the pre-war figure of 365,714 acres to 276,509 acres. During 1922 the area increased to 293,807 acres, and the present year sees a cultivation of 345,946 acres, the Emilia, Venetia and Mantua districts again planting. A gradually increasing use of the finer kinds of seed has also been noted. Climatic, soil, fertilizing and water supply conditions have been favorable and a good crop is expected.

THE MARYLAND FARMERS ARE ORGANIZED

WHILE the farmers of Maryland now have the best and strongest organizations in their history as results of intensive organization efforts during the past year, much yet remains to be accomplished before all the farmers of the State are brought to a realization of the importance of united efforts of the promotion of co-operative marketing organizations, according to Dr. Thomas B. Symons, director of the University of Maryland Extension Service.

In a statement issued here, urging all farmers to back up the existing agricultural organizations in the State, Dr. Symons points to the fact that, despite the success of numerous membership campaigns throughout the State this year, hundreds of farmers remain outside of organizations that primarily are intended for their benefit.

"Too many farmers remain indifferent to the call of organization while aware of the fact that agriculture is confronted with all manner of difficulties," says Dr. Symons. "The result is that an unequal burden of responsibility is being placed on farm organizations that are handicapped in their work by only partial farmer membership and lack of necessary funds.

"The Maryland Agricultural Society-The Maryland Farm Bureau Federation has recently reported a total membership of 7,000 farmers in thirteen counties of the State. Included in the organization's membership are Washington, Frederick, Montgomery, Anne Arundel, Carroll, Howard, Harford, Baltimore, Queen Annes, Kent, Caroline, Talbot and Worcester counties. These are among the best counties in the State, and while the total membership from all these counties represents the largest unit of farmers that have ever worked together in Maryland, there are many farmers within range of Farm Bureau locals who have not answered the call in support of the industry from which they gain a livelihood.

"The University of Maryland Extension Service, through its specialists and county agents, has done everything in its powe to aid and promote organization among farmers," says Dr. Sy mons, "because of the conviction that only through organizatio can many of the problems of agriculture be solved. Now tha the farmer's busy season is drawing to a close, the men an women who are engaged in agriculture and who are intereste in its welfare should begin to make preparation for another yea The best preparation that can be made is to strengthen existin farm organizations by increasing memberships in counties wher they exist and by etxending the Farm Bureau and Grange t other counties. It is only in such a manner that farmers will b able to take part in other important activities designed to ai the farming industry."

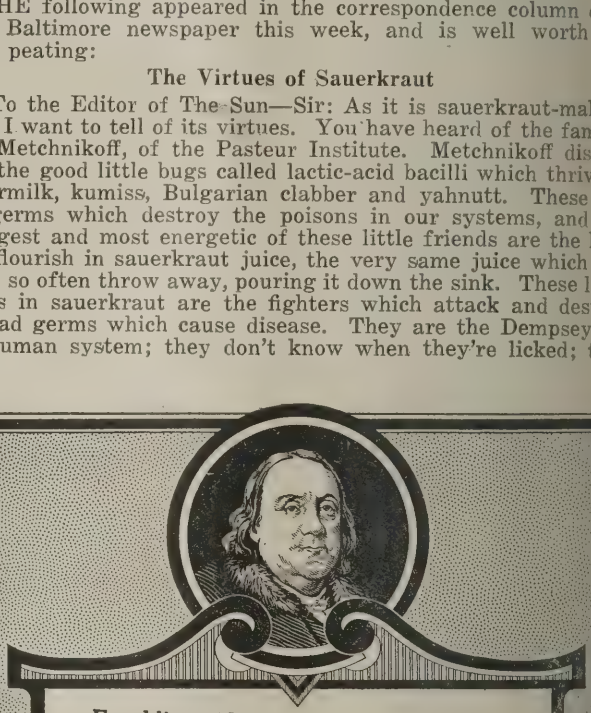
Dr. Symons points out that as a result of membership drive by the State Farm Bureau, the Maryland Tobacco Growers' As sociation, the Maryland and Virginia Milk Producers' Associatio and increased activity on the part of the Inter-State Milk Pro ducers' Association, the Maryland State Dairymen's Associatio and the Grange, Maryland farmers are more strongly organize than ever before. It is his belief that Maryland farmers are o the threshold of realizing their wonderful opportunities in com petition with farmers of other sections provided they accept th opportunities of organization and realize that by working to gether in a spirit of co-operation they are strong.

A DOCTOR SINGS THE PRAISES OF SAUERKRAUT

THE following appeared in the correspondence column of a Baltimore newspaper this week, and is well worth re peating:

The Virtues of Sauerkraut

To the Editor of The Sun—Sir: As it is sauerkraut-making time, I want to tell of its virtues. You have heard of the famous Elie Metchnikoff, of the Pasteur Institute. Metchnikoff discov ered the good little bugs called lactic-acid bacilli which thrive i buttermilk, kumiss, Bulgarian clabber and yahnutt. These are the germs which destroy the poisons in our systems, and the strongest and most energetic of these little friends are the kind that flourish in sauerkraut juice, the very same juice which our wives so often throw away, pouring it down the sink. These little germs in sauerkraut are the fighters which attack and destroy the bad germs which cause disease. They are the Dempseys of the human system; they don't know when they're licked; they



IMPROVED STEEL PROCESS KETTLE

Manufactured to hold 800, 1,000 and 1,200 2-lb. cans. Conceded to be the best; hundreds in use. Double thermometer pocket riveted to each kettle. Constructed so as to use either water, dry steam, or open bath process.

keep on fighting till they win. They're the best friends we've got today in the arena of life. And I ask you to remember that these germs of health literally teem in sauerkraut and sauerkraut juice.

With all the scientific evidence in its favor, we can well understand that the time has passed when sauerkraut needs any apology from anybody. It is high in vitamine contents, rich in mineral salts, and altogether merits what I have said.

DR. G. M. FISHER.

Amarauth, Pa., Sept. 17.

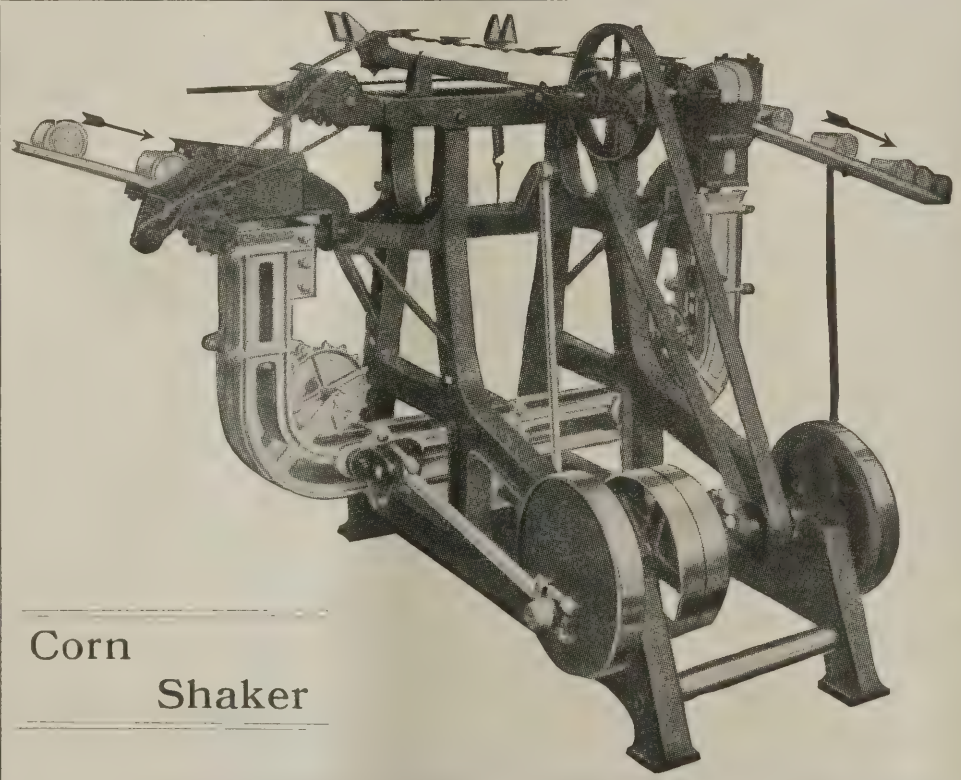
THE ARABOL MANUFACTURING COMPANY HOLDS ITS ANNUAL OUTING

THE Arabol Manufacturing Company "closed shop" all day Friday, August 24, but opened again bright and early the next day. The occasion was the annual picnic and outing for all Arabol employees in New York and Brooklyn, and both the executive offices in New York, at 110 East 42nd Street, and the big Brooklyn factory were closed all day.

Some idea of the size of the Arabol organization may be had when it is said that five big sight-seeing auto buses were required to take the Arabol family to the picnic grounds, and some idea of the enthusiasm of Arabol employees may be indicated by the fact that practically every employee of the Brooklyn factory and the executive offices, including salesmen in nearby territories, joined in the celebration.

The big buses which were furnished for the occasion by the company assembled both at the New York offices and the Brooklyn factory. The buses containing the office forces drove straight to the Brooklyn factory, where they joined the factory buses, and the entire "fleet" made the trip together to the picnic grounds at Seaside Park, Rockaway, where provision had been made in advance to receive the big crowd. All the buses were decorated with flags and bunting, and on the sides of each bus were huge streamers bearing the legend of the occasion:

"Annual Picnic of the Arabol Manufacturing Co., Largest Manufacturers in the World of Adhesives for All Purposes."



It was a happy, informal get-together, and the spirit of th celebration indicated the fine unity and loyalty that has alway existed among the big Arabol family. There were basket partie and games and songs and bathing and dancing. Most of th officers of the company were there, and they apepared to enjo the celebration fully as much as any of the hundreds of em ployees. About 8 o'clock in the evening, just as it was growin dark, the big buses filled up again, and it was a tired, but sati fied, crowd that started homeward again.

The Arabol Company has been established for thirty-si years, and has grown from a small business to the largest organ ization in the world specializing in the manufacture of adhesive for all purposes. Their three large factories in Brooklyn, Chi cago and Brampton, Ont., with their hundreds of employees, ar an indication of the successful growth of this organization.

It has been customary for a number of years for the com pany to hold an annual picnic and outing, and, judging from th success of this year's celebration, the custom will no doubt b continued through the years of Arabol success to come.

GOVERNMENT IN MARKET FOR CORN

CORN—Marine Corps, Quartermaster's Department, Wash ington, D. C., September 20, 1923. SEALED PROPOSAL duplicate, will be received in this office until 11 A. M., Octo ber 10, 1923, and then be publicly opened for furnishing 1,75 cases CORN, for delivery to Depot Quartermaster, U. S. M. C foot of Snyder Avenue, Philadelphia, Pa.; 750 cases CORN, fo delivery to Post Quartermaster, Marine Barracks, Parris Islan S. THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, OCTOBER 1, 1923

WEEKLY REVIEW

Market Has Taken on Unusual Activity—Buyers From All Sections Seeking Tomatoes—The New Pea Statistics—Fall Packs Coming on the Tables.

THE TOMATO MARKET BUBBLING—This has been a hectic week in the canned foods market. Jimmie Colbert's letter, published in our Editorial, was the cause of as much discussion and comment as the market has seen since this time last year. The canners, naturally, have been "roasting" it, to use the slang, and wanting to know why or by what right a brokerage firm should issue a bearish circular letter of this kind, and, of course, condemning as absolutely untruthful the insinuation that the tomato pack of this section will be large enough to make up for all shortage elsewhere. This circular contains a strange paradox. Here is one paragraph:

> "Practically every canner we know will have tomatoes to sell and will want to sell them just as soon as they can get their present sales shipped out. At the present time there are very few canners interested in taking any orders for prompt shipment."

If the first sentence in that paragraph is true, then the second sentence is untrue; and if the second sentence is true, then the first cannot possibly be true, because at no time in the history of canned tomatoes in the Tri-States regions has anyone ever known them to hold a certain surplus for a higher market. Unless the leopard has changed his spots, they would now be throwing them onto the market—forcing sales at any price to get their money out, until the entire market had become demoralized. Then, unable to find buyers, they would look up their surplus and wait. But to turn a deaf ear to offers to buy! And at market prices! If the canners have any surplus, they ought to refuse to consider offers for it now, because tomatoes will be good property long before another season comes around; but we are not so foolish as to flatter ourselves that any urging on our part would make them hold them when a buyer offered to buy them. And everybody knows this. This has been one of the greatest causes of the boiling market in canned tomatoes this week.

Another and more direct cause has been the rush of buyers from all over the country to buy up every case of tomatoes in sight. The market stiffened and began to advance last week, and, seemingly, every buyer everywhere awoke at the same time to the fact that he had waited too long and must hurry to cover his wants—and he has been hurrying, you may believe us. These buyers know the tomato situation in every section of the country; they have seen the Western tomato canners coming into the market to cover future orders; they know there are no tomatoes to be had west of the Tri-States, neither in Utah nor California, and that is what has caused, as one prominent canner termed it, a perfect deluge of orders this week. Of course, the market has advanced, and 60c is about as well as can be done today for No. 1s, 90c for No. 2s, $1.30 for No. 3s, and $4.25 to $4.50 for No. 10s. And to quote the Colbert Brokerage Co., no canner is interested in taking orders for prompt shipment.

The Tri-States have gotten up a good pack of tomatoes, there is no question about that, but how large it is no one can say, for no one knows now. Last year the pack in this section was very light, equalling but 4,132,000 cases for the three States of Delaware, Maryland and New Jersey, whereas in 1918 these same States packed 8,195,608 cases. This section should, normally, pack about 7,000,000 cases. It was the Tri-States which fell down in the tomato pack last season, the rest of the country contributing about its normal quota of the eleven and a half million cases packed. Now the rest of the country has fallen down, and the Tri-States has the task of furnishing the tomatoes, for even Virginia cannot help, as it will not have its usual million and a half cases to help out. Has the Tri-States done it? We don't know. It may have equalled its normal amount, but that would constitute a record in time of production.

PEAS—The third item of of excitement in the market this week was the issuance of the annual pea statistics, or, we might more properly say, the extent of the pack as shown by these statistics. Here the story switches to the other side of the road—for the pack proves to be very much larger than we were all lead to believe. Recently rumors and hints have been creeping out that the pack would foot up quite large, but no one ever expected it to equal, much less surpass, the record pack of 1922. The 1923 pack exceeds the 1922 by 906,000 cases. Here are the figures, and for the three years previous:

	1920	1921	1922	1923
Wisconsin	5,804,000	4,063,000	7,042,000	6,966,000
New York	2,381,000	1,382,000	2,137,000	2,541,000
Indiana	271,000	182,000	268,000	367,000
Michigan	549,000	317,000	455,000	392,000
Maryland	696,000	533,000	489,000	591,000
Ohio	282,000	241,000	225,000	384,000
Illinois	460,000	331,000	516,000	586,000
N. J. & Del.	549,000	345,000	153,000	199,000
California	.....	84,000	496,000	239,000
Utah	595,000	376,000	751,000	918,000
Minnesota	(included in all others to)			254,000
All others	402,000	353,000	510,000	516,000
Totals	12,317,000	8,207,000	13,042,000	13,948,000

In the 1920 figures there will be found a discrepancy of 328,000 cases, which was given as in some few States not included in "All others" but which we did not give a separate line in the above.

The big surprise in these figures is furnished by Wisconsin. The Alaska pack, there, was supposed to be only from 50 to 60 per cent of normal, but it was said they expected better of the sweets. They certainly got it. New York State said it would have a good pack and delivered the goods. Cali-

ia reported short, and packed short. One of the surprises, nly because it is given a special entry this time, is Min- ota, which is stepping forward as a very considerable pea- king State. The figures will furnish you some interesting lies for a while.

The gratifying thing about the pea situation is that the s have gone into consumption. There is no doubt about . and it puts the pea-consuming ability of the country at ery high mark. Permit us the bromide: pack quality and will always find a ready market for it. The pea prices ld without change this week, and while we may expect a e flurry later on, it is not likely anyone will see lower es.

RUITS—California promised the buyers that it would pack only the orders on hand, and very little if any over. The buyers put finger to nose and slowly closed the other eye, did not order. Now they are scurrying for fruits and the ners have been forced to withdraw from the market and nark their lists higher, this early in the season. California ally means what it says, and says what is the truth about conditions, a fact the market has well learned. And it s best to do this. New York State has only a light setting fruit, and this section has paid but little attention to them. its will steadily become better property. One large apple- wing region, in the western mountains of this State, was ted this week by a severe hail storm, ruining one-third of crop, which they were just beginning to harvest. The p would have gone out largely as fancy stock, in boxes, but s will have an indirect effect upon the canned apple market.

YSTERS—The weather has continued too warm for the best interests of the fresh oyster shippers, and, of course, the canners are not yet thinking of cove stock. Prices ruling so high that there would seem to be slim chance the canners getting any in this great oyster canning and owing center. The raw stock is sellig at higher prices now, der these unfavorable conditions, than it did during the lidays last year, when the market is always at its top.

The canners are considering fall spinach, which is packed ite extensively in this city, fall string beans and some fruits. ey are following right in behind the tomatoes, as many uses have been unable to keep going on tomatoes, the prices ving reached $1.00 per bushel and over. Sauerkraut has mmenced its rise, as the cabbage crop and the probable pack sauerkraut are not promising. Prices have advanced to .05 for No. 2½; $1.15 for No. 3, and to $4.00 for No 10's. xed vegetables are quoted higher this week, and one item corn—standard Evergreen—has advanced to $1.10. Pretty uch the whole line of canned foods has felt the effect of in- easing interest and better demand.

NEW YORK MARKET

arket Showing Steady and Strong—Buyers Showing More Confidence — Tomatoes on a Rampage and Buyers Trying to Cover — The Facts of the Tomato Situation As Given by a Previous Tomato "Bear"— Corn Also Advancing—Pineapple Profiteering—Chain Store Election—Notes.

New York, September 27, 1923.

USINESS Continues Steady—Buying of canned foods has continued at a satisfactory rate during the past week, and the market is showing a steady to strong tone all along e line. Both the wholesale grocers and the chain store op- ators are in the market for canned foods in fairly large quan- ies, and the brokers with the larger canned foods accounts are ing a substantial volume of business. Buyers are showing uch more confidence in the situation, and they are less disposed buy only for immediate requirements, anticipating their needs w to some extent.

Salmon Prices Differ—Some of the Northwestern salmon nners are still holding red salmon at $2.35 per dozen, the price tablished by the Alaska Packers' Association, but others con- nue to book business at their original opening prices, $2.25, f. o. b. The new pack is coming down rapidly, several heavy shipments having been recently received at San Francisco and Seattle from the Alaska canneries. Pinks continue quoted at $1.25, f. o. b. and chums are rather strong at $1.20. The local trade is buying salmon in a fair way, new pack pinks being available here at $1.35. Southern distributors are reported to have purchased large quantities of pinks and chums out of the new pack. L. H. Kassel & Co., prominent canned foods brokers of Fort Worth, Texas, specializing in salmon, say: "Our total sales for Deming & Gould Company for first eight months of 1923 far in excess of total sales for entire twelve months of either 1922, 1921, 1920 or even the 'boom' year of 1919."

Tomatoes on a Rampage—The canned tomato market during the past week has been on a stampede towards higher ground, and buyers who had been short are now rushing to cover. The situation is best summed up by a well-known broker in the canning district, who advises the trade. Fix these facts in your mind before you or your men start to see your trade. Here they are: We have not been boosters of canned tomatoes; bullish facts from us are therefore entitled to attention. Ever since planting time we have written about the favorable progress of the crop; when extensive packing began we promptly notified you of declining prices. It is true we expect a settling period when the market could become established and we could safely recomend buying. But it began to appear that the packing period would be of short duration, and that it might be well to cover at the decline that was due to the great rush of packing. You had notice of this and many buyers heeded it, to their profit. But we could not know the following facts all of which you should take to your buyers for their inportant information and guidance as early as possible. Indiana, Missouri, and Arkanas have not packed what they expected to pack, and during last week canners from these States, as well as buyers from cities which they usually supply on account of their advantageous freight rate, rushed to this market to buy at advanced prices. Eastern merchants saw these prices and frequently went them a little better. From Tuesday until Saturday we had to send over 300 telegrams declining orders for at least carloads, some of them for good size blocks. Each of these buyers has been told that we could buy for them at $1.25 for 3s, 85 cents for 2s, and $4.00 for 10s. If they should all come back we could not fill half of them. The market has not settled; it is advancing. "The prices quoted in the above letter are now below those at which many canners are willing to sell, particularly on 10s.

Cor Higher—Southern standard corn, which has been selling well at 85 cents per dozen, f. o. b. cannery, is now being quoted at 90 cents per dozen by most canners, the same price at which mid-western canners are booking business. There is a good active demand for corn and reports received from principal canning sections indicate that the pack will fall considerably below early-season estimates.

Pineapple Profiteering—The American Wholesale Grocers' Association, in a recent bulletin, quoted a member of the Association as follows: "It has come to our notice that the packers of pineapple are permitting large brokerage concerns in large cities to book a large amount of pineapple. "Joseph Durney, speaking for the Griffith-Durney Co. of San Francisco and the Haiku Fruit and Packing Co. of Haiku, Maui, T. H., writes the American; "We have done everything we could to eliminate the speculative side of the pineapple business and have even gone so far as to reduce jobbers' orders where we had an impression that they were buying more than their legitimate requirements. "Harry E. MacConaughey, vice-president of the Hawaiian Pineapple Co., Ltd., in a letter to the American Wholesale Grocers' Association placed his company on record as having taken substantially the same position as the Haiku and Griffith-Durney orgainzations.

Lee Invites Trade to Convention—Secretary John A. Lee of the Western Canners' Association has issued an invitation to the trade here to attend the fall meeting of the Western, which will be held at the Sherman, Chicago, Nov. 6, 7, and 8. It is probable that quite a number of New York brokers will take in the meeting.

Tuna Quite Strong—All reports on the tuna situation are bullish, and the market for white meat is stronger both here and on the Coast. The extremely high prices on white meat this year have brought out an improved demand for the lower grades.

Pea Demand Continues—Buyers are still in the market for Wisconsin peas, and a heavy inquiry is reported. The lower priced grades are in limited supply, and many canners are now refusing to book business below $1.30 per dozen, although it is reported that a few parcels can still be had here and there at 5 cents under this price.

Shrimp Is Steady—The market for shrimp is strong, with many of the Gulf canners now withdrawn from the market, which is quoted at $1.50 to $1.60 for 1s and $3.00 for 3s, f. o. b. Biloxi or Gulf points carrying the Biloxi freight rate.

Sardines Hold Firm—Maine canners, while getting more fish, are still having a hard time to take care of the good business which is reaching them. The market is nominally held at $4.00 per case for quarter keyless standards, with other grades in proportion. Packers thus far have been unable to lay aside surplus stocks to be carried over for the winter trade. The season does not legally end until November, and packers are hoping for improved conditions during the next month.

Chain Turnover—The "secret of success" of the chain stores, Grocery Co., of Washington, D. C., was elected president of the National Chain Store Grocers' Asociation at this convention at the Waldorf here late last week. Other officers for 1923-24 are as follows; first vice-president, James Reeves of Daniel Reeves', Inc., New York City; second vice-president J. M. Fly, Bowers' Stores, Inc., Memphis; third vice-president J. W. Albrecht, T. W. Albrecht Grocery Co., Akron, Ohio; secretary and treasurer (re-elected Alfred H. Beckman, New York City; executive committeemen, W. G. Wrightson, Great Atlantic & Pacific Tea Co., Jersey City; Henry C. Bohack, H. C. Bohack & Co., Brooklyn; D. Pender, D. Pender Grocery Co., Norfolk, Va., S. B. Charters, S. B. Charters Co., Portland, Oregan; C. B. Cox, Cox Cash Stores Co., Little Rock, Ark.; W. B. Skagg, Skaggs Cash Stores, San Francisco; Sam Seeleg, Sam Seeleg Co., Los Angeles; E. E. Gray, E. E. Gray Co., Boston; C. E. Marr, The Marr Stores, Spokane, Wash; and J. W. Crook, J. W. Crook Stores Co., Baltimore. The 1924 convention will be held at Altantic City, during October.

Chain Turnover—The "secret of success" of the chain stores if secret it be, seems disclosed by the delegates' discussion, which showed that turnover per unit store averages about 25 times per year, with two exceptions, where the record show 30 turnovers, and the warehouses have a record turnover of about 15 times the capitalization. Average sales in the Pacific Coast stores run about $60,000, while the Middle West average is $50,000.

"NEW YORK STATER."

CHICAGO MARKET

Canned Tomatoes Attracting Attention of Buyers—Some Interest in Canned Salmon—Canned Peas Withdrawn From Public Attention—Plan to Establish Zone Repositories for Swells—Other Notes of the Trade.

Chicago, September 28, 1923.

THE market for canned tomatoes is attracting the attention of buyers in Chicago and the Central West. The weather here has been warm for a week, and it may be that Indiana and Ohio are packing some tomatoes, but if they are, they are not offering them, and that is an indication that they will have no more than will be required to fill the orders they now have.

Our buyers are evincing some interest in Maryland and Virginia tomatoes, and are asking for samples and prices, so the brokers report.

There is some interest in canned salmon, as it is reported that the output of standard red Alaska is a half million cases less than last season, and there is some inquiry for pink salmon, which seems to have superseded the red Alaska as a popular price seller to a great extent.

It is reported that the surplus of medium red Alaska, pinks and chums, which have been an annual holdover asset to the salmon canners for about five years, are all sold out clean, and that the new pack of all grades will come in on a bare market.

The buyers of the East (some canners) are placing orders in the Central West for fancy canned corn. This is prompted, I suppose by the prospect that the pack of corn in Maine has been severely diminished by early frosts.

The buying is said to be in fancy Country Gentlemen, fancy Crosby and fancy Evergreen, and at the fall opening prices, and occasionally a little more.

Canned peas are rather interesting because they seem to have withdrawn from public attention and gaze, and as to some grades to have entirely disapeared. There are no cheap standard peas to be had, and buyers are now beginning to look for extra standard and to pay the asking prices.

The latest prices direct from Maryland Peninsula canner on canned tomatoes by wire are: For 2s standards, 90c, and fo 3s standard, $1.30, f. o. b. Maryland canneries. Some Virginia packed 2s are being offered, so I am told, through Virginia brok ers at 85c, f. o. b. canneries, but when orders are sent to them they wait a few days while trying to find them, and then writ that they are all sold or to be had only at a higher price.

American sardines are selling in a very small way, as th price of $4.00 to $4.50 a case puts them in the 10-cent-at-retai class, and repels the interest of retailers who have been in th habit of selling them at 5 cents the can.

There is much merit in the plan proposed by the Nationa Canners' Association of establishing zone repositories to whic swells and spoiled can foods may be shipped, classified, inspecte identified, allowed for and paid for by the packers of them.

The handling of such goods has in the past been an accurse nuisance to the wholesale grocers, and I should think that the would be delighted to be relieved of the job. Nearly every whole sale grocery house has for years been compelled to conduct wha was generally called the Morgue as a depository of swelled an spoiled canned foods, and to hold the swells for months unti they could be viewed by the representative of the canners an claims allowed and orders for the disposition of the goods giver The handling of the swells has been one of the most disagreeabl features of a wholesale grocer's business.

I do not agree with those who claim that the wholesal grocers are trying to get a flat percentage or discount becaus they expect to make an added profit out of the canned food business through the discount, but I believe that their desir has been to get a quick way of disposing of the spoiled good and to abolish their Morgues.

Under the plan proposed by the canners, I think that th canning industry will establish absolute protection against th possibility of the spoiled goods getting into the hands of con sumers and the evil arising therefrom to the industry.

I also believe that whatever expense the canners are put t in conducting the repositories will be more than amply repai by the security the canning industry gets from the goods fallin into the hands of ignorant consumers, and any discreditable pub licity arising therefrom.

I think the wholesale grocers will obtain better service i the redemption of spoiled goods by the zone repository plan tha in any other way that has been suggested, as they have allowe claims to retailers in the past for millions of cans in small quan tities for which they asked no remuneration from canners, merel because of the trouble and bother of presenting the claims.

"WRANGLER."

ST. LOUIS MARKET

Jobbers Taking More Interest—Stocks Will Not Be Sufficient—Warehouses Empty—Tomatoes Show Increasing Firmness—Buyers Forced to Go East—Chain Stores Featuring Standard Corn—Peas Cleaning Up Rapidly.

September 28, 1923.

JOBBERS Taking Interest—The canned foods business is muc more satisfactory than it has been and the jobbers are begi ning to take some interest although not as much as the might. Brokers as well as canners are of the opinion that th distributing trade has not been wise in not replenishing the stocks. It is their opinion that before long they will not be ab to get what they want. The liquidation of canned foods, not ver far off, has been going on during the past twelve months an there has not been the addition to stocks they usually mak either by buying for later delivery or for immediate require ments, for their storehouse. While there has been slightly mor activity in trading since the first of September, it has not bee as large as expected to make up for the neglect of the mark during the summer. Considerable impatience is being shown b some brokers, and jobbers are being informed that if they co tinue to neglect their wants they will have to pay more mone when the pack is over. The buyers, however, do not seem to b a bit worried by this threat. The firmness and lack of chang in prices now prevailing is owing principally to the supplies no in sight, the support given the situation by the canners by n selling freely at discounts and by the high cost of productio as well as by the limitation placed on the output by inadequat help on the farm and in the canneries.

VEGETABLES—Tomatoes—According to advices received e, the end of the tomato glut has been reached. The canners e been packing large quantities, but on account of the labor rtage they have not been able to take full advantage of the ge offerings of raw tomatoes. Canners are very firm in their ws on the market and an advancing tendency is noticeable. s is particularly true as regards the Southern canners, and n low bids placed with the smaller factories are turned down. e Southern market is influenced, to a certain extent by the ness prevailing in the Middle West and in California. It is orted here that the flush is over in the South and that from v on, there will be a falling off in production, depending great- upon the weather during the next few days. If the fall is e and there are no frosts, the late start and scarcity of help uld be overbalanced. According to advices, the pack in In- na has been less than early estimates, and with most of the kers from that State withdrawn and with available prices anced, buyers from the central markets have found it to ir advantage to send their business East.

Corn—There is an increasing demand for standard corn. The in stores are said to have been heavy buyers of new standard n and they are featuring the sale at retail. Offerings are very heavy from the Middle West, as most of the canners e sold up their fancy grades.

Peas—Strength is being shown for Wisconsin peas. There no doubt but that spot Wisconsin peas, particularly in the aper grades, are cleaning up very rapidly. Buyers are ad- ed to look ahead further than ever and buy their spring peas v. There will be nothing available in a few weeks, except the h priced ones.

Asparagus—New pack asparagus is being called for quite ely.

Fruits—Following the action of the California Packing Cor- ation recently in issuing a revised price list, setting further merous withdrawals and several price advances, a stronger e on all grades of California canned fruits is being shown. has been a well known fact that the leading independents in lifornia, are not carrying a very heavy overpack stock of 1923 ck. In fact, it is very limited. The result has been that a eat many of them have been compelled to withdraw many ms from the recent price list. It is said interior and Southern rkets are buying heavily on California fruits.

Pineapple—A fair inquiry for pineapple pervails, and the rket is firm.

Milk—Canned milk is reported in fair demand and prices are ding firm. Distributors continue to limit their purchase to all quantities for their immediate requirements.

The Missouri apple crop from September indications should ld 614,000 barrels, against 1,250,000 last year, according to joint report of the United States Department of Agriculture d the Missouri State Board of Agriculture. The season has en favorable to apples, except in the southwest counties, where ught caused much fruit to be small and to drop heavily. cent weather conditions have been favorable to coloring out, d in most localities size is good.

"MISSOURI."

CALIFORNIA MARKET

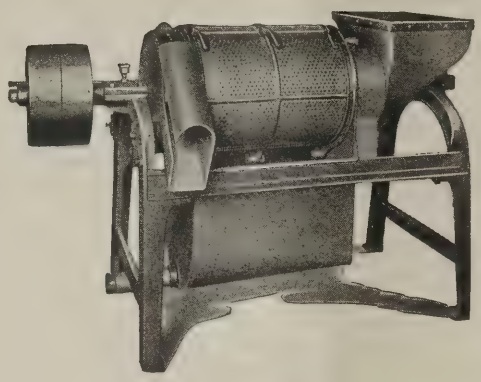
siness Fairly Active—Big Berkeley Fire Upset Business—Members of the Industry Affected—Fruit Canners Withdrawing and Advancing Prices—The Output Even Lighter Than Expected—Pineapples Are Being Delivered—Short Deliveries on Tuna—Tomato Yield Is Light—Notes.

San Francisco, September 28, 1923.

HE Market—While business in canned food lines has been fairly active during the week, the booking of orders has been subordinated to work of a humanitarian nature. arcely had the fund of $500,000 for Japanese relief been gath- ed in this city than the suburban city of Berkeley was visited a $10,000,000 fire, entailing many hardships and much con- sion. About six hundred and fifty buildings, including many the finest homes in the College City, were swept away, and ore than three thousand people rendered homeless. The sec- tion visited by the holocaust was that in which many college professors, students and San Francisco business men had their homes, and was one of the show spots of the East Bay district. Among those who lost their homes was W. V. Cruess, of the Fruit Products Laboratory of the University of California, whose work on California fruits, and especially on by-products, is so favorably known. Professor Cruess was instrumental in arranging a short course for canners at the University two years ago, and at the time of the fire was making preparations to visit Europe and make a study of the olive industry and of developments in the utilization of fruit juices. Several members of the brokerage trade in San Francisco were burned out, and others had narrow escapes from loss. The homeless ones were cared for in Berkeley and San Francisco, and all funds for relief are being collected locally.

Fruit—The conditions of the California canned fruit market may best be judged by the number of advances and withdrawals that have been made of late. The packing season is virtually at an end, and the output has proved even lighter than was anticipated a few weeks ago, when it was seen that last year's pack would not be approached. From present indications the pack this year will be about one-third less than that of 1922. The California Packing Corporation has put out a new list which shows withdrawals of No. 10 choice and water apricots, No. 2½ peeled apricots, No. 10 choice and No. 10 standard Royal Anne and black cherries, and No. 1 and No. 2 Del Monte Bartlett pears. Some lower grade peaches are also off the list. The advances are on apricots, peaches, cherries and pears, and range from five to ten cents a dozen. These advances are guaranteed against decline until January 1, 1924, as were general opening prices. Business is steady, without any really large orders, and is well distributed through the list. Cling peaches are commanding a little more attention, now that it is definitely known that the pack is less than that of last year.

Pineapples—Some pineapple packers are prorating deliveries, but in general the trade will get the goods it has placed orders for, and which have been accepted. A few will pack even less than last year, but more will show a gain, and the output will pass the estimates made at the opening of the season. The most marked shortage is on No. 2½ extra sliced, but this is more than made up by an increased pack of No. 2½ extras. Nothing in the pineapple line is really dragging, but No. 1 and No. 2 standards are selling less freely than most other grades.



The Hawaiian Pineapple Co., Ltd., of Honolulu, T. H., alone shipped more than a half million cases of canned pineapple from the Islands during August, breaking all former records and illustrating the manner in which the pack is being placed in the hands of the trade. This concern is preparing to increase its output during the next few years, and has already commenced to lay a foundation for a greater demand. James D. Dole, president of the company, and H. E. MacConaughey, vice-president and manager of the San Francisco office, have left on a trip to Europe to make a study of business conditions and to learn at first hand of the requirements of the trade there. In addition to increasing its acreage on the Island of Oahu, this firm plans extensive plantings on the Island of Lanai, and upon being granted authority by the Government will build a small harbor at Kamalapau, with a wharf and breakwater. The fruit grown there will be handled at the cannery at Honolulu.

Tuna—The packing of tuna fish is at an end in the southern part of the State, and short deliveries of white meat are being made, many packers delivering less than 50 per cent of the orders they had accepted. Owing to the scarcity of this grade, there has been an increase noted in the demand for blue fin, striped and yellow fin fish, and slight advances are being made by some interests on these grades.

Tomatoes — Many canners have wound up the season on peaches, and are now devoting their entire attention to tomatoes. The yield of the latter is not proving as heavy as was expected, but the quality seems excellent. The size of the pack will depend upon the length of the season, which sometimes extends until after Thanksgiving. So far there have been no losses from rain, but a storm is declared to be on the way, there having been showers in various other points on the Pacific Coast.

Coast Notes — San Francisco's own relief ship, the U. S. transport Vega, sailed from this port recently with a full cargo of supplies for stricken Japan, making the fifth vessel to leave port on a similar mission. This cargo of 5,604 tons consisted almost exclusively of California products, including 4,382 tons of rice, 125 tons of evaporated milk and 20 tons of baked beans.

SMILE AWHILE

Following Teacher's Advice.

"Children," said the teacher instructing the class in composition, "you should not attempt any flights of fancy; simply be yourselves and write what is in you. Do not imitate any other person's writings nor draw inspiration from outside sources."

As a result of this advice one bright lad turned in the following: "We should not attempt any flights of fancy, but write what is in us. In me there is my stummick, lungs, heart, liver, two apples, one piece of pie, one stick of candy and my dinner."

Extraordinary.

"Rastus, are you a married man?"

"Nossah, boss, ah earns mah own living."—London Answers.

Not Overcrowded.

It seemed that when Rastus and Sam died they took different routes, so when the latter got to heaven he called Rastus on the phone.

"Rastus," he said, "how yo' like it down thar?"

"Oh, boy! Dis here is some place," replied Rastus. ('All we have to do is to wear a red suit wid horns, an' ebery now an' den shovel some coal on de fire. We don't work no more dan two hours out of de twenty-four down here. But, tell me, Sam, how is it with you up yonder?"

"Mah goodness! We has to git up at fo o'clock in de mawnin' and gathah in de stahs; den we has to haul in de moon and hang out de sun. Den we has ter roll de clouds aroun' all day along."

"But, Sam, how comes it yo' has ter work so hard?"

"Well, to tell de truf, Rastus, we's kin' o' short of help up here."—Philadelphia Public Ledger.

He Should Be a Diplomat.

Tenderfoot Harris was entertained at the scoutmaster's. His meat slipped from his plate and he felt he ought to say something which would not embarrass his hostess.

"Tough meat often does that" was his explanation.

An Interested Spectator.

During the Civil War an old negro was deeply interested in the conflict, but showed no sign of wishing to take part in it. A white man questioned him one day:

"The men of the North and South are killing one another on your account. Why don't you pitch in and fight yourself?"

"Has you ever seen two dogs fighting over a bone?" the negro asked.

"Many times, of course," was the answer.

The negro chuckled as he said: "Did you ever see de bone fight?"

"Well, no!"

"Dat's so. I'se de bone."

Accurate Diagnosis.

Stockbroker—Yes, I'm feeling a bit below par.

Doctor—Say, 99.

Stockbroker—Worse than that—98 15-16.—London Opinion.

Unconvinced.

Owner of Property (sternly)—Don't you see that notice, "Trespassers will be prosecuted?"

Tramp (calmly)—No, I don't see it, for I can't read.

Owner of Property—Well, you know what it is now, so go.

Tramp—Hexcuse me, mister, but I don't know what it is. I've only got yer bare word for it, and you're a puffet stranger to me. For what I know to the contrary, the notice may be "New milk sold 'ere," or "Apples tuppence a pound," or "Welkim, weary wanderer."—Pearson's Weekly.

Experience.

Flapper (after the accident)—It was all your fault. I've been driving carefully. I've had two years' experience.

Old Boy (picking himself up)—But I've always walked carefully. I've had 68 years' experience.—New York Sun and Globe.

EDITORIAL

WESTERN CONVENTION DATES CHANGED—The Fall Convention of the Western Canners' Association has been slightly changed to what might seem to be a four-day meeting, but which in reality is but a two-day session, the first two days being given over to the meetings of the National Canners' Association's special sessions of its Executive Committee and considerations with the Wholesale Grocers' Associations and others, and the latter two days to the meeting of the Western. The dates are November 5, 6, 7 and 8, and the place the Hotel Sherman, as before.

WORTH CONSIDERING—The conventions of the canners during the past year or so have shown a great improvement over previous ones, in that they very largely eliminated a great mass of useless chatter and ineffectual talk. The conventions had become overburdened with "Inspirational Talks," "Welcomes by City or State Officials," "Talks by Noted Dominies" after giving the invocations, etc., and a whole lot of time and energy were wasted, to no purpose. The four-day session outlined above holds possibilities of more of this same "talk, talk, talk," but as programmed, we do not expect to see this end of an outcome. A few days after this meeting will come three or four more days at Milwaukee, and as both conventions will be largely attended by the same canners, brokers and supplymen, the men will be frayed out by the end of the meetings, and the net result will be a harmful, rather than helpful, if there is too much talk.

These are business sessions, and business should be short and snappy and to the point—and not talked to death. Meetings of this kind should be called for specific purposes, and not too many of them; and these purposes should be worked to at all times and along the shortest possible route. Recently we were much impressed by the program set out by the Chain Store Association for its Convention in New York City. A few of the salient features of their business were proposed and considered—in a strict businesslike way—and the delegates left their sessions pleased with the considerations and because they were not unnecessarily delayed from their business at home. Let us have businesslike sessions of these business men, and let the presiding officers carefully eliminate the trivial and unimportant, and we are sure that the meetings will be better thought of, better attended, especially by the big, brainy men who count and who now regard all such conventions very lightly and usually fail to lend their help and experience.

IS THERE ANY CONNECTION?—President McLaurin, of the American Wholesale Grocers' Association, has recently been taking the members of his Association to task for their cut-throat methods in trying to effect business, saying that the wholesale grocer is becoming more of an auctioneer than a merchant. Probably the same condition exists in the National Wholesale Grocers' Association, for in their new policy of trying to buy on a retail basis and make more frequent turnovers, the natural result must be a scramble for business and a cutting of prices to get it. They no doubt have had a large injection of "efficiency," and they are overworking it badly, as is generally the case. This in itself is out of our jurisdiction, but when one of their leaders comes forward with a proposition to the canners that they, the wholesale grocers, must have a larger margin of profit on canned foods, then it becomes most interesting to us. Taking the two things together, it looks as if they were asking the canners to make up for their own follies. Even if the canners were willing, just how they could do this is a little hard to see; for if the canner cuts down his share of profit by making the prices lower, the jobber would immediately hand that saving over to the retailer—under the present cut-rate war complained of—and another start would have to be made, always to the loss of the canners. We can't sanction this idea for a moment, for the profits which the canners make on their goods are not such, on the average, as to permit further reductions. Remember that the bulk of this year's packs was sold by the canners as futures at low prices, and that the good prices now prevailing pertain only to the small amount of surplus, and this is small. If the wholesale grocers have not been able to turn a handsome profit on these future canned foods, it will be the first time in history and absolutely contrary to the "nature of the beast." Of course, many wholesalers sold their futures and will have to deliver at the old prices, but that practice is not very general, and the probabilities are that the wholesalers have followed the market up, and are requiring the retailers to pay on today's prices for the goods which were bought as futures at very much lower prices. But in any event the task is wholly and entirely a wholesaler's one. Let them advance the prices so that they will show the needed percentage of profit. The retailers are not bashful about putting the right price or profit on canned foods, judging by a visit to the average retail store.

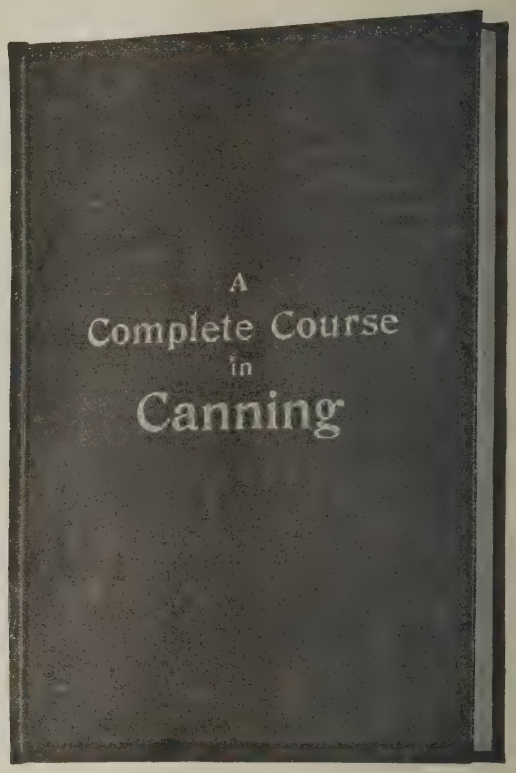
THE INDUSTRY SITTING PRETTY—Taking a wide and comprehensive glance at the entire canned foods market situation, did you ever see it look so rosy? And particularly at this time of the year? There is not an article that is not in excellent condition, and with the brightest kind of prospects in the many months that must intervene before another pack can possibly be made. "The oldest inhabitant" in the canned foods world cannot recall when the market presented such a strong and promising outlook as it does today. There have been good packs, in the main, and it would seem they have passed out into consumption—apparently directly into consumption—because all floors—wholesalers' and retailers—were bare, and the new goods had to go out at once to keep the market supplied. In connection with this has come a wonderful increase in the consumption of canned foods. The people have not done the amount of "home preserving" which they usually did, as they have learned that the commercially canned products may be bought at a considerable saving in time, energy and cost, and be better than they can turn out. That demand which we promised the canners would materialize if they would but pack quality goods has come to light and is here, and has taken the goods as they

were never taken before. Apparently the wholesalers and the retailers did not take this into consideration, but figured upon the usual hum-drum demand. However, consuming America has turned to canned foods, found them pleasing, and is eating them in immense quantities, and will continue to do so as long as the canners give them this sort of satisfactory service. This lesson of quality has come home to the canners, and we hope and trust that it will never be forgoten.

Take just the item of canned peas. Last fall the writer was called to speak on the floor of the Milwaukee meeting as to conditions and prospects, and in doing so we promised the Convention of pea canners that if they would pack another year of high quality as they had just done, they could go as far as they pleased in the extent of the pack and the people would eat their goods, paying a fair profit to the canner for them. They have just surpassed their record of 1922, and the peas are gone. There is no question about that—the peas have passed into consumption—the greatest pea pack on record—and the buyers are busy trying to find more to keep the hungry demand supplied. If there are any peas hanging fire in a canners' hands, they are the product of a Smart Alec canner who thought he could ignore quality and make the market take his trash. It may have to do so, but it will mark that canner for all time to come. We congratulate the pea canners on this excellent accomplishment, and we promise them once more that if they will keep the quality high—a satisfactory article for the consumer—they can go ahead as hard as they please and they will have trouble in ever catching up with demand again. A good many corn canners have kept quality before them this year, and they are beginning to reap their reward, and will continue to do so at a steadily advancing market. The people will eat good corn, but it must be good corn not not near-good, much less poor. There are many in need of drastic schooling in this line, but the yeast is working, and there has been a considerable improvement shown this year. Never in the history of tomato growing have the canners of this Tri-State territory seen such quality tomatoes as they did this season. "They ground up tomatoes into paste and tomato sauce that it seemed a crime to use for such purposes," is the way one man put it, and this will give some idea of the fine tomatoes that have characterized the whole season. More fine tomatoes have been packed this season than ever before, and the market shows the effect today, and will go on demonstrating its approval by continually advancing prices. And all other articles are about in the same line. "Ain't it fine?

FREIGHT RATES & SHIPPING NEWS

Traffic Bureau



THE CANNED GOODS EXCHANGE OF BALTIMORE

Effective October 17th, slight reductions in the carload rate on canned goods will be made from stations and wharves on the Baltimore, Chesapeake and Atlantic, also Maryland, Delaware and Virginia Railways to certain stations on the following roads: Boston and Albany Railroad, Boston and Maine Railroad, Maine Central Railroad, Rutland Railroad, Gettysburg and Harrisburg Railroad, Lehigh and New England Railroad, Philadelphia and Reading Railway. Also to Boston and Providence via the Merchants' and Miners' Transportation Co.

Present indications are that revision of canned foods rates from Eastern Trunk Line territory to points in the Southeast and Mississippi Valley, restoring proper relationship with the rates from Central territory and Ohio River cities to same destination territory will become effective within the next 60 days.

The usual heavy movement of freight destined to Western points via the rail and lake routes has begun in anticipation of the closing of navigation on the lakes which officially takes place the first week in November. Canned foods form quite a large percentage of this movement.

Warehousing and Transportation Economies in Distribution

By The Domestic Distribution Department Chamber of Commerce of the United States Washington, D. C.

AN important function of Distributors in storage. That is, the collection of goods at a central point to supply a future demand and the care of these goods until the demand is experienced. It must be remembered that wool or cotton cannot be converted into clothing until several months after they have been sheared or picked; and that the garments cannot be placed in the hands of the wearers for an appreciable lapse of time after they have been manufactured. Storage—Warehousing and its inseparable team-mate, Transportation, therefore must be regarded in the United States today as of almost if not quite equal importance to production.

There are so many kinds of Warehouses that it seems advisable to define them; but for present purposes we are concerned only with that class known as Public Warehouses.

Public: For the storage of merchandise of every description; distinguished from Private Warehouses by being available to—and intended for the use of the public.

Private: Owned or occupied by merchants or manufacturers for the storage of their merchandise.

Household Goods and Furniture: For the storage both of individual property and of merchandise.

Cold Storage: For the storage, principally, of perishable foods.

Cotton, Grain, Tobacco, Wool: And others, for the storage of special commodities.

Bonded: For the storage of all kinds of commodities on which a tax must be paid before they are released for Distribution.

A sufficient reason for this discussion is discovered in the somewhat intricate nature of the difficulties faced in the operation of warehouses. It is hoped that a wider understanding will be contributed of the way in which many of the problems have been and are being solved; and that the results will become available more easily to those who might benefit by any economies or conveniences offered to various classes of distributors. During the past ten years, interest in Warehousing has been growing rapidly; but fast as this growth has been it is a beginning only and great numbers of Distributors maintain an attitude of extreme conservatism.

As a preliminary, this chart gives a rough idea of:

Public Warehousing Services

Storage	Transportation	Financial
Fire Protection	Clerical and Accounting	Local Deliveries and Repacking	Receiving and Forwarding Consolidating Shipments	Negotiable Receipts	Continuous Insurance

Very recently, the American Warehousmen's Association has published an Encyclopedia containing among other items of useful information, 280 pages devoted to a description of commodities which it is common to store, including recognized weights of packages and the dangers from which each of the commodities must be protected. No better proof is needed of the seriousness with which warehousemen regard their duties than the results of investigations conducted by the Association as embodied in this book. Proper storage is a science—no longer a mere piling of goods in an ill-lighted, possibly ramshackle old building used for that purpose because it may have been fit for nothing else.

A thoroughly modern public warehouse is of fireproof construction, equipped with a sprinkling system well illuminated and provided with efficient conveying and stacking machinery. Usually there is a fleet of automobile trucks as a part of its equipment and usually it is connected with one or more trunk line railroads by means of its own sidetracks. Included among the forces who conduct the affairs of this warehouse are skilled accountants, correspondence clerks, packers and freight tariff experts who are familiar with every physical detail of warehousing and with the effect upon the property entrusted to them of local laws, insurance and taxation.

Practically every commodity sold in retail stores is entrusted to public warehousemen during the process of Distribution. We make this assertion confidently because we cannot imagine any commodity which might be an exception to the otherwise universal rule. Not all of all commodities, of course, are entrusted to public warehousemen, but, from the farm to the fireside, food, wearing apparel, hardware, drugs stationery and tobacco undergo storage, and the impulse toward the use of public warehouses has only begun to gather force.

Comparatively few figures exist and so far as we are aware none of a reliable character have been published which will give a true coefficient with which to calculate the comparative cost of storage in the two types of warehouses. Yet even if we had this coefficient, only a part of the story would be told, since advantages which attend the use of public warehouses are not limited to the mere cost of storage.

Indeed, the cost of storage may be only a small proportion of the whole sum involved because of the economies which are known to follow the separation of long-distance carload shipments into L. C. L. shipments for local Distribution. During an address before the Domestic Distribution Group Session at the Annual Meeting of the National Chamber in May, 1923 it was stated that by consolidating into a car load several long distance, separate shipments of washing ma

chines and consigning the car to a public warehouse the savings earned paid all costs of transportation, all costs of handling for re-shipping locally, all costs of distribution except selling and, in addition, a material percentage as unexpected profit!

This is a single instance, but it could be multiplied indefinitely, and suggests the advisability of a careful study on the part of distributors to determine how their present area of business may be covered more economically or even enlarged if that promises to be profitable. There is a growing tendency among retailers to increase their rate of turnover through buying in smaller quantities, which, logically, will crystallize into a need for convenient wholesale sources of supply to meet the demands for more prompt deliveries.

Many manufacturers and wholesalers whose area of distribution is or may be of a considerable extent, already are preparing to meet this demand. One of the most obvious methods is to ship in carload lots consigned to warehouses in distant centers of distribution where the cargoes are stored until orders are received for local distribution. Any reasonable degree of economy should be expected from this method, since the bare cost of storage may not exceed the cost in a large private warehouse and the maintenance of several hundred small private warehouses is likely to entail a prohibitory expense.

There is an unmeasured but certain economy in entrusting commodities to the care of agents who know the proper conditions of storage dictated by the need for exact degrees of temperature, humidity and isolation as well as the "ins and outs" of local property rights, legislation and taxation. Sometime, a good while in the future perhaps, it may be possible to attach a value to these factors, but today they can be recognized only as existing and usually of greater importance than is attributed to them.

In the same category is the use of negotiable warehouse certificates which, based upon rigid inspection and standardized grading, not only are of vast importance now, but are of increasing significance.

From the foregoing discussion it is clear that the economies disclosed through a closer correlation of warehousing and transportation invite the constant attention of those who have problems of distribution—merchants and manufacturers in an equal measure. There is no general formula by which these problems may be solved, since they are affected profoundly by such varying factors as location, area of distribution, volume, size and character of the merchandise units. This suggests the need for a more or less careful study in the interest of individual distributing organizations to determine the general financial results of storage in private warehouses compared with public warehouses. Some of the most obvious elements are:

(a) Amount of capital investment for the maintenance of private warehouses.

(b) Bare operating costs of storage under each of the methods.

(c) Publicity value of private warehouses.

(d) Intangible value of the specialized services offered by public warehouses. For example, in the control of humidity and temperature; expert accountants; familiarity with local laws and taxation and with freight tariffs.

(e) Possibilities of reducing the costs of Distribution within a given area or of increasing the area without increasing the costs.

(f) Relative costs of additional warehouses to supply a given area.

(g) Consideration of negotiable warehouse receipts as a means for enlarging the volume of a business.

How Can A Leaky Can Be A "Swell"?

London, (England) Distributor Puts Question To Dr. Bigelow—The Doctor Answers.

WITH all the world studying canned foods and learning to use them, it becomes increasingly necessary to make plain all things relating to them.

Here is a letter received from one of the largest distributors of canned foods in London, England, and it propounds a very material question—one which would puzzle most canners to satisfactorily answer. Therefore, the canners will find this help in the further education of their business.

We quote both question and answer:

London, August 30, 1923.

W. D. Bigelow, Esq.,
Director, Research Laboratory of the National Canners' Association.

Dear Sir:

Attached you will find a cutting from the National Grocers' Bulletin, which has been of very great inteerst to me. It makes me hungry to receive the Bulletin to which it refers.

But what has moved me to write to you is that you say "swells are due either to understerilization, or to leaky cans." It has always been my impression, which is confirmed by other words in the same paragraph, that what causes the cans to swell is pressure from within. Now, if a can is leaky, surely the pressure would be relieved through the leak, and there would be no cause for the ends of the can to bulge.

I know you will forgive me for putting this point to you, but it is one which is not clearly understood in this country by a great many, and I may quite conceivably not clearly understand it myself. I feel sure my thus troubling you hardly needs an apology, as, of course, you are as keenly interested as I am in everything that relates to canned foods. If you will kindly reply, I shall be glad to reciprocate with any service in my power.

I am, dear sir,
Yours faithfully,

Washington, September 24, 1923.

Dear Sir:

We have your letter of the 30th ultimo, and take pleasure in sending you herewith a copy of our Circular No. 6-L. Your question regarding the possibility of swells being caused by leaky cans is a perfectly natural one. Everyone who hears the suggestion for the first time thinks it was made by inadvertence and cannot be true. As a matter of fact, however, a very large percentage, probably the great majority of swells, are due to the fact that the cans originally leaked, and in this way the contents, which were originally sterilized, became contaminated. We cannot explain in all cases how these leaks have become closed. Sometimes the reason is apparent, but, on the whole, we have to suggest several explanations as the most probable. Certainly the fact is there, and it has been proved in a great many cases that products are spoiled by bacteria of a kind that could not possibly resist the process by which the goods were sterilized. I will give below several causes that are generally accepted as responsible for closing the leaks which originally existed. In some cases these causes have been proven, in other cases they are offered as the most probable solution.

The Rusting of the Seams—It is a common experience that a new installation of water piping sometimes leaks at the joints, but that with continued use these leaks "take up" and the pipe becomes tight. It seems probable that small openings in tin cans also are occasionally closed in this manner.

Influence of Change in Temperature—Owing to difference in expansion, it is well known that small openings in cans may appear while the can is hot and be closed when it cools. As an illustration of this, it sometimes happens that leaks in cans permit the escape of practically all the air during the process, and that these leaks are filled before the can is cooled, so that the cans are exposed to a full vacuum and collapse. This is especially true with products that have considerable air, especially such as dry-pack shrimp. In the same way it is believed that some leaks which exist in cans during the process admit water from the cooling tank before can is entirely cool and become closed up when the can is cool.

Evaporation of Material Leaking from the Can—It is well known in the canning industry that some products require a much tighter can than others. For instance, with peas the can must be absolutely tight. Even the most minute leak causes the spoilage of the product. With tomatoes, on the other hand, the cans may be very loose, especially when the product is not cooled after processing. Under these conditions the cans are taken from the bath with the ends distended, caused by heat, and when the cans are not tightly sealed, this pressure causes the contents to leak from the openings. As the cans cool, the tomato juice leaking through these openings evaporates and forms plugs of solid material. These plugs are more or less permanent. They sometimes remain in place during the entire history of the can and prevent the spoilage of the product. When the can is examined in the laboratory, however, and carefully washed after the contents are emptied from it, these openings are often found. Sometimes these plugs become loosened from the openings, thus affording the bacteria an opportunity to enter and cause the spoilage of the product. Spoilage from this cause is not by any means confined to tomatoes. It occurs with many other products, and especially with vegetables and fruits.

The Influence of Fat—Small openings in cans are sometimes closed by fat in products rich in that substance. Sardines offer an excellent illustration of this. Many of the sardine cans used by American packers are not hermetically sealed. In fact, they are closed by crimping on the covers without the use of any gasket whatever. When we open the can and remove the contents, this far may be washed out, and it is seen that the can was very far from tight; yet the fat acts as a seal and prevents the spoilage of sardines which are sufficiently processed.

The Influence of Solid Particles of Food—It frequently happens that solid particles of food stops up a small opening and prevents the leaking of the can. This is illustrated by the experience frequently encountered by canners with whole and cap cans in the early days of the industry, when it was customary to give the cans a "kettle exhaust," then remove them from the retort, punch holes in the top to permit the escape of air, close the vents and return to the retort for processing. When the cans were vented in this manner it sometimes happened that solid particles of food were forced into the can and prevented the escape of air. To overcome this trouble it was customary for meat canners to place a disk of tin on the top of the contents and vent the can immediately over it. Still, even when this precaution was taken, it frequently happened that the vent was closed by the particles of food, and made it necessary to vent the can a second time, and sometimes several times. In the same way the openings in cans which permit the entrance of bacteria sometimes become closed

with particles of food, thus making the can tight and contributing to the formation of a swell.

Referring to the last portion of your letter, I wish to assure you that your letter needs no apology. We are very glad to receive questions of this kind and to make our information available to users of canned foods. If you wish to make any further inquiries regarding this or regarding other matters conected with the spoilage of canned foods, we will be glad to give you such information as we have.

Very truly,

LOUISVILLE TO HOLD 4TH ANNUAL FOOD EXPOSITION

November 15th to 24th, 1923

LOUISVILLE's Fourth Annual Food Exposition will be held in the Jefferson County Armory, November 15th to 24th, under the auspices of the Retail Grocers' Association, manufacturers and distributors.

The novel manner in which the Louisville expositions are conducted is the cause of their success. A committee of three officers of the Retail Grocers' Association, together with three manufacturers and distributors, are in absolute charge, with the Secretary of the Retail Grocers' Association acting as a chairman of the joint committee and exposition director.

The Louisville Exposition is not run for profit, as the Executive Committee agrees to spend all moneys received in the sale of space in decorations, entertainment and publicity. Last year the entire amount could not be spent intelligently, and a rebate of 5 3-10 per cent of the space price was returned to the exhibitors.

Mr. V. H. Engelhard, Jr., chairman of the Manufacturers' and Distributors' Committee, announced that the sale of space is far in advance of that of last year at this time. This indicates that the 1923 exposition will be more successful than 1922.

During the nine-day run last year over 120,000 people visited the armory in which the exposition was held. This building, if not the largest, is one of the largest buildings under permanent cover in the United States.

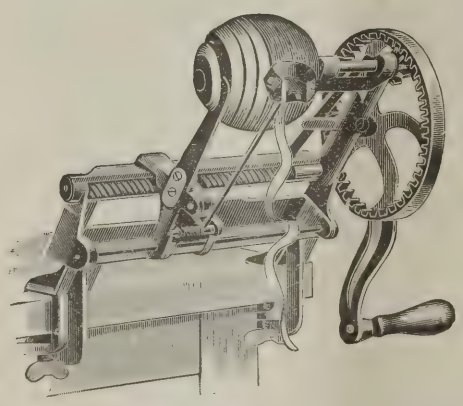
The Executive Committee announced that the budget fo decorations, entertainment and publicity is 25 per cent mor than the amount used last year, which assures an increased at tendance.

Any information relative to the 1923 exposition can be ha by communicating with Shirley E. Haas, Secretary, Retail Gr cers' Association, 1229 Inter-Southern Bldg., Louisville, Ky.

VENEZUELANS IMPORTING GERMAN CANNED FOODS

GERMAN canned foods are beginning to be articles of reg ular diet in Venezuela. Within the past four months ther has been a notable increase in the volume of these good imported from Germany into Maracaibo, Trade Commissione Jackson informs the Department of Commerce. It is estimate that 60 per cent of the wholesale grocery trade in that city is i the hands of German firms doing heavy importing, mainly fro the United States as yet. However, large stocks of canne sausages and some canned fruits from Germany are now in ev dence and being offered at from 15 to 25 per cent under compe ing American and English articles, although the quality is sa by consumers to be inferior. Considerable volumes of Swis food products are also stocked.

MUSHROOM PASTE, A NEW TABLE DELICACY



Mushrooms, Grown in Former Brewery, Utilized in Valuab By-product, Preserved in Glass Containers.

From the Glass Container.

A LOVE of mushrooms, experience in growing them, a emergency, and careful experimentation tempered with i genuity and scientific imagination—that is the recipe tha has produced Champee, a mushroom paste made by the Hupf Mushroom Plantation in New York.

Mushrooms were, in former days, articles of luxury, a were limited to definite seasons of the year, and were restricte in use to certain favored localities that were suited to their pr duction. But now this is changed. You may go to your delic tessen and purchase Champee—or champignon puree—in eith

the small two-ounce jar or the large size that was designed primarily for the use of the hotel trade.

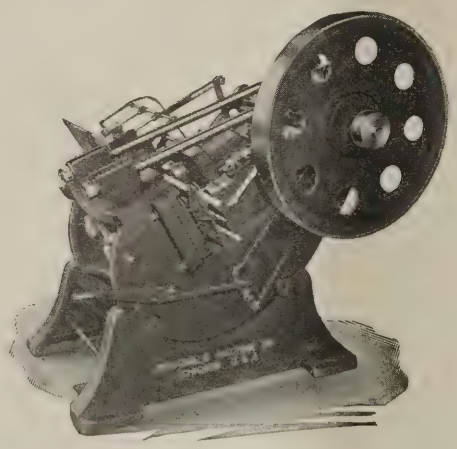
Brewery Cellar Good Growing Place—Before the days of Prohibition this was impossible and unheard of. The manufacturers of Champee were then operating the Hupfel Brewery, with probably no idea of ever growing mushrooms on a commercial basis. Mr. A. G. Hupful had long been fond of mushrooms, and had been interested in growing them, experimenting with them from time to time, and when the company saw Prohibition coming, the thought occurred that the rock caverns and tunnels of the brewery would serve as excellent growing places for mushrooms, as indeed they have since proved to be.

After a thorough survey, Mr. Hupful planted about 100,000 square feet with mushroom spawn, after the French practice, in narrow rounded beds of rich loam, placed in the cellar of the plant. In this compost the mushroom spawn was placed, and, after a time, a soft cover layer of loam was laid down, through which the mushrooms pushed themselves.

Experiments in Spawn Production—This method was found to be too extravagant since it occupied too much valuable space, so after considerable thought and experiment, it was decided to change the system. So three decks of mushroom beds were arranged, one above the other, and later, in some of the rooms of the former brewery, as many as six decks, one above the other, were devised. A remarkable series of experiments followed, to determine the best possible production methods. The first mushrooms grown there were obtained from mushroom spawn produced through the usual commercial channels, but this was found unsatisfactory because it could not be depended upon for uniformity, so the production of spawn was undertaken by experiment. An isolated "mother" cell is taken from underneath a good specimen of mushroom produced in one of the most prolific sections in the former bed. A number of these cells are planted simultaneously in bottles of gelatin, and the best of the growths from these are then transferred to "root" jars. From this humble beginning enough spawn is secured to serve in planting the entire bed area of the plantation. This is a very delicate process, and is a triumph of applied microbiological experimentation.

Artificial Fog and Rain—Since mushrooms are parasites lacking chlorophyl, or the green substance of other plants, they do not assimilate air and water necessary for growth, but rath depend on other plants to manufacture their organic food. F this reason the specially prepared beds are necessary and ter perature of from 50-54 degrees must be maintained. Water f the beds is supplied by artificial rain and fog produced by pas ing steam from the old boiler through a refrigerating apparatu This rainy fog is created approximately twice a week.

Jazz Drumming an Aid—Mushrooms were found to be ve sensitive to atmospheric conditions, and many marvelous thin have been done to promote their growth. Noting that mushroon in the natural state are inclined to rapid growth immediate following severe thunderstorms, Mr. Hupfel experimented wit reproducing this condition in his plantation, installing stat machines that produce sparks of electricity, serving to relea the oxygen in the air in much the same manner that lightnin flashes do. These static generators have been remarkably su cessful in stimulating "bumper" crops, just as the thunderstorm influence the rapid growth of wild mushrooms.



A mechanism producing a constant drumming noise in som thing comparable to the rhythm of jazz music has been invente by Mr. Hupfel and remains his secret. It is said to aid in i creasing the formation of plant cells, and is reputed to be a ve valuable aid in the growing of mushrooms.

Getting a market for the fresh mushrooms proved to be ve easy, indeed. Clubs, hotels and restaurants were very eager purchase the fresh product, as formerly their mushrooms ha been transported some distance, impairing their pristine fres ness. The Hupfel Plantation made it possible to serve mornin mushrooms at noon, so there was aboslutely no difficulty in ma keting the fresh mushrooms in New York.

However, the market for the mushrooms is limited, and ca absorb only a certain amount, so the firm found themselves wi a great surplus that could not be disposed of profitably. So M Hupfel's next thought was to can mushrooms, and so distribu his market over a very wide field. So he began to experime with possibilities, and, being a chemist, he soon learned the co plete nature of his product. It occurred to him that a mushroo paste could be made, and that it would be valuable.

Glass Proves Ideal Container—Mushroom paste possesses the delicious qualities of the natural mushroom, for it is made

No. 32 Automatic Strip Feed Press

Although similar to our other Automatic Strip Feed Presses, this particular size is especially adapted to the rapid production of deep drawn metal articles.

Of extra heavy design with chrome nickel crankshaft and solid steel flywheel, the Press is well suited for single or double die operations requiring excessive strain. Large diameter shaft bearings allow ample rigidity and extra long slides maintain a perfect alignment of dies.

The Press is provided with compound change gears for variable cuts and simple adjustments for different lengths of material.

The automatic feeding insures a high uniform output and eliminates the dangerous hand operation.

The Press is equipped with automatic release which immediately stops feeding mechanism when subject to undue strain.

Additional particulars on this press or any other automatic can producing equipment gladly furnished upon request

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

Baltimore, - - Maryland

mushrooms, plus salt and thickening. He found that the glass container with a vacuum cap to be the only practical container, and decided to use two sizes, a two-ounce jar and one larger for hotel and restaurant use. The name Champee is derived from champignon puree, and it certainly appears to be a triumph as a trade name. It is short, original and stimulates the imagination, and is easily remembered. It is a great factor in their advertising campaign which has been inaugurated on a national basis. In their advertising the glass package is featured; it undoubtedly has done a great deal in winning the confidence of the housewife in an absolutely new product. Champee has become popular almost instantaneously, finding a great favor with the housewife, restaurateurs, chefs of hotels and clubs. New recipes are being originated all the time, making its use more diversified.

The story of Champee is significant in showing what can be done in making a by-product of importance by research and careful thinking and a close study of the possible market.

THE PUMPKIN CROP SITUATION

By E. E. Wood,
Continental Brokerage Co., Indianapolis, Ind.

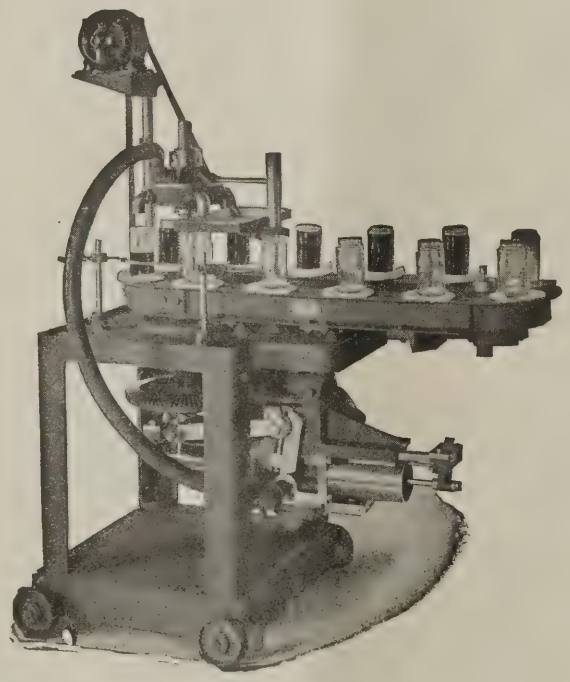
September 26, 1923.

THE writer has been in touch with a large majority of the pumpkin packers throughout the country. After summing up their reports, we are predicting a short pumpkin pack. A very large number of the pumpkin packers have no pumpkin in their territory this year.

There is no carry-over of pumpkin. Pumpkin was cleaned up many months ago. The jobbers' stocks are the lowest in years, and many jobbers have no canned pumpkin on hand, and have been unable to buy it of their competitors. A number of canners are entirely sold up, and most of the balance can only accept a limited additional business.

We bulletinized our trade the first of August, apprising them of the likely outcome of the tomato crop, and predicted a short pack and advised purchasing. We are just as sincere in strongly advising buyers to cover on their requirements of pumpkin.

Conditions warrant higher prices. We will still sell at our opening price what we believe to be two of the best packs in Indiana on the following basis: No. 3 choice pumpkin at 85c, No 10 choice pumpkin at $2.60, f. o. b. Indiana factory. No. 2 extra standards, 70c; fancy, 75c; fancy dry pack, E. L. tins, 80c. No. 3 extra standards, 90c; fancy, $1.00; fancy dry pack, E. L. tins $1.10. No. 10 extra standards, $2.75; fancy, $3.00; fancy dry pack, E. L. tins, $3.25; f. o. b. Indiana factories.



MARYLAND GROWERS HAVE SOILS TESTED

SOIL from nearly a thousand Maryland farms came under the expert scrutiny of soil specialists from the University of Maryland during the week of August 20 to 25 as a result of the Soil Improvement Special, operated by the Baltimore and Ohio Railroad in co-operation with the University of Maryland and the Eastern Division of the National Lime Association

Behind it, in twelve of the twenty-three counties of the State the train left a white trail of lime that was spread out on probably more than 750 acres of land. And the most important fact was that the lime was not spread haphazard, but in accordance with the requirements of the soil as shown by the tests made aboard the train.

The train had as its purpose the demonstration of the value of lime to agriculture. It was operated by the Baltimore and Ohio Railroad because that company is interested in developing the agriculture throughout the territory which it serves. The University of Maryland co-operated by making the tests, because it has recognized for years the value of lime in improving the condition of acid soils. The Eastern Division of the National Lime Association, an organization made up of manufacturers of liming materials, supplied the lime that was distributed free of charge because it had faith in the ability of its products to produce results more convincing than words.

Wherever the train stopped it received a cordial reception and the crowds that turned out so far exceeded original expectations that by the time it had completed its week's run the supplies on board had practically reached the vanishing point. In fact, the unexpectedly large number of tests that were made s

With This One Machine You Can Fill

Preserves - jelly - mustard - mayonnaise - syrups - apple-butter and all similar products.

Two pistons - one rotary valve - do the work and give you—

Greater accuracy and cleanliness of filling than has ever been possible before.

It's a machine that is made to stand up during the strenuous run of the season. No breakdowns, delays, loss of money and product.

You can fill on the same floor where your kettles are, or on the floor below.

Find out all about it.

The Karl Kiefer Machine Co.,
Cincinnati, Ohio.

Can You Clean Your Pea Filler?

What Will You Do If Inspectors Demand That You Take Your Filler Apart Every Night?

Sanitary laws require that the dairyman must take his cream separator apart every night in order that it may be thoroughly cleaned. Why? Because inspectors realize that in no other way can it be cleaned properly. Why should not the canner do the same with his fillers?

One of the causes of spoilage in canned foods is due to the inability of thoroughly cleaning and sterilizing the filler. This is neatly taken care of in the Hansen Filler, it being the only filler that can be quickly and completely taken apart for cleaning without the use of tools. The feed hopper, upper and lower measuring cups with auxiliary parts are all held together by gravity and can be easily taken apart by one operator while standing on the floor at the back of the filler.

Ease of cleaning cannot be over-emphasized as it is extremely important. With other fillers it is almost impossible to disassemble them, consequently operators go through the entire season without taking the machine apart, allowing peas to accumulate in the corners to sour and rot, especially in the measuring cups and brine tank. The Hansen Filler is always clean and wholesome and is the only filler that really conforms to the sanitary laws and is truly a SANITARY filler.

Probably the greatest forward step ever taken in pea filler sanitation was made when the BRINE TANK was ENTIRELY ELIMINATED on the 1924 Model Hansen Filler. Open exposed brine tanks serve as traps to collect dirt, flies, and filth and are never thoroughly clean.

Hansen Canning Machinery Corporation
Cedarburg, Wisconsin.

Watch for Illustration of this New 1924 Model Hansen Pea and Bean Filler which will appear in this space next week.

quickly depleted the original supplies of lime that additional cars had to be obtained on rush orders along the route.

More than a thousand samples of soil were tested during the week, and while some of the soils gave neutral tests and needed no lime, the majority called for at least a light application. The requirements ranged all the way from a minimum of five hundred pounds per acre to as much as three tons. In every case, except at Oakland, Potomac and Cumberland, enough lime for an acre was supplied to each farmer as determined by the Truog test.

At Oakland, Potomac and Cumberland the quantity of lime on board the train unfortunately ran so low that only sufficient lime for half an acre could be distributed. This unforeseen eventuality was entirely due to the gratifying throng of Garrett county farmers, that practically swamped the train and its personnel at Oakland.

Probably more than five hundred farmers, bringing in something like three hundred soil samples, greeted the train at this stop. The number of samples to be tested in the short time that the train was scheduled to stop at Oakland entirely overtaxed the capacity of the equipment which had been provided. Likewise the soil, running more than ordinarily acid, called for larger applications of lime than usual, with the result that supplies on board the train were soon depleted. As a result, the quantity distributed to each farmer had to be reduced to enough for half an acre, and the train had to pull out before all the samples could be tested. The remaining samples, however, are to be shipped to College Park, where they will be tested, while the necessary lime will be shipped back to Oakland.

In addition to the lime carried by the train and the necessary equipment for soil testing, there was a coach where short talks on soil improvement were given at each stop. In the lectures the farmers were told the essential facts about lime, the various forms in common use for agricultural purposes and the reasons for its use. The Truog method of testing was also explained while the tests were being made.

The train made stops at Cowenton, Aberdeen, Childs, Mt. Airy, Sykesville, Woodstock, Elkridge, Jessups, Laurel, Beltsville, Oakland, Potomac, Cumberland, Hagerstown, Keedysville, Adamstown, Frederick, Germantown and Gaithersburg. On the train were: Dr. A. G. McCall, head of the soils department of the University of Maryland Experiment Station; Henry M. Camp, of the Eastern Division of the National Lime Association; P. O. Hurley, agricultural agent of the Baltimore and Ohio Railroad; A. M. Smith, J. H. Snyder, F. W. Oldenburg, and M. D. Bowers, of the University of Maryland; J. B. Emack, of the Palmer Lime and Cement Co., and E. H. Brinkley, of the Standard Limestone Co.

Apparently the train has aroused much interest in the subject of soil testing, and numerous inquiries from all parts of the State are being received in regard to it.

WHERE THE SALMON IS KING

Kwakiuti Indians Depend On It for Prosperity

WHAT the "cricket on the hearth" is to the English housewife, so is the salmon to the Kwakiuti Indians of British Columbia, an omen of prosperity, happiness and content. Sir J. Frazer, the noted ethnologist, who has lived among this tribe for many years, say that "a failure of the salmon for a single season means famine and desolation, silence in the village and sad hearts about the fire. Salmon in plenty, however, means abundance in the camp and joy at the domestic hearth."

When the first salmon of the season has been caught, the Kwakiuti fisherman carries it to the chief of the tribe, who delivers it to his squaw. Taking it from him she says to the fish: "Who has brought you here to make us happy? We are thankful to your chief for sending you."

The salmon is then cooked before all of the silent tribesmen, who are squatted about the campfire, and eaten with solemn rites and ceremonies. The feast ended, the natives, all of whom have been served with a small portion each, retire to their tents, believing that the "first catch" is already enjoying a happy afterlife in the "salmon country."

BOXED APPLES WILL BE FEATURE OF EASTERN APPLE EXPOSITION

Plans for Big Show Nearing Completion

EASTERN apples packed in boxes will make up the largest single exhibit by one grower at the Eastern Apple Exposition and Fruit Show to be held November 3 to 10, according to the General Committee in charge of the Exposition. This exhibit will be a part of the display from the State of Maryland. It will consist of Jonathan, Grimes Golden, Stayman Winesap and Delicious, packed in the regular commercial Western box. The packer of these apples, the Maryland Orchards Corporation, expects to pack its entire output of 75,000 boxes this year in t Western type box.

State committees from various other States throughout t East have their plans well under way for the big show. T New York State Committee met this week at Albany and pr tically completed its plans for the exposition. New York St will have by far the largest State exhibit, covering an area about 8,000 square feet. Most of the available space in t section has already been reserved by big growers from eve section of the State. Two of the largest exhibits will be ma by the co-operative packing associations from Western N York and the Hudson River Valley.

It was announced by Thomas E. Cross, chairman, of N York, that the State Experiment Station is going to put on the show one of the greatest exhibits of apple varieties ev made. This single exhibit will occupy a block 80 feet long a several feet high. It will not only have the standard varieti but will feature several new kinds of apples recently develop by the Station.

For the purpose of popularizing apples for cooking, t Department of Cookery at Teachers' College, Columbia Univ sity, is co-operating with the Domestic Science Department Cornell University in running a continuous demonstration showing various ways of cooking apples and other fruits. group of experts operating behind a counter seventy feet lo will make all kinds of apple desserts in plain sight and ha them to the visitors for their own tasting.

In addition to the fourth floor of Grand Central Pala which will house the State exhibits, the entire third floor h been reserved for commercial exhibits. Manufacturers of spr equipment and farm machinery, dealers in apples, maple syr honey and other farm products have taken space on this flo where they may not only show their wares, but sell direc to the hundred thousand or more visitors expected to attend t exposition.

HUGE LOSSES FROM TOMATO DISEASES

RESULTS of investigations by the U. S. Depa ment of Agriculture, just now being made publ show that Septoria leaf spot may be controll by fall plowing. This fungus disease of tomatoes a nually causes large losses in most of the tomato-ca ning regions of the East and Middle-West.

The disease is often known also as "blight" "leaf blight."

Official estimates covering the years 1918 to 192 inclusive, give the reduction of the tomato crop fr Septoria as follows:

	Per Cent
Virginia	26
Tennessee	10
Maryland	37.5
Delaware	14
New Jersey	13
North Carolina	10.5
South Carolina	7.3
Ohio	8.3
Indiana	8.3
West Virginia	10
Kentucky	11.3

We are enclosing copy of press release on cont of this disease through fall plowing which, we belie will be of direct practical value to many canners a growers of tomatoes. (This appeared in The Canni Trade of October 1st, 1923.)

Fall plowing to prevent the over-wintering of t fungus and consequent infection of the plants duri the season, combined with thorough spraying or du ing of the tomatoes in the seed-bed, so they are healt when set in the field, may in most cases be expected reduce the losses from Septoria leaf spot to a minimu

RATE OF PRODUCTION MORE THAN ANYTHING ELSE DETERMINES PROFITS

EVERY day more emphasis is placed by authorities upon the importance of increasing the rate of farm production. Several interrelated factors are at work to accomplish that end. Increased taxes on farm property, decreased labor supply, higher labor costs, lower market prices—all tend or should tend to cut down the cutivated acreage and intensify the rate of production on the remainder.

Therefore, credible evidence coming straight from farmers themselves and demonstrating the dependence of profits upon rate of production is especially interesting just now. According to the Ohio Extension Service, "Twenty-eight Scioto county farmers who have been keeping books on their farms for the past five years find that yields to the acre and the quantity and kind of livestock kept had more to do with profit and loss than any other factors."

The five best paying farms had averaged for the five-year period five bushels of corn, three bushels of wheat and 600 pounds of hay per acre more than the other 23 farms.

"They also fed their stock more liberally, showing an average feed cost per animal $11 higher than the other farms. It paid to do so. They recovered $150 on every $100 fed to livestock, as compared to an average recovery of $110 for all 28 farms."

The same was true of poultry. Whatever was grown on the farm, it paid and paid well to feed properly and liberally.

"Not greater total production, but greater production to the acre, or the cow, or the hen, was what made profits. It costs about as much to feed a poor cow, or hen, or to work a poor acre, and the per unit cost of the product in this case often ran so high as to exclude profit at present prices."

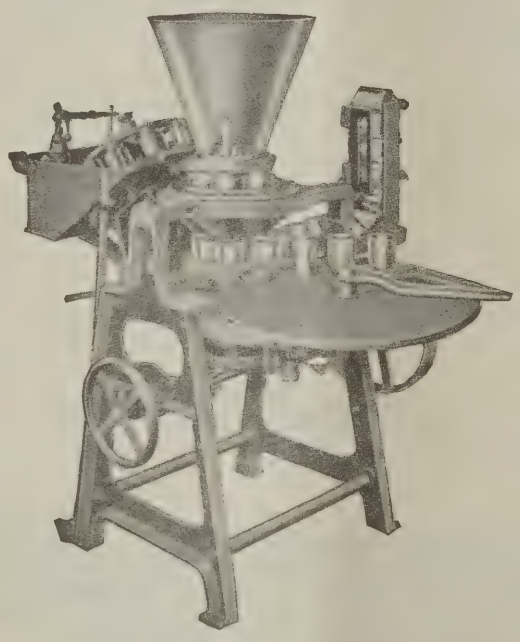
BALKAN PRUNES MIGHT IMPROVE

AN improved quality of prunes is looked for this year by the Serbian producers. General conditions are much better in that country and it is believed that the crop for this year will be financed and transported more efficiently than in the past. As a rule, the Serbian prune is small, and it h been found difficult to secure large shipments of unifor quality. An endeavor is being made to increase the quali of the exported prunes, states Consul K. S. Patton, Belgrad in a report just received by the Department of Commerce. T total exports of prunes last year amounted to 40,443,383 kil grams, compared to 38,376,730 kilograms the year before. T declared export of Yugoslav prunes at the Trieste and Belgra consulates, destined to the United States, last year amounted 2,290,628 pounds, valued at $142,529.

A GOOD CANNER'S CREED.

Since a laborer is worthy of his hire, I must price m goods so that I can pay these expenses and make a reasonab profit on my business and on the investment of time, ski energy and money which it represents; so as to provide f my family and lay aside a fair surplus for that period wh adversity may overtake me or when old age makes me le active and less able to meet the rigorous requirements of t canning business.

We are "lifting" this Creed, adopted by the National R tail Grocers Association for grocers, by substituting "canne for grocer. We recommend it to canners, that they paste it their hats and keep—and live up to it. But to have faith this creed the canners—and the grocers—must know the costs.



"HELLO, CENTRAL!"

Two girls were talking over the wire. Both were discussi what they should wear to the coming party. In the midst this important conversation a masculine voice interrupted, as ing humbly for a number. One of the girls became indigna and scornfully asked:

"Waht line do you think you are on, anyway?"

"Well," said the man, "I am not sure, but, judging fro what I have heard, I should say I was on the clothesline."—S Louis Star.

Ayars "NEW PERFECTION" Pea and Bean FILLER

No valves to wear out and leak brine on the floor.
Will not waste brine.
Fills absolutely accurate.
Has positive can feed.
Does not cut Peas.
Guaranteed capacity up to 129 cans per minute.
No Cams. No Levers.
Has no RUBBERS to catch cans after they become worn.
Only Filler for BAKED BEANS.
Has separate measure and separate saucer. If measure fails to drop part or all the quantity of beans the can will show slack to inspector.

Model made for No. 1, 2, 3, & 10 cans.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, OCTOBER 8, 1923

WEEKLY REVIEW

Rapidly Changing Tomato Prices—Corn Also on the Advance—All Buyers Centering on Baltimore Market for Supplies—Better Quality Increasing Public Demand for All Goods—Better Demand for Canned Foods—Market on Strong Basis.

TOMATO PRICES ADVANCING—Last week we said in this column that the market was bubbling. We should have said it was seething, and then possibly some of our readers would have understood why the prices we quoted at the time of going to press were far below the prices ruling when the paper was received and opened. It did not require days to score a change in prices; they changed within the hour, and this always makes danger for the market reporter, for, despite his best efforts, the real market at the time the reader sees his paper is not possible to report when going to press. At this time, while our market pages will show prices considerably higher than last weeks' figures, there is no certainty that those prices will hold next week when you read this. As a fact, we think in respect to the tomato market, at least, that market prices are entirely nominal; that is, that it all depends upon the seller and the price he may ask. The difficulty today is to find anyone willing to sell at any price, unless it be well above the market as now quoted, and even in that case there is no evidence of eagerness to part with the goods. The truth has come home to the tomato canners: that even with a good crop of tomatoes in this section—and it was the only section about which such a statement could be made this season—there was no way in which they could pack enough tomatoes to meet urgent demands, much less supply the big holes that existed in every section of the country. The tomato crop came on too suddenly, and then ceased too suddenly to permit the canners to get up record packs. One large operator told the writer this week that he believed that not more than 60 per cent of the tomato crop got into cans. In any event, tomato canners from all sections of the country joined the ranks of wholesale grocers and others from all over the country in trying to buy a supply of canned tomatoes in this section, and that is what has set the tomato market going. Brokers will tell you that the big buyers are taking only such goods as they need; that they are buying very carefully, and that they have not abandoned their policy of keeping stocks at a low ebb. And that is true. But there have been so many buyers of all kinds in the market—big, little and medium—that the total of their wants, today, surpasses, apparently, the supply of tomatoes on hand. There has been a little speculation by the oldtimers who know and "feel" the tomato market, but not a great deal; the vast majority of both canners and buyers have merely awakened to the fact that you cannot clean out all spot stocks down to the bare floors, as was done this year with tomatoes, and then overpack the tomato market in one year, no matter how good the crop condition may be in every section. And, in particular, this cannot be done where the canners pack a quality article, as the vest majority of canners tried to do this season. For when the quality is there, then the consumer comes in with increased demands and will absorb any surplus which might otherwise accumulate. Look at what has happened with canned peas this season. They packed a larger pack of peas this year than they did in last year's record pack; it was a quality pack, and it has practically all been distributed earlier and more quickly than was done last year—and that was a record for quick distribution. Give them the quality, and it is doubtful if the canners of any article can produce enough goods. Market operators should wake up to this fact, for even the canners are now growing "wise" to it.

So, while we quote tomatoes at 65-70c, 90c-$1.00, $1.35-$1.45 and $4.50-$5.00 for Nos. 1s, 2s, 3s and 10s, it must be understood that these are merely nominal prices as of this day, and it is easily possible that next week may see these prices as too low.

CORN—Here is another item that has felt the seething of the market, and on which prices are steadily mounting. Corn cleaned out last season a whole lot better than many believed, and was in a large way entirely gone by the time the canners began on this season's pack. So there was a mighty big hole to fill up from this year's output. And, be it said to the credit of most of the corn canners, a big effort was made this season to improve the general quality of canned corn. And it looks very much as if they had succeeded very well in their efforts, judging by the way demand has increased since the delivery of futures was begun. If this is the real case, look out for a skyrocketing market on canned corn. There are whole lots of people who never saw good corn in cans. When they find it then watch the demand grow with leaps and bounds. All that will be needed when quality is there will be for the canners to put upon the labels some good recipes, telling people how to use canned corn, for most people do not know how to use it, but invariably abuse it. They might tell their brokers, also, that when offering canned corn to buyers, it would be worth the while to go to the trouble to heat the corn before sampling, for next to a cold potato there is nothing flatter to the taste than cold canned corn. There will be a lot of hot objections flung at that statement by corn canners who boast that they often eat a whole can of corn cold. Once the writer seized a ton or two of desiccated egg—dried egg—but they should have been termed desecrated egg, for certainly they were rotten and smelled to high heaven but the owner, protesting the seizure, took a small handful tossed it into his mouth, and declared that it was delicious! No many brokers and not many wholesale buyers eat canned corn for they taste it cold and do not like it. Tell them to heat it and it will sell better.

Canned corn is all quoted higher this week. Standard Evergreen at $1.15, standard shoepeg at $1.20, extra standard shoepeg at $1.30, standard crushed at 97½c—and that means that we have about reached the dollar market on canned corn.

AS—Everyone expected the pea market to run off for a period, at least, when the year's statistics showed such a good pack, but this has not happened, merely because the s of peas in first hands are down to the vanishing point, and buyers are even now busy trying to find the peas they Wisconsin reports that the interest in peas is stronger ever and the market holds firm, much on the order of toma- and corn, in a nominal way. The buyer who finds the peas nts has to pay the holder's price to get them.

INACH—Fall canning of spinach is on, and the cleaned-up condition of this article in all sections of the country, and the small packs where usually they have good ones, have d to bring demand to this market. The market holds firm ut change of price.

UERKRAUT—The market has shown improvement this week, because it is known that the cabbage crop is a disappointment, and that kraut may go to high prices. It is ncing here and in the West, and this at the very beginning e kraut-curing time is an indication of the strong position is item.

EET POTATOES—This item his followed suit with others and scored an advance this week. There seems to be some ncertainty about the pack, and it is to be noted that some quotations are lower than the prices issued by the country rs. The market on well-known brands of sweet potatoes uture packing is $1.05 to $1.10 for No. 3s.

ETS—The best crop, so far as the canners are concerned, nas been a severe disappointment this season, and as a consequence there will hardly be enough beets canned to take of the present demands, much less of the future. It is said will be no surplus of beets.

MPKIN—This item is beginning to attract attention as one of those on the scarce and high list. Indiana promises that there will be a very considerable shortage of canned kin, and Indiana is the big factor in canned pumpkin. Those have not covered their wants by futures may find them- s without good pumpkin.

ARS—It is said the canners are showing little or no interest in pears, although this is the season when they should be at work on them. The Keiffer pear crop is reported to ry good, and that is probably the reason why canners are particularly interested. No. 3 extra standards in syrup are d at $1.60. No. 2 in syrup are $1.15.

PPLES—There is not much said about apples, although the season is here when the canners should be busy on them. Apparently everyone is watching which way the market No. 10s are so low in price—$3.10 to $3.25—that there is margin of profit in them. There is a pretty good general crop, and this has its effect.

NEW YORK MARKET

ket Shows Improvement and Prices Advancing—Stocks Are Limited, but Buyers Not Rushing—In Spite of a Large Pea Pack, Buyers Are Looking for Peas—Jobbers Wanted Large Margin of Profit—Many Caught on Tomato Advance—All Corn Advancing—Maine Corn Pro-rated.

New York, October 5, 1923.

TUATION Favorable—The canned foods market continues to show satisfactory development locally, and a stronger market is reported throughout the trade. Prices continue on the rade on many lines, and increasing shortages of wanted s are reported in advices received from canning centers. le stocks are limited, but wholesale grocers and chain store rs are not rushing the market for supplies, as they are con- ing the possibility of invisible stocks, represented by specue holdings, appearing on the markets later on.

The Pea Statistics—The statistics on the 1923 pack of peas, as published in last week's issue of The Canning Trade, came as a distinct surprise to many members of the trade here, who have consistently maintained that the pack for 1923 would fall considerably below the figure for 1922. The first surprise over the size of the pack being over, the question now being asked is: "Where have the peas gone?" It is quite probable that the increased attention to quality paid by pea canners supplies the answer; in other words, the pack has gone steadily into consumption. Buyers are still looking for peas, and are paying higher prices now than at the original opening.

Pity the Jobber—At the convention of the American Specially Manufacturers' Association in Minneapolis last week a prominent wholesale grocer, speaking unofficially on behalf of the wholesale grocery trade in general, told the manufacturers that unless they increase the gross margins of profit for the jobber that many jobbers will be annihilated. Among the items on which he asked increased gross appeared canned vegetables. on which the jobber must make 10 to 20 per cent gross (according to the wholesale grocer's figures) and canned fruits, on which a gross of 20 to 30 is asked. Just how such a gross is to be given, when these two items are essentially competitive commodities, was not stated. However, to the canner who produces the goods, the ideas of his distributors as to the profits which they require merely to distribute the goods to the retail grocer are illuminating.

The Tomato Runaway—Buyers are rubbing their eyes in surprise at the unexpected antics of the Maryland tomato market. They have been warned right along that advances, and sharp advances, were in sight; but they discounted these warnings, as they have lately fallen into the habit of doing with many of their postings. Consequently, the recent rapid rises in prices have caught many of them unprepared, and they have been busy getting in while the getting was good. Western wholesale grocers are reported to have sent a heavy volume of business to the Eastern packers, following the disapointing yield at the Indiana canneries. Buyers who are sending down bids now at 2½ to 5 cents under the prevailing quotations are finding that they are merely wasting their time and the brokers' money for telegraphing, as canners are extremely firm in their views. Indeed, many of them are refusing to sell at the market, holding their goods for an anticipated better market later on in the season.

Pro-Rata Delivery on Maine Corn—Maine corn canners have advised their trade that they will be forced to make pro-rata deliveries on contracts for new pack fancy corn. The pack has been considerably curtailed by crop damage this year. It is believed that the percentage of deliveries will average 50 to 60 per cent, although no official announcement to this effect has yet been made. Canners, by their foresightness in refusing to book additional business during the summer months when the crop prospects were most dubious, have saved much trouble and hard feeling for both themselves and their distributors.

Standard Corn Advancing—Standard corn is sharing in the general upward movement which has characterized the markets for staple canned foods commodities. Canners are now holding at an inside price of 95 cents for full quality standards, with a little off quality stocks to be had at 2½ to 5 cents under these figures. The sharp advance in standard corn prices took the buyers unaware, as little heavy buying in anticipation of future requirements was done at the lower prices prevailing a few weeks ago. Buyers who turned down offerings then are now paying 10 to 15 cents per dozen more for their corn, and present prospects indicate a $1.00 market in the near future.

Sardine Supply Small—While the Maine sardine canners have been able to supply their trade with a little more fish, stocks are still limited. The market is quotable anywhere from $4.00 to $4.50 for quarter keyless oils. Some canners are said to be refusing to sell at all at present prices, and are storing their stocks in anticipation of a higher market this winter and during next spring. Reserve holdings of sardines have been cleaned up, and practically nothing has been set aside in reserve so far this season.

Shrimp Stronger—Shrimp canners are now quoting the market firm on the basis of $1.60 to $1.65 per doezn for 1s, and $3.00 for 1½s. Packing thus far is considerably behind normal schedule, and supplies are light, both in the hands of packers and in the hands of distributors.

Pineapple Higher — Hawaiian pineapple, which has been rather quiet on the spot position of late, has come to life rather suddenly, and this week advanced 10 cents per dozen on standard and extra 2½s, which are now quoted at $3.10 and $3.40, respec-

tively. Coast interests have withdrawn quotations, and one prominent canner has announced pro-rata deliveries on principal grades.

Canned Prunes Up—Owing to indicated scarcity of prunes this year, the California Prune and Apricot Growers' Association this week advanced its prices on both individual size cans and No. 10 goods, the advance on the latter size being 75 cents per dozen. The prune association account in this market is now being handled by Wood & Stevens, Inc.

Notes—Leaves Butler & Sergeant—A change of great interest to the local food brokerage fraternity took place this week, when C. K. Richardson, who has been president of Butler & Sergeant, Inc., severed all connections with that organization, and went with Wood & Stevens, Inc. Mr. Richardson also severs all connections with the Butler & Sergeant selling organizations in Philadelphia, Cleveland, Milwaukee and San Francisco. Ernest S. Sergeant, who last year retired from active participation in the affairs of Butler & Sargeant, Inc., is now once again at the helm, making his headquarters at the New York office.

W. B. Timms Recovering—Walter B. Timms put in a few hours in his office this week for the first time since his recent operation. Mr. Timms is looking very fine, and received the congratulations of his hosts of friends in the canning and brokerage industries on his speedy recovery from the effects of his operation.

Tuna Is Higher—California tuna is showing a stronger tone on all grades. Canners are pro-rating on white meat, and this has thrown the bulk of the demand on other grades, which are now higher in price. Canners are still booking business on yellowfin, for shipment when packed, as they expect to get fairly liberal supplies of the raw fish from Mexican waters during the next few months. The fish are caught in Mexican waters and shipped under refrigeration to the plants in Southern California for canning. "NEW YORK STATER."

ST. LOUIS MARKET

Buyers Beginning to Buy Better, but Still on Small Lots—Tomatoes at Any Price Are Hard to Buy—Corn Also Shows Strength—Pea Offerings Limited—All Lines More Firmly Held—A Fine Quality of Apples in This Section.

St. Louis, October 5, 1923.

THE Market—The past few weeks, up to a few days ago, have been a disappointment to both the canners as well as the brokers, owing to failure of distributors to buy. The last few days, however, there has been a betterment in the demand, and the distributors have been doing some purchasing. Small quantities have been the rule, however. Few carload lots have been taken. Distributors have not been stocking up in spite of the many reasons for doing so. Some few distributors, however, with an eye to the future demands, have been laying in some good-sized stocks, particularly tomatoes and beans, and they have not hestitated in paying top prices for them. The buying has either been because the purchasers have been short on contracts, or they know that they will need them later on. Contract stocks that have been bought are commencing to come in. Canners have sold up enough, so they are now independent.

Tomatoes—The buyers of tomatoes who want goods at inside prices are not able to get them, and even if they want them at full prices, they are not to be had. Indiana started planting late, and the packs in that State are much below early estimate. In the South and Middle West prices are firmer. California is decidedly firm. This is because of crop conditions, packing costs and prospective turnovers. Speculative tendencies, however, have not yet developed.

Corn—There is considerable strength being shown in fancy corn. There is but little to be had. Maine canners have oversold their output, and can only make about 50 per cent delivery, it is said. Competing packs are affected by the Maine situation and favor the canners.

Peas—Peas are so nearly sold out, it is reported, that offerings are limited in all grades, with very few standards available. There is a good demand for that pack, but few are obtainable. The only real offerings are of fancy grades.

Beans—All sorts of beans are getting more scarce.

Fruit—All California packers are standing firm on their li of all packs which have not been withdrawn. Stocks are w cleaned up, and there are few offers being made. The local s list is firm on the higher prices recently announced by the le ing packers. Quotations on futures are still more or less norm but the outlook is very firm. Indications are that the pack have done an excellent business on what was left over of t old pack stock before they announced prices on the new pack

Peaches—There is a slight improvement in the movement peaches, although there is not a satisfactory demand.

Pineapples—There continues an indifferent demand for pi apples for current consumption.

Apples—Apples are in a firm way for the new pack, beca the demand has depleted stocks of the old pack.

Fish—Sardines continue to be the feature of canned fi Firm prices prevail, although many buyers have been disco aged because of advances. Canners are said to be limiting th offers, because they are of the opinion that prices will go up.

Milk—The tone of condensed milk is irregular. Libe offers are being made.

Early apples, including Jonathans and Grimes varieties, ha practically all moved from points along the Frisco Railro in Northern Arkansas, but there is still considerable movi from the Missouri district. Seasonable conditions during t past several weeks have been favorable for maturing late var ties of Ben Davis, Ganos and other varieties are now under w particularly from points in Northwest Arkansas. Owing to sufficient quantity of rain during the past several weeks, t apples have developed in size very rapidly and are also colori nicely, and it is expected that the shipments will come up expectations and previous estimates. It is quite sure that t trade, as a whole, will be well satisfied with the quality of l apples from the Frisco district. "MISSOURI."

CALIFORNIA MARKET

The Rains Have Come—Tomato Canning Checked, but Ra May Help Crop—Advancing Prices on Fruits Cause More Interest—Heavier Crop of Cling Peaches—Pineapple Pack Larger Than Before—Spinach Getting Scarce—Some Coast Notes.

San Francisco, October 5, 1923.

THE Rains Came—Rains have fallen throughout Californ in a few places the precipitation having amounted to much as three inches. In most places, however, it is l than a half an inch, and the damage done is not extensive. fact, the small loss to crops is so greatly overbalanced by t extinguishing of fires that is almost lost sight of. Deliver of tomatoes have been held up some by the storm, but it is unlikely that the crop will be benefited by the moisture in t long run. Beans were slightly damaged in a few places, a growers of raisins and prunes were put to the trouble of sta ing trays.

Fruits—The upward tendency in California canned fr prices is causing the buying trade to pay a little more attent to their requirements, and business is a little brisker than it h been. Large orders are still lacking, but there are plenty small ones, and everything on the list seems to be moving. A ditional advances in prices are in prospect, and the situat promises to steadily grow firmer, since packing operations a largely at an end and the output is below estimates. In s eral varieties record crops were produced, but packs were c tailed because of small sizes, higher standards and a very hea shipping demand.

Peaches—The California Canning Peach Growers has issu estimates of the size of the crop of cling peaches in Sut county, the banner peach-growing county of the State, and pl this at 61,345 tons, as compared with 60,273 tons last year. T increase is accounted for by the large acreage of young orcha coming into bearing. In many other parts of the State the o put showed a falling off, and the Sutter county crop is figu to be about 46 per cent of the expected total of cling peac produced in California this year.

Pineapples—Advices from Honolulu indicate that the pack Hawaiian pineapple this year will run over early estimates a considerable margin, owing to an improved acreage yield the unusual proportion of large fruit. Early in the year the k was estimated at 5,250,000 cases, but there is now a likeli- d that it will closely approach 5,700,000 cases. The Hawaiian eapple Co., Ltd., will pack more fruit than any other concern year, and has already passed its estimate for the season of 0,000 cases by a margin of 130,000 cases, with three months ro before the final reckoning is made for the year. The Cali- ia Packing Corporation has packed more than 1,000,000 es of its estimated output of 1,400,000 cases, and Libby, Neil & Libby have exceeded their estimate of 1,000,000 cases, are still packing. Several other packers are already over ir preliminary estimate. An excellent demand has been ex- ienced ever since the naming of opening prices, and very little he pack is unsold. Some packers are arranging to make pro- a deliveries on some grades, while others will have small sur- ses to offer. The trade is interested in the announcement that popular No. 2½ size, which was in light supply last year, l be plentiful this season. Record-breaking shipments are iving at San Francisco, the steamer Matsonia having arrived hin the week with 117,053 cases aboard.

The California Packing Corporation has revised the codes merly published by the J. K. Armby Co. and the California it Canners' Association, and is offering this under the name the Calpack Code. The new cipher code has been brought ictly up to date and is designed to reduce the expense of tele- aphic communication to a minimum. In addition to covering ned fruits, vegetables and fish, it embraces dried fruits, nuts, sins, and the like. Its use will date from October 1.

Spinach—The California spinach pack is moving off in good ape, and some packers now have little to offer. The No. 2 e is getting rather difficult to locate in quantities. No. 1 is be had at $1.15, No. 2½ at $1.65, and No. 10 at $5.25.

Coast Notes—The troubles existing between the Fisher- n's Protective Association of Monterey and the sardine pack- of that city are being sifted by the Department of Justice, cording to current reports. Charges have been made that the nermen's organization is maintaining a monopoly in violation the Sherman Anti-trust Law.

The first convention of Western purchasing agents ever held the Pacific Coast was held at San Francisco, Cal., the last ek in September, with delegates present representing annual rchases in the Western States of more than two billion dollars. arles E. Virden, of the Virden Packing Company and chair- n of the Industrial Committee of the California Development ssociation, took an active part in the convention, as did also alter H. Levy, of the California Packing Corporation, who ted as chairman of the Entertainment Committee.

A notice of the co-partnership of Arthur A. Burrows and C. Warmington as the Warmington-Duff Co. has been filed San Francisco. Cal. These men have purchased the interests J. F. Butts in this concern, as well as his interests in the F. Butts Co. The name of the latter concern, of which Arthur Burrows is now president, is to be changed to that of the leton Canning Co. A canning plant is maintained in the Sacra- ento River delta.

The California Packing Corporation has purchased additional roperty adjoining its large plant at Sacramento, Cal., and plans e enlargement of its cannery.

Amended articles of incorporation of the Ehmann Olive Co. ave been filed at Oroville, Cal., and the main office of the com- any will be transferred from Oakland to Oroville, where its acking plants are located.

The plant of the Pacific Pea Packing Co., at Oakdale, Cal., as been reopened for a short run on hominy. Green lima beans ill also receive attention shortly. This crop has been slow in aturing and canning operations are late in commencing.

The plant of the Syracus Canning Co., at Syracuse, Utah, as destroyed by fire on September 21, with a loss of about 150,000. A large quantity of canned peas and tomatoes was ined.

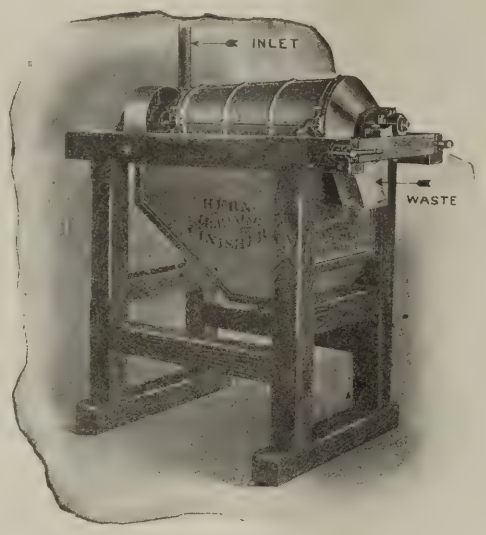
"BERKELEY."

MAINE MARKET

Can Pack Very Tardy and Many Factories Still Operating—Deliveries Not Yet Announced—Apple Canning Season Next—"Canned Lunch" to the Ladies.

Portland, Me., October 5, 1923.

A MEETING of the Maine Canners' Association was held in Portland on the 28th ultimo. Owing to the fact that the corn pack is very tardy and that many factories are still operating, the attendance was not as large as usual. Only internal matters were considered during the session, principally the increased price to be paid to the growers in 1924.



Even at this late day some of the corn-canning factories are still taking in corn, though the majority of them are closed up or are already at work on apples. The corn pack, while still very small, has proved to be somewhat larger than was earlier anticipated, and this is attributed to the warmer weather which we have had for the past three weeks. Such corn as was on high land or for some other reason was not damaged by the frost has had an opportunity to mature, and has been of very good quality, indeed. While every factory has packed corn that was too young and some that was too old, this seems to be of very small amount compared to the total up-put, and the 1923 production is generally of a very satisfactory quality. Canners have not yet announced their deliveries, but the indications are that the average will run about 50 per cent, with slightly less in one or two instances, and slightly more in the case of Golden Bantam or either variety in No. 10 size. The delivery on ear corn is rather higher than on cut corn; in fact, one large producer of this style announces practically 100 per cent on his contracts.

The apple-canning season is next on our local calendar, and several factories are already opening up for their fall run. Prices opened at $3.75, and several canners say they will take no more business at anything under this figure. Others have accepted contracts at $3.50, but are rather sick of their bargain when they come to figure actual costs of their goods. Orchardists are having great difficulty in getting help during picking, paying as high as $5.00 and $6.00 a day in some localities. One large grower sold his entire crop to a canner, then announced recently that he could not get pickers, and that the canner would have to take the apples on the trees or go without them altogether. This same scarcity of help is noticed in the factories, boosting production costs. With the quality of canned apples which Maine has lately established in the market, it is useless to hope to produce goods to sell at $3.50 and show the canner enough profit to show on his income returns.

A "canned" lunch was served by the Burnham & Morrill Co. to the visiting ladies of the N. E. Convention of Advertising Clubs, held here last week. The menu included clam broth, fish flakes a la Newburg, lobster salad, and rice pudding, with an "iron ration" of canned beans with pork and canned brown bread as a souvenir at each plate. After lunch a tour of inspection around the modern factory was enjoyed by about a hundred ladies, all being impressed with the sanitary and efficient methods used. The Burnham & Morrill Co. also had a sample of their Fish Flakes in the souvenir suitcases presented to the ladies of the convention; others packages of foods from local firms were: Golden Bantam corn, from H. C. Baxter & Bro.; Hatchet Brand beans and pork, from Twitchell Champlin Co.; sardines in olive oil, from Portland Products Co., and mustard from E. W. Brown Co., and shredded fish from Lord Bros. Co.

SMILE AWHILE

WHO CAN DENY THIS?

From the Manufacturers' Record

Hooded men who think they are Divinely commissioned to whip men and women are greater criminals than the people they whip, it matters not what their professions of goodness and morality may be.

THE RETORT APPROPRIATE

From the Washington Star

Senator Simeon D. Fess, of Ohio, who in the last ele was promoted from the House to the Senate, recalls that he was a college president he once wound up a talk to his by saying: "Remember, hell is paved with booze, joy wag jazz dancing and wild women," and sotto voce from a back as an echo came: "Oh, death, where is thy sting?"

THAT OPERA HABIT

It is a custom in small towns to refer to all classes of atrical performances as "oprys," perhaps because the playh is usualy called the opera house. Not long ago a theatrical was obliged to inspect the opera house of a Massachusetts t and found the janitor busy holding down a rocking chair, pu quietly at an old clay pipe.

"Ah, Mr. Stage Manager, just the one I want to see," ch fully spoke the visitor. "Can you tell me the name of the show you had here?"

The janitor paused thoughtfully for a minute.

"I jest can't. It's clean gone from my memory." Then, ing to someone in the rear, he asked:

"Hey, Ezry, what was the last opry we had here?"

"The last opry we had here," came the decisive answer, " Albert Anderson's trained monkeys."

TRAINED

Quite recently a woman advertised in the Times for a c taker for her town home, and after interviewing a large nun of applicants, found one that suited her.

"Thanks for giving me a job," said the man, "and mig ask you a question? You stated in the ad. that you want married man. Does that mean you have some work in view my wife?"

"Oh, no," replied the woman. "I wanted a married so as to be sure I get someone used to taking orders fro woman."

WHERE TIME IS MONEY

Housewife—What! Twenty thousand marks? I only 10,000 last time!

Shopman—Ah, that was in the good old times—half an h ago!—Ulk (Berlin).

NECESSITY HELPS INVENTION

Mr. Wye—I don't know where women acquired their extr agance in dress—Eve wasn't like that, you know.

Mrs. Wye—Of course not—there was only one man in world and she had him.—Life.

MERELY MISPLACED

"Johnny, you've been fighting again and lost all your tee "Naw, I got 'em all in my pocket."—Santa Fe New Mexi

HE KNEW THE DOCTOR

A certain celebrated doctor hated to pay his bills, and out of doing so whenever he could. One day the doctor emplo a workman to mend some pavement just outside his house. Aft wards he exclaimed:

"Why, you rascal! Do you expect to be paid for such a pi of work? Why, you have spoiled my pavement and then c ered it over with earth to hide the bad work!"

The workman winked knowingly.

"Doctor," he retorted, slyly, "mine is not the only bad w the earth hides."—Kansas City Star.

A BIBLICAL SCHOLAR

"And do you know your Bible, my child?"

"Oh, yes; I know everything that's in it. Sister's you man's photo is in it, an' ma's recipe for face cream, an' a l of my hair cut off when I was a baby, an' the ticket for p watch."—Melbourne Punch.

EDITORIAL

CONVENTIONS APPROACHING—With the active canning season very largely tucked away, and to quite good purpose for this year, the thoughts of canners now lightly turn to the State and local conventions and the gathering of the clans ereat. One by one the dates of these meetings are being announced, and the program builders are at work upon them.

The first of these meetings is that of the Western Canners' ssociation, at Chicago, the week of November 5th. Before the ening of this event, however, there will be the annual meeting the Board of Directors of the National Canners' Association the Hotel LaSalle, on Tuesday morning, November 6th, beining at 10 A. M. Among many other things of importance e Conference Committee with the Wholesale Grocers' will make report on the disposition of swells, and this very important nsideration will be given much attention by the Board. This atter is still very much up in the air, but it is hoped that after e many months of study and consideration that something finite will be decided upon—and it is our guess that the secnal warehouse plan will be the one decided upon as best apted to the canners' interest, and entirely fair to the wholele grocers. With the food authorities willing to concede this ethod of assembling and handling and inspection of the goods, can see no good reason for the wholesalers balking at it. In essence it merely means that competent, trained men will pass on the questions of spoilage, because these examinations will made by members of the National Canners' Laboratory, and is must make for more equitable and for entirely fair disposal what everyone recognizes as a distasteful matter. The wholelers make much of their morgues for swelled canned foods and e troubles and annoyances of handling them; all of which is cognized and taken into account by the canners; but the loss to nners through the mere allowance of a flat amount to cover is item is too heavy, and cannot be tolerated. The morgues ill now be located at these warehouses and the goods quickly d finally disposed of to the satisfaction of the food authorities, d to the satisfaction, it is hoped, of both buyers and sellers. any other matters of great importance will be acted upon at is meeting of the Board of Directors.

The meeting of the Western Association promises to be a al, he-man, snappy business meeting, and Secretary Lee is orking out the program along that line. These fall meetings this fine, old and influential Association are always well atnded and well worth attending. They will be held this year the Hotel Sherman, Chicago.

The 19th annual meeting of the Wisconsin Pea Packers ssociation will be held at Milwaukee, November 13th to 16th, clusive, and there will be no hotel headquarters. Following e plan of the last two Conventions Headquarters booths for rokers, machinery and supply men and others will be in Juneau nd Kilbourn Halls of the Milwaukee Auditorium. And all Meetings of the Convention will be held at the Auditorium. Plans are under way for a bigger Convention than ever before and those desiring both spaces should make application at once to Secretary W. E. Nicholoy, 720-721 First Central Building, Madison Wis.

The various Sections of this very much alive Association, including the Women's Auxiliary will meet at the same time and place, and we presume before the regular sessions of the Convention. We do not have to tell interested parties that the Milwaukee Convention is always a big one and one at which much good work is accomplished. President Hegemann will steer the meetings along business lines as they should be. And there will be amusement features to relieve the monotony.

The Association of New York State Canners, Inc., notify us that they will hold their annual meeting at the Powers Hotel, Rochester N. Y. on December 12th and 13th. This is another splendid business session of leading canners, attracting other canners, from many sections, and the meeting will undoubtedly be largely attended. Secretary Street lays out the work so that business is on tap every minute, but they know how to mix in the right amount of amusement features so that there is enough pleasure to carry the work.

There are other canners' associations yet to be heard from, but they will come along shortly, for the new year is looked forward to and preparations being made to make it one of the largest and best the industry has ever had.

About These Convention Programs—Last week we made mention of the business-like program used by the Chain Store Association at its meeting in New York City on September 20th and 21st, and since then we have been asked what the program was like. The best answer to this would be to quote some of the subjects listed for discussion; in other words here is a gist of that program.

Does the present canned foods contract meet all requirements?

Do you experience any difficulty in obtaining the one-half of 1 per cent swell allowance provided for in the contract, keeping in mind the Federal as well as the State ruling prohibiting the return of spoiled canned foods?

Has any accurate estimate of swells been made of different articles?

Eliminate soap manufacturers' coupons or insist on adequate return for handling.

The adoption of a uniform accounting system tending to reduce cost of doing business and curtailing overhead expense.

Is the chain, cash and carry grocer functioning as originally intended, no charge accounts or delivery service? If not, what are the reasons?

How are donations to church fairs, picnics and the like taken care of by cash contributions or groceries? Some uniform plan might be considered.

Advisability of issuing sales slip to customers as a matter of check for both customer and manager.

What method do you employ to have your store managers know their customers? Is not the man behind the counter the

essential element for increased sales combined with quality of merchandise?

How do your rentals compare with a year ago and which are considered the most favorable locations? Are suburbs proving good locations?

What is it costing members in different sections to do business?

What items of cost comprise the grand total?

What percentage of your cost is charged to warehouse?

In your deliveries to stores, are goods charged at retail or cost?

What is the average monthly salary for warehousemen and truck drivers?

Has the gross margin increased this year over last, or is it less?

What does it cost per ton to move merchandise, and what is the average load and longest distance hauled?

How does the character and remuneration of store managers compare with a year ago?

What is the minimum and maximum turnover in the unit stores and in the warehouse?

What is the average sale in the unit store per annum?

What percentage of your business is sugar, tea, coffee, milk, butter, eggs, flour, canned foods, cereals and miscellaneous?

Do nationally advertised articles produce sufficient returns commensurate with your advertising ability and quick turnover, to say nothing of the special salesman's expense being eliminated in purchases by you at headquarters?

What does it cost per thousand dollars of business to advertise, and which has proven the most effective and inexpensive form of advertising?

Do you observe the business courtesy of not employing store managers of your competitors or leasing stores at higher rentals?

What has been the experience of introducing meats, vegetables and fruits in the stores?

Note that this Association is young enough not to be afraid to get down to the intimate things of their business. A canners' program built along these general lines would make a most interesting and profitable meeting.

HELPING WITH YOUR LABEL

MORE canners are studying the proper wording and display of their labels right now, we believe, than at any previous time of this industry. That is a good indication, and it means that intelligence will soon show in these labels, as the consuming public demands.

This is not an especially easy task, this proper drafting of label, and we notice in the advertisement of the United States Printing Co., on page 26, showing two leading labels, that they offer to lend their help and experience without obligation. This offer should be taken up. Ask them about it, and see how they can help you. And you should not wait until you are about ready for the labels. It takes time to draft and print your labels. Give the label man a fair show. Here is just a point many canners may overlook: they offer the service—take it.

THOMAS A. EDISON VISITS ARABOL BOOTH

OF ALL the exhibits on the main floor of the Chemical Exposition there were probably few which attracted as much attention or as many visitors as that of the Arabol Manufacturing Co. This exhibit was one of the most unique in the entire exposition. It consisted chiefly of a display of products on which Arabol adhesives are used for labeling, wrapping or sealing purposes, and these samples truly represented the world's leading products, such as Budweiser, Zonite, Canada Dry, Mineralava, Valspar, Aunt Jemima and other internationally known products. Adhesives for boxmaking and shoemaking were also represented in the collection by samples from prominent manufacturers. More than 100 different manufacturers were represented in the products exhibited, and over the display was the following sign, which explained the purpose of the exhibit:

A FEW OF THE WORLD'S FAMOUS PRODUCTS THAT ARE LABELED, WRAPPED OR SEALED WITH ARABOL ADHESIVES

"There is a guaranteed Arabol Adhesive for every purpose."

The chief object of the Arabol Exhibit was to reach new fields requiring adhesives for any purpose, and to demonstrate the facilities of the Arabol laboratories. More than a thousand visitors inspected the collection of samples and presented a great variety of problems requiring the use of labeling, wrapping or sealing adhesives. Most of the visitors were chemists or executives representing internationally known firms, and not the least of these was Mr. Thomas A. Edison, himself, who had an adhes problem which his own laboratories had not been able to so successfully. Needless to say, the Arabol chemists are alre working on Mr. Edison's problem and various other propositi presented during the Chemical Exposition, and samples of hesives for labeling, wrapping or sealing have already been s to many manufacturers who presented various adhesive di culties.

The entire Arabol display shown at the Chemical Exposit has been shipped to Providence, R. I., where the Arabol Comp will repeat the same exhibit at the exposition of the Ameri Bottlers of Carbonated Beverages, to be held there from Octo 15th to 19th. In addition to the prominent products displaye the Chemical Exposition, the Arabol Company will include, the Providence display, samples of many well-known bevera bottled throughout New England.

START SHIPPING POINT INSPECTION OF APPLES

AT THE request of apple growers and shippers in section Adams, Cumberland and Franklin counties, the Bureau Markets of the Pennsylvania Department of Agricult has established shipping point inspection services in five lo ities, to continue until the close of the packing and shipp season.

The five State inspectors employed for the season are licen by the Feleral Department of Agriculture and are under the j supervision of the State and Federal officials. They are statio at Chambersburg, Gettysburg, Biglerville, Flora Dale and Y Springs.

The inspection service at these shipping points employs United States classification of apple grades which are be adopted as the standards for Pennsylvania. Inspection cer cates are issued only to those who are financially interested the handling of the fruit, such as the grower, the shipper and transportation company. These certificates are admissible prima facie evidence in both State and Federal courts.

The value of the service is in the protection given to grower, shipper and all other handling parties by reason of disinterested statement made in regard to the grade and co tion of the fruit at the time of shipment.

Pennsylvania is one of 24 States now carrying on this w Other nearby States engaging in apple and peach inspec include New Jersey, Delaware, Maryland, West Virginia Virginia.

TREATMENT FOR THE BEAN WEEVIL

A Method of Controlling and Cautions to Be Observed in C bating This Serious Bean Pest.

R. H. Pettit, Entomological Section of the Mich. Ag. Col.

THE treatment for beans, containing weevils or other ins is comparatively easy, providing the beans are in tight or barrels, capable of being tightly and quickly closed. carpets, blankets, etc., often will be found useful in helping m the bins tight.

Measure the inside of the bin, counting in the air space ab the beans if the bin is not entirely full, and place some old p or plates on top of the beans. Then put in the pans two dr of liquid carbon disulphide for every cubic foot of space in bin, and quickly close the bin. Thus a pound of the liquid suffice for about fifty cubic feet, or a little more, of space, or about fifty bushels of grain. This treatment is far more effec during warm weather than in cold. During severe cold weat the insects are dormant and resist the action of the fumes q successfully.

The bin should remain tightly closed for from twenty-f to forty-eight hours, a longer exposure being likely to injure germinative power of the beans.

The liquid carbon disulphide, on being liberated, will quickly transformed into a gas, which, being heavier than the settles to the bottom and fills all the air spaces between the se The liquid costs about sixty cents for a single pound, if p chased at retail. The work must be done in the daytime, a from lamps, stoves or fire of any sort. No fire must be allo to come near until everything has been thoroughly aired, for gas fumes are very explosive when mixed with air. The be should be shoveled over several times. Great care must be served to breathe as little as possible of the fumes, as they very poisonous and will produce death as easily among men among insects.

Carbon disulphate may be obtained of the makers at ab six cents a pound in fifty-pound drums. It is also useful killing woodchucks, gophers and other vermin. The work sh be done away from other farm buildings, since the insuranc likely to lapse during the operation.

THE SCIENCE OF SEALING

A Treatise on the Sealing of Canned Goods

THE Max Ams Machine Co., well-known makers of double-seaming machines and of the "compound" used thereon, has just issued a little booklet under the above title, and every user of a sealing machine will find it well worth having and keeping.

In the introductory they say:

Sealing Fluid and the Packer—What is a Sealing Compound? What is its importance to the packer and what can he do towards making sure of the quality of the compound used on HIS cans?

The average packer has customarily left the choice of a sealing compound to the canmaker, a matter between him and his conscience. Perhaps the reason for this has been that the packer did not fully realize the important part that sealing compound plays in successful canning—the spoilage and waste, eating into the season's profits, that can be avoided through the use of the proper sealing medium; perhaps it has been because, although realizing this, he has not felt that he was sufficiently acquainted with the subject to question the judgment of the canmaker.

Because this matter is of great importance to every packer and because it is so little understood, we tell here the story of sealing methods and mediums in the interests of the canning industry as a whole and of economy and greater returns to the individual packer from his investments and efforts.

THE OLD SOLDERED SEAM

Sealing Fluid Is to a Can What the Washer is to a Valve or the Gasket to a Cylinder Head

It is a well-known fact that to put two pieces of metal together so that the seam shall be air-tight or even water-tight is practically impossible—it could never be done in the quantities and at the speed necessary in commercial canning and packing.

What, then, is the best way to secure an air-tight seam? This is what we discovered:

Years ago, before the invention of the sanitary can, all seams were soldered. You can probably remember the old-fashioned soldered cans with their unsightly seams; the small, round caphole in one end through which the contents was forced (it was impossible to pack the luscious halves of peaches and pears or the big, round slices of pineapple as we do today), and, to avoid lecaration, it was frequently necessary to reduce the size of the pieces, or even to chop them up; the filling hole closed with a small disc and objectionable flux and soldered fast; the air exhausted through a still smaller hole which was then sealed with a drop of solder that, like as not, dripped through into the contents in small globules, like buckshot, bad for the stomach if swallowed and bad for the teeth when bitten upon unwittingly.

Little wonder canned goods were not popular. And what a tedious and involved process to go through to put a can of corn or peas or fruit on the grocer's shelf!

The New Method—Then came the sanitary can, perfected in 1896 by Charles M. Ams. This was designed to overcome the solder objection as well as to make possible the filling of the can through a completely open top.

The principle employed for attaching the ends, namely, by crimping or double-seaming them to the body, was used from the start, and has stood the test of all these years, although, of course, the machines for performing this operation were crude and slow compared with our high-speed, automatic double seamers of today.

During the early experimental period of the sanitary can a rubber gasket was used between the body flange and the end, similar to those used on an ordinary Mason jar. While these comparatively thick rubber rings made air-tight seams, there were so many objectionable features, such as the cost of material and handling and the unsightly appearance of the filled can, due to the thickness of the resulting seam, that their use was impractical.

Almost every conceivable material was tried and tested out in order to determine the best possible sealing medium considered from every angle and for every purpose. Experiments proved conclusively that by far the most satisfactory basic material for this purpose is rubber, and, further, that the cheapest, most economical and by all odds the most satisfactory way of applying it is in liquid form.

Two Solutions—Thus the problem had narrowed itself down to a question of the most suitable means for holding the rubber in solution. In working this out there were a number of factors to be considered. Most important of these was the chemical composition of the various products to be packed. Most of these contain water, but there are many of an oily nature. It was evident that the same solvent would not serve for both classes of goods to the best advantage, although our AMSCAN Sealing Fluid, designed particularly for foodstuffs, has been used with some degree of success for selling cans containing oils. However, we have now taken care of this condition with two different compounds which are described in detail in the following pages.

Our sealing fluids are the result of long study and experimentation in specially equipped research laboratories, the sole object of which was to develop the most efficient medium for sealing cans. By working this out in connection with our development of canmaking equipment in all its branches, we feel that we have handled the matter in the most logical way, and that the results we have achieved approach more nearly to 100 per cent perfection in sealing methods and mediums than any so far developed.

The Importance of a Perfect Seam—A great deal has been said and written about the importance of the double seam in modern canning practice, and it is important. Without a perfect, tight seam every other packing operation is useless. The food itself and all the preliminary work of preparing it is wasted.

But the seam itself is not all there is to sealing. The gasket between the two pieces of metal—the body and the top—is of equal importance, and it is our belief that, in many cases, the failure to obtain an air-tight seam, for which the closing machine usually receives the blame, is really due to inferior sealing fluid.

The seam and the sealing fluid are inseparable. The seam is successful only insofar as both of these elements work perfectly together.

We build double seamers, but to us a double seamer is not just a piece of mechanism nor is sealing fluid just a chemical compound—they are the means to an end—the means by which the food resources of the world are conserved and made convenient for distribution without waste from places of abundance to those where the production of foodstuffs does not equal the demand.

The Packer Feeds the World—We believe that the work of the packer is among the most important that it is given to man to do, and that it is becoming more so as the years go on. As the population of the earth increases, it is becoming more and more necessary to conserve and make the most of our food resources—any avoidable waste is little short of criminal.

In bringing the processes of canning nearer to perfection, reducing waste and loss and spoilage to a comparatively infinitesimal amount, we feel that we are working in the interest of all humanity as well as to the profit of the individual packer.

HOWARD E. JONES & CO. MOVES UP

THE well-known canned foods brokerage firm of Howard E. Jones & Co., Baltimore, has been growing so rapidly that they have had to get out of their old quarters and into new ones. These new ones are larger and better, affording better accommodations in every way. And they have gone down to the famous old canned foods brokerage corner—Water and Post-office avenue. Before the great Baltimore fire this was the heart-center of brokeragedom not only of Baltimore, but in those days of the whole country. This aggressive firm has, therefore, succeeded to all the rich traditions of the past—and in step with these holds out a hearty welcome to all to visit their new offices at 408 Water street, Baltimore.

Coffee, bulk, roasted	18—25	Pencil and Ink Tablets	33⅓
Coffee, in pkgs.	18—25		

It is worth noting that "Nuts in the Shell" carry but 15 per cent, although subject to worm and insect attack, while canned foods, every can of which is held to a strict accountability, must bear 10 to 25 per cent. In fact, you will find in this table some very interesting calculations when compared with canned foods.

THE GARNERED HARVEST

Campbell's The Optimist

WE ARE frankly unable to visualize the "mournful October" of the poet, nor can we get any sense out of that old song anent the coming of the melancholy days, the saddest of the year. October, as we see it, is the Moon of Fulfillment—the Month of the Garnered Harvest.

Throughout all the rest of the year everything that is done in the great industry of rearing the kindly fruits of the earth is done in anticipation of the Harvest. And the Harvest is reaped in September, and garnered in October.

All of the manifold powers of nature are exerted to this end. The snows of yester-winter—the rains and freshets of spring, the brooding earth, the summer sun—all are but preparatory and incident to the Harvest.

And this Harvest—this wonderful thing—is it something that has to do only with farmers and grain elevators and carloadings? Is it something that affects the producer and not the distributer? Is it a matter of supply and not of sales?

We should think that any salesman would hate to see everyone happy in Harvest time and not have any Harvest for Himself. Perhaps that's where that "mournful October" stuff comes in. Maybe that's what that dirge about melancholy days refers to.

The crop of any salesman is orders. The fact that they can be reaped with a lead pencil and garnered in an order book never prevents them from constituting a satisfactory Harvest. This is the Month of Realization. This is the Moon of Contentment. How is it with you?

BERLIN CANNING MACHINERY WORKS EXPAND

THE Berlin Canning Machinery Works, at Berlin, Wis., is building an addition to its factory, the new space adding 25,000 square feet to the present plant, giving them an area of over 60,000 square feet. The new addition will be a modern boiler and sheet-iron working shop, and is a testimony of the growth of this canners' supply firm. The machinery they produce is giving the satisfaction which produces this growth.

WHERE ARE THE FARMERS?

Where now is Farmer Silas Spuds
  Who rose at half-past two
To turn the cows at large to browse
And shake the fodder from the mows
And hitch the horses to the plows,
  As farmers used to do?
No more he hoes or plows or sows,
  Or feeds the hungry stock;
Ol' Si is down in Congress with
  The Agriculture Bloc.

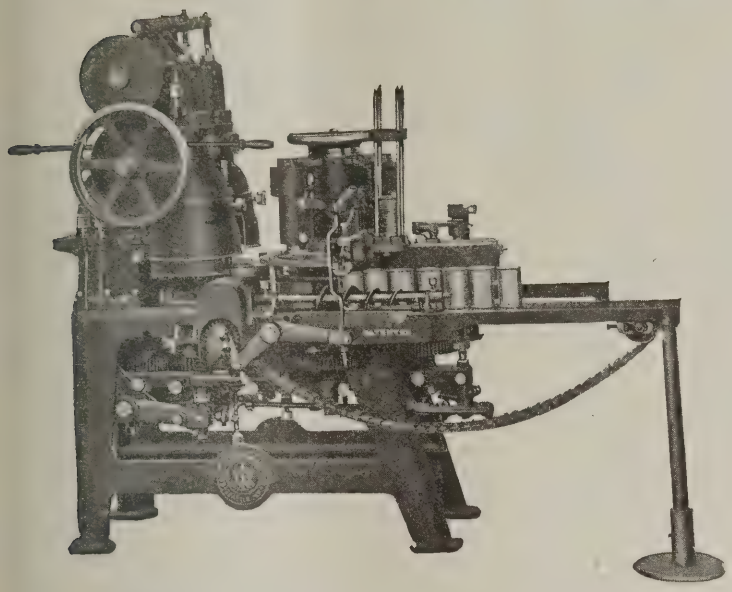
Where, too, is Granger Hirah Hall,
  Who through long winter nights
In Judson's store was wont to roar
Anent the burdens of the war
And how they're mulcting, more and more,
  The grangers of their rights?
No more about the hissing stove
  His troubles are outpoured;
He's now the leading member
  Of the Agriculture Board.

Time was when farmers tilled the soil
  From rise to set of sun;
They reaped and sowed and pruned and hoed
And worked their tax out on the road
And never rested, slacked or slowed
  Until their work was done.
But now, the news would indicate,
  They've every one been sent
To Washington, to sit around
  And run the government.

—The Optimist.

CALIFORNIA MARKET

(*Continued from page 31*)



Mr. Chapman suggests that many manufacturers are no giving traffic rates sufficient attention, and declare that if the were, more Pacific Coast goods would be marked in territor now claimed by manufacturers in the Middle West. "Let u consider the Pittsburgh field," he said. "The all-rail rate fro San Francisco to Pittsburgh is $1.28 per hundred pounds, base on a 40,000-pound minimum, and $1.05, based on a 60,000-poun minimum. But the manufacturer should keep the low water ra in mind. He should remember that for 40 cents a hundred h can land his product at Baltimore, which is the natural port entry for Pittsburgh. The local rail rate on canned foods fro Baltimore to Pittsburgh is 31½ cents, which gives him a throug rate to Pittsburgh of 71½ cents per hundred. Now, let us su pose that his strongest competitor in the Pittsburgh field is manufacturer in St. Louis. How much advantage has St. Lou over San Francisco at Pittsburgh? The rail rate from St. Lou to Pittsburgh, a distance of only a little over 600 miles, is cents per hundred pounds. The San Francisco manufacturer goods are freighted to Pittsburgh for 71½ cents per hundr and those from St. Louis for 43 cents. How much difference do this make in the retail selling price of the goods in Pittsburgh Just this difference: Take six dozen cans to represent 100 pound At 71½ cents per hundred, therefore, transportation cost Pittsburgh for the San Francisco manufacturer is a fraction le than one cent per can. The same six dozen cans cost the S Louis manufacturer 43 cents, or six-tenths of a cent per c landed in Pittsburgh. The difference is four mills per can. a dozen cans this amounts to the trifling sum of 4.8 cent Would both cans retail for the same price in Pittsburgh? Mo assuredly they would."

Coast Notes—A new use has been found for condemn canned fruits, according to press reports from Oakland, C Prohibition officers recently raided a bootleg plant in that ci and confiscated 10 000 cans of fruit. The police claim that tho operating the plant had been buying spoiled fruits from canne and were transforming it into whisky.

Walter M. Field, of Walter M. Field & Co., San Francisc and H. H. Henrici, president of the Johnson-Locke Mercanti Co., also of this city, have arranged to visit the Hetch Hetc project with a party arranged by the San Francisco Chamb of Commerce. This great water and power project will be e amined in its entirety.

Marmalade Juice and Jelly Juice from Citrus Fruits

By W. V. Cruess and Lal Singh.

From a Circular of the College of Agriculture of the University of California.

THE profitable use of cull oranges and lemons has become a problem of growing importance to the citrus industry because of the rapid increase in production in recent years. If the market for the fresh fruit is to be extended, it is necessary that the marketing of cull fruit in competition with graded fruit be prevented and that the present high standard of quality of the latter be maintained.

California normally produces more than 60,000 carloads of fresh citrus fruits annually for the market. Estimates of the amount of cull fruit vary greatly, but it represents probably at least 5 per cent of the total production, or not less than 45,000 tons. Some of this cull fruit is at present utilized in the preparation of citric acid, marmalade, orange vinegar, dried peel, citrus juice, etc., but a very large proportion is discarded or sold in local markets in competition with the graded fruit. In years when frost injury is serious, the proportion of cull fruit is greatly increased.

The writers believe that the manufacture of two products, which we have called "canned marmalade juice" and "jelly juice," would afford a profitable outlet for a large quantity of orange culls. These products are suitable for household use and for the commercial preparation of marmalade and jelly. They would save the housewife and the marmalade manufacturer the expense and trouble of preparing the fresh fruit and would insure more uniformly successful results. Our investigations show that they can be prepared at a cost sufficiently low to be marketed at a price within the reach of the average consumer. Marmalade or citrus jelly made from the canned juice is much cheaper than similar products purchased in the finished state or prepared in the household from fresh fruit purchased from fruit stores.

Citrus jelly juice, as described here, is prepared by boiling sliced oranges, lemons or grapefruit, or a mixture of any two or all of these fruits, with water, and then expressing, clarifying, canning or bottling, and sterilizing the liquid so obtained. It is rich in pectin and acid, the constituents of fruits necessary for jelly making. It is light amber in color, slightly cloudy and possesses the characteristic flavor of the cooked fruit. When concentrated by boiling with the proper proportion of sugar to the jelling point it yields a clear, firm jelly of light amber color and pleasing flavor.

Citrus marmalade juice is citrus jelly juice to which has been added from 10 to 20 per cent of boiled, sliced peel.

These products may be prepared and canned in fruit canneries or in marmalade factories.

Experiments upon the manufacture of marmalade juice were first made at the University in 1915. The results were successful, although no attempt was made at that time to investigate the details of the process. More recently one of the writers has given much of his time to a careful study of the factors involved in making citrus jellies, marmalades, and the canned juices, and has developed a method of preparing the canned juices, which, it is believed, can be applied upon a commercial scale.

The method recommended here is based upon the results of these investigations. They will be reported fully in a later publication. A brief statement of the results of the experiments having a direct bearing on the subject of this article is given herewith.

1. Unripe oranges yielded a bitter juice, as did much of the fruit gathered at the beginning of the season, even when complying with the 8 to 1 standard.

2. It was found better to cut the fruit into pieces about one-eighth of an inch thick, rather than one-quarter or one-half of an inch thick, for boiling and extracting the juice.

3. Boiling in two lots of water in successive periods of 45 minutes each gave the best results with respect to yield and clarification.

4. Pressing the boiled fruit gave a much higher yiel than straining through cloth without pressure.

5. The most effective means of clearing the juice wa found to be by settling and racking (drawing off the clea juice). Filtration through felt bags or wood pulp gave fairl satisfactory results.

6. Long boiling of the fruit or juice in copper resulte in darkening the color; boiling in aluminum and glass-line equipment did not darken the color.

7. The most satisfactory method of preparing sliced pee for marmalade juice was found to be the following: Cut of small portions at the blossom and stem ends of the fruit. Re move the remainder of the peel in quarters. Cut this length wise in very thin slices (about one-sixteenth to one-thirty-sec ond of an inch thick).

8. Lemons yielded a better jelly juice than a mixture o oranges and lemons. A mixture of equal weights of lemon and oranges, however, was almost as good and gave a produc much superior in flavor, color and general appearance to tha made from the usual mixture of 10 per cent and 90 per cent by weight, of lemons and oranges, respectively. Oranges i this large proportion darkened the color of the juice and im parted a "stale" or "medicinal" flavor. Ten per cent, b weight, of grapefruit added to a mixture of equal weight o lemons and oranges, gave a juice of pleasing bitterness.

9. It was found that the juice should contain at least per cent of pectin and a similar amount of acid.

10. Marmalade juice canned in December, 1919, whe examined in February, 1922, still retained its jelling power an the other desirable qualities.

11. Juice was found to retain its color and flavor bette in lacquered cans than in plain tin cans.

Preparation of Marmalade Juice.

1. Proportion of Oranges and Lemons.—Use equa weights of oranges and lemons. If a bitter juice is desired add 10 per cent, by weight, if grapefruit.

2. Extracting the Juice.—Slice the mixed oranges an lemons about one-eighth of an inch thick or crush in an appl grater. Add twice their volume of water. Boil 45 minutes Separate the juice by pressing or draining through cheesecloth Add enough water to cover the pulp and boil again for 45 min utes. Press again and combine the juice from the two lot and strain through cloth.

3. Clearing the Juice.—Set the juice aside over nigh in 5-gallon bottles or in a tank that will not be affected by th juice. Pour or siphon off the juice from the sediment an strain through a felt jelly bag. The juice may also be clari fied by means of a high-speed centrifuge or by filtratio through wood pulp or a filter press.

4. Concentration of the Juice.—Boil the juice down rap idly until it is rich enough in pectin to form a good jelly. I the juice is to be canned commercially, it is suggested that i be concentrated from 10 to 12 degrees Balling, cold test, equiv alent to about one and one-quarter to three and one-quarte degrees Balling test, made on boiling hot juice. Juice of thi concentration will make good marmalade or jelly when one cu of juice is mixed with 1¾ to 2 cups of sugar and boiled on or two minutes. If concentrated to 5 or 6 degrees Balling, onl one cup of sugar need be used with each cup of juice. In thi case the mixture must be concentrated by boiling to 220 or 22 degrees Fahrenheit. Strain the hot juice through filter bag or clarify by centrifuging.

5. Preparation of Peels.—Remove the peel in quarter from large oranges after first cutting off small portions fro the blossom and stem ends. Slice the peel lengthwise ver thin, if possible to one-thirty-second of an inch. Peels ma also be prepared by removing a broad band about three-quar ters of an inch to one inch wide around the greatest circum ference of the fruit and cutting these ribbons of peel in ver

London, England, 50 & 51 Lime St., E. C. 3

thin shreds about three-quarters of an inch to one inch long. Boil the peels until tender, then discard the water. Allow to drain on a screen.

6. Addition of Peel to Juice.—To cold juice (60 to 64 degrees Fahrenheit) testing 10 to 12 degrees Balling, add about twenty parts, by weight, of shredded peel to 100 parts by weight of juice, or 1½ pounds of peel per one gallon of juice. To juice testing 6 degrees Baling cold, add ¾ of a pound of peel per gallon of juice.

7. Testing.—Prepare one or more glasses of marmalade from each lot to make certain that the product will jell. If the juice is of 10 to 12 degrees or more Balling (cold test), the product should make jelly when 1¾ or 2 cups of sugar are added to one cup of juice and the mixture is boiled about two minutes. If the juice is of about 6 degrees Balling (cold test), add one cup of sugar to one cup of juice and boil to 221 degrees Fahrenheit, or until the boiling marmalade will hang in sheets from a cooking spoon. If the test shows the juice to be deficient in pectin, concentrate it to such a Balling degree that good jelly can be prepared from it without difficulty.

8. Canning and Sterilizing.—Heat the mixture of peels and juice to boiling without adding sugar and place in jars or lacquered cans while boiling hot. Fill cans completely. Seal immediately and invert to cool.

9. Recipe for Use.—The label should carry a suitable and simple recipe for the use of the contents of the can. For juice of 10 to 12 degrees Balling prepared as above this may be: "To each cup of this juice and peel add from 1¾ to 2 level cups of sugar. Skim and pour into glasses."

If the liquid is of only 6 degrees Balling, the recipe may read: "To each cup of juice and peel, add one level cup of sugar. Boil until a thermometer inserted in the boiling juice reads 221 degrees F., or until the liquid will hang in sheets (jell) when allowed to fall from a spoon."

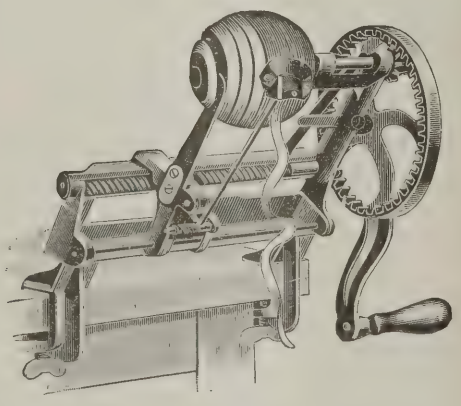
The writer prefers the juice of higher concentration (10 degrees Balling), because its use requires no previous experience on the part of the user. . .

In the preparation of jelly juice use equal amounts of for the preparation of marmalade juice, but omit steps 5 and thinly sliced oranges and lemons and proceed as directed above 6. This product is canned without the addition of the peel.

Summary.

1. The uncertainty and most of the labor of making citrus fruit jelly and marmalade in the home can be eliminated by the use of concentrated canned citrus jelly juice and marmalade juice. These juices can be prepared in canneries in the citrus-growing districts, by methods described above, and distributed through the usual trade channels. The cost to the housewife of juice and sugar to make a 6-ounce glass of marmalade or jelly will not exceed five cents. The canned juices are also suitable for use in the preparation of marmalade and jelly upon a commercial scale.

2. The jelly juice is prepared by boiling sliced oranges and lemons (equal weight of each) with water and pressing, followed by straining, settling, drawing off the juice from the sediment, filtering, and concentrating by boiling. The juice is filled boiling hot into lacquered cans and sealed at once. Marmalade juice is prepared in the same manner, except that thinly cut boiled peel is added at the time of canning.



3. A higher yield of pectin is obtained by the use of fruit cut to one-eighth of an inch in thickness or less than from that cut one-quarter of an inch or thicker.

4. Boiling for an hour and a half is necessary to obtain a maximum yield of pectin. The juice is more easily cleared and the yield of pectin is increased if the fruit is boiled and leached with two lots of water for 45 minutes in each case (a total of one and one-half hours).

5. The juice should contain at least 1 per cent of acid and pectin, respectively.

6. The writers believe that canned marmalade juice and to a less degree canned citrus jelly juice possess sufficient merit to make their commercial production worthy of serious consideration by canners and manufacturers of citrus by-products. Their production should afford a profitable means of utilizing fruit canning equipment during the winter and spring months.

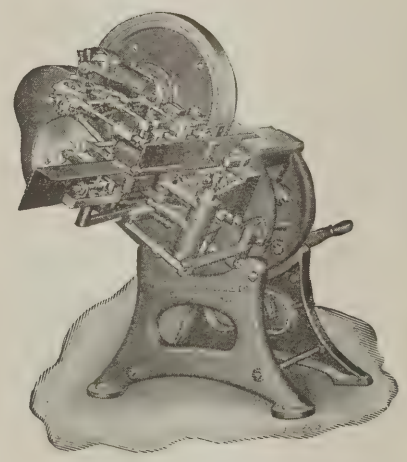
The Human Factor

Is Factory Management Becoming Too Domestic?



By A. Leslie Wilks, in the Hosiery Trade Journal

THERE is this difficulty that always besets the employer who desires to act justly towards his workpeople: He seldom gets to know exactly what they think about any given reform or suggested innovation. Self-interest and jealousy are powerful factors in every phase of human life, and it is only too often the case that where the operatives are themselves consulted, their real desires are obscured by what is sometimes designated "the rule of the majority"—in reality, in only too many cases the rule of a few fadists anxious to try experiments or a few sychophants determined to bring themselves into the notice of the powers that be.

It is probably true of the vast majority of the operatives that they desire nothing more than to earn their wages in the least possible space of time and in the easiest way, all other interests in common with the business which provides them with a livelihood being summed up in the expectation that it will be successful and so continue to provide them with a weekly packet as long as they live. But of intelligent interest in the organization of the business and of the thought and care expended to keep it going there is none. Not only is there none, but it is never considered for a moment that there is a call for any. It must be admitted that in too many instances the ordinary operative has little chance of making a useful suggestion in any direction, even when access to the principal is readily available. His or her own particular sphere is so restricted that a comprehensive view of even a section of the organization is more than can usually be obtained. There is another reason, too. There is a mistaken sort of esprit de corps in most factories which restrains the operative from making advances to the management in any such direction. It is born of the spirit that wages, hours and conditions conform to the rules laid down by and for the majority. Making useful suggestions to the management is a means to secure preferential treatment and is, therefore, not to be considered by the good trade unionist. The operative, in short, is employed by the management, but has no further concern with the firm beyond doing the work allotted and drawing the wages assigned for it.

Consider, in contrast with this, the position of the employer. By innumerable Acts of Parliament, by-laws, and trade union regulations, his course from day to day is mapped out for him—the wages to be paid, the conditions under which work shall be carried on, the hours to be worked, the plan of the factory, and so on. There is no need to make a catalogue of the restrictive conditions which nowadays hedge round factory production. Every employer is only too familiar with them. There are so many of them that he cannot remember them all, so a thoughtful State provides an army of officials, who constantly visit him to ensure that he does not shut the window or does not open it, as the case may be. There is no need to complain about the officials. Social legislation calls for officials, and plenty of them.

No. 32 Automatic Strip Feed Press

This Automatic Strip Feeding Press is adaptable to the rapid and economical production of can ends or other articles made from tinplate or light sheet metals up to 4'' round or square. The feeding mechanism is entirely automatic giving an output of from 60,000 to 100,000 a day and is arranged so that change gears may be utilized for handling from 3 to 20 cuts to the strip and stock up to 29'' in length. The positive action of feed not only allows a high capacity, but insures an accurate register for decorated work. As on all our automatic presses an improved friction brake is provided which does not engage crankshaft until clutch is released. To prevent damage to dies, press is equipped with a recent improvement which automatically stops the entire mechanism when conditions are not entirely regular. Standard equipment includes attachments for one size only with exception of dies. Attachments for additional sizes can be promptly furnished at extra cost.

NEW YORK

Human nature constantly craves to follow its own inclination; and when the State begins to interfere in any direction, nothing but the ceaseless vigilance of officials can curb this inborn spirit of mutiny.

This article is not a dissertation either for or against the tendency of modern factory legislation or of the "new spirit" in factory management. It is only an attempt to call attention to certain effects. In addition to the legislative restrictions and trade union rules to which he is subjected, the employer (as was shown in the previous contribution) is being imbued with the idea that he must also act as a father to his people.

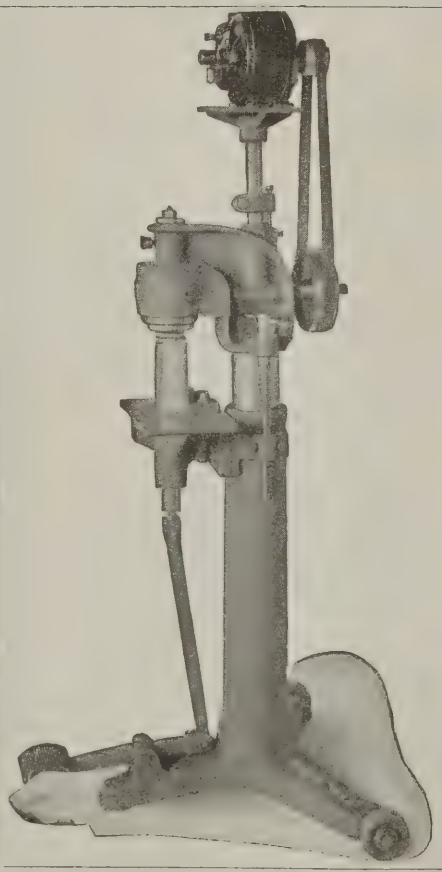
It is here that employers are probably making a mistake which will cost them dear in the not distant future. Successful legislation never precedes, but always follows, the collective sense of the nation; and a paternal philanthrophy which is at present indulged in from a sense of good-fellowship, or from a desire to pose as an enlightened industrial administrator, may in due time become a compulsory brake on the industrial machine. The operatives already regard the factory as a place whose conditions of work should be regulated by themselves.

If employers are not to be entirely engulfed in the quicksands of collectivism, they must cease to encourage the spirit that makes for it. Factories are places to work, and nothing should be allowed to interfere with the strictly businesslike application of that principle.

There is no reason why the employer as such should consider himself responsible for the spiritual welfare of his workpeople, or why he should go out of his way to establish conditions of work that make his operatives' moral texture soft and flabby. There is no need for the employer to be harsh, domineering, or unsympathetic; but there is need for him to guard against the tendency of the age toward "equality and fraternity" in the factory—a tendency which is doing more than anything else to breed among the work-people of this country unrest, discontent, and an utter dependence on the State for everything they require through life.

CHEAP INSURANCE

Canner No. 1—"George, I have just got a bill from the N. C. A. for quarterly membership dues. I haven't paid it yet, and don't know that I will. I don't think that I get much return for my money."



Canner No. 2—"Say, Bill, let's look into that last statement of yours a little. I once felt the way you do, but I've learned my lesson. I consider membership in the N. C. A. a most valuable kind of business insurance."

Canner No. 1—"How do you figure that out, George?"

Canner No. 2—"Well, you pay — per cent for insuring your automobile against fire, theft and claims for damages, don't you? You pay — per cent for fire insurance on your cannery; and do you ever doubt the value of that kind of insurance?"

Canner No. 1—"I should say not!"

Canner No. 2—"Well, Bill, don't you appreciate that membership in the N. C. A. is only another form

Can You Clean Your Pea Filler?

What Will You Do If Inspectors Demand That You Take Your Filler Apart Every Night?

Sanitary laws require that the dairyman must take his cream separator apart every night in order that it may be thoroughly cleaned. Why? Because inspectors realize that in no other way can it be cleaned properly. Why should not the canner do the same with his fillers?

One of the causes of spoilage in canned foods is due to the inability of thoroughly cleaning and sterilizing the filler. This is neatly taken care of in the Hansen Filler, it being the only filler that can be quickly and completely taken apart for cleaning without the use of tools. The feed hopper, upper and lower measuring cups with auxiliary parts are all held together by gravity and can be easily taken apart by one operator while standing on the floor at the back of the filler.

Ease of cleaning cannot be over-emphasized as it is extremely important. With other fillers it is almost impossible to disassemble them, consequently operators go through the entire season without taking the machine apart, allowing peas to accumulate in the corners to sour and rot, especially in the measuring cups and brine tank. The Hansen Filler is always clean and wholesome and is the only filler that really conforms to the sanitary laws and is truly a SANITARY filler.

Probably the greatest forward step ever taken in pea filler sanitation was made when the BRINE TANK was ENTIRELY ELIMINATED on the 1924 Model Hansen Filler. Open exposed brine tanks serve as traps to collect dirt, flies, and filth and are never thoroughly clean.

Hansen Canning Machinery Corporation
Cedarburg, Wisconsin.

of insurance? Think of what the research on botulism and the solving of that menace to the industry has meant."

Canner No. 1—"Oh, well, botulism never affected my product."

Canner No. 2—"That's all right, Bill; but do you realize how the fear of botulism was bound to affect the sale of all canned foods, if the danger had not been promptly checked? Why, back in 1919 and 1920 some of the local food and health authorities were threatening to place embargoes on all canned foods."

Canner No. 1—"That's true, George; but that trouble is over, now."

Canner No. 2—"Wait a minute, Bill. Haven't you ever had a letter from some woman, claiming to have been made ill from eating some of your canned foods, and threatening suit or exposure if you didn't pay her damages?"

Canner No. 1—"Yes, I had one last year, and I finally paid her a hundred dollars, just to keep her quiet."

Canner No. 2—"I don't believe you realize, Bill, that the Association has gone further in its efforts to remove prejudice against canned foods than simply to run down these so-called ptomaine-poisoning cases. The ptomaine theory is out of date, and the fact that canned foods are as wholesome and nutritious as foods cooked in the home has been fully demonstrated. A large share of the credit for this work is due to the N. C. A., which not only has carried on research work for that purpose, but has published the results broadcast. It has endeavored, as far as possible with its present organization, to look out for misstatements regarding canned foods, principally in papers, magazines, advertising, and in textbooks used in schools and colleges, and to furnish by correspondence or personal interviews with the authors, editors, etc., correct information.

"In the case of food and health officials, the Association is endeavoring to keep them posted on the subject of canning and canned foods by furnishing them with a special list of publications in which they have manifested unusual interest, and from which they are asked to select such publications as they desire for reference."

Canner No. 1—"That's all true, but does that work reach the ordinary consumer, or help to increase the consumption of canned foods?"

Canner No. 2—"Bill, there is no question about it, but, for direct consumer appeal, think what has been accomplished by such popular publications as 'Canning and How to Use Canned Foods,' the Marion Harland, and F. J. Haskin canned food recipe books, and such articles as 'How to Open a Can,' 'Storing Food in the Open Van,' and 'Nutritive Value of Canned Foods,' by advertising campaigns such as the annual Canned Foods Week, and the canned foods exhibits at the annual conventions.

"Remember that there is no problem connected with the canning industry on which the N. C. A. does not stand ready to help you. Its headquarters in Washington bring it in close touch with the various Government departments, and such questions as income taxes, proper labeling, transportation, foreign trade and army and navy purchases are promptly and effectively handled for its members."

Canner No. 1—"Well, you are certainly a good salesman, for you have sold me on this proposition, both as a question of insuring my business and as a part of my duty to the industry. A national organization of canners, I believe, is absolutely necessary. It is up to each one of us to get into this organization and make it what we expect it to be—thoroughly representative, efficient and progressive.

"Just wait till I sign this check for my dues and I will take you out to lunch."

PLANTS REQUIRE FEEDING

IT IS gratifying to know that the editor of so important a livestock paper as the Breeders' Gazette has such a clear conception of the fundamentals of soil fertility. In a recent issue he had the following to say:

"All soils that have long been under cultivation are depleted in varying degrees. Some of them are incapable, if fertilizers are not applied to them, of producing crops that in quantity or quality are worth growing. If inferior seed, which is commonly used, be planted or sown in impoverished soils, profitable yields cannot be expected under average economic conditions, even if the season be exceptionally favorable, the best of cultivation practiced, harvesting flawlessly accomplished, and marketing done to the best possible advantage.

"Plants, like improved farm animals, require generous, intelligent feeding in order to produce merchantable grades and uniformly large yield of grain, foliage, fiber or root crops. On most farms the inferior seed used is committed to poor soils, and whether the season be good, medium or bad, the resultant plants commonly are slatternly cultivated and similarly harvested. Being inferior in quality, the matured crops fall automatically into low or 'cull' market grades, and, hence, realize minimum prices. No system of marketing, whether it be farmer-controlled commodity co-operative, or the existing system under the control of non-agricultural interests, can ensure 'the cost of production and a fair profit' to the growers of inferior crops. It is clear, therefore, that the 'marketing problem,' which farmers are paying thousands of hard-earned dollars to orators, lawyers and politicians to solve for them is, after all, a production problem. It is a soil fertility problem.

"Practically all soils that have long been cropped are deficient in certain plantfood elements. Plants in these soils grow weakly and slowly on unbalanced, deficient or inadequate rations, have a low resistance to insect and disease attacks and climatic hardships, and yield low-grade products. Where they are fed liberally with fertilizers, plants from improved seed grow rapidly and robustly, are high in their resistance to insects and diseases, endure most ordinary climatic hardships, and return large yields of excellent quality. The most profitable types of farming everywhere are based upon soils which will give to plants an abundant, balanced ration. Those who would feed their plants must apply green, animal and chemical manures to their land."

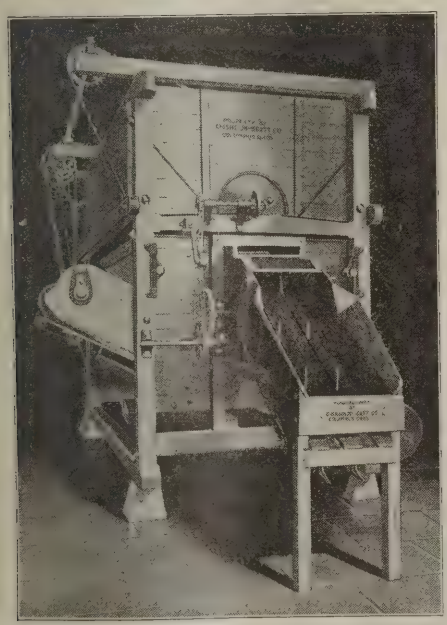
METHOD, NOT MAGIC, WINS IN FARMING SANDY SOILS

FARMING on the lighter types of soils offers problems that sorely tax ability and resourcefulness, and that often seem insurmountable. A commendable effect to assist farmers on sandy soils has been made by the Pennsylvania Railroad in their work on a demonstration farm near Howard City, Mich. After seven years of experimenting, this company has evolved some definite recommendations that point the way to profitable farming on these soils, and which, in the words of their agriculturist, Mr. D. L. Hagerman, constitute "a tested method of building and retaining soil fertility with profit." The first step in the method or system is the establishment of a rotation of crops adapted to the climate and soil conditions found. This rotation is called the "Keystone Rotation," because it is, in fact, the keystone upon which the whole method depends. This rotation is as follows:

First Year—Peas and oats seeded to sweet clover.
Second Year—Sweet clover seeded to rye and vetch.
Third Year—Rye and vetch reseeded to rye and vetch.
Fourth Year—Cultivated crops seeded to rye and vetch or peas, and oats with sweet clover, clover or alfalfa.

The advantages of this rotation are enumerated as follows:

First—A legume crop is grown on the land at least three years out of four.



Second—The ground is nearly always covered by a growing crop, thus preventing severe losses of fertility and humus due to leaching, blowing and erosion during spring rains, summer drouths and winter windstorms.

Third—The entire growing season is utilized by planting the spring seeded crops early in the spring and those for fall growth late in the summer.

Fourth—The crops selected are sand-loving, drouth-resistant ones, palatable to livestock and adapted to the climate.

Fifth—Very little plowing is necessary, never more than every other year, and seldom more frequently than every three years.

Concerning the use of fertilizers and manure, Mr. Hagerman says: "The majority of sand land has been cropped until it contains little or no humus. Its mineral elements have leached out till there remains little else of the soil than finely pulverized rock.

"Commercial fertilizers provide an economical and successful means of returning these missing elements and thereby establishing successful stands of legume or grass crops. The investment per acre in the application of commercial fertilizer is small, and the immediate returns invariably pay back the initial cost and net above 100 per cent profit over a four-year rotation.

"Fertilizers are the most practical means of paying back to mother earth the minerals of which she has been robbed by years of careless farming. A high-grade complete fertilizer should first be used, followed by the use of good acid phosphate as the legumes, green manures and stubble are plowed under and the amount of livestock kept on the farm increases.

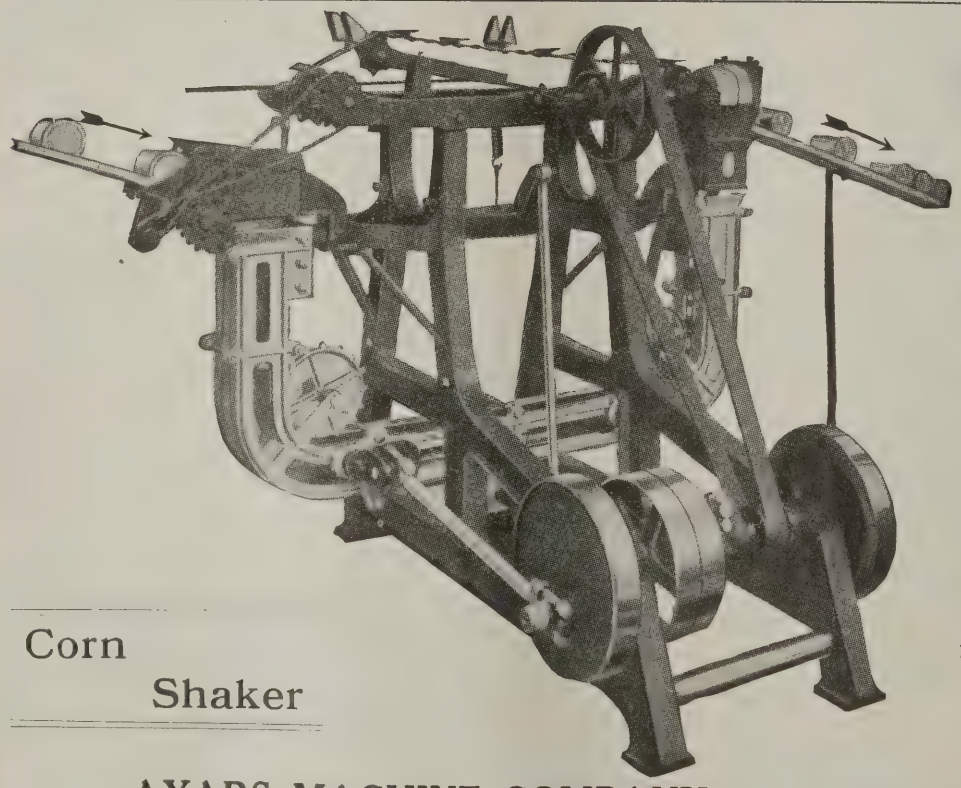
"Careful conservation and use of stable manure is most essential and should be applied each spring on the cultivated crops or new seedings. However, most farms in the lighter soil areas are undersupplied with livestock, and the belief that the fertilty of the farm can be built up and maintained without the use of commercial fertilizer at present prices is usually unfounded."

THE SQUASH BUG

A Method of Combating This Garden Pest

R. H. Pettit, Entomological Section of the Mich. Ag. Col.

EVERYWHERE one hears more or less of the large squash bug, sometimes called the "stink-bug," which attacks melons, cucumbers, squash, pumpkins and other vines of this type. The squash-bug pierces the leaves, stems and vines, sucks the juices, and is likely to carry the infection of disease such as wilt from plant to plant.



Unfortunately, we have no spray that acts effectively as a repellant nor one which can be used to kill the bugs on the vine.

These squash-bugs are over half an inch long and nearly black in color. They hide under the leaves and are very quick in their movements. In the absence of an effective spray or repellant, one is forced to trap them, and this is not an especially difficult matter.

Squash-bugs seek shelter at night and will crawl under bits of board placed in the field during chilly nights. Place a few pieces of boards or shingles around the vines, simply throwing them on the ground here and there. In the morning visit these traps very early, before the air has time to become warmed by the sun, and turn the boards over. Sometimes one will find forty or fifty squash-bugs clustered on the underside of a piece of board no larger than a shingle. They can be readily jarred off in a bucket of water on which is floating a little kerosene.

Nicotine has an effect, to be sure, and no doubt dust would do some good, but its effect is not at all lasting and it will be necessary to dust the vines very often in order to keep them free from the bugs.

One finds clusters of their large red eggs on the leaves, and it will usually pay to crush these eggs wherever they are found. All vines should be buried or destroyed by fire just as soon as the first frost comes, in order to destroy the breeding place where the young bugs develop late in the season. These bugs collect around the crop remnants, and when cold weather sets in they crawl under fallen leaves and rubbish and feed until spring. The destruction by fire of all fallen leaves, such as those that collect in fence corners and in brush, will greatly reduce the number of squash-bugs by destroying their winter quarters.

Corn Shaker

Black Discoloration in Corn.

Mr. Corn Canner :-

If you are troubled with Black Discoloration in your corn here is a remedy--use our Corn Shaker.

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

THE 1923 DIRECTORY OF CANNERS

A list of the canners of the United States, compiled by the National Canners' Association, from Statistical Reports and such other reliable data. 14th Edition.

Carefully prepared and up-to-date; lists corrected by canners themselves; verified by competent authorities. The various articles packed and other valuable information is given. Distributed free to members of the National Canners' Association. Sold to all others at $2.00 per copy, postage prepaid. The book that is needed by all wholesale grocers, brokers, machinery and supply men, salesmen, and practically everybody interested in the canning industry. Get your order in early.

NATIONAL CANNERS' ASSOCIATION, 1739 H St., N. W. Washington, D. C.

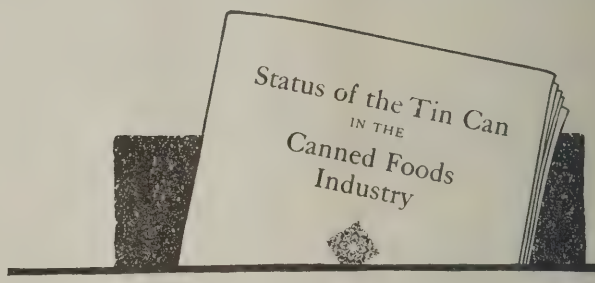
PERSONAL CHECKS ACCEPTED

Are people familiar with your brand?

Goods well displayed are half sold, and actual tests prove that good looking counter displays (silent salesmen) will positively increase sales.

How many brands of Canned Goods are actually called for by name? And isn't it true that crowded shelves confuse the purchaser so that the grocer's suggestions are usually accepted.

Why not let people become familiar with your label and ask for your brand by name? An attractive counter display will bring your can off the shelf down on the counter where it can be seen by everyone entering the store.



We have made a study of this subject and originated some particulary successful displays. May we plan one for you?

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, OCTOBER 15, 1923

WEEKLY REVIEW

The Tomato Canning Season Is About Closed for This Year—Thanks to Our Crop Correspondents—How Other Sections Fared With Tomatoes—Tomato Prices Tending Upward—Scarcity of Corn Better Realized—String Beans Good Property—Fruits Advancing.

THE SEASON WANES—The whole country has not ceased to look toward this season with inquiring eyes as to what is being done in the canning of tomatoes. Maryland and this Tri-State region received so much advertising this season as having a fine tomato crop that most of the inhabitants of the hinterland seem to think that they are still canning tomatoes here in immense quantities, and that the land is still red with this popular vegetable. You can find no one in this Tri-State territory that thinks along that line, for most, if not all, canners have been done their year's work for sometime. There are some tomatoes still coming to market and some canners have been receiving a few in the counties, but the tomatoes that have been driven through our streets lately and have come to our wholesale market are poor things to look at—the small, half-grown fag ends of a bountiful crop, about unfit for anything. Possibly they appear poorer than usual in contrast with the really wonderful quality that signalized the tomato crop this whole season.

We have had a peculiar condition this fall. The weather has been unusually cold for this time of the year, back over the past two weeks, and yet there does not seem to have been any frosts worthy of the name; at least, tender flowers and other plants appear unhurt, as a rule. It has been cold enough for furnace fires and overcoats; the dews have been very heavy, and there have been light frosts in most sections; but the season has not been ended by frost as it usually is. Therefore, we say the season is waning. But you can understand that tomatoes have not been able to develop under such cold weather conditions. In fact, loads of green tomatoes have been brought to town and sold to the home-makers of chilli and other pickles. So far as the canning of tomatoes this year is concerned, the word "Finis" may well be written.

We would like to take this occasion to thank the many contributors to our Crop Column this season. It has been generously contributed to, and, we know, has been read with interest and profit by all our readers. There are many who have taken much help and information from this and given nothing in return. Let them remember that they are indebted to this column next year, and let them join heartily in the service when next season rolls around.

As showing the conditions in their respective localities, we append two letters, recently received, the first from Ironton, Va., under date of October 1st, and which reads:

> "Canning season at Ironton over. One-third of a pack is all we get this year. Wet weather and late planting are responsible for the failure. Last year was a poor year. This season is the limit. We got only 1,300 cases, as against the usual 8,000 cases. The Canning Trade comes with correct information to Roanoke, R. D. No. 1, every Monday morning."

The second comes from Clever, Mo., under date of September 28th, and says:

> "Relative to tomato condition in Clever, Mo., territory, will say that the pack will run around 50 per cent of normal. The pack has gradually fallen off since September 5th, at which time we usually have our heaviest run, up to about the 15th. We have made one little run this week amounting to a few hundred cans.
>
> "So the pack has been practically over since September 10th to 12th. We are barely filling our future orders. I think this is a fair sample of the entire country."

Almost every market reports the tendency of canned tomato prices as upwards and offerings very limited. On the other hand, it can be said that the jobbers are showing no anxiety to buy, but are paying the price when they want them. From California to the East all holders of tomato stocks are holding them at steadily increasing values, but we have no market changes to record this week.

CORN—It is beginning to be noised about that corn may soon find itself in the same condition as tomatoes—not enough to supply demands. It is known that Maine cannot deliver more than half its expected amount, and the buyers, scurrying to other sections for lots of fine corn, have cleaned them up, as the surplus over futures was nowhere heavy. It is difficult to hold any advance in the corn market, because as soon as a little advance is seen, there are always many ready and eager to take it, and the advance is knocked down before it can establish itself. There is need of more confidence among corn canners. There are no changes in prices this week.

PEAS—The stocks of peas are getting so small that there is little left even to talk about, and this market, so far as the market reporter is concerned, is deadly dull. Here is what the Grocer Supply Co., of Wausau, Wis., said in its most recent circular:

> "Every item on the Wisconsin canned foods list is in a very strong position; no weak sisters. Last week we listed five lots aggregating about 6,000 cases (the largest lot we know of in Wisconsin) of Alaska peas. The five lots were all sold Monday (the next business day after the letter went into the mail), and could have been sold many times over. Wisconsin canners will inventory very few peas this year. Sauerkraut still occupies a very strong position, both bulk and canned. We are list-

ing a few beans this week. Don't overlook them. There are mighty few beans left in canners' hands. Corn is firm and in good demand. No. 10 corn is nix. There will be no surplus beets."

BEANS—The fall string bean crop is not likely to be a very good one in this section, as it has been dry and cold all during the past month and more, and this condition is not conducive to a good yield. The baked bean canners and e canners of red kidney beans are much worried over the injury the bean crops this season and the uncertain market ahead of em. They will soon know the result of this injury, but just w they are badly worried.

Anyone who has any stringless beans knows he has good operty, and is asking full prices. Lima beans promised to be big pack this season, as the crop generally has been first rate, d more canners are now handling them than ever. They con- nue to rule low in price, and the public will now have a chance learn how good lima beans are in cans. In this way the can- rs will benefit by the good packs of this season. When the blic learns that it can buy limas at a figure better than peas, will eat a lot of limas, and like them. No. 2 fresh limas are oted here at $1.20; pole lima beans at $1.40. There are no anges to note in bean prices which can be found on their reg- ar page.

SPINACH—This was to have been the big week in fall spinach canning in this city, and there have been some fine loads of this vegetable come to town. It has been too dry and too ld, however, for the best interests of the crop. It tried to rain is week, but there was not enough to lay the dust. No. 3 spin- h is quoted at $1.30.

SWEET POTATOES—It is said sweet potatoes are attracting attention, as the market consumption of this article in cans is rapidly growing. The cafeterias find this vegetable sells ry readily, and they like it for their service. Good sweet pota- es in cans are very good, and a poorly canned product had bet- r be left uncanned.

FRUITS—Fruits are showing signs of greater firmness, and California, after following its promised plan of canning little or nothing over future orders, has been withdrawing one ticle after another, and advancing prices with each withdrawal. ruits of all kinds will be very much better property as time es on. Even apples may get into this class. At present they re too near the absolute cost figure to tempt canners, and this ing so, the canners are wise not to touch them.

NEW YORK MARKET

obbers Slow Up on Buying to Examine the Market and to Make Deliveries—Tomatoes Tending Upward—Tomato Puree Higher—Maine Delivering Corn Short—An Active Demand for Peas—Fruits Show Strength—Notes.

New York, October 11, 1923.

THE General Market—While there has been a noticeable pause in buying of canned foods during the past several days, the market has not lost any of its strength, and the rice tendency continues upward on many lines. Jobbers have ought enough of most varieties to take care of their immediate equirements, and are slowing down in their operations tempo- arily to get a line on the situation and get out shipments to eir retail trade before proceeding further.

Tomatoes Still Headed Upward—Buyers are rather uncer- ain about the tomato situation. They do not know whether the arket has steadied, or whether it has just paused for breath efore continuing on its upward journey. Prices for immediate hipment from Maryland factory are quoted at 60 to 65 cents or 1s, 90 to 95 cents for 2s, $1.30 to $1.35 for 3s, and $4.75 for 0s, with most interests talking a $5.00 market on this size in he near future. Many California canners have withdrawn from he market, which is now nominally held at $1.15 for 2½s in uree, and $4.00 for 10s in puree, with solid pack 2½s at $1.65, . o. b. cannery. The market for tomatoes in Indiana is very strong, with most of the packers giving notice of pro-rata deliveries ranging from 40 per cent and upward. One factor early this week was quoting Indiana 3s in a small way at $1.70 per dozen, factory.

Puree Higher—Maryland tomato puree is showing more strength, reflecting the general strength of the tomato market. No. 1s are quoted at 60 cents, with 10s at $4.25 to $4.50, f. o. b. Indiana puree packers quote fancy 10s at $3.75 to $3.85, f. o. b. cannery. Buying is reported to be fair at these prices.

Short Corn Deliveries—Maine canners are delivering short on all grades this season. One prominent packer has just notified his trade of 40 per cent delivery on fancy Crosby and 50 per cent delivery on fancy Golden Bantam. Deliveries of as high as 65 per cent on fancy Crosby are reported from other canners, however. As a result of this scarcity of fancy Maine corn, there is a growing demand in this market for fancy corn of other packs.

Standard Corn Active—Southern canners continue to quote standard corn for prompt shipment at 95 cents per dozen, f. o. b. cannery. There is a good demand for the corn on this basis. Mid-western packers are quoting the market anywhere from 87½ to 95 cents, as to pack and brand.

White-Meat Tuna Fish Advance—There has been an active demand for white-meat tuna in the local market during the week, and prices are higher. Halves are now held at $12.25 in the local market, with ones ranging $23.00 to $24.00 per case, according to brand and seller. Reports from the Coast note a general scarcity of white meat. The canneries are still operating, packing yellowfin and skipjack, caught in the waters of Southern California and shipped to the canneries at San Pedro under refrigeration. There is a good demand for the low-grade tuna as a result of the scarcity of white meat.

Crab Meat Is Higher—Japanese crab meat has shown further advances, reflecting the stronger statistical position of the market as a result of the loss of stocks held at Yokohama during the recent earthquake. The market is now held at $38.00 for 1s and $40.000 per case for halves.

Pea Demand Active—While the trade is still wondering where this year's heavy pack of peas has gone to, they are also still in the market for additional stocks. Very little is offering in first hands, and Wisconsin canners continue to quote the market at an inside price of $1.30 per dozen. Canners with surplus stocks on hand have very limited assortments to offer, however.

Pineapple Is Stronger—New pack sliced Hawaiian pineapple is showing a stronger tone, both on spot and for Coast shipment. Standard sliced 2½s are quoted at $3.10 per dozen, with extras at $3.40 to $3.50. Demand is reported to be steady on all sizes. While the pack this year is running approximately a half million cases ahead of the anticipated yield, some pro rating has been necessary, and leading factors are withdrawing from the market.

Low-Grade Fruits Advance—There has been a material strengthening in the market for low-grade canned fruits on the Coast. The market for good quality seconds peaches is now held at $1.50 to $1.55, f. o. b., with seconds apricots still available at $1.35, f. o. b. California. California holdings of low-grade fruits are light.

Assortment Broken—As a result of the good demand for canned fruits this season, as well as the curtailed packing operations in several quarters, many of the larger California packers are not longer able to offer full assortments to their trade. Lines are broken and jobbers have to shop the market to pick up fruits for their full line under private label.

Cheap Salmon Sells Well—There has been a good volume of business in pink salmon booked on the Coast during the past week, this buying clearing out all of the pinks available under $1.20. This price is now prevailing in some quarters, although most of the holders continue to quote firm at $1.25. The smaller packers are booking business on reds at $2.25, but the Association and the other large factors are quoting firm at $2.35, f. o. b. Seattle.

More Discussion on Swells—Two days of conference between committees representing the canners and committees representing the wholesale grocers are scheduled for next month in Chicago, at the semi-annual meeting of the Western Canners' Association. Members of the trade are looking for some definite solution to the swells problem to come out of these meetings. The National Wholesale Grocers' Association is now conducting a referendum among its members on the various plans which have been advanced as a solution of the problem. Retail grocers in New York are firmly committed to the percentage allowance plan.

Pumpkin Pack Short—Reports from Indiana state that the pack of pumpkin this year is small, and canners are advising their regular trade to cover on their season's requirements as soon as possible. Extra standard is quoted at 97½ cents for 3s

in s. e. l. tins and 90 cents in plain tins, with 10s at $2.75 in s. e. l. and $2.50 in plain. Fancy dry pack is held at $1.15 for 3s in s. e. l. and $1.07½ in plain, with 10s at $3.50 in s. e. l. and $3.25 in plain, all prices f. o. b. cannery.

Now Ashenfelter-Balfe Co., Inc.—H. H. Ashenfelter, Inc., local brokers, have changed their firm name to Ashenfelter-Balfe Co., Inc. The company has opened an office in Philadelphia under the firm name Ashenfelter, Balfe & Moore, Inc. The Philadelphia office will be handled by Mr. Moore, formerly associated with the Philadelphia office of Butler & Sergeant, Inc.

Sardines Continue Scarce—Maine sardines are showing continued strength an all grades, a good demand being reported. Offerings are scarce, and packers have practically no reserve supplies on hand to take care of business later on in the season.

Notes—Harry Montague, of the Valetia Evaporated Milk Co., canners, of Madison, Wis., was in the market this week, stopping with Edwards & McCann, Inc.

The Seacoast Canning Co.'s New York office is now located at 41 East 42nd street having been recently moved from the old U. H. Dudley & Co. building at Varick and Watt streets. Melville F. Taylor, in charge of sales for the company, is now on a trip to principal distributing markets.

F. H. Verseman, of Warmington, Duff Co., Chicago office, was visiting with Warmington, Timms & Co. this week.

Ivans Pettit, Burlington, N. J., canner, was here this week, visiting P. E. Meyer Co.

"NEW YORK STATER."

ST. LOUIS MARKET

Prices Tending Upwards—Buyers Continue Small Purchases—Tomatoes Moving Higher—Corn Seems to Be Short—Offerings of Peas Taken Quickly—Missouri Will Can a Good Many Apples.

St. Louis, October 11, 1923.

THE Market—The canned foods situation continues along the same lines as heretofore. Jobbers are reluctant to buy as they should, although there is an advanced tendency on all the offerings. Buyers are not very much worried, it seems, and continue to purchase in the usual small quantities to take care of their immediate wants.

VEGETABLES—Tomatoes—New pack tomatoes continue to advance in prices. For prompt shipment from the country canners, the market is holding firm. Canners, according to advices received here, have about given up any idea of cheap offerings this season, of a heavy surplus over contracts, and a desire to get rid of any excess stocks, if they have any, before it is time to place them in storage. Prices have been going up for some time, and they are constantly increasing. It looks as if tomatoes will be distributed over a greater territory than ever, because stocks have been bought at Western jobbing centers, which, as a rule, take their goods from canners nearer to home. It is more difficult, some brokers report, to confirm, even at full asking prices. Not only does the South turn out a moderate pack, but there is a lack of surplus in other tomato States. The strength of the market, which began to be felt about the middle of September, continues.

Canners regard the chief distributing influence as pertaining to the extent of the supples, which are more limited, it is said, than the average jobber realized. Packers believe that first hands will run out of merchandise earlier in the season than usual, and that distributors will have to depend on resale lots. According to this view of the situation. it is said there are empty warehouses or light stocks everywhere in retail as well as wholesale lines. Without the protection of contract merchandise these factors will be forced to make replacements later on at whatever the market happens to be at the time the goods are wanted. Vegetables, as a class, are more favorably regarded than fish or fruits, although the trend of late has been for a better tone in fruits and to some extent in fish.

Corn—Reports from canners in certain territories state there is going to be a shortage in corn. This applies not only to Maine, but to New York State as well. Varieties of corn that matured early, so the frost did not hurt it, will be in good quantity. However, all grades of corn are holding good.

Peas—Peas in the cheaper grades are not offered freely. When there is a chance to buy them, they are taken up quickly. Fancy peas are more available than other grades, but their prices are being maintained.

Fruit—Distributors are limiting their purchases on California fruits. No new developments are reported from the Coast.

Pineapple—Some pineapple is moving, but only in limited quantities.

Apples—More interest is being shown in apples, as the firmness of canners, as to prices of new packs, creates confidence.

FISH—Salmon—Not much interest is being shown in salmon, as distributors are not inclined to buy ahead very freely.

Sardines—It is more difficult to buy sardines at inside prices, according to information received here, as canners have but little surplus and see no prospect of a pack heavy enough during the rest of the season to stock up. Deferred shipments are of common occurrence, as all styles are in light supply.

In spite of the Missouri apple crop being only about one-half this year, compared with last season, there will be lots of apples canned in this State is the consensus of opinion of the best informed. The Missouri commercial apple crop outlined is 614,000 barrels this year, again 1,250,000 barrels last year and 30,000 in 1921, according to the report of the Missouri State Board of Agriculture. Jonathans, more often raised than other varieties, are 58 per cent condition and 77 per cent quality. Grimes Golden, 64 per cent normal and quality 79 per cent. York Imperials, 48 per cent of a full crop, quality 70 per cent. Ganos, 61 per cent normal crop, 74 quality. Ben Davis, next most popular Missouri variety to Jonathans, are 50 per cent of a full crop, 71 per cent quality. Ingrams, mostly grown in southwest, are 44 per cent of a crop, quality 76 per cent.

The commercial crop in the United States is 33,300,000 barrels in prospect, compared to 31,090,000 in 1922 and 21,557,000 barrels in 1921. New York has slightly less crop than last year, Pennsylvania and Maryland have increased, and Virginia and West Virginia very much more than last year.

"MISSOURI."

CHICAGO MARKET

Market Satisfactory in All Lines—Very Little Surplus for Spring Carryover—Iowa Corn Entirely Sold Up—Buyers Scent High Prices and a Scarcity of Goods—A Snappy, Businesslike Convention Is Promised.

Chicago, October 11, 1923.

THE market for canned foods is in a very satisfactory condition from the canners' standpoint, as prices are firm, with an advancing tendency on most all articles, and the yield or output is such that there will be very little surplus for canners to carry over into the spring.

Tomatoes—Indiana tomatoes, for No. 10 size, have advanced to $5.50 per dozen, and there are only a very few lots in the State still unsold. No. 3 standard tomatoes, f. o. b. Indiana, are held at $1.50 to $1.55, and No. 2s are held at $1.00, and the canners are not anxious sellers at even those prices, but appear to be indifferent as to sales and will not accept offers below the quoted prices.

Corn—In canned corn, Iowa is holding standard corn at 92½ cents to 95 cents for No. 2 and $1.00 for extra standard. There are some sellers in Iowa of canned corn, but altogether the State is said to be sold up entirely. Some of the canners will have to deliver short; others have a small surplus. Sales, reported from the Secretary's office of the Iowa-Nebraska Canners' Association, are aggregated at about 80,000 cases per week, which will, in a few weeks, clean up everything in the State in the way of canned corn. A little standard canned corn can be bought in Indiana and Illinois for 90 cents per dozen, and I heard of a sale of Ohio standard corn made this week—a small lot—at 85 cents, f. o. b. cannery. It was represented to be standard, but I did not see samples.

Peas—In canned peas, the market is very spotted, and though Wisconsin packed an output nearly as large as last year, her output is well sold up, and orders from the wholesalers are difficult to place. Especially is this the case as to standard peas, which are held firmly at $1.25 to $1.30 per dozen, f. o. b. Wisconsin canneries.

Apples—Michigan is packing some apples, and is now work- on the late winter fruit, for which her canners are asking 50 per dozen for standard and $4.00 per dozen for extra heavy ght apples in the can. There is a very fair demand for canned les, as the market had gone bare of stock.

Watching the Market—Deliveries of tomatoes, peas, corn, , bought on future contract by the wholesalers, are now arriv- in large quantities, and the wholesalers are busy discounting ir bills and taking up their drafts and distributing the goods he retail trade to which they have been sold. Despite the fact t they are very busy, however, buyers are giving careful at- tion to the offerings of brokers, showing that they are pos- sed with an anxiety in relation to the future of the market, I feel that prices are going to be higher and that goods are ng to be scarcer.

Salmon and Sardines—The active season for the sale of ned salmon nd American sardines is about over, and the de- nd for these articles will settle down from now forward to nimum requirements. Red Alaska salmon is regarded as com- atively high, and the cheaper class of consumers is taking k salmon in lieu of red Alaska, because it is retailed at about f the price.

American sardines, which are being retailed two cans for 15 ts, or 10 cents straight, are a little beyond the views of con- ners at the price, but, nevertheless, being about the cheapest icle in canned fish obtainable are meeting with some sale.

Beans—There is an urgent demand for graded whole Refuge ns, green and white, and the brokers are unable to find suf- ent quantities in the hands of canners to supply the demand. ch as are to be found are held at high prices. No. 2 cans, No. ieve, $2.50; No. 2 sieve, $2.25; No. 3 sieve, $1.90, f. o. b. Wis- sin canneries, and the offering at even these prices are quickly pped up.

Dried Beans—The price on Michigan dried beans fluctuates ost daily, the latest quotation being $5.90 per hundred pounds, . b. Michigan elevators, and it is predicted that they will be er when harvesting is a little further advanced, as a large p has been grown in Michigan.

This will encourage the winter canning of pork and beans, l should furnish a large volume of canned foods to consumers very low prices.

Kraut—Canned kraut is being firmly held at $1.10 cannery No. 3 cans, spot or future.

Beets—Canned beets are scarce, and but few are being cked. Our buyers will have to go to Baltimore for their ned beets.

Pumpkin—The offerings of canned pumpkin are few and ited. A much larger quantity of canned pumpkin was sold future delivery than supposed. The Grimes Canning Co., at imes, Iowa, has sold about one hunderd car loads and are now pping it.

I do not hear much from sweet potato canners of the South, d am wondering if they, too, have sold up to their capacity. ey do not seem to be making any effort to get orders. Neither there any pressure to sell canned shrimp or oysters from the uth or elsewhere.

The Convention—Preparations are being made to hold a appy and businesslike convention by the Western Canners' As- ciation at Chicago in November.

The addresses are going to be practical and informing, there ll be no unappreciated entertainment features to take up valu- le time, no civic formalities or ceremonial welcomes and no nister has been invited to say an invocation or make an ad- ess of inspiration.

The canners will have to get along without such invocation inspiration unless one of the editors of the canning papers esent might be induced to officiate.

I fear, however, that the result would be like when a magis- ate performing his first marriage ceremony. He said: "I now onounce you man and wife, and may God have mercy on your uls."

The Convention proper will be held November 7th, 8th and h, 1923, Hotel Sherman, Chicago. The rates of one and one- lf fare cover the two preceding days, November 5th and 6th, 23, which two days will be used for conferences between the g National Associations of canners and distributors. The rates one and a half fare cover practically the entire United States d part of Canada.

"WRANGLER."

CALIFORNIA MARKET

Market Definitely Firmer—Small Orders Eating Steadily Into Supplies—No Foreign Business—Tomatoes Are Firmer—Small Canners May Not Deliver in Full—Some Apples Will Be Canned—Withdrawals on Apricots — Freight Rates More Pleasing—Coast Notes

San Francisco, October 11, 1923.

THE Market—The market for California canned fruits and vegetables is definitely firmer, and withdrawals are being made steadily, which indicates that buying has not been as light as some might believe. There has been little foreign business booked, and individual domestic orders have not been large, but there have been a lot of the latter, and they have counted up. There is now scarcely a weak line in the entire list of California canned products, and the prospects are very bright for an extremely close cleanup. Some of the smaller packers who named opening prices well below those of the larger interests are holding their unsold surplus at the prices quoted by the latter, and believe that they will have no trouble in disposing of their holdings at these figures.

Tomatoes—A market firmness exists in the canned tomato market, and there is a likelihood that some packers will be unable to make deliveries in full. Light rains have fallen in the tomato-growing districts, and while the actual damage has been light, the cool weather that has followed has slowed up the ripening process, and the pack is not mounting up very rapidly. The California Packing Corporation recently made advances on its full line, and No. 2½ standards are quoted at $1.15. Later No. 10 standards were advanced from $3.75 to $4.00, and shortly afterward were withdrawn. Eastern buyers are in the market for California tomatoes, and quantities will be shipped by way of the Panama Canal.

Apples—The few firms in this territory which pack apples are giving this fruit their attention, but the output will not be large. The crop is of good size, and growers complain that returns are inadequate. But about $18 a ton is being paid for Newton Pippins and Bellefeurs, with red varieties bringing a little more. The low price, however, is not proving an incentive for the making of a heavy canned pack.

Apricots—The steady demand for apricots in the No. 10 size has whittled down available stocks until most packers have but limited stocks to offer. Several of the large concerns have made withdrawals in choice, standards and seconds in unpeeled and in sliced. In the No. 2½ size there is a scarcity of choice in peeled fruit and of standard in sliced.

Cherries—Stocks of canned cherries are getting down to low compass, and there are many blank places in the lists being put out by leading packing firms. Scarcely anything is to be had in No. 2½ water goods, and black cherries in the No. 10 size are hardly to be had in any of the grades. Standard black and white cherries in No. 2½ cans are also scarce.

Better Freight Rates—Transportation facilities and rates to the Atlantic seaboard are now very much to the liking of California canners, and not a few are making preparations to extend their market on products which have in the past been difficult to market there, owing to price completion. John W. Chapman, Pacific Coast manager of the Williams Steamship Co., Inc., recently commented on the low freight rates, and expressed the opinion that but few, even among the live manufacturers in this territory, really appreciate what the prevailing rates mean to them. He stated that there are now sixteen steamship companies, operating more than one hundred and sixty vessels between the East and the West coast. Each vessel makes about four round trips a year, so that there is an average of more than two sailings a day, with freight capacities of 18,000 tons. The rates are on a parity, being the same from any Pacific Coast port to any Atlantic Coast port, and vice versa. The entire list of canned food products is included in the rate of 40 cents per hundred pounds. The rail rate on 100 pounds of canned foods from Visalia to Stockton, Cal., a distance of 163 miles, is 40 cents, while a packer may ship the same quantity from San Francisco to New York, through the Panama Canal, a distance of 5,262 miles, for 40 cents.

SMILE AWHILE

WHEN PATIENCE CEASED

Father was very long-suffering, but his nerves sometimes gave way under the strain of constant questions from his quick-witted, talkative seven-year-old son.

"Dad," said Thomas, just as father had settled down to read in peace—"Dad, it says here 'back to the dust.' Am I made of dust?"

"I think not, Thomas," answered his father. "If you were you'd dry up now and then."

ALMOST REPEATED

Of two friends staying at a hostelry where most keys fit most doors, one went off to bed, undressed, and turned in, mistaking his friend's room for his own. Half an hour later the friend followed, saw his bed occupied and returned to the coffee room.

"Did you see me go to my room just now?" he said to the night porter.

"Yes, sir," was the reply.

"Well, then, why didn't you tell me I'd gone to bed already?" he grunted, and proceeded to finish the night on a chair in front of the fire.—Yorkshire Post.

WARNING NOTE

When a man shows no passing interest in beautiful women generally at a brilliant affair, it's a sign he'll come out of the coma right after he marries THE one girl.

A STINGING RETORT

There was a determined look in the young lady's eye as she marched into the optician's shop.

"I want a pair of glasses immediately," she said. "Good strong ones. I won't be without them for another day."

"Good, strong ones?"

"Yes, please. I was out in the country yesterday, and I made a very painful blunder which I have no wish to repeat."

"Indeed! Mistook an entire stranger for an old friend, perhaps?"

"No, nothing of the sort. I mistook a bumble bee for a blackberry!"—Pearson's Weekly.

PROOF

"Are you sure he loves you?"

"Absolutely. He objects to my bathing suit."—Life.

IN HIS OPINION

Maisle was showing off her new evening frock. "Don't you think it rather becoming?" she asked.

Her young brother eyed it with misgiving. "It may be coming, but some of it seems a bit late in arriving," he said.—Pearson's Weekly.

ONE OF HOW MANY.

One of a party of men left his corner seat in an already crowded railway compartment to go in search of something to eat, leaving a rug to reserve his place. On returning he found that, in spite of the rug and the protests of his fellow-passengers, his seat had been usurped by a woman. With flashing eyes, she turned upon him:

"Do you know, sir, that I am one of the director's wives?"

"Madam," he replied, "were you the director's only wife I should still protest."—Pearson's Weekly.

NOT SO DENSE.

"I think that children are not as observing as they should be," said the inspector to the teacher.

"I hadn't noticed it," replied the teacher.

"Well, I'll prove it to you," and, turning to his class, the inspector said:

"Someone give me a number."

"Thirty-seven," said a little boy eagerly.

The inspector wrote 73 on the board and nothing was said.

"Will someone else give me a number?"

"Fifty-two," said another lad.

The inspector wrote down 25 on the board and smiled at the teacher. He called for another number and young Jack called out:

"Seventy-seven; now see if you can change that."—Public Opinion, London.

THE CANNING TRADE

THE JOURNAL of the CANNING and ALLIED INDUSTRIES

Established 1878

l. 47 BALTIMORE, OCTOBER 22, 1923 No. 9

EDITORIAL

UST Buy Crops By Grade — The wonderful demand for canned foods, and which has taken the packs of 1923 almost entirely out of canners' hands this early in the year, has n ascribed to the improvement in the quality of the packs, and htly so. Taken as a whole the industry has never in its tory packed as uniformly high quality goods as it did this son. Possibly we should rather say that never before have many canners—the great majority of the whole—determined n such a procedure and carried it out, as they did this year. whole level of quality has been materially raised, and the ners are even now reaping the benefit of better demand sed by more satisfactory goods.

It is hoped that this lesson has sunk deeply into the being every canner and will be the basis of his operations in all ure years; for if it has, the future of this industry may be said nave been made.

But with this striving for improved quality in the pack, there st come attention to many other matters, not least among m the quality of the raw products coming to the factory. It l be impossible to produce always acceptable quality if the raw ducts continue to be bought on the hit-and-miss plan, take-at-the-grower-brings-you method. It i a trite saying, in s industry, that you cannot get quality out of the can unless put quality into the can. For years, and possibly even to-, in some men's minds, 'canning stock' meant that stock from farm or garden which could not be sold in the market. The at canners are somewhat to blame for this reputation, as y make much of that grade of beef or other meat which is nd but old and tough, and therefore will not bring the top-rket price among butchers' stores, but is the very best kind cooking and canning, because it has more flavor and strength l the cooking makes it tender. Cattle of this kind are quoted the stock markets as "canners," and the term has gone on to its and vegetables. The canners have changed this to a very ge extent and now most canners demand, and get, prime qual- of fruits and vegetables, and all of them must do so if they pect to pack quality goods. The difficulty hinges with the owers. In some lines the growers have learned that it pays to se quality crops—as in peas, for instance, because they "get re" for their crops if they run largely to the finer grades. e California canners, this year, told the fruit growers that they st have high-grade fruits and they moved up their "standards" eral degrees. Fortunately California has a Market Director o recognizes the right of the canners in this and supports m, and sees that the law—for they have a law—is enforced. ner States are not so fortunate, and if market-stall prices are ing higher than canner contract prices the canners must take erything" or go without. And the canners have often been den rough-shod in this way, forced to accept on his contract ls and "scalds" and tailings of the crop which the average rmer would hesitate to feed to his hogs. And the canners, ring to offend the grower and to lose him as a grower the next season, have not been able to defend themselves against this dishonest practice.

On the other hand, the growers have often brought the canners extra fine quality, and it has all been run in at the average contract price, and the grower resents this.

Our readers know that there has been a movement on foot, by the Government, to standardize raw products and thus do away with both of these complaints—paying the farmer a premium for finer goods and giving the canners the kind of quality they want. We believe that every Canners' Association in the country should get behind this movement; discuss it thoroughly before their meetings, and lend their support to the Government in establishing proper standards. The Government is not trying to be dictatorial in this; they are anxious to fix these standards on a basis that will meet the approval of both growers and canners, and they are asking help from the canners.

Mr. Chas. W. Hauck, Investigator in Marketing, Bureau of Agricultural Economies, U. S. Department of Agriculture, believes that tomatoes should be the first article handled, and he has written, explaining the whole matter in a way that will prove most interesting to every canner.

He says:

Washington, Oct. 16, 1923.

"Mr. A. I. Judge.

Dear Mr. Judge: I regret that you were not in when I called at your office in Baltimore a few days ago, as I desired an opportunity to discuss with you the matter of purchasing raw stock on the basis of standard grades.

This Bureau has undertaken a study of this phase of the canning industry in an effort to determine the advisability of establishing Federal grades for cannery crops, beginning preferably with tomatoes, since this is one of the most important crops grown for cannery purposes. Official grades have already been formulated for fifteen fresh fruits and vegetables, thus providing a basis for contracts, sales, inspections, adjustments, etc., in the marketing of these commodities, but prior to this time no effort has been made to make these grades applicable to the requirements of the manufacturer of canned foods. Obviously the problems differ materially from those involved in the commercial packing of fresh fruits and vegetables.

There is little question as to the desirability of standards. If tomatoes could be bought by the canner on the basis of grade and a price paid for this raw stock that is commensurate with the quality delivered rather than on a flat average basis, a few of the canner's problems would undoubtedly be on the way to solution. It it recognized that these crops often show wide difference in quality, condition, maturity, etc., due to varying climatic, cultural and soil conditions as well as to the different degrees of care employed by the growers in handling the mature fruit. The value to the canner of a given lot of tomatoes is reflected directly by these differences in quality, and consequently it is impossible to

establish a flat price for a ton of tomatoes in a given section that will be just to the canner and to the grower under all conditions. Standard grades founded upon these variations in quality would provide a common language with which to describe each indiviual lot of tomatoes and would furnish a basis for establishing gradations in price corresponding to variations in quality. It seems reasonable to assume that such grades would be of material assistance in promoting fair and equitable business relations between the canner and the grower, since similar results have followed the adoption of practical grading plans in connection with the marketing of other commodities. Furthermore, the very fact that the delivery of high quality tomatoes would bring greater returns to the grower than one of poor quality, could not fail to encourage the improvement of cultural and handling methods, thereby raising the average quality of the crop in the territory in which these grades were used.

Although considerable work has been done by this Bureau in formulating standards for the grading and marketing of fresh fruits and vegetables, nevertheless since this is the first attempt to provide Federal grades for cannery crops, we shall be guided very largely by the advice, suggestions and information furnished us by those interested in the industry and familiar with its problems and commercial practices.

It is hardly to be expected that the grower of cannery tomatoes would use these proposed grades as a basis for separating the lots of different quality before hauling to the cannery. It appears to me that the canner is much more likely to use them as a basis for sampling the loads as they come to the receiving platform, thereby fixing the value of each lot. It is my impression that the canner ordinarily does not want the load sorted into more than one grade; he wants the culls left out, of course, but as a rule he is not prepared to handle lots of different quality separately, and the individual loads lose their identity immediately after being unloaded at the receiving station or platform.

The careful and conscientious grower would profit through such an application of these grades by receiving a return commensurate with the large amount of first quality tomatoes and the scarcity of culls in his load. On the other hand, a delivery of poor quality could be quite justly discounted in direct proportion to its actual value to the manufacturer. The canner buying on a grade basis would thus be enabled to secure tomatoes at a cost more nearly equivalent to their actual value.

Numerous difficulties may be anticipated in putting into effect a workable plan of grading raw stock. In the first place, there will have to be developed a method of sampling that is easy, quick and accurate, and that would not require an exceptionally high degree of technical training for its use. This brings to mind the possibility of frequent disagreements between the grower and canner as to the actual grade of a given load of tomatoes if the sampling is done by either party. Perhaps sooner or later it may be wise to provide for a system of inspection that would be entirely impartial, the cost of which would not be out of proportion to the service rendered and which would be promptly available in case of need. This Bureau now has in operation a nation-wide fruit and vegetable inspection service, the purpose of which is to determine, upon request of shipper, receiver, broker or other interested party, the quality, condition, grade, etc., of lots of fruits and vegetables, either at the terminal markets or at shipping points. It is altogether possible that if sufficient need and demand arose, the scope of this Government inspection service might be extended to include the inspection of cannery crops at delivery points, so that in cases of dispute the final grade determination might be placed in the hands of an impartial and competent inspector clothed with Federal authority.

Within a short time I hope to have some definite recommendations to make, both as to the wording of the standards themselves and how they may be put into effect. It must be understood that Federal grades for cannery tomatoes promulgated at this time will be only in tentative form and will be subject to revision if necessary in order to make them dovetail with good commercial practices. I propose to submit these standards to representative canners and growers for their criticisms and suggestions, with the expectation of being thereby enabled to improve the tentative draft considerably. I shall then give these tentative standards considerable publicity among the trade. If a number of manufacturers will adopt them as a basis for their 1924 contracts, it will provide us with an opportunity to observe next year how they work under actual commercial conditions.

I shall endeavor to keep you informed of the progress of this movement, as it is one of considerable importance to manufacturers of all canned fruits and vegetables and their by-products. Doubtless if the establishment of grades for tomatoes meets with success, it will be an encouragement for us to undertake a similar course in respect to other cannery crops. I shall appreciate any comments you care to make on this subject or any suggestions that occur to you as to the actual wording of the standards themselves.

Very truly yours."

C. IRVING KROH DEAD

THE industry in this section received a distinct shock when it was learned that one of its very active members and one who was rapidly making a name for himself had died suddenly. Mr. C. Irving Kroh, of Silver Run, in Western Maryland near Westminster, was brought to the Maryland University Hospital to be operated upon for appendicitis, and died under the operation on Saturday, October 13th. He was buried at home at Tuesday, October 16th.

Mr. Kroh's history is a most interesting one. He was a young man, about 40, and had been in the canning business less than ten years. He began as a small home-canner and the ridicule of his relatives and neighbors only stirred him to increased efforts and to the determination to make good at canning. His first and last aim was quality, and on that basis he built that small business a few years ago, amounting to but a few hundred cans per year, steadily upward, improving and extending his factory and increasing his output, until at the time of his death he had one of the best appointed factories in the business turning out upwards of a hundred thousand cases of goods yearly. During the war he made money and spent it in these factory improvements and built himself a veritable mansion nearby. In fact, he admitted that he went a little too fast in that, and when the slump came in 1920-21, he found himself somewhat pinched. But he set his shoulder to the job and last year showed marked progress, and those who ought to know say that he would have been clear and far ahead of his game with this season's operations had he lived. His was one of the most meteoric careers we have noted in the canning industry and his trouble was through no fault of his and solely because the unforeseen turn in the canned foods market, following the war, caught him as it did so many others. He was a quiet, unassuming little fellow, spoken of as the soul of honesty by all who dealt with him—his word as good as his bond, and he had begun to attract attention of the Association workers and to be put upon various committees. He told the writer when he first began that he intended to build his business on quality and to build it big, and he did just what he promised. The pity is that he could not live to enjoy the fruits of his energy and honesty and farsightedness.

JOHN HALLOWELL HEADS NUBIAN MYSTERY

Portland, Me., Oct. 11, 1923.

Dear Judge:

I have some awful good news in store for you, and I shall want to use some advertising in your valuable paper, and I want you to come right down on earth with your price to help a poor fellow out.

You know it has been years since the good Nubian Mystery started in Louisville. Kentucky. John J. Hallowell, of the T. A. James, Inc., of Philadelphia, is now its president, and a notice published by you to the stockholders of the great Nubian Mystery Company that they better get in touch with its president, as it is soon to declare another dividend, will be interesting.

I am just undecided at this time as to what space or method we will take to expose this long "sort for" enigma. but rest assured we have something good, for we never speak until we are spoken to.

With kind personal regards, I am,

Yours sincerely,

E. M. LANG, JR.

THE SWEET POTATO OUTLOOK

By John S. Dennee

Agricultural Statistician, United States Department of Agriculture, Bureau Agricultural Economics, Division of Crop Estimates.

THE outlook for sweet-potato growers and shippers is somewhat brighter than last season, when the heavy supplies caused low prices. Indications are for a total crop of 96,350,000 bushels, or 12 per cent below last year's production, and 2 per cent less than the 1921 crop. Largest proportional decrease is in the Northeastern section, where production promises to be cut about one-fourth. Compared with last year, very important decreases are noted in Delaware, New Jersey, Maryland and Virginia. Since one-half to two-thirds of all the sweet potatoes shipped to consuming centers come from those States, this cut will, of course, enter largely into the market situation.

The crop in the Northeastern section, however, is still 2,000,000 bushels above the 1921 production. The 10 Southern States expect about 15 per cent fewer sweet potatoes than last year, and about 9 per cent less than two seasons ago, their estimated crop being slightly above 76,000,000 bushels. In the Central district, Illinois, Kentucky and Missouri show some increase over the 1922 crop.

Georgia resumed first place this season as to volume of estimated production, and Alabama dropped to second place, followed closely by the Carolinas and Mississippi. Because most of the Southern sweets are consumed locally, the States leading in carlot shipments are Virginia, New Jersey, Delaware, Maryland and Tennessee.

Total shipments last season broke all records, reaching 21,574 carloads.

Movement was somewhat delayed this season, and to October 6th was nearly 1,450 cars behind last fall's output. Eastern Shore of Virginia has shipped about 225 carloads less than to this time last year, and other States are lagging. During the past week Virginia furnished 334 carloads, New Jersey 90, Maryland 53, and California 60 cars. The volume from the Eastern Shore alone has been 70 per cent of the total movement.

Shipments increased gradually during September, but as the liberal supplies in most markets caused price declines, shipments have decreased since week ending September 22nd, and last week were reduced 10 per cent, to 604 carloads. During the same week a year ago shipments filled 864 cars.

STANDARDS FOR SEED AND SHOW CORN

By J. E. Metzger and F. W. Oldenburg.

University of Maryland Extension Service.

INTRODUCTION.—A sample of show corn generally is representative of the variety and type which the individual grower prefers. Individual preferences, however, do not always represent the best interests either of a community or of an individual grower. To have as few types and varieties as possible facilitates not only the production of pure types, but the marketing of the commodity as well. Under the Federal Grain Standards Act, corn is either white or yellow, or it is mixed. A single wagon load of mixed corn in a car of otherwise uniform grade would make the entire lot grade "mixed corn," to the loss of the shippers concerned.

The main value of fairs and shows is their tendency toward standardization of the products grown and exhibited. The improvement in the quality and type of the corn exhibited in recent years in our community shows, our county fairs, our State corn show, and in the exhibits sent to the International Grain and Hay Show, has been unusually noticeable. The standards suggested in this bulletin are applicable to, and represent, the Johnson County White and Reid's Yellow Dent varieties as grown in Maryland. These varieties are adapted to most of the corn-growing sections of Maryland.

Chief Points to Observe.

General Quality—Firm, mature, sound and bright. The ears of corn must be ripe when husked, and dry when put on exhibit. To be sound, they must be free of disease of kernel or cob, and the kernel must be free of injury by mice or weevil. Avoid dull lifeless cars in making the selection.

Color—Uniform shade throughout. Yellow corn with white kernels or white corn with yellow kernels should be avoided. Ears of deep color should not be included in the same sample with ears of a lighter shade.

Shape of Ear—Nearly cylindrical. Most ears of corn have a slight taper. All ears in a sample should taper uniformly.

Length of Ear—From 9½ to 10½ inches. These measurements are the longer and shorter limits for corn exhibited at the International Show. They apply likewise to corn exhibited in Maryland except where provision is made for corn grown in the mountain district. For this section, the ears may be as short as 7 inches.

Circumference of Ear—Three-fourths of length. This measurement should be taken at a point one-third the distance from the butt to the tip of the ear. It is not advisable to use ears which have a circumference less than three-fourths of the length. A fraction over this circumference may be acceptable.

Number of Rows—18 to 20. In local and State shows where allowance is made for corn grown in the mountain district, the requirements permit 16 or 18 rows.

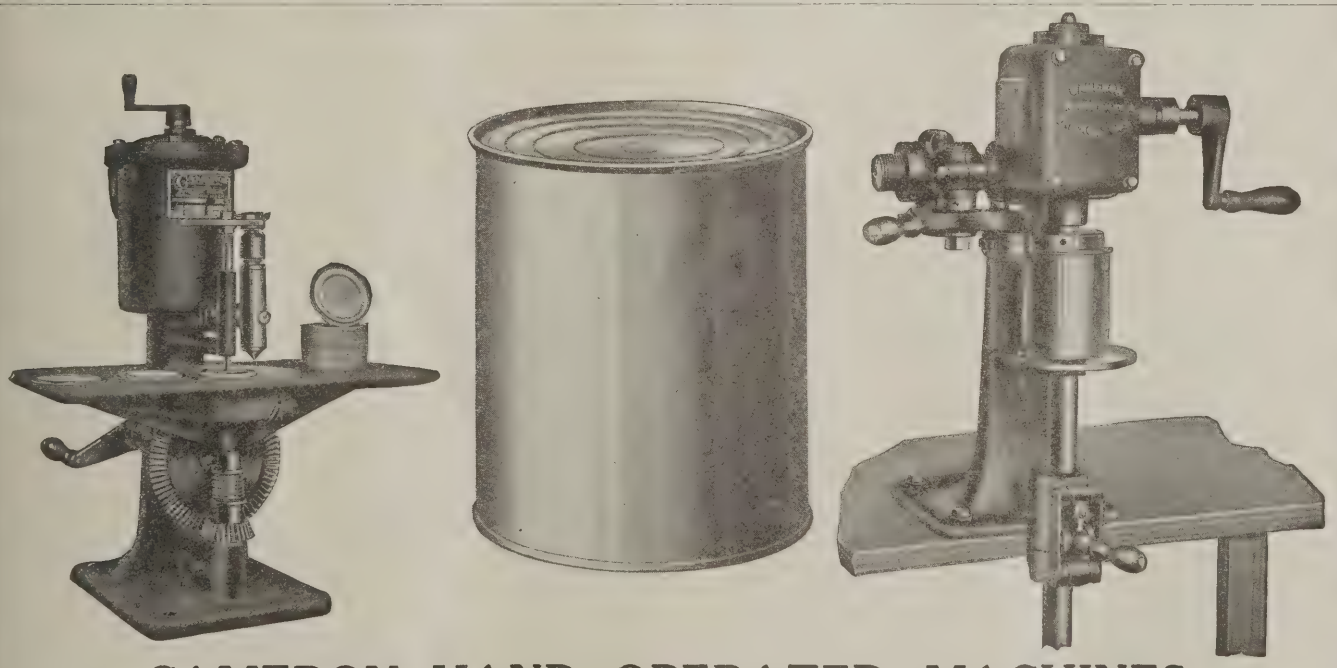
Shanks—White, clear, not shredded or discolored.

Kernel Shape—Width about one-half of depth with depth one-half to five-eighths inches. Extremely thick or thin kernels should be avoided.

Indentation—Medium. The edges of the crown of the kernel should be pinched, and when dry should nearly close over the cup. They should not be sharp, rough or form a hook or barb. Kernels that are characterized by a dimple or rounded dent are shallow.

Kernel Texture—The back of the kernel—the side opposite the germ—should be clear, horny and not "starchy." The layer of white starch at the top of the kernel should not be excessive. A "starchy" ear is light in weight and color. Starchiness in corn is reflected in reduced feeding value and yield.

Sanitary Cans for 1924.



IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,

A SWELL'S A SWELL, FOR A' THAT

REFERRING to our article "How Can a Leaky Can Be a Swell," in last week's issue, one writer, well known to all the industry as an expert on solder and metals, writes:

Portland, Me., Oct. 11, 1923.

A. I. Judge,
Editor, The Baltimore Trade,
Baltimore, Md.

My Dear Judge:

I have been a close student of almost every article published in your valuable trade paper since its first issue dated back to the Trade Sheet, edited by your dear old father. I recall in one Trade Sheet the big fire of Platt & Company's Canning Factory, canners of the famous Niger Brand of raw oysters, which threatened the destruction of your beautiful city, and I can see that label now, with the nigger opening his mouth already to partake one of those famous oysters, which made Baltimore the Mecca of oyster land. It shines like a mirror in my memory.

In the last issue of your Trade paper, October 8th, on page 12, with bold headlines, it says, "HOW CAN A LEAKY CAN BE A SWELL?" This question is asked by a London Respondent Distributor, who puts the question to Dr. Bigelow. My answer is your bold type headline: A LEAKY CAN.

Today the search of knowledge is original. It is no longer necessary or advisable for a person of original thought to play a lone hand, so long as the person has the ability he brings forth results. The results may be positive or negative, but they must be accurate, not guesses, so that when they are given out to the canning world, or consumers of canned foods, they may rest assured. He is dealing with facts, so far as it is humanly possible to obtain them. Seeing is believing, and you know the old farmer said feeling is the naked truth.

I would not want Dr. Bigelow to think I have taken issue with him on "How a Leaky Can Can Be a Swell;" for I know the average canner will give Dr. Bigelow credit for having answered the question intelligently, as he sees it, but I am sure it is just as clear as mud to the average layman.

Yours sincerely, in the faith of progress,

E. M. LANG, JR.

Leaving For Florida?

'Tis the last lump of winter
In the bin all alone;
All its brunette companions
Are burned up and gone;
No sign of its kindred
Is lingering nigh
To reflect back its blushes
For being sky-high.

I'll not leave thee, thou lone one,
To pine in the bin;
The rest are all ashes
Go, join now your kin;
Thus kindly I heave thee
Upon the fire's bed
Where thy mates once got rosy
But now are quite dead.

Oh, soon may I follow
And leave this distress
Where coal strikes and rail rates
Make life a sad mess:
When pockets are withered
And credit has flown
Oh, who would inhabit
This temperate zone?

VEGETABLES TO BE ADVERTISED

Vegetable Growers' Association Seeks to Popularize Slogan "Eat Vegetables for Vitamines" Through Advertising.

SOME 100,000 vegetable growers have adopted as their slogan "Eat Vegetables for Vitamines," says Interstate Grocer, and with the aid of a $1,000,000 advertising campaign are planning to make this slogan a household phrase. The plan is to be carried out under the supervision of the Vegetable Growers' Association of America.

Vegetables are to be advertised in every market garden center in the United States and their value as vitamine foods made the keynote of the campaign. Local associations and individuals will do the advertising in their own fields, but will use data for this advertising furnished by the National Association, it is stated. Thus the cost to the individual will be small, but in the aggregate possibly a million dollars will be spent by the 100,000 commercial growers, it is estimated.

Growers will also co-operate with the farm bureaus in circulating literature on the value of vegetables in the diet for health, vegetable cook-books, etc. An official four-color poster picturing various vegetables has been adopted and a badge or stamp will be given members of the National Association.

Some 1,500,000 acres is devoted to the production of the half-dozen vegetable crops most in demand, including celery, lettuce, tomatoes, onions, cauliflower, it is reported, and the vegetable industry produces annually about $200,000,000.

PASTORAL

We now behold
The pumpkin's gold
In every field.
From bursting pod
The goldenrod
Gives goodly yield.

The bumper crops
Of shredded hops
Are in the press.
And one and all
Proclaim the fall
A great success.

—By Wm. S. Adkins.

CALIFORNIA MARKET

(*Continued from page 31*)

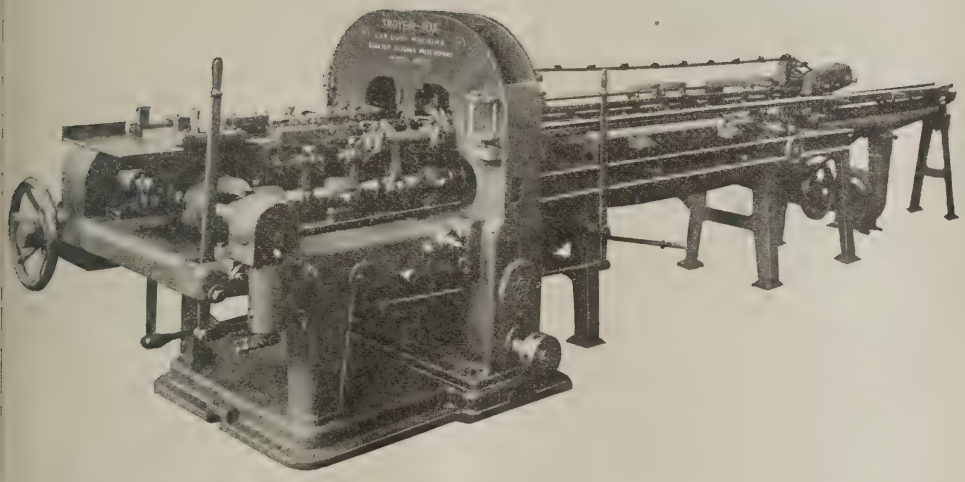
A meeting of the Pacific Westbound Conference was held at San Francisco early in October, and it was decided to advance freight rates on trans-Pacific shipments of canned foods from $10 a ton to $12 a ton.

Salmon Ship Fails to Appear—A shipment of 40,000 cases of canned salmon from Alaska is believed to be a total loss in the motor ship Kennecott, which went ashore recently on Graham's Island, on the British Columbia coast.

Notes—Two fires occurred recently at the plant of the H. G. Prince Canning Company, San Leandro, Cal., causing a heavy loss. The first one destroyed two box cars loaded with box shook, and the following night a fire broke out in the warehouse, resulting in a loss of $75,000.

The Northern California Wholesale Grocers' Association has chosen officers for the ensuing year as follows: President. Ed. G. Williams, Dodge-Sweeney & Co.; vice-president, A. G. Falk, Sussman, Wormser & Co.; treasurer, A. Marre, Marre Bros., and directors, P. C. Drescher, Mebius, Drescher & Co., and Perry T. Cumberson, of the William Cluff Company.

C. J. Nouges, vice-president of the pioneer brokerage house of Parrott & Co., San Francisco, Cal., has left on an Eastern business trip.



Prof. W. V. Cruess, of the fruit products laboratory of the University of California, Berkeley, and who lost his home in the great fire which visited that city in September, has left for Europe on a six months' leave of absence, to make a study of olive growing, processing and marketing. The California Olive Growers, a co-operative organization, with other olive interests, is assisting in making the trip possible.

Disease Control in Black Raspberries

C. W. Bennett, Botanical Section of the Mich. Ag. Col.

THE growing of raspberries on a large scale and the bringing in of plants from older berry-growing States has led to the introduction and spread in Michigan of a number of destructive diseases. Plants are like animals, in that the greater number of a kind crowded together, the more disease one finds present. Raspberries are now grown intensively in several counties of the State, and diseases of various kinds are becoming more and more destructive. In the early days of the berry industry, planting and cultivation were the only things necessary to insure a large field. At the present time, with berry patches grown close together, the grower has ceased to expect his planting to produce the old-time yield or to last eight or ten years as they once did.

The problem of disease control and of bringing raspberry yields up to where they should be is primarily one of sanitation and seldom of stock from which to propagate. If best results are to be obtained, the grower must start with plants free from disease, or as nearly free as it is possible to obtain them. Disease-free plants at the present time cannot be bought in any State of the Union. Growers must produce their own supply of clean plants. Except where plantings are very badly diseased, the grower, by using proper methods of selection, can obtain his most reliable supply of plants from his own field. The cleaning up of raspberry diseases is a grower's problem. Young plants require just as intelligent and careful selection as the most successful growers give to the production of seed stock of beans or potatoes.

The selection of plants to tip should begin early in the season. With a little extra effort the most desirable plants in a field can be staked or marked in some way. If these plants are inspected several times through the season and the least desirable ones thrown out, the grower has for tipping purposes high-yielding plants which conform to his ideal of growth, shape and ability to stand up under all conditions. Perhaps not enough such plants can be found in an average patch to supply the number of tips needed for the new planting. Even if the start can be made with only a few plants, use of these for seed stock will in time give plantings which have back of them a percentage of vigorous, healthy individuals. With such plants any grower who cultivates well and maintains the fertility of his soil can expect maximum yields.

A program for obtaining plants relatively free from disease and for maintaining the health and vigor of the planting can be outlined as follows:

Select a Young Planting for Tipping—Two and three year old patches are very good; the first-year plantings give excellent tips, provided the soil is rich enough to induce a vigorous growth of new canes. In such plantings crown gall has had only a short time in which to spread from the few diseased individuals to the healthy ones. Old galls have not had so long to break from the plants and accumulate in the soil at a distance from the hill, and so the chance for a new tip's escaping infection is much greater.

Use only the largest and most vigorous plants for tipping, paying special attention to a healthy growth of new shoots. By eliminating all plants which show any tendency to be mottled, a large part of the blue stem and mosaic diseases can be eliminated.

Select long shoots and tip well away from the mother plant, as near between rows as convenient. This tipping away from the parent plant gives greater freedom from crown gall.

Locate on the farm for spring planting a spot of soil which has not grown raspberries, dewberries or blackberries for at least two years. A soil which has brown corn, wheat, or some other grain crop is excellent from the standpoint of freedom from disease.

Transplant the tips early in the spring and bury the entire tip. Special care should be taken to bury the old cane or to cut it off below the surface of the soil and remove it from the patch before the new growth starts. This old growth carries anthracnose disease, and by getting rid of it a new planting can be started off almost free from this trouble. The so-called tails have some use in marking rows, but they are very expensive markers.

Put on a dormant spray each year just before the buds start in the spring. For this spray lime sulphur, one gallon to twenty gallons of water gives good results.

Inspect the planting several times through the summer and pull out and remove from the patch all plants which show yellowing or mottling or blue striping of the canes. Every grower should become familiar with the mosaic and blue stem diseases and keep them rogued out of his young plantings. In most young plantings the percentage of these diseases is small, and prompt removal will prevent spread.

Remove all dead canes from the patch as soon as they are found. Most canes which are killed just before the berries ripen have cane blight. The cutting out of these will help control this disease.

For further information on Michigan raspberry diseases, see Michigan Experiment Station Quarterlies, Vol. 4, No. 4—May, 1922, and Vol. 5, No. 1—August, 1922.

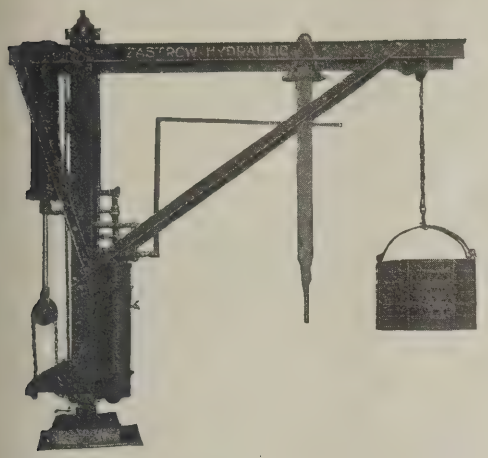
THE WHOLESALE GROCER

By the Editor of a Grocery Paper

THE editor of the Modern Merchant and Grocery World, of Philadelphia, in an editorial headed "The Sickness of the Jobber," has just said:

President J. H. McLaurin, of the American (Southern) Wholesale Grocers' Association, made a most remarkable confession and appeal to the convention of the American Specialty Manufacturers' Association last week. This is what he said:

"The wholesale grocery business is sick—positively ill. I readily understand that such a statement is not a refreshing one, nor is it calculated to bring brightness and good cheer into the lives of the wholesale grocers. However, the statement cannot be contradicted, nor will a wholesale grocer be found with a disposition to debate it.



"Cut-throat piratical merchandising which obtains among jobbers throughout this country is the reason. While jobbers are disposed to attribute the conditions of things in the jobbing grocery business to the chain store and buying exchanges, that is 'begging the question,' and the real trouble lies with the wholesalers themselves. You can discount this statement all you please, but, take my word for it, you will indorse these views.."

There is no doubt that what he said is true; the Harvard report of the jobbing business for last year showed that the profit in the wholesale grocery business had practically reached the vanishing point.

Mr. McLaurin and other wholesale grocery representatives who spoke at the convention all seemed to agree that there was only one thing that could save the jobber from something pretty close to extinction. Not literal extinction—there will always be wholesale grocers—but a waning in importance so marked that the jobber could no longer be considered a factor of importance. That one thing is the exercise of such control over prices by the specialty manufacturer that wholesale grocers will be practically guaranteed a profit. If that isn't done, Mr. McLaurin predicted that the wholesale grocer will be pushed to the wall.

Well, what of it? I don't want to see failure come to any wholesale grocer who justifies his existence. If there are any who don't justify their existence, failure ought to come to them if they won't get out without, the sooner it comes the better for them and for everybody. If the wholesale grocer has failed to stand the test—if other agencies formed to do his work have done

it more accpetably, with resultant disaster to him—if in the application of the rule of the survival of the fittest he has not survived, why should he be kept alive artificially? For the control of prices against their natural competitive trend would be wholly artificial.

I can give the wholesale grocers a formula by which they can justify their existence and assure themselves of a prosperous and permanent future. Instead of the large number of provincial and incompetent factors that now exist, let them cut out the dead wood and organize a few strong factors that could get close to the producing markets. Jobbers like that would be impregnable—nobody could even threaten their position.

WESTERN CANNERS' ASSOCIATION REVIEW

Office of Secretary,
12 East Grand Avenue, Chicago, Ill.
October 4th, 1923.

WE desire again to state that this is not the official organ of The Western Canners' Association, and must not be so considered. It is a news letter for the information of members and the opinion and statements herein are unofficial, the Secretary, as Editor, being solely responsible for them, not in official capacity or representing the Association, but as news Editor of the publication.

The 79th Semi-Annual Convention of The Western Canners' Association will be held at Hotel Sherman, Chicago, Monday, Tuesday, Wednesday, Thursday, Friday, November 5th, 6th 7th, 8th, 9th, 1923. The first two days will be devoted to conferences between the Conference Committees of The National Canners' Association, The National Wholesale Grocers' Association, The American Wholesale Grocers' Association, The National Association of Retail Grocers of U. S., The National Food Brokers' Association and The Western Canners' Association, in relation to matters of importance to be submitted to our Convention. The regular session of the Convention will begin Wednesday morning, November 7th, and will continue Thursday, November 8th, and Friday, November 9th, 1923. A special railroad rate of a full fare coming and half fare returning has been granted from nearly all parts of the United States by the Passenger Associations on the certificate plan. In order to get the special rate a full-rate ticket must be purchased at point of embarkation and a certificate obtained from the agent, then the certificate will be validated at the Convention and the agent at Chicago will sell a return ticket by the same route for half the regular fare. Be sure to get a certificate whether you expect to return by the same route or not, for we must have 250 validations in order to secure the special rate and every certificate may be needed. This is important.

The Conference Committee of the National Canners' Association in suggesting to wholesale grocers the establishment of warehouses by the canners in various localities, to which swells and leaky cans could be shipped by buyers for inspection, classification, redemption and destruction by the canners, evidently had the careful protection of the reputation of the canning industry in view:

First—That claims could be carefully and accurately adjusted and paid and no unfair or unjust claim would be allowed.

Second—That spoiled goods would be promptly destroyed, so that they could not possibly get into the hands of consumers, thereby protecting the canning industry from accusations of packing unwholesome foods, whereas if left with the buyers their thorough destruction might be neglected, and they might get into the hands of unscrupulous dealers, who would sell them to consumers.

Third—The expense of locating and maintaining inspection and elimination stations at various points would be borne by the canners, and the buyers need not be concerned about that feature. Canners would be well reimbursed for the expense by the protection of the reputation of the canning industry from charges of manufacturing unwholesome food, which is a vital consideration to all canners and to commercial canning.

Fourth—The allowance of a general percentage for swells would work an injustice to the careful canners, and would protect the careless canners from accountability for incompetency, and would cause carelessness and indifference on the part of buyers as to the disposition and destruction of swells and spoils.

Fifth—The zone warehouse and inspection system is absolutely essential to protection of the reputation of the canning industry, now that the government will not allow swells to be returned to the canners by freight. The government would undoubtedly permit such shipments to be made to the zone warehouses, where they could be inspected, claims allowed and the spoiled goods destroyed under the supervision of the public health authorities.

Please note that the date of the 79th Semi-Annual Convention of The Western Canners' Association has been extended to include Monday, November 5th, and Friday, November 9th. The first two days, Monday and Tuesday, will be devoted to meetings of Conference Committees as stated elsewhere in the Review. The regular session of the Convention will begin Wednesday morning, November 7th, and continue Thursday, November 8th, and Friday, November 9th. Get a certificate from railroad agent when you buy your ticket, whether you expect to use it or not. We have to have 250 certificates in order to secure the return half-fare rate. Many came to our Milwaukee Convention without certificates. Any one coming to this Convention without a certificate cannot get a return half fare, and we may conclude to have him arrested as a bootlegger or on some equally serious charge, as every certificate may be needed. Yes, the one-and-a-half rate is extended to ladies or any dependent member of your family, or any one connected with your cannery or firm.

There will be a great gathering of the canning clan at Chicago, November 5th, and members of the Executive Committee and Directors of the National Canners' Association will be there. The President of the American Wholesale Grocers' Association and the President of the National Wholesale Grocers' Association, and the President of the National Association of Retail Grocers and the President of the National Food Brokers' Association and the Conference Committees of those Associations will be present and, with the Conference Committee of The Western Canners' Association, will endeavor to agree upon important matters of policy and performance of interest to all. These conferences will be held Monday and Tuesday, November 5th and 6th. The regular session of the Convention will begin Wednesday, November 7th and continue Thursday and Friday.

There will be open forum discussion at the November Convention as to practical subjects, led by the Chairmen of the Western Canners' Association, on Pea Seed Supply—Traffic and Transportation—Cost Accounting—Factory Efficiency—Soil Conservation—Membership—By Products—Labels and Labeling—Disposition of Swells—Canners' Contracts, etc., and everyone present as active or associate members will be welcome to participate in the discussion.

Mr. W. Clapper, of Iowa, Chairman of our Transportation Committee, has applied to the Transcontinental Freight Bureau for a reduction of freight rates in canned foods to Pacific Coast terminals from Chicago and other points, in order to meet the water rate competition by Panama Canal. The matter is now under consideration, but canned foods had not been previously included in the application.

Samples of canned corn from Iowa, Illinois, Wisconsin, Indiana and Ohio of the 1923 pack, which have been sent to this office for inspection, show evidences of careful work on the part of canners and the qualities are unusually fine.

Iowa and Nebraska canners of corn find that their output this year will fall short of the yield they anticipated nearly a million cases. Their pack will be about the same as last year, which was small. Every case of the 1922 pack in those States

and elsewhere, so far as can be learned, has been sold and the new pack arrives on a bare market.

The special rate of one and a half fare to the 79th Semi-Annual Convention of The Western Canners' Association at Chicago, applies to nearly all parts of the United States. Be sure to get a certificate of purchase when you buy your ticket to Chicago. If you do not you will have to pay full fare back. If the agent has no certificates ask him to give you a receipt showing purchase of the ticket. You can use the rate for any dependent member of your family or any one connected with the firm or corporation.

Ex-President Woodrow Wilson used a word in writing about a man he did not like some time ago, calling him a "marplot." In thinking about it, it seems to be a word which well fits the fellow who is always trying to create dissension between the canners and their customers, the wholesale and retail grocers.

Marplots are impractical, illogical and thoughtless people, who are constantly trying to start something in any organization to which they belong, in order to attract attention to themselves.

A marplot has not usually the ability to start anything constructive and always resorts to something destructive, because it is easier. It requires a broad and clear mind to uplift and build up. Any kind of a misguided mind can pull down. It takes an artist of genius and ability to create a beautiful picture. Any kind of a common mud-slinger can spoil it. No person is especially aimed at in this paragraph. It is just a little piece of constructive philosophy fired into the darkness.

There is a prospect of our having a delegation of canners from Canada at our November convention. The railroads have granted the one and a half fare rate from several points in the Dominion, and the canners have been invited to come. There are many canners in Canada and they pack goods of excellent quality, and large quantities of them.

There is a seller's market for canned foods this year in nearly all kinds and varieties. If the canners of the United States do not maintain their prices and sustain the market for their output this season, it would seem that they never will be able to do so. Every staple in canned foods of the 1922 pack is sold out clean, and the buyers are hungry for goods. They are buying carefully and not in a large speculative way, but they are buying frequently and constantly. This writer is closely in touch with the canned food market every day and in every way, and knows that it is going to be better and better for the owners of canned foods as the season advances.

A good live and reliable brokerage firm in Omaha wants some pea cannery accounts, and other canned foods accounts. The firm has recently enlarged its sales force and can handle another corn account or two. Write this office for the address. The firm is a member of this association.

A Milwaukee brokerage firm with a well-established trade, a member of this association, wants some tomato accounts and corn accounts, and could handle some accounts in other kinds of canned foods. Write this office. A St. Louis brokerage firm also needs some canners' accounts.

Are you a salesman? You may think you are, but are you? I must be shown! There is a membership application blank enclosed with this copy of the Review. Just as an experiment and as a test of salesmanship, from now until November 1st, 1923, anyone sending to this office an application for a new member to this association, active or associate, will be presented with an order for a good Waterman fountain pen, or a fine loose-leaf memorandum book, cover and filler, and the presentation will be made before the convention at Hotel Sherman if the recipient is present, or mailed, if otherwise. This proposition closes Nov. 1st, 1923. New members will be allowed all their constitutional privileges at the convention, and a prize as described will be given for each application sent in. Get a dozen and you will have enough fountain pens to last you all your life and to write your will at near its conclusion.

The National Canners Association will hold its annual convention at Buffalo, N. Y., in January next, and it will be a very important convention. There will be a fine canned foods exhibit and demonstration during that convention. Write to Secretary Frank Gorrell, 1739 H street, Northwest, Washington, D. C., and get all the particulars and arrange to make an exhibit. The space costs nothing beyond a few incidental items for decorating the booths.

The total output of canned peas for 1923 in the United States is nearly 14,000,000 cases, the largest output ever produced. Wisconsin packed a few cases less than in 1922 and California fell off about a quarter of a million cases; all other pea-canning States increased their output. Singular to state, nearly all this big output of peas is already sold out of first hands. The consumers licked up 13,000,000 cases of the 1922 pack clean and cried for more, and it seems that they will do the same with the pack of 1923.

Every president of a State canners' association, within the jurisdiction of this Association, are ex-officio, and by a paragraph in our constitution, vice-presidents of this, the Western Canners' Association. These vice-presidents are the presidents of the State Associations of Illinois, Indiana, New York, Iowa, Nebraska, Michigan, Minnesota, Missouri Valley Association, Ohio, Tennessee, Utah, Wisconsin. They are especially invited to attend our convention in November at Chicago of which particulars are given elsewhere in this Review.

Members who have not paid their dues for 1923 will oblige the secretary by mailing a check at once to this office. We must have all collections in before November 1st, 1923, otherwise we will have to mention delinquents in our report to our board of directors. Mail the check now, before you forget it, please!

"SAUERKRAUT DAYS"

WE have recently received posters and newspaper clippings announcing the celebration of Sauerkraut Days. One was held at Dubuque, Iowa, Saturday, September 22nd, and the other is to be held Saturday, October 6th, at Anderson's Park, Springfield, Minn. Both carry good programs of sports, speaking, etc. The program in Minnesota especially features Senator Elect Magnus Johnson.

We did not receive the Iowa notice in time to send our greetings but were in time for the celebration at Springfield, Minn., and sent the following wire to the Mayor of Springfield as the program mentions that he is to give an address:

"Clyde, Ohio, Oct. 5, 1923.

Mayor Louis Kreitinger,
Springfield, Minn.

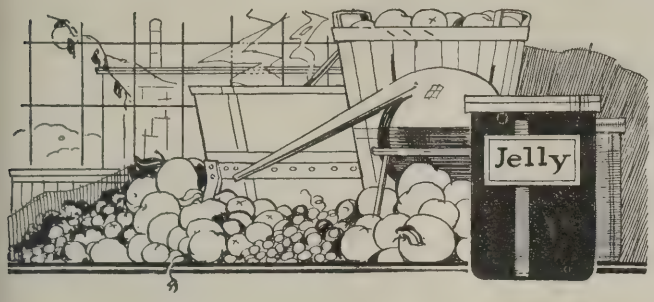
At your convenience please convey to the participants of Sauerkraut Day the greetings and best wishes of this Association. Stop. We hope they will enjoy good health and live to celebrate many more such occasions. Stop. We only regret that we are not able to be with them to enjoy these festivities and the sauerkraut dinner. Cordially yours,

THE NATIONAL KRAUT PACKERS' ASS'N."

We are indebted to Mr. LaFrance, of the Pepin Pickling Co. for the clipping announcing the Springfield, Minn., Sauerkraut Day, and Martin Meeter, of the John Meeter & Son, Lansing, Ill., for the Iowa occasion.

We think this is "one" on all of us connected with the production of sauerkraut. While we are not familiar with the origin of Sauerkraut Days, yet we do not hear of anyone in the industry celebrating or causing the celebration of such days.

Let's start Sauerkraut Days in our local communities. It will create appetites for sauerkraut and help the whole industry. Let's not let the outsiders put one over us like this Who is the first?



ROY IRONS,
The National Kraut Packers' Ass'n.

ENGLAND'S USE OF NITROGENEOUS FERTILIZERS

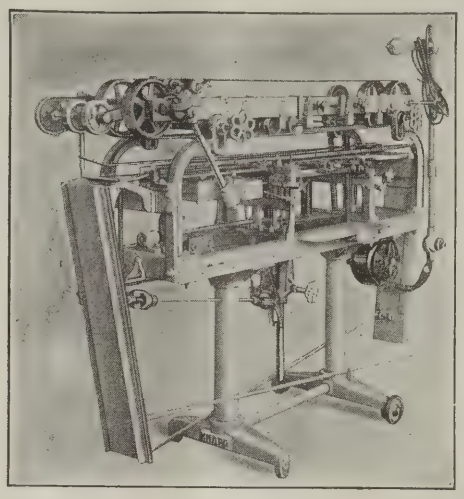
BEFORE the war England was the great producer of Sulphate of Ammonia for export. All the countries of the world that needed it and could not produce it themselves were her customers. In 1914 the United Kingdom produced 426,500 tons and exported 314,000 tons. The consumption for fertilizer purposes in England is given as only about 40,000 tons per year, however, this being supplemented by considerable nitrate of soda.

During the war English agriculture was forced to adopt intensive methods of food production, and attention was naturally directed to the utilization of their own domestic nitrogen supply. The advantages of Sulphate of Ammonia, which had for years been produced in their own gas and coke plants and had been hauled past their very gates to be shipped abroad, were presented to the British farmer and he was finally convinced.

The domestic consumption rose to as high as 269,000 tons in 1918, and even now, that the time of stress is past, the offici

LACTART

produces a smooth and even jell body



LACTART is slightly slower than harsher acids in setting jellies and produces a smoother and more even jell body. And for spreading jellies this is most desirable.

LACTART is highly refined, pure, edible Lactic Acid. It inhibits the crystallization of the sugar. It gives the desired acidity and blends perfectly without altering the flavor. It is the result of years of research and development. And to it is attributed diatetic value and digestible properties not found in other edible acids.

The knowledge and research of the Technical Staff of the Wamesit Chemical Company in the use of Lactart is at your service for consultation and advice without obligation.

Write today for samples of LACTART to test.

WAMESIT CHEMICAL CO.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

figures show that it amounts to 134,000 tons for the year 1922-23. At the same time the use of nitrate of soda is now at about the same rate as before the war. In other words, the United Kingdom has found it profitable to add to her former consumption of chemical fertilizer ammoniates by increasing the use of Sulphate of Ammonia 230 per cent.

THE 1923 PEA PACK

By Frank T. Stare.

THE recently announced figures on the 1923 pea pack are no surprise to us and should be no surprise to the recipients of these letters. We have never been fooled for a minute. In our letter of September 1st in commenting on the size of the pack we said "and it was big as statistics will show. It is our business to know, not guess. Of course, we have known that yield per acre, generally, was short, and that an occasional canner was actually having a short pack. At the same time, we knew that the increased acreage would practically offset the shortage in yield.

The pack was abnormal rather than short. Nothing like the usual percentage of standard peas of the larger siftings, either Alaskas or sweets, were packed. They didn't grow that way. There was an actual shortage in standard No. 4 and No. 5 peas. While there was an unusually large percentage of the smaller siftings this year, they lacked quality. Therefore, there was an actual shortage in strictly fancy peas.

The significant thing in analyzing these figures is the ability of the country to absorb peas. This year's pack was approximately a million cases more than last year. It has practically all moved out of canners' hands and the trade is clamoring for more. The increase in consumption can best be visualized by the following tabulation of figures:

Five-year average ending with pack of 1913.. 6,002 800
Five-year average ending with pack of 1921.. 9,867,275
Five-year average ending with pack of 1922..10,629,844
Five-year average ending with pack of 1923..11 239,800

This would indicate an increase in consumption of more than 87 per cent during the last ten years. The increase during the three last five-year periods would, therefore, appear to be about normal. When it is taken into consideration that the per-capita consumption, computed on the basis of the 1923 pack, is only about 3 cans, it would seem that the industry is susceptible of considerable additional expansion if due consideration is given quality.

Outside of a few—not large—blocks of peas owned by speculators there are very few car lots of peas left in Wisconsin. A quarter of a million cases would be an outside figure of the total peas unsold in canners' hands. The clean-up will be complete and that very soon.

A CONVENTION TRUTH

WE get tired of our own chatter, once in a while, and we have been talking for snappy Convention stuff so long—and loud—that first thing we know some program builder (and that's a hard, tedious, thankless job) may feel inclined to accidentally on purpose drop a brick on our pate from the 11th story of his structure. Colonel Wrangler-ly, we observe, has taken our bait and ran away with it, and now says that the big Western meeting in his town on November 7th, 8th and 9th is going to be businesslike and practical, with not even an invocation—for if it depends on this Editor, as he threatens, there will be just an old-fashioned Sam Jones rip-snorter: Go to Hell! And so we hasten to say that all the trouble is not with the poor, hardworking Secretary who has to build the program. We suggest right here that at every Convention this fall each Association appoint a Special Program Committee for the next meeting, such committee to be composed of three or four or five of the most chronic kickers "that the Convention never does nothing." This will

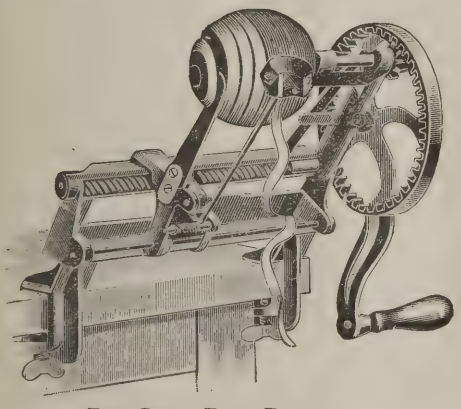
The Karl Kiefer Machine Co.
CINCINNATI, OHIO

No. 30A Automatic Strip Feed Press



This Automatic Strip Feeding Press is adaptable to the rapid and economical production of can ends or other articles made from tinplate or light sheet metals up to 4'' round or square. The feeding mechanism is entirely automatic giving an output of from 60,000 to 100,000 a day and is arranged so that change gears may be utilized for handling from 3 to 20 cuts to the strip and stock up to 29'' in length. The positive action of feed not only allows a high capacity, but insures an accurate register for decorated work. As on all our automatic presses an improved friction brake is provided which does not engage crankshaft until clutch is released. To prevent damage to dies, press is equipped with a recent improvement which automatically stops the entire mechanism when conditions are not entirely regular. Standard equipment includes attachments for one size only with exception of dies. Attachments for additional sizes can be promptly furnished at extra cost.

effectually silence complaints by having the Convention do the things they think it should do—that is, it ought to do that. You think it will?

Here's the answer from the pen of Editor Buckley, the The Grocery World. Read this and ponder, some of you ever-present kickers:

Dull Conventions—In the last issue I commented on the published fact that at the last convention of the Missouri retailers there were only fifty-nine delegates. I said I thought the reaso was that so many retailers had learned by experience that attending conventions I said I thought the reason was that so many retailers who had told me that after sixteen years' regular attendance at his trade conventions (he was not a grocer) he had not gotten **one** concrete idea which he could apply to his business.

Apropos of this I have received from William Smedley, the efficient secretary of the Pennsylvania Retail Merchants' Association, the following tart, but perfectly apt retort:

> Dear Buckley: Some men's heads are too thick to get an idea into them. In other words, they do not know an idea when they come in contact with one.
>
> I am wondering if the man you quote ever in the sixteen years' attendance **gave** an idea?
>
> SMEDLEY.

This is a fair question, and puts a finger on the real reason why so many trade conventions are a gross waste of time. Most of the delegates go expecting to **get**, but give no time or preparation to **giving** anything. If they don't get, they are dissatisfied, forgetting that the other fellow feels the same, and that they are responsible for that. The convention being largely composed of getters rather than givers, the officers are left to supply everything, and they can't possibly swing it all. The most interesting matter which a trade paper can print comes from the subscribers, with the flavor of the store about it. So the best matter that comes up at a convention comes from the seats and not from the chair.

CONVENTION DATES

November 5th, 1923—Board of Directors, National Canners' Association, Hotel LaSalle, Chicago, 10 A. M.

November 7th, 8th, 9th—Western Canners, Hotel Sherman, Chicago. Semi-Annual Meeting.

November 13th to 16th—Wisconsin Pea Canners, Milwaukee Auditorium. Annual Meeting.

December 12th and 13th—New York State Canners, Hotel Powers, Rochester. Annual Meeting.

January 21st to 26th, 1924—National Canners, Canning Machinery and Supplies, National Food Brokers, Machinery Exhibit, etc., Buffalo, N. Y.

Note:—Secretaries can help their cause by keeping us informed as far ahead of time as possible, and so keep this column correct and complete.

MARKET FOR FRUIT SIRUPS AND SOFT DRINKS IN MEXICO CITY

Warren Ullrich, Clerk to Trade Commissioner, Mexico City.

THE use of imported flavoring extracts in the manufacture of sirups, ice creams, cake icing and candies is fairly large in Mexico City, owing to the fact that locally made extracts can not compete in the high-class restaurants, soda fountains and bakeries with the foreign product. The flavors most in demand here in Mexico City are as follows: Vanilla, orange, lemon, cherry, sarsaparilla, grenadine, nectar, chocolate, grape, mint, mocha and maple. The mint flavor is the only one manufactured locally that can compete with the foreign product.

Fruit Juices Produced Locally—Imported Soft Drinks.

The majority of the fruit juices are put up locally because of the abundance of fruit available for this purpose. There are several manufacturers in Mexico City who are canning all kinds of fruit juices for the local trade. Probably the most popular of such juices are the pineapple, strawberry, raspberry and guava.

The market for American soft drinks is as yet very small. The largest user of a popular American drink is an American restaurant and soda fountain located in Mexico City. This firm uses one 50-gallon drum of this drink each month. All other soda fountains of lesser size are importing in 4 and 5 gallon lots. There is no sale of this drink in bottles, the only sale being made from the soda fountains, of which there are only four or five popular ones in the city. The use of American-made grape juice is beginning to develop, and it is believed that the sale will expand in the near future. Several well-known brands are now on the market and are being carried by the higher-class grocers and liquor wholesalers

Well-known brands of ginger ale are being imported from England and the United States in limited quantities for sale at soda fountains, clubs and many of the high-class cafes and cantinas. The American brands on the market are meeting with considerable competition from such British brands as Schwepper, Ross and Belfast, all of which find a fairly large sale. There is one locally manufactured brand, but it can not compete with the imported ginger ale.

Local manufacture of soft drinks in Mexico has been very slow and may be confined to one or two brands of soda pop which find a ready sale with the peon class only.

(A list of users of flavoring extracts and sirups, and importers of soft drinks in Mexico City can be obtained from the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce or its district or co-operative offices by referring to file No. C. I. 101.)

FRENCH MAY TRY NEW FISH-SHIPPING SCHEME

UNSATISFACTORY methods practiced in France for the preservation of fresh fish have led to an interesting experiment by the fisheries division of the government looking toward an improvement. The experiment consisted of the shipping of two cases of mackerel, conger eels and frog fish from the coast to Paris, one shipment containing fresh water ice, and the other salt water ice. According to Consul A. M. Thackara, in a report to the Department of Commerce, the sea water ice was prepared by the "Saugy" process and is white, opaque and sheet like in texture, but very closely compressed. It is friable and uniformly salty, its temperature varying from minus 4 to minus 6 contigrade. With equal quantities of fish and ice in each case, the following phenomena were observed upon the arrival of the shipments: The cases containing fresh water ice arrived with the temperature of the fish at 5 degrees centigrade, and the cases with the sea water ice the temperature of the fish was 2 degrees centigrade. The fisheries division came to the conclusion that sea water ice presents additional advantages to lower temperature in that its friability and the absence of sharp corners permit it to be laid about the fish without tearing the

skin, and this friability further makes unnecessary any instrument for breaking the ice. When the sea water ice melts, the fish is left humid and salty as if in its natural element, no noxious effects on its tissues being observable. In localities placed near the coast where industrial establishments have not sufficient supplies of fresh water, there is permitted an unlimited manufacture of sea water ice with a very simple modification of the regular equipment of ice-making plants. A further use of sea water ice is foreseen in connection with the loading of refrigerating cars, permitting a much lower and more sustained temperature. However, to the use of sea water ice is the objection that it is more expensive in manufacture than the fresh water ice.

NORWEGIAN SARDINE CANNERIES IDLE

ORDERS for at least $1,500,000 worth of Norwegian sardines are now filed away with Stavanger firms, with poor prospects of filling even a fourth of them, says Consul George K. Stiles, in a report just received by the Department of Commerce. Only trifling quantities of bristling have been brought to Bergen sardine canneries, another of Norway's big fish canning centers, Consul Ifft reports. Similar situations are reported from Haugesund, Sondhordland, and Sogn og Fjordane. During the latter half of July and the first week of August there was a fine catch of bristling on the east coast and about the entrance of the Christiania fjord, but the little fish so far have only appeared in few numbers and at a few points in the western fjords and off the west coast. The long-continued cold weather in August practically killed all hopes of making up for the very poor catch in the spring and early summer. Most of the bristling in August ran very small, averaging about 32-34 fish to the can, which is much smaller than usually liked for the American market. With the present scarcity, however, American importers are bidding high for these usually little-liked packs. A realization of the present conditions has been brought home to the Maine sardine packers who, it is understood, are considering the packing of their fish in true Norwegian style.

ADVERTISEMENTS

By F. H. Bilderback, Bristol, Pa.

I hurry past the lyrics,
  Short stories, novels fine,
To scan the advertisements
  In some magazine of mine.

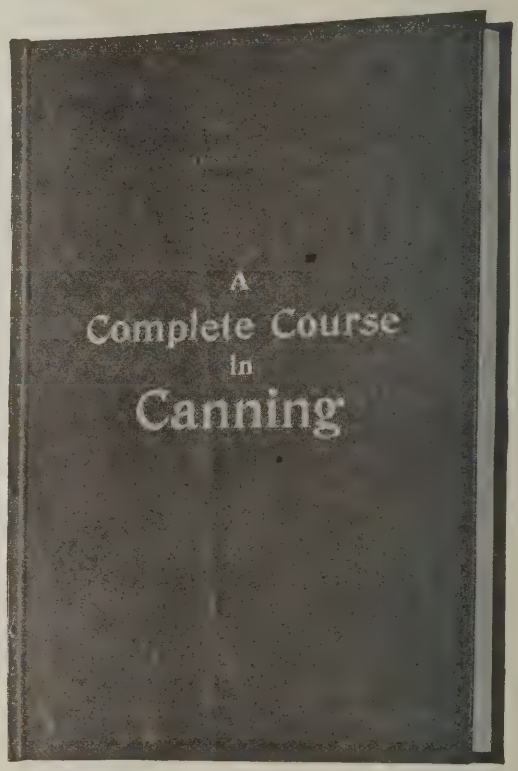
There's a world of fascination
  As I turn each rustling page;
But I miss the dear old pictures
  Of a departing age.

I'd like to see transfigured
  The old clock 'gainst the wall,
The folding rocker still holding
  Dad's hat inside the hall.

But there's a vivid story
  In each picture that I lime,
And an easy way of keeping
  Up with the present time.

A CORRECTION ON SPINACH PRICES

IN our Weekly Review, issue of October 15th, we said:



> "SPINACH—This was to have been the big week in fall spinach canning in this city, and there have been some fine loads of this vegetable come to town. It has been too dry and too cold, however, for the best interests of the crop. It tried to rain this week, but there was not enough to lay the dust. No. 3 spinach is quoted at $1.30."

One of our local canners was not slow to call our attention to this in the following words:

> "Little 'offside' on this price, I think. Have heard several packers' quotations were $1.50. Poor spinach brought 32½c to 35c last two days. At that, with the small yield this Fall, it will cost near $1.50 for a good full can."

We merely have to add that he is right. The spinach market (canned) has been on the jump and some brokers' circulars, as well as ourselves, were caught in this way.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, OCTOBER 22, 1923

WEEKLY REVIEW

Buyers and Canners Marking Time—Hard to Find Willing Sellers—Jobbers See That Better Prices Are Likely—Tomatoes Firm, But Unchanged—Corn Gaining Strength—Spinach Held at Higher Prices by Canners—Fruits Show Increasing Firmness.

MARKING TIME—We believe there is not much question but what all jobbers have come to realize that canned foods prices, as a whole, are due to remain strong and with most items in line for further advances. The effort, therefore, to wake up jobbers to this fact is useless—they know it; they are not overlooking it; but neither are they being moved into anything that looks like quickened action by it. They are getting in their futures now, and are distributing them as fast as they may, and this gives the day the appearance of much activity in canned foods, and that's enough. That the supplies will all be gone soon does not worry them. When the futures are distributed they will buy spots, they say; and when they are told that unless they get those spots right quickly they will not be able to buy them from canners, they just shrug their shoulders and reply: "All right; we will do without them, then." Such action as this is almost the death-knell to speculators, or at least it makes cold chills run down their spines.

On the other hand, the canners who have any surplus of any kind of goods feel just as confident about them as they do about money in bank. Brokers are finding that the canners are not anxious to hear of offers to buy; and unless those offers are well up to the full market prices the canners will not even hear of them! And even a premium with the order does not move many of the canners. The canners are looking forward to very much better prices; they know that stocks are cleaned down at the earliest point in history, and they also know that the country must have canned foods for the next eight or nine months—and they ask, where is it going to get them? It is said that above 80 per cent of the tomato pack has already been sold, and the fact that jobbers admit that they are carrying light stocks, and further that many of them are in the market now for tomatoes, makes the holders of tomatoes realize that they can sit tight and let the market come around to their ideas. It is a long, long ways to the next tomato-canning season, and the people will have tomatoes.

The result of all this is that the canner does not give a rap about the market just now, and the buyer pretends that he does not, so they are both just marking time. And as they stand still, so does the local market, no changes in prices being recorded this week here, although in most other sections, including California, the tomato market is on the rise.

The usual crop of rumors has gone its rounds this week: that California would pack an immense amount of tomatoes and load down the market; that it can can tomatoes clear up to Christmas time, etc., etc. Another rumor said that New York State's tomato vines are red with tomatoes and the canners there running for dear life. Personally we do not expect to see California have any canned tomatoes for sale to the East, and in fact tomato prices there are now higher than in the East. As for New York State glutting the tomato market—it is to laugh. We hope New York has gotten a much better crop of tomatoes than it ever dared expect, and that it will be able to fill its orders. New York State as a tomato-market-wrecker is a new one. Of course, there is the ever-present rumor about the size of the tomato pack. One man says he thinks it will run between ten and eleven million cases; others mention figures around this and then ask what we understand will be the tomato pack. Well, up to this time we do not understand, and therefore cannot answer. We do understand, however, that the Tri-States and possibly Ohio—and it is very spotty—are the only two places where the tomato crop was worth while this season. If you can make up the year's statistics from that—go to it.

As we have intimated the canned tomato market remains at the prices quoted last week, which may be found on their regular page. The conditions referred to in other markets will be found by consulting those market reports, and they need not be repeated here.

CORN—All information covering canned corn has a bullish tinge: the corn pack of 1923 is not only of much improved quality over the average year of the near past, but the output has fallen short of expectations—and in many cases of actual needs on futures, as, for instance, in Maine—and this has served to put corn in a strong position. Writing us recently, Secretary of the Western Canners' Association, Col. J. A. Lee (Wrangler), speaking of the corn market, said:

> "I defy anyone to understand the market philosophy of canned corn, or what the canners of corn base their selling policy on. It is about as difficult to establish an advance of five cents per dozen in canned corn as it is to do so in hominy or pork and beans, which are packed all the year round.
>
> It is said that there is a strong demand for fancy grades of canned corn at higher prices, but when it comes to standard and extra standard grades, the market is as flexible in varying as it was six months ago, when there was a big carry-over confronting the canners. God helps those who help themselves, but corn canners won't help themselves or permit anyone to do so."

As with tomatoes, the market prices on corn remain unchanged this week, standard crushed corn being quoted in this city at 95c, which will give an idea of conditions.

SPINACH—There seems to be a very grave difference of opinion between canners and buyers of spinch and some brokers. The packers of spinach are holding their goods at about $1.50 for No. 3's, well filled cans, and although we have had to call attention to an error made in this article in this column last week, elsewhere in this issue we note that brokers continue to mark it $1.40. The canners say that there is no money in spinach at such prices, and it is safe to say that it will not be canned if the buyers will not raise their prices to the first quotation mentioned by canners. In spite of the extremely dry weather we have had for more than a month, with the ground as hard as flint and wells going dry, the spinach crop seems to be doing fairly well; but this condition makes the outlook for the crop uncertain. Friday saw a break in this long spell, and this section, along with the rest of the country, had a good rain. More may be expected, and then cold weather. You will note that we have advanced our market prices, on the basis of brokers' prices, over last week's figures, but even so these prices are not up to a level with those quoted by canners.

SWEET POTATOES—Elsewhere we give a very good resume of the sweet potato crop and prospects by an expert on this, and we recommend a careful reading of it. From this it will be understood why quotations on this article are steadily improving. They have advanced all along the line this week, as you will see by consulting the market page.

PUMPKIN—Despite the reports from the heavy pumpkin-canning sections that the crop and pack will be below the average this season, our market prices are marked down this week in this market. Some of our nearby canners may be out for some small orders on this product, which is about the only explanation we would attempt on this peculiar fact. They have greatly improved the factory production facilities on pumpkin, and we presume the canners are anxious to give the consumers the benefit of this.

SAUR KRAUT—This item has scored a distinct advance all along the line in our quotations, and in this it merely reflects the situation as it is found in other sections. Kraut promises to be firm and advancing this fall, because the demand is rapidly increasing from the good advertising which the Kraut Association is doing, and because the crop of cabbage is not good. The day may not be far distant when all kraut will be eaten from the can, and no longer from the open barrel, and it is certainly worth noting when we can have a Sauer Kraut Day as well as an Apply Day and many other special days. Here as in other items all that the canners need do is pack a quality article. Sloppy, poor kraut is an abomination, while good kraut is a delight.

FRUITS—All reports show an improving tendency in fruits of of all kinds. This immediate market is no longer a great factor in fruits, but other sections report fruits advancing, with indications of higher prices in nearly all items. Our market prices remain unchanged this week.

NEW YORK MARKET

The Situation Is Strong, Statistically and Actually—Tomatoes Continue to Advance—Eighty Per Cent of the Tomato Pack Has Been Sold—Improved Conditions Due to Improved Quality—Corn Higher—Sardines Move Higher—Pineapple Strong—Pumpkin in Demand—Notes.

New York, Oct. 17, 1923.

STRONG—The general canned foods situation has undergone no material change during the past week. The situation is strong, statistically and actually, and the price trend is still upward on many of the leading items in the list. Canners' stocks are by far lighter than during the corresponding period last year and the year previous, and with no pressure to sell buyers are forced to pay canners' asking prices.

Tomatoes Still Ascending—Maryland tomato packers are still showing stronger views on tomatoes, and the upward march of prices continues. Standard 1s are now quoted firm at 65c per dozen, and many holders of 2s are demanding 95c, although it is stated that 90c can still be done. Standard 3s have marched up to $1.35 cannery, and 10s are being quoted firm at $5.00 by many holders, with the minority offering at $4.75. One well-known Maryland broker last week estimated that 80 per cent of the entire tomato pack had been sold, and this figure appears to be conservative. Distributors are picking up stocks right along, in anticipation of a probable shortage later on in the season. Recent comment by one Southern broker to the effect that, notwithstanding the general opposition to carrying over large inventory stocks, tomatoes showing 20 or more cents per dozen profit will be good property for the wholesale grocer on January 1st next, seems to about sum up the buyers' opinions on the subject.

Quality the Answer—From the writer's viewpoint, the answer to the flourishing condition of the entire canned foods market is not so much the fact that the packs have run light in many lines, but that the quality of the pack has improved. Take canned peas as an example. Early propaganda from the pea canners and brokers indicated that the pack this year would be a light one, but final figures show that the pack for the season exceeded that for 1922 in most of the packing sections. Despite the heavy pack this year, however, the pea market is practically bare of first-hand offerings and the peas have gone into consumption. The same is true of many other items in the canned foods list, and improved quality seems to be the answer.

Standard Corn Higher—Standard corn has been advanced another notch, and many of the packers now quote firm at $1.00 per dozen cannery, although some stock can still be picked up at 95c factory. The chain stores have been extensive operators in the market for standard corn and have been getting a heavy consumer demand at the low prices at which they have been selling—10c per can.

Fancy Corn Strong—Considerable strength is also shown by the market for fancy corn, as a result of the action of the Maine canners in announcing sharp pro-rating on orders for fancy Crosby and fancy Golden Bantam. As a result of this situation, more interest is being displayed by buyers in offerings of Western fancy corn, particularly of the Minnesota pack, which has come up rapidly during the past few years, as the result of the excellent quality corn which the packers have been putting into the cans.

Sardines Move Up—Quite a bit of activity in sardines is noted this week. The Booth Company has withdrawn from the market, many of the smaller factors are withdrawn, and the Seacoast Canning Company is accepting business only subject to confirmation. In a special letter on the situation, the Seacoast says: "The catch continues depressingly small. Improvements are spasmodic and of short duration. Subject to confirmation we can take only a limited amount of orders. Operating conditions make packing slow and very expensive. We expect to see higher prices before the year is over." The Seacoast is quoting the market on the following basis: Key quarter oil cartons, $5.40; keyless quarter oil, $4.50; key quarter oil decorated, $4.85; key quarter mustard carton, $5.40; keyless quarter mustards, $4.50; key three-quarters mustard cartons, $5.15; key three-quarters mustard decorated, $4.60; key quarters tomato carton, $5.90; key quarters smoked cartons, $5.75; key quarter smoked, wrapped and labeled. The Seacoast controls a number of leading brands, including Neptune, Arab, Elk, Anchor, Home Run, Bull Dog, Deep Blue Sea, Mikado, St. Bernard, Pot Luck, White Cross, King Cole, Seaco, Gamecock, Yankee Boy, Big Smoke, Water Witch, Shipmate, Toreador, Continental, Imperial, Possum, Conqueror, Sea Lion and Pine Tree.

Tuna Is Strong—A very firm market for all grades of tuna fish is noted. Resale transactions are limited to small quantities owing to the scarcity of stock available. White-meat halves command $12.50 per case, with 1s at $24.00 per case, ex warehouse New York. Several canners are sold out of striped, and as far as known all first-hand holdings of white meat are cleared. Canners are still offering small quantities of yellow-fin tuna and blue-fin tuna, caught in lower Mexican waters, and shipped to San Pedro under refrigeration and canned there.

Pineapple Strong—Continued firmness is reported in sliced Hawaiian pineapple on the spot position, and there is a good demand reported for both 2s and 2½s. Stocks for shipment from the Coast are not heavy, canners have disposed of their entire pack for 1923. In a few instances, pro-rating has been necessary. There is a good consuming call for pineapple, and the trade anticipates a clearance of the 1923 pack by the time the new packing season commences.

Cranberry Sauce Season—With the Thanksgiving season approaching, buyers are beginning to show more interest in canned

cranberry sauce, both the strained and the whole, and sales are picking up. The canning of this product is a comparatively new enterprise, although several well-known canners are now engaged in it. The Massachusetts and Jersey canners lead in this field.

Pumpkin Also In Demand—Pumpkin is also selling as the "punkin" pie season is at hand, and the local trade notes a good demand for both 3s and 10s. The Indiana pack is expected to be rather light this season.

California Fruits Selling—California canned fruits continue to meet with a good sale. Distributors have apparently arrived at the conclusion that prices now are as low as they are going to be on 1923 pack canned fruits, and they are beginning to buy to fill out their stocks. There has been quite a little buying during the past week or so to round out the assortments of private brands.

Royal Scarlet Campaign—R. C. Williams & Co. are conducting a street car and poster ad. campaign on their "Royal Scarlet" products. Thus far the campaign has concentrated on canned foods, a different commodity being advertised each week. Salmon steaks, sweet corn, and shrimp have been featured thus far. The advertising has resulted in increased sales of the general Royal Scarlet line, and it is conceivable that the cause of increased canned foods consumption is also receiving impetus as the result of this well-planned and well-executed campaign featuring one special brand.

Notes—George W. Cobb, of the American Can Company, is on a vacation in the Lake Placid country.

H. E. Savage, of the Hawaiian Pineapple Company, Ltd., accompanied by Mrs. Savage, came on from Honolulu for the World Series here last week.

Members of the local trade were shocked this week to learn of the death of C. Irving Kroh, well-known Westminster, Md., canner, who died while undergoing an operation on October 13th.

Roy Irons, secretary of the National Kraut Packers' Association, was in the market during the past week.

H. A. Heckman, Washington wholesale grocer, was in the market this week.

Melville L. Taylor, in charge of sales for the Seacoast Canning Co., is back from a successful trip through the Middle West.

The Continental Can Company is moving its executive offices from Syracuse to New York City.

"NEW YORK STATER."

ST. LOUIS MARKET

Market Active and Advancing in Most Lines—Jobbers Showing More Interest—Tomatoes Generally Firmer—California's Shortage of Tomatoes Disappointing—Corn Wanted —Pumpkin Joins the Advance—A Big Apple Growing Country.

St. Louis, Oct. 19, 1923.

THE MARKET—The general conditions here in St. Louis are very good. The market is active and prices are advancing in most lines. Jobbers are covering a great many items that a few weeks ago they were not at all interested in. They are also placing larger orders. The volume of business, however, is not as heavy as it should be. Although the larger distributors say they are not holding the quantity they should in their warehouses and under contract, they are not inclined to buy, as formerly, for use later on. Not only the canners, but the broker, believe the jobber has waited too long, and when he wants the goods he will have to pay higher prices and will not be able to get the brands he desires. Because of the packs being small on nearly every item, the trend of prices has been upward, and these prices will not doubt constantly increase.

Tomatoes—The season for tomato packing has about closed and only a few of the smaller ones are operating, but these are only doing so for a day or two each week. At all the packing centers prices are not only held firm, but they are constantly advancing. Cheap lots in many sections are not, as a rule, to be had. However, the usual offering by small canners who have not sufficient storage capacity to hold them, and are ready to make a quick sale for ready cash when they can get the price. The Indiana shortage is used as an argument by the packer in favor of a strong market. He says that the middle west packers will be compelled to draw on the South for supplies. California packers are also maintaining firm prices, and it is also said that packers in that state are finding it necessary to make pro rata deliveries. Here in St. Louis, due to the short crops in Missouri and Illinois, the market has advanced from 85 cents to $1.00 for No. 2. There have been comparatively no Indiana offerings at all. The demand from Western buyers has caused the Eastern market to advance. No. 10 have advanced to $5.00 on many Maryland. Some sales have been made on California No. 10 at $3.85 to $4.00, Standards with puree.

Corn—There is an urgent demand for corn, and there seems to be more willingness on the part of buyers to pay the prices demanded than they are to meet the sellers with reference to values of other staples. Any desirable lots are being picked up quickly when obtainable. The Middle West is said to be cleaned up on some sizes, particularly No. 10, and offerings of that size from other quarters are not very free. Reports received here from several of the larger Maine packers indicate that deliveries will not be over 60 per cent. Whole corn, it is stated, is firmer than other kinds, although a great deal of other style has been contracted for. The shortage in Maine and the demand for Middle West has given a feeling of confidence to canners.

Asparagus—Spot asparagus tips are scarce, and when quality and not brands are available they are quickly taken.

Peas—There has been nothing new on Wisconsin peas other than already reported.

Pumpkins—Much to the surprise of many, this item has sharply advanced. The prediction is freely made that we will see a repetition of last year on this commodity.

Fruits—More and more confidence exists on California fruit, so it is not believed, the brokers think, that now is the time to buy freely on contract. A stronger feeling exists in nearly all choice and fancy grades, as the pack is light. Distributors have bought as far as they care to go. It is said, however, that they will again begin to buy after the first of the year, when the present holdings have been liquidated.

Pineapple—Spot pineapples are not as strong as other packs. There is a fair movement, but only conservative buying is being indulged in by retailers.

Apples—Apples are firm, and the New York packers state there is a light crop.

Fish—Salmon are having a good call. Sardines are strong with a fairly satisfactory demand.

Milk—The demand for evaporated milk is quiet along normal lines with an unchanged market.

Although in many sections of the country the apple crop is reported light, over in Calhoun county, Illinois, there is a 500,000 barrel crop. Calhoun county is one of the largest apple-producing counties in the United States, and the movement of these apples is now under way. While the apples are moving the canners in that section are busy, and it is said there will be a large pack in that county.

The growers will receive approximately $2,000,000 for the crop, prices now ranging from $4 to $4.75 a barrel. Each barrel contains three bushels. Warehouses at Hamburg, Hardin, Kampsville and Mozier, the chief shipping points of the county, have been found inadequate to handle the crop and thousands of barrels are standing on the levees and in the streets. The congestion has been so great at Hamburg that for the last month all vehicular traffic has been restricted to a narrow lane in the center of the main street, not wide enough for two wagons to pass. One-way traffic has been established. All shipments are made by boat, Calhoun county being the only county in Illinois which has no railroad. About a third of the crop is shipped to St. Louis. The remainder goes through Alton or points north on the Illinois and Mississippi River. "MISSOURI."

CHICAGO MARKET

Movement Active—Heavy Receipts Fresh Fruits Causes Slackening of Demand for Canned Foods—Buyers Showing Interest in Spinach—California Said to Be Figuring On a Large Spinach Pack—No Pressure to Sell Any Goods.

Chicago, Oct. 19th, 1923.

MOVEMENT ACTIVE—The canned food demand seems to continue, especially in the big vegetable staples, corn, peas and tomatoes, and all down the vegetable line the movement is fairly active.

In canned fruits the market is more quiet, which is to be

attributed to the great abundance of fresh fruits with which all the big town and city markets are now loaded.

An enormous crop of grapes seems to have been grown everywhere, and the price at which they are being sold is very attractive to consumers. The large sized basket is being retailed for 75c, containing about 20 pounds. Then there are carloads of California grapes, and pears, and plums, and apples from everywhere, arriving altogether by the hundreds of carloads in Chicago daily. This situation practically sidetracks the sale of canned fruits for the time being. Grapes are daily arriving from Michigan by the steamer load.

Corn canning is about over. One can tell that this is so from the fact that roasting ears have disappeared from the fresh vegetable stores, and of course by the news from the canneries and the brokers.

The weather is very fine and bright, and is warm, and that is not conducive to an active consumption of canned foods.

Spinach—Some interest is being taken in canned spinach and buyers are asking for samples. Baltimore quoted 10s spinach of the new pack this week at $4.25 and 3s at $1.30, and I understand that some sales have been made. (Note—This Baltimore quotation was an error. It should have been $1.50.—Editor.)

California is arranging to pack a large output of spinach, I understand, and to make a competitive price for the Eastern trade. Many of our buyers who stayed away after California spinach a year or two, or more ago, are coming back to Eastern spinach. They state that the Eastern spinach is raised on clay or muck land, and that the California spinach is raised on sandy land and cannot be therefore so thoroughly freed from grit as the Eastern spinach, and that the latter is of a brighter green color and freer from coarse stems than the California product.

I am not going to express a personal opinion in relation to the relative merits of the two packs of spinach, but am just stating the views of two buyers who have returned to the Eastern pack after having gone West for their supply for several seasons.

This thing of comparing the respective merits of the output in canned foods of two or more sections of the country gets me into a lot of trouble frequently, and I have reformed.

If hereafter I cannot say anything good about a pack of canned foods, I am going to silence my voice, blunt my pen and throw a monkey wrench into the machinery of my Blick typewriter.

No Pressure to Sell—I have never known a season in the canning industry when at this time of the year there was as little pressure to sell goods as there seems to be now. Not even in speculative times in the war period was there such indifference on the part of sellers and such anxiety on the part of buyers.

I am told that when a broker gets an order from a wholesaler, and starts out to get it confirmed, that he usually finds, if there has been even less than the usual delay in negotiations, that the goods have been sold. Canners will not tie up their goods on sales subject to approval of sample, but stipulate that the sale must be made "if unsold when samples are approved."

Then I hear the brokers complaining that canners do not answer their letters or telegrams promptly, which is another indication of indifference to sales, but is a very bad practice.

Maybe now that canning is practically over, the canners will do better in that respect and answer their correspondence more promptly. They have been very busy for several months and have a good excuse for being dilatory correspondents, but now have none.

"WRANGLER."

CALIFORNIA MARKET

Small Orders Flooding In—Corporation's New Price List Shows Big Depletion of Stocks — Tomatoes Not Listed — Artichokes Expected to Go Well This Season—Forty Thousand Cases Salmon Believed Lost—Notes.

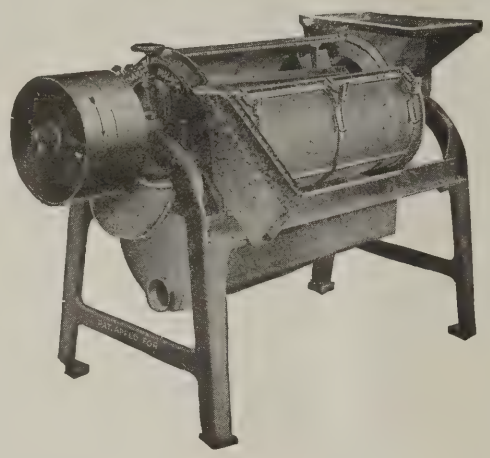
San Francisco, Oct. 18, 1923.

THE MARKET—The demand for California canned fruits continues much the same as for the past several weeks. Buyers are no longer expecting price concessions, but are taking goods at list prices. Orders are not large, but they continue to be numerous and the movement of canned fruits from California warehouses is far from being light. Very little foreign business is being booked, but this condition was foreseen and any marked demand in this direction would soon deplete stocks.

Immediate Delivery Business—The California Packing Corporation has put out a new price list, supplementing the one revised early in September. The new list contains thirty-eight fewer quotations than the one it supersedes, illustrating the manner in which stocks are dwindling away. Tomatoes have been withdrawn entirely and some fruits are getting down to a few sizes and grades. In speaking of the business on canned fruits, a member of the sales staff of this concern said: "Business continues to be very steady and of fair volume. A feature is the insistence of buyers on immediate deliveries. Almost every order has to be rushed, which indicates that stocks in jobbers' hands are light. This is true of orders from all parts of the country, and our shipping department is very busy."

Tomatoes—Additional rains have fallen in Northern and Central California, where the bulk of the tomato crop is grown, but tomatoes have not been damaged to any marked extent and canneries are still in operation. The output in general is disappointing and the shipping demand is absorbing more of the crop than usual. The California pack cannot be of very large proportions and word comes from Utah that the pack there is also proving light. A few concerns are still quoting canned tomaties, but several of the large factors have disposed of their expected output.

Artichokes—The artichoke crop is now ready for harvesting, and this vegetable is going forward to the Eastern markets in carload lots. The acreage has been greatly increased this year and artichokes are being grown commercially as far south as San Luis Obispo. Considerable success has been met with the canned product and the output will likely be increased this year, particularly if the fresh markets are not able to absorb the crop in full. This article merits more attention than has been given it by canners in general and there are those who express the opinion that properly packed and exploited it might take its place with asparagus in popularity. Like asparagus, it can be grown successfully only in a limited district, and like it, it has the advantage of being a very easily digested vegetable and one pleasing to most palates.



Brussels Sprouts—Opening prices on Brussels sprouts have been named by the Ocean Shore Canning Company, which has a plant at Halfmoon Bay, Cal. No. 2 medium is quoted at $1.75 and extra small at $1.80, with $8.00 and $8.25, respectively, for these grades in the No. 10 size. This is another distinctive California vegetable that is meeting with a good sale wherever introduced. This concern is also putting out a vegetable salad, which is offered at $2.65 for No. 2s.

Olives—The picking of olives is commencing in Northern California, where the crop ripens earlier than in other sections of the State, as do citrus fruits in general. Deliveries are being made to the California Olive Growers and $30 a ton is being advanced members. The crop in this part of the State promises to be a good one and the market for canned ripe olives shows signs of being more active than for several years.

Tuna—The demand for California white meat tuna is strong and the market is advancing. This grade is very scarce and sales are consequently confined to small lots. Buyers are offering $22, with some holders holding out for $24 a case.

The California State Railroad Commission is holding a hearing on the application of the California Packing Corporation and eleven other packers and canning companies for reparations for alleged excessive rates collected by the Southern Pacific Company on returned empty fruit and vegetable containers in carload lots during the "Federal guaranty" period, May 1 to September 1, 1920. The Commission recently decided that it has jurisdiction in the premises and the hearing is to determine if the complainants are entitled to reparations and in what amounts.

The Indiana Pulper

Is a Modern Hercules

This machine will handle more tomatoes, pumpkin, squash, apples etc., than any machine heretofore offered the canning industry. It does all this in a sanitary, economic, efficient way. By its use your yield and profits will increase, worries and labors will be lessened. The capacity is unlimited.

A team mate to the above is the Indiana Pulper Finisher. This machine will pulp and finish 5000 bu. of tomatoes in a day.

SMILE AWHILE

ENTIRELY BALD

Skinnem had invented a new hair restorer, and had sent a large number of sample bottles out to various well-known people in the hope of securing some testimonials for advertising purposes.

"I don't know whether to publish this testimonial or not," he said to a friend who was calling upon him as he was opening the letters.

"What does it say?" inquired the other.

"Well, it says," said the proud inventor, "before I used your hair restorer I had three bald patches; now I have only one."

THE QUEERED EXCUSE

"I'm sorry your mother can't come, Winnie. What shall we do with the extra ticket?"

"Oh, give it to the man you go out to meet in the intervals, George; then he can come and sit with us!"—The Humorist (London).

THE JUDGE BELATED DINNER

Lord Shaw, of Dunfermline, tells an amusing story of an experience in the old days when the Scottish bench in Edinburgh were accustomed to dine at 4 o'clock in the afternoon, then went on till late or early, according to the cases before it.

At 2 o'clock one afternoon a client called on a distinguished jurist, and was told by the serving maid that he was at dinner.

"At dinner at 2 o'clock in the afternoon!" exclaimed the visitor, incredulously.

"Yes," replied the maid, "but it's yesterday's dinner he's eating the noon."—The Argonaut.

DOUBLE DISAPPOINTMENT

Rural Magistrate—I'll have to fine ye a dollar, Jeff.

Jeff—I'll have to borrow it off'n ye, Jedge.

Rural Magistrate—Great snakes! It was only to git a dollar that I was fining ye. Git out! Ye ain't guilty, anyway.—Regina (Canada) Leader.

WHAT HE MADE

He never made a buckle,
He never made a shoe;
And yet he stops to chuckle
At the work that men must do.

He never used a hammer,
He never held a saw;
But he often paused to clamor
On the prophets and the law.

"What have you made?" we queried,
"That thus you proudly walk;"
He answered, rather wearied,
"I've made a lot of talk!"

—Washington Star.

A WOODEN LEG

A young lady who was casting around to get a good second hand piano at a bargain, advertised as follows:

"Wanted a nice piano by a young lady with mahogany legs."

UNNECESSARY

Mr. Fussy—Here, waiter, bring me a spoon for my coffee.

Waiter—Sorry, sir, but we don't serve them—the music here is so stirring.—Hudsonian.

ALAS! 'TIS TRUE

Teacher (to pupil)—What is Science?

Pupil—Science is that branch of learning in which one person will prove the reason for a certain thing doing what it does, contrary to popular belief, and then another person will come along and prove it to be different and him to be a liar.—C. Willard Duckworth.

COR-WRECKT

Al. Bert—How do these love triangles usually end?

Phil. Bert—Most of them turn into a "wreck-tangle."—John Anderson, Jr

EDITORIAL

ANOTHER NOTED AMALGAMATION—In the center of this issue, in a two-page display announcement, the Sells Bros., well-known proprietors of the Peerless Husker Company, announce the taking over of the Sprague Canning Machinery Company, the one-time greatest of all canning machinery firms. To the man who has sat on the sidelines viewing the development of this great canning industry, watched its growth from a few thousand dollars in total production to an industry with a valuation of a billion dollars today; recorded and assisted, in an indirect way, the development of the first mechanical means used in the production of canned foods or the supplies used therein, and on up through this magical development to the perfected, entirely automatic factory of today, this announcement means more than a mere joining together of two great machinery firms. It recalls to this Looker-on the early days and the heart-breaking struggles of the first "machinery men," when "Dan" Trench, for instance, taking hold of the product of Welcome Sprague, made this corn cutter his bell-horse and gathered about him the various distinct units used in corn canning, and became known, very justly, as the father of the "unit system" in corn-canning machiery, and from a struggle for a mere existence built himself up high in the realms of finance, so potent in his position that he could never become President of the Canning Machinery and Supplies Association. For, not content with the development of an immense line of machinery of all kinds for the canning and preserving of all food products, "Dan" Trench branched out into other projects—established the first laboratory for the study of canners' problems, at Aspinwall, Pa., with Professor Duckwall in charge; took over the tottering "Canner" and rebuilt it into the splendid trade journal it is today; took up many new projects for improved methods of canning, some of which sapped his fortunes to the vanishing point, and brought the Sprague Canning Machinery Company into the hands of the lawyers. It brings back the days of Cox, Colbert, Warfield, Burt, Conant; the older Sells, father of Ogden, who has now put this deal across; of McCagg, Cottingham, Knapp, Stickney, Merrell- Soule, Hemingway, Kelly, Ulery and the many other pioneers in the machinery development of this industry, and of the Nortons, Stevensons, McDonalds, Sleeper, Jensen, Joslyn and many others in the can-making industry. Now comes the second generation, building better than their forebears, because they are building on the experiences and wisdom of those pioneers, and the whole canning industry profits from it. It used to be that combinations of this kind made men fear that their pocketbooks would be touched. Not so today, for they have learned that such combinations mean greater efficiency, better products, and usually at better prices.

The announcement tells the whole story—that while the Peerless Husker Company, as represented by the Sells brothers (Ogden, Millar and Neal), will bring to the Sprague Canning Machinery Company the same excellent management and progressiveness that have made their company so successful, the Peerless Husker Company will retain its identity and go on as of yore. Leland A. Babcock, the popular "Bab," who has been directing the destinies of the Sprague Company since the death of its President, will be there to continue his good work. The industry must take its hat off to Ogden Sells, Past-President of the Canning Machinery and Supplies Association, and the power behind the wonderful development of the Peerless Husker Company. Working alongside of his father, the patentee of the well-known husker, he helped add the touches which brought it from uncertainty to success; then took control of the business, and began by building quality into every unit. Followed then the acquisition of the Colbert Machinery Company's products, thus joining the products of two sons of famous early inventors in canning machinery, and the addition of others of their own production until they presented a formidable array of the latest and best canning-house machinery. The linking of these two great businesses will offer the industry a complete service of high-quality machinery, sold under fair competition and upon a high level of business ethics.

THE WHOLESALERS ARE COUNTING NOSES—The National Wholesale Grocers' Association has set about to find the actual sentiment of their members on this matter of the Swells Committee, and has taken a vote to see where each member stands. We are not a prophet nor a son of a prophet, and have no desire to prophesy, but we think it requires no prophesy to foretell what the outcome of that voting will be. Possibly the returns are already in, though we have not heard; but they will show a very decided, if not unanimous, desire for at least one-half of one per cent discount upon the face of the invoice to cover swells—and further deductions if further swells should happen to develop. Certainly the canners have no desire to antagonize their buyers, but they cannot, in justice to themselves, accept such a solution of this vexing question, because the losses would be too heavy on them, and there is no justice or economy in saying that this added expense could be put in the cost and the public made pay it. The easier way and the more just to all parties concerned is to decide upon the establishment of regional warehouses to which swelled canned foods and goods on which claims are made could be sent, and there be examined by all interested parties and honestly adjudged, the while being under the supervision of the food authorities, a feature these authorities insist upon retaining. The Board of Directors of the National Canners' Association will have this subject up before them on November 5th. The Western Canners' Association will meet in Chicago that week, and Secretary Gorrell has said that he will welcome all canners at the sessions of their Board, whether such canners be members of the Association or not. The industry should make its wishes known in this matter and stand with and behind its Association representatives so that this industry will present a united front. If you have not given this important matter serious consideration, do so at once; weigh all its possibilities and probabilities, and let these representatives know where you stand. If you are in favor of handing the jobbers the $1,600,000 annually, which is the amount represented by a discount of one-half of one per cent on only 50 per cent of a

normal output of canned foods, say so. If you think the losses through swells should be paid for only as they actually occur and are proven by expert examiners, say so. But don't ring in with that mass who want to give the buyers this sop on the sly; who do nothing but continually complain that the Associations do nothing, that this warehouse proposition is just another trick to get some fat salaries for someone. Have some opinion and backbone of your own and say what you want because you want it. So far as creating fat salaries for anyone is concerned, there is nothing of the kind in view. And even if there were, it would be worth while. The idea is to have the present force of the N. C. A. Laboratory do this inspecting as part of their duties, and they can do it. In fact, they are busy now making these examinations for members, and have been doing this for a long while. They are trained men, know how to do this work, and we need not point out what a contrast this makes with the usual swelled canned foods examiner.

Here is a chance for the industry to show its metal and to stand together. Let's see what it will do.

A GOOD SLOGAN—The California delegates to the N. C. A. Board meeting are in favor of the warehousing plan, saying: "The destruction must be real and not accompanied through the medium of a typewriter or billing machine."

OUR IMPORTS AND WHO USE THEM

Their Value and Diversification—Vital to Many Key Industries—Their Relation to the Well-being of All the American People.

Issued by the National Foreign Trade Council
India House, Hanover Square, New York City
October, 1923

TRADE is a two-way business. The effect of the export, or outgoing part, is much better understood among Americans than is the bearing of the import, or incoming, trade. Yet our imports contribute every day in numerous ways to the comfort, convenience or amusement of us all.

For instance, every time any person in the United States receives or spends a five-cent piece, its convenience has been served by our import trade. The common name of the coin, a "nickel," explains why. Nickel is the metal out of which the five-cent piece is coined. The Indian on one side and the buffalo on the other are native American products, but the nickel was not mined in the United States. It came to us as one of our imports from Canada or from New Caledonia—an island in the South Pacific Ocean. The nickel found in this country is so small in amount as to be commercially negligible. Thus even Uncle Sam's coinage system is dependent for this humble, but very useful, part on our import trade.

The significance of the import trade of the United States is often gauged by the volume and value of this movement standing alone, amounting, as it did in the calendar year 1922, to $3,112,548,772; but the ramifications of this movement are practically immeasurable in their relation to the well-being and prosperity of our people. Not only does the entry of crude materials for use in manufacturing together with semi-manufactured commodities for further use in manufacture, furnish our domestic industries with needed supplies, often essential to the very existence of those industries, but on many of these identical imports depends our ability to ship abroad our finished manufactures, thus building up a lucrative trade with other countries.

A summary of the reports made to the Bureau of the Census by the manufacturing establishments of the United States shows that the value of their products aggregated $43,672,785,000 in 1921, and that the average number of workers employed by them during that year was 8,395,000, whose wages ran into hundreds of millions of dollars. Without the necessary imports from foreign sources this wonderful showing could not have been made, nor would the United States hold its present enviable position as the leading manufacturing nation. That same year our agricultural production was valued at $12,402,000,000, and required the services of over ten million people. In large, although not exactly definable measure, this vast farm organization was dependent upon imported fertilizers and other foreign materials.

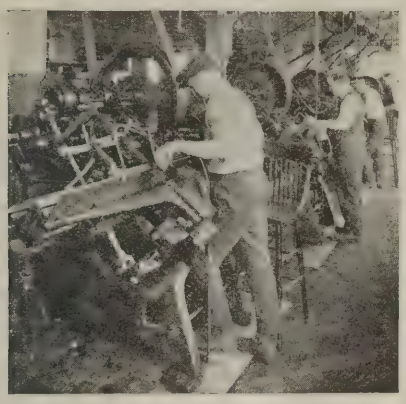
It must also be appreciated that the ability of the foreigner to dispose of his raw, semi-finished or completely manufactured products to us enables him to buy from us the wide variety of foodstuffs and manufactured articles which he may need or desire. In short, the larger the foreigner's sales to us, the greater will be his power to buy our copper, cotton, agricultural products, machinery, automobiles and innumerable other articles of utility and convenience in the production of which Americans excel. On the other hand, foreign finished manufactures, imported and sold in the American market, while in some lines competitive with our domestic industries, furnish us with a variety of goods often not produced here, thus rounding out our requirements.

With a view to getting the facts from basic sources regarding the significance of imports in their relation to American industries the National Foreign Trade Council asked a large number of domestic manufacturing concerns to list the materials of foreign origin which are essential or helpful in the manufacture of their products.

Some of the replies demonstrated that many of our industries could not exist without imports. Other answers revealed that, while for the great part, materials of domestic origin were relied on, there were nevertheless certain foreign products absolutely necessary to round out production. Some manufacturers stated that they were using nothing from abroad; but close analysis of this class of replies disclosed in a great many instances that the materials actually used by these manufacturers and regarded by them as raw materials depended in their original process of manufacture on various foreign materials, without which they could not have been made. Not infrequently, also, it developed that manufacturers using only domestic materials in their products employ tools or machinery in which foreign materials form essential parts.

It is, however, more particularly to our crude material imports and to the entries of manufacturers for further use in manufacturing that attention is invited, because of their basic importance to American industry and trade as a whole. No attempt has been made to mention every raw or semi-finished material that is imported; nor does the story of the use of different imports in our national life attempt to indicate the relative importance of such imports.

In the calendar year 1922 we combed the world's fields of production for raw materials for use in manufacturing to the value of $1,161,727,967, or 37.33 per cent of our total imports. In the same year our purchases of manufactures for further use in manufacturing aggregated $550,245,930, or 17.68 per cent of all our merchandise entries. Together these two classes of imports totaled 55.01 per cent of American incoming trade. Without these imports, covering such essential commodities as nickel, tin, rubber, copra, wool, hides, skins, chemicals, nitrate, potash, silk, flax, hemp, jute and a great variety of other basic materials drawn from every clime, our domestic industries in many primary lines would have ceased to produce, with resultant unemployment of labor, loss to capital invested, and denial to the American people generally of articles of utility, convenience or luxury to which they have become accustomed.



Our imports in 1922 of manufactures ready for consumption totaled $663,650,685, this accounting for 21.32 per cent of all merchandise imported. Other 1922 import items included foodstuffs in crude condition and food animals, appraised at $329,816,862, or 10.60 per cent., and foodstuffs partly or wholly manufactured, valued at $388,287,520, representing 12.47 per cent.

The outstanding fact about these figures is that America, with an actual increased productive capacity during the World War of approximately one-third over the pre-war year, 1913, is buying, and will continue to buy, an ever larger volume of the world's crude and rougher sort of materials to be worked up into finished goods for domestic consumption and for export. In 1922 the nation's foreign business gained nearly $3,000,000,000 over that of 1913. Great Britain's increase was but $1,300,000,000. The United States has become the world's great workshop, and, although possessed of the largest and most varied store of raw materials in the world, we must import a steadily increasing quantity of a great variety of supplies from every part of the globe in order to keep our factory sweels whirling and our multitude of workers occupied. No better indication of America's future in the world's business could be given than this increase in crude and semi-crude imports. This growth should be a cause for optimism to capital, labor and investor alike.

Imports of raw materials and merchandise are paid for in various ways, chiefly by the export of our own products. The important point, however, is not so much how they were paid for, but that in 1922, for instance, foreign producers and manufacturers, on account of their sales to us, received money or goods to the value of 3,112,548,000 American dollars. This not only enabled the foreign producer or manufacturer to pay his labor, finance his business, allow for depreciation, add to his plant, and presumably make a reasonable profit: it did much more. It put him in position to buy the additional materials—some of them no doubt from us—necessary to keep his enterprise going. Thus both foreign capital and labor were better enabled to satisfy in the American market their needs or desires for those things

Corn	Tomato	Spinach	Snap Beans
Beet	Squash	Pumpkin	Cauliflower

Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

D. LANDRETH SEED COMPANY
BRISTOL, PA.

Business Established 1784
139 years in the Seed Business.

How Cranberries are Handled and Canned.

The dish that made turkey famous now becoming a big seller in cans.

A reader sends an interesting account, adding that this Company will build another great factory at Wareham, Mass., next season.

IN less than two weeks berries from the enormous crop of the United Cape Cod Cranberry Company will start arriving from their various properties for packing and shipping from the large screen house at South Hanson. The building is being remodeled and the canning plant practically doubled. The company has been located in Hanson for the past 10 years, and is headed by Marcus L. Urann, who is known all over the country as expert in all phases of the growing and handling of cranberries.

The cranberry bogs of the company extend in all directions of this section and the Cape, the Harwich property being probably the greatest distance away. In the harvesting season there will be about 1,000 pickers at work for the concern, with 60 trucks on the road hauling berries. There will be 100 crews at work at as many different points within the 80 or more miles over which the Cape Cod Cranberry Co. owns bogs.

There are a great many screen houses on the properties, but all berries within 15 miles of Hanson are brought to the Hanson screen house for distribution. Last year a truck load of berries arrived at the screen house every 13 minutes. This year, with more trucks on the road and greater convenience in handling, a truck load will arrive every seven minutes. As many as 2,000 barrels a day have been handled. After being put through several machines which remove all vines and refuse, they are brought on a belt to benches at which the women screeners work, and the final screening is done.

The berries must, of course, be kept in a cool place, but the screeners must have a warm place to work efficiently. The arrangement of the room and belts is so well planned that the berries are in the warm room but 10 seconds for one position on the screening board and for the other position at the lower end of the board but 21 seconds.

The women work at a board, and so quickly do the berries move that they do not have time to sweat, and are returned to the packing room dry and firm and fit for long-distance shipping. They go from the screening boards to the containers, are nailed up and run on belts directly into the cars waiting on the company's side track. The number of containers are automatically counted as they pass into the cars.

The conditions throughout the whole screen house are of the best, and the work is so well planned that there is no lifting and moving from one floor to the other. Each step in the care of the berries carries them along to another machine for the next operation. The screening room where the women work is well lighted and heated, and each position is supplied with an electric drop-light for use when necessary.

The most modern of machinery is in use throughout the house and canning plant, much of it especially designed for the use of the United Cape Cod Co. Even the packing boxes are especially made with a cover arrangement, which cuts the cost of packing in half because it does away with the old way of filling the corners by hand. The arrangement has been patented by the company, and the box is known as the "Ful-Korner box." The boxes are made by the John Foster Co., which is located within a short distance of the screen house. The first order for the season has been placed with the Foster company and is for 50,000 boxes.

The canning factory, which joins the packing house, is equipped with eight aluminum kettles, a 125-horsepower boiler, has three floors in main buildings, 50 by 90, with additional storage of over an acre of floor space. The cook room is 40 feet square, with three stories of machines. Robert H. Hall, a canning expert and a graduate of Massachusetts Agricultural College, is superintendent of the canning department, and is assisted by Walter Caron, also from Amherst. All the machinery in this department is new and most up to date. They are run by Edison electric power, and here, also, as in the pacing house for fresh fruit, no handling or lifting is necessary. A large machine shop, well equipped, adjoins the plant, and is under the care of Herbert Belknap, of Bryantville. The large smokestack recently placed attracted a great deal of attention in the vicinity. It is 75 feet high and 30 inches in diameter. It weighed two and one-half tons and was raised in two and one-half hours with three-quarter-inch four-ply Plymouth cordage rope.

The United Cape Cod Co.'s canning factory is the only successful cranberry-canning plant known. Last year over a million cans were shipped, and but 22 claims were made for swelled cans.

Only the best vine-ripened berries are used for the canning and the most suitable berries are selected from the crops of over a thousand acres. The berries best to can are so mellow, juicy and tender that they would not stand shipping, and the berries while fresh and crisp and in the best condition, go immediately to the cook house. In fact, the work of packing the berries to ship, fresh, from which are selected those best to can, is so timed that usually the berries are cooking in the kettles within 15 minutes after leaving the cleaning machines.

The berries go through a blower to remove light, dry vines, leaves, etc., which are gathered with the fruit in harvesting and pass to hand-sorting tables, where all dirt or bad berries are removed. There is space at the tables for 40 workers. From the tables they go to a washing tank, after which they are dipped by machine from the tank to another machine, which again washes them and removes the stems. They then go to an elevator, which carries them to the top floor, where they are placed in open aluminum kettles and mixed with a hot syrup of granulated sugar and pure water. Five tons of sugar a day will be used when the plant is running at full capacity. The cook room is well lighted and is glassed in, as a protection from dust or dirt. The entire room is painted white, and all attendants will wear white uniforms. No outsiders will be allowed in this room, and the workers here are especially selected with regard to health and neatness. After the cooking, the sauce drops, by gravity, into a machine, which removes the skins, and then, by gravity, drops to the filling machine to be canned.

A car of empty cans will arrive every fourth day, and will set on a side track and be fed to a belt, upon which they are automatically washed, drained and delivered to the filling machines. The latest type of filling machines have been installed and cans may be filled at the rate of 200 to a minute. After filling, the can passes through a box of live steam, is sealed, and goes, with a thousand other cans, in a basket into a cement cooling tank six feet wide, 30 feet long, then hoisted by a crane to the second floor, and cans feed directly from these baskets to the labeler.

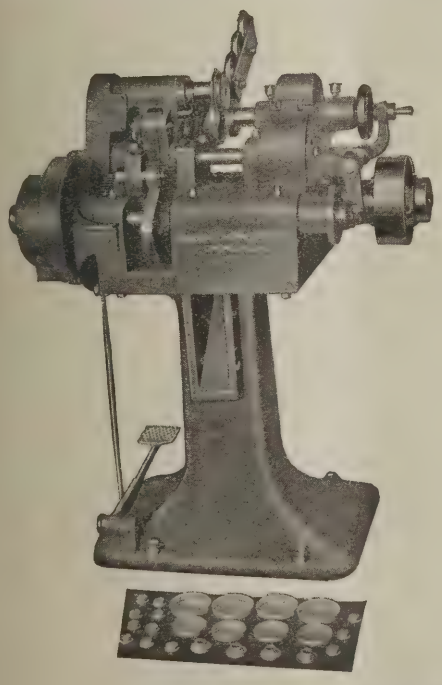
This machine is capable of labeling 70,000 cans a day. The cans are then placed in fiber cases, sealed and run down a gravity conveyer into a car waiting on the side track to receive them. The capacity of the plant is a carload a day.

Cranberries are rapidly becoming more widely known as a health food, and are described as the king of vitamines, making the vitamines of other foods available and an otherwise stale diet attractive. They have medicinal value, containing iron, lime, sugar and healthful acids easily assimilated by the most delicate stomach.

The Ocean Spray Brand Cranberry Sauce packed by the Cape Cod company is shipped to all points. July shipments this year were sent to San Francisco, Honolulu, Los Angeles, Dallas, New Orleans, Memphis, Atlanta, Jacksonville, Washington, New York, Philadelphia, Norfolk, Detroit, Indianapolis, Columbus, St. Louis, Toledo, Cleveland, Albany, Pittsburgh, Baltimore, Rochester, Syracuse, and more than 50 New England points. Orders for September delivery are more than entire pack of last year.

The canning plant will occupy about 50 workers, with about as many at work on the fresh fruit, in the season.

Sanitary Cans for 1924.



IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

We make every machine for "can-making."

CAMERON CAN MACHINERY CO.

240 North Ashland Avenue CHICAGO, U. S. A.

The United Cape Cod Cranberry Co. is also making a great many various bogs. In Bryantville, just below Mayflower Grove, a large 24-inch centrifugal pump, run by a 125-horsepower electric motor, has been installed. It is operated by Edison electric power, and is capable of covering 82 acres of bog land one foot deep in four hours. This will be a great saving of time to the company. When frosts are expected, the cranberries are protected by flooding with water from the various lakes in the section. A pump like the one installed in Bryantville has also been put in place at the property in Hanson at the rear of the Plymouth County Hospital.

OUR IMPORTS AND WHO USE THEM

(*Continued from page 8*)

which we produce in superlative fashion, and which are justly famed throughout the world.

Transportation of Imports—In the distribution of these imports among our manufacturers and merchants, transportation is the primary and vital step. Most imports come by ship, although railroads from Canada and Mexico bring their share. In 1922 American ships brought in cargoes valued at $900,399,902, or 33.55 per cent of our inward ocean commerce. This inbound freight is essential to the successful operation of an American merchant marine. Without it the homeward voyage would be a losing venture, and the outgoing freight rates would, therefore, have to be increased so as to cover the expenses of the whole trip. The transportation of imports provides employment both for capital and labor directly involved in ship operation; it also provides business indirectly for all that vast ramification of American industry and labor which supplies steel shapes and plates, which builds or repairs ships, and which furnishes marine engines or equipment.

Import tonnages have not been segregated from the general bulk of merchandise carried by our rail and domestic water-transportation lines, but the carriage of import freight from the chief seaports to other points is of large proportions. This traffic is of real value to the railroads and coastwise shipping companies, and to their thousands of employees. It calls for more and more equipment which the railroads must order if they are properly to handle the traffic. These orders are, in turn, translated into business for the steel mills, lumber camps, locomotive and car-building plants, all calling for the employment of thousands of men at good wages. To this large aggregation must be added thousands of transport workers on inland and coastwise craft, motor truck and other handlers, every one of whom is individually concerned with the larger volume of business resulting from the direct transportation of imports or of the vast tonnage of finished goods into fabrication of which the imports entered.

Tinware—One branch of the steel industry—the manufacture of tinplate—illustrates the dependence of the American people on foreign products for the comfort and convenience of their daily life, as well as for the maintenance of a great industry employing many thousands of workers. Tin itself is malleable and does not rust, as it is used in many alloys, as tinfoil, and as a protective coating on articles made of iron or steel. In literally numberless ways everyone of us every day makes some use of tin. Yet in 1921 the United States produced only four tons of tin in the whole of its domains. The remainder of the vast quantity which we used came from foreign lands, chiefly from the Malay Peninsula through the Straits Settlements, partly from China and partly from Bolivia. We imported more than 70,000 tons.

It is practically impossible to make a comprehensive enumeration of the myriad ways in which tin is utilized by American manufacturers in the production of a multitude of articles in everyday use in the home, in tools and machinery generally, as well as for construction purposes of all sorts. The average kitchen is, in a very real way, a permanent exposition of foreign trade, covering a wide range of articles indispensable to every home in the shape of tin utensils. The cans of fruits and meats and fish and vegetables and soups and oils that line the shelves of every grocer's shop in the country are made out of imported tin. So are the tubes of tooth paste and shaving soap in every bathroom.

What this raw or semi-manufactured tin in its various imported forms means to our industries is set forth in the Census reports for 1919 and 1921. Here we find that the domestic tinplate and terneplate industry numbered 24 establishments in 1919, with 3,122 wage earners, and representing a capital of $34,315,066. The wages paid in that year aggregated $5,756,417; cost of materials, $73,422,649; value of products, $97,404,720; an value added by manufacture, $23,982,071. Tinware manufactu ing plants in 1921 were set down at 244, with 22,711 wage earn ers, and value of products $168,304,813. No attempt is made t list the vast number of tinsmiths and dealers in tinware throug out the country.

Imports for Agriculture—In 1921 the following quantities fertilizer were imported (all in tons): nitrate of soda, 369,17 sulphate of ammonia, 4,677; bone dust, 21,516; lime nitroge 16,078; kainite, 69,076; manure salts, 38,648; muriate of potas 71,109; sulphate of potash, 11,124; other fertilizers, 77,762. Th colossal quantity of imported fertilizer has been spread all ov the United States. It has been applied in bulk to large farm while the small garden of the commuter has received some of in balanced fertilizer mixtures.

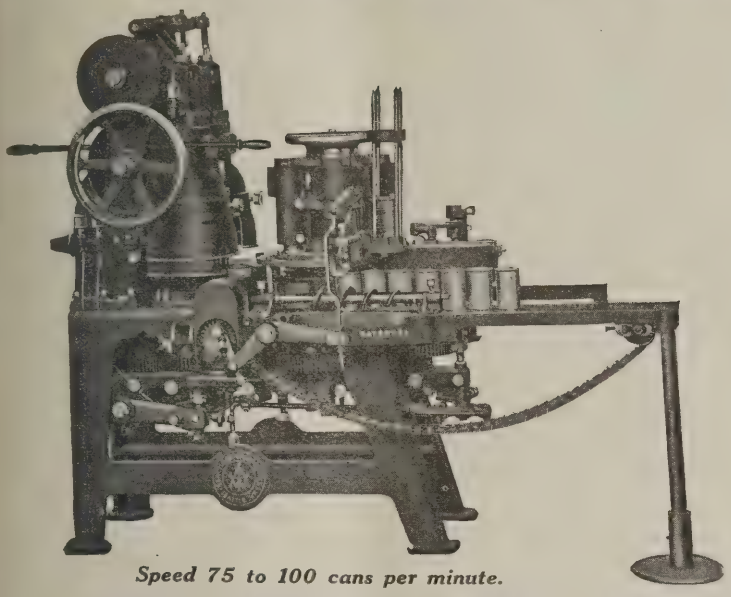
The two fertilizers most essential to the continuance of agr culture and horticulture are potash and nitrates. Both are pla foods, which when applied to the soil restore to it the elemen of fertility exhausted by previous crops. Without the use these two fertilizers, aided by phosphates, lime, etc., the produ tivity of American farms and gardens could not be maintaine for more than a brief period.

Potash is regarded as an essential to all complete fertilize and forms a part of practically all commercial fertilizer mi tures. Our tobacco and potato crops require the most intensiv application of potash, but cotton needs a great deal and co sumes the bulk of the potash used in this country. While som domestic production of potash was obtained during the wa practically our entire supply of this essential fertilizer is no obtained from Germany and France (Alsace).

Nitrates are also used in commercial fertilizer mixture but, unlike potash, they are used to a large extent by then selves, particularly in truck gardens and citrus groves. Som nitrates are derived from barnyard manures, slaughter-house b products, fish scrap and cottonseed meal; but these supplies a totally insufficient and the importation of Chilean nitrate of so is indispensable to American agriculture. The importance these foreign fertilizers is constantly increasing, as America farmers are learning that approved fertilization results in larg profits from their crops.

Imports for Pottery, Enamel and Glass Industries—Th basis of the pottery industry is kaolin clay. There is very litt good koalin in America. What is produced here is so poor mined and refined as to be negligible as a source of supply. is, therefore, absolutely necessary for the crockery industry import kaolin, mostly from England. From the same sour we get Cornwall stone, used as a flux.

In enamaled iron plumbing fixtures American manufacture use assorted pig iron, which is imported by them in large quant ties from Scotland and Belgium, and oxides of lead and zin which also come from foreign sources. Belgium supplies pebbl used as grinders, the Straits Settlements produce tin, whi Greenland sends kryolite.



Some of our manufacturers use several different material which originate in foreign countries, in making porcelain enam and china ware. Some antimony oxide and barium carbona is imported to supplement the domestic supply. Nitrate of so comes from Chile. Makers of vitreous china fixtures use diffe net types of foreign feldspar-flint, and ball clay from England.

In the manufacture in this country of fruit jars, glass sp cialties, opal and amber ware for packers and druggists, foreig sources are drawn upon to an important degree. Of the foreig materials utilized, the most important are aluminum, antimon cobalt, boric acid, andlac. Bauxite, the ore from which aluminu is produced, is found in large deposits in France; Georgia fu nishes most of the domestic supply. The ore from which ant mony is extracted is known as stivnite, found principally Japan, Austria, France, Hungary, Algeria, Turkey and Mexic Some antimony comes from China; some is also found in Ca fornia and Nevada. Cobalt is found in Europe and Canad Boric acid comes from Italy and Germany principally; a litt is produced in California. Lac is imported chiefly from Northe Africa, in the form of gum. Chile is drawn on for sodiu nitrate, Germany for potash, Russia for a special quality of ma ganese, and Canada, Mexico, Japan and Belgium for arseni All these actually go into the glass.

Flint pebbles, imported from Denmark or Belgium, a essential for grinding glass. Felt from Belgium is an importa item in the manufacture of plate glass; it is used in polishi operations. Emery is also used in grinding plate glass. Som domestic emery is used, but it is necessary to import conside able quantities, principally from Turkey. Whiting also is us in the finishing operations and comes in the main from Englan

ESTABLISHED 1880

A Varietal Comparison of Tomatoes for Pulp and Condiments.

By Leroy V. Strasburger and Edw. H. Shaw, Jr.

SOME recent work done in the Mid-West should prove a profitable basis of experimentation for the canners of tomato products. In an effort to establish a comparative basis of results from different varieties of tomatoes, each farmer was furnished with a straight variety of plants from the seed beds of the canner. Accurate records were kept of the distribution of each variety and the yield, color and flavor therefrom. In all, four different strains were tried—Earliana, Chalk's Jewel, Beauty and Early Detroit.

These tomatoes furnished the raw material for two different factories, both, however, under the same management and supervised by the same scientific personnel. The greater part of the yield of 250 acres, averaging about ten tons to the acre, was turned into 1.045 pulp. The specific gravity control was excellent, the seasonal average for one plant being 1.0448, and the other almost as close to the desired standard. Extreme accuracy of gravity control was necessary in order that the figures concerning yield might give real indicative comparisons.

The pulp was cooked down in copper kettles of about 200 gallons capacity each. One hundred and forty-five gallons of cyclone juice, with the addition of three pounds of salt, was charged into each kettle. The only exception to this was in the case of the Beauty tomatoes, where excessive foaming of the juice cut the initial volume to one hundred and forty gallons. The volume of each batch of finished pulp was gauged and the ratio of finished product to raw juice calculated.

From the results obtained it is conclusive that the sugars and natural occurring mineral salts are at their maximum in the first tomatoes that fully mature on the vine. Daily variation was slight in most incidences until after the peak of the season, when the dimunition of the sugars and mineral content manifested itself by a falling off in yield. The great difference in yield of the several varieties at the early and late part of the season is highly interesting, as the following table will attest:

Variety	Gals. Cyclone Juice	Gals. 1.045 Pulp Early in Season	Per Cent Yield
Earliana	145	75	52
Chalk's Jewel	145	90	62
Beauty	140	95	66
Early Detroit	145	75	52

Variety	Gals. Cyclone Juice	Gals. 1.045 Pulp Early in Season	Per Cent Yield
Earliana	145	60	41
Chalk's Jewel	145	75	52
Beauty	140	70	50
Early Detroit	145	55	38

Average Yield—Early and Late in Season

Variety	Yield—Percentage
Earliana	46.50
Chalk's Jewel	57
Beauty	58
Early Detroit	45

Such figures as these are a revelation to the uninitiated, and since so little attention has been paid to this phase of the work, most of the canners must come under that category. That the variety of the raw stock should cause the difference in yield between 45 and 58 per cent, or, in other words, an increase in yield of almost one-third over the lowest figure, is to say the least astounding. It represents a difference to the producer between operating at a loss and operating at a healthy profit.

Other factors, however, enter into the selection of a standardized strain of raw material. Good tomato products are judged primarily by their color and flavor. Since appearance enters so deeply into the sale of his goods, the manufacturer must need pay some attention to the results obtained from different varieties of the raw stock. Flavor is essential, yet by judicious blending slight differences will pass unnoticed. This is especially true of catsup, where the added vinegar, salt, sugar and spices often conceals the tomato flavor in its entirety. In fact, were it not for the red color that the eye detects, we should have no means of knowing whether the basic element were potato pumpkin or ven tap water. A comparison of the color and flavor obtained in the product derived from the four varieties of tomatoes under observation follows:

Variety	Color	Flavor
Earliana	1st	4th
Chalk's Jewel	2nd	1st
Beauty	4th	2nd
Early Detroit	3rd	3rd

From these results it can readily be seen that there is no definite relationship between color and flavor in tomatoes of different varieties. Earliana gave the best colored pulp, yet produced the least desirable taste. Chalk's Jewel gave the best flavored pulp and was also possessed of a very good color.

With such records as these it was easy enough to select the best variety for this particular case. The Beauty gave the best yield, a good flavor, but a poor color. Coupled with this was the fact that it showed a greater variation in yield from day to day and even from hatch to hatch, than any other variety. This strain likewise produced excessive foaming in the kettles, and was in every way difficult to handle. Both the Earliana and Early Detroit gave yields that were far too low. By the process of elimination Chalk's Jewel was chosen as the most desirable specie; its yield was good, color good and flavor excellent. Until further experiments find something more satisfactory it will stand as the adopted standard for the cannery in question.

What should this mean to other canners of tomato products? It should signify that their success can be greatly amplified and their product improved by a proper selection and cultivation of the raw material. The above results should by no means be taken literally—the variety that proved best in this case may fail wretchedly in another locality. It is a well-known fact that conditions of soil, climate and methods of cultviation cause wide differences in results in places only a few miles apart. A tonic to one may prove poison to another.

Just as each of us must work out his own destiny, so each canner must determine by careful and well-planned trial the variety of tomato best suited to his own individual needs. Such work might well be started during the coming season by planting a few acres each in several varieties, then keeping all of the conditions surrounding the growing as much alike as possible to obtain comparable results. When promising results are obtained the work may be carried further, until a point is reached where careful and painstaking efforts locate the variety or varieties that should be used. It is a real opportunity to better conditions and to better the industry.

CHISHOLM-SCOTT CO.'S NEW FACTORY OPENED

Large Crowd Feasted and Entertained at Columbus, Wis.

ONE of the greatest discoveries in the canning industry was that of the Viner, which made the canning of peas largely what it is today, and it is possibly on this account that the Scotts are so fond of Columbus. You know they moved their offices and factory from that well-known metropolis, Cadiz, Ohio to Columbus, Ohio, and now they have built and equipped their latest and best addition at Columbus, Wis.

The formal opening of this new plant at Columbus, Wis was held on November 10th, and, as might be supposed, lavish hospitality was the keynote of the occasion. And was the crowd of canners there? All "Thom" Scott has to do is to raise his finger, beckoning the canners of Wisconsin and surrounding territory, and they come a-running. The local paper, the Columbus Republican, commenting on the occasion, said:

ARABOL LABEL PASTE

No matter where you are located you can order your supplies of famous ARABOL adhesives from any of our convenient sales branches. Plentiful supplies of pastes and glues, all fresh from the great ARABOL factories, are ready for immediate use—and close at hand. "The Chisholm-Scott Co., at an informal celebration on the occasion of the completion of their new Wisconsin factory, most pleasantly and highly entertained the representatives of the canning industry of Wisconsin on October 10th in our city.

"The forenoon was given over to renewal of acquaintances and meeting the representatives of the Chisholm-Scott Co.

"At 12:30 P. M. over three hundred guests partook of a bounteous buffet luncheon which was served by our local Woman's Auxiliary.

"The afternoon's program, which was given on the second floor, was modestly announced by Mr. Scott. The community singing, directed by Prof. F. W. Carberry, of Milwaukee, was spirited and put the audience in a congenial mood. Mr. Scott's song, "Yes, We Aint Got No Viners," was appropriate and surely made a hit.

"Mr. Scott in introducing the officers of the National Canners' and Wisconsin Canners' Associations, briefly and ably mentioned the hearty co-operation he had received from the canners. He also mentioned the reason of building a new factory in Wisconsin was to render efficient and quick service to the operators.

"Mr. Royal Clark, Vice-President of the National Canners' Association, spoke of the high character of Mr. Scott's business management and his integrity in all relations to the canners. He emphasized the revolutionary effect of the viner in the canning industry, and that the new factory was in keeping with the progressive ideas and plans of Mr. Scott. Mr. Clark gave expression to every heart when he paid a high tribute to the late Mr. W. C. Leitsch, who, he stated, was pre-eminently without a rival in the leadership and management of the canning industry in the United States.

"Mr. Fred E. Hulbert, Secretary of the Wisconsin Canners' Association, said that he remembered when the first viner came into our State. It came to Green Bay during the early days of canning, when the pods were picked from the vines by hand. Mr. Hulbert spoke in commendable terms of the wonderful service that Mr. Scott has so consciously given to the canning industry of our State. Both of these representatives speakers, on behalf the National and Wisconsin Associations, welcomed the enlarged adventure of the new factory to Columbus.

"Mr. McKewen, of the Chisholm-Scott Co., spoke of the new plan of co-operation with the canning factories. Heretofore the company put out these viners only on royalty or rented, but from now on the canners can purchase the viners if they desire. He spoke of the suspicious and distrustful mind that sometimes questions new policies in any company, and it was humorously dispelled when he showed their new viner with its new ideas and parts, which, when uncovered for inspection, was a splendid vaudeville company of six men from Chicago, who drove all thoughts of any selfish purposes from the listeners with their lively performance.

"Mr. Scott formally turned the key of the building over to Mr. McDonald, and entrusted him with its supervision. He spoke of Mr. McDonald's loyalty and faithfulness to the company, and was glad to bestow the added responsibility upon him.

"Mr. McKewen introduced the factory force and said to the canners: 'These men represent us, and if they do not give you good service, tell us.' Most of these men are of our city, and our city welcomes such an enterprise as the company has established here; for it makes for better business.

"After Prof. Carberry again led in joyful community singing, the rest of the afternoon was given to dancing.

"The new factory was constructed by Hasenfus & Ibisch. It is a building of hollow cement, which is an adventure in construction work, and it is 100x50 feet, with two spacious floors for the building of viners and other equipment used in the canning industry.

"The gratitude of the guests on leaving was personally expressed to Mr. Scott, who, besides being a very successful business leader, is of a friendly and congenial personality.

"The occasion was pleasant and appreciated by all, and it has wide significance in the canning industry.

"In the evening the building was thrown open to the public for dancing."

CANNERS' SURPLUS GONE, SAY DEALERS

Buyers Display More Friendly Attitude Toward Industry—Bette Stability in Prices.

By John A. Lee

In Chicago Journal of Commerce.

THERE is a more friendly attitude on the part of buyers t ward the canners and canning industry than there has bee for several years previously, and the reason is that th canners have gone to much trouble and expense to give canne foods more stability as to prices, and greater reliability as quality.

The big hangover surplus in staple canned foods, resulti from the enormous accumulation of canned foods in the han of the United States Government because of the preparation f war and the quick termination of the war, has at last been e tirely disposed of and consumed. For three years it was a d pressing incubus upon the canned foods market, causing gre loss, discouragement and demoralization in the industry.

The wholesalers, at the same time, having sustained heav losses from declines in the market, stopped buying canned foo for future delivery, as had been the custom, and this had a d moralizing effect, because the canners had been in the habit basing their applications for bank loans, with which to finan their output, upon the contracts they could exhibit with reliab houses for their product to be delivered when packed.

Carry Smaller Stocks—Then, too, the wholesale grocer who capital had been heavily impaired by losses incident to the rea tion of war prices, adopted the policy of buying small quantiti frequently and carrying very small stocks.

All these and other matters, among which were the hig price of labor, the very high price of raw products, and of ca ning materials, and the restriction of bank credits, weigh heavily upon the canners. Fortunately many canners during t preparation for war period had packed and sold to foreign go ernments, and our own government, large quantities of goo and had thereby been enabled to make some profits; but th reserve had all been needed to carry them through the period depression and readjustment previously described.

Canners, however, have accepted the responsibilities impos upon them, and have risen supreme over their difficult conditio They have, first of all, devoted determined attention to manufa turing canned foods of good quality acceptable to consume thereby increasing the demand. They have renewed and re-esta lished their banking credits and resources along other lines th those formerly depended upon, and have convinced bankers th their products are as worthy and essential as those of the whe potatoes and corn of the farmers, and far safer, less perishab and almost equally salable, and that canned foods furnish a saf basis for credit for loans than raw and perishable products.

Sellers' Market—They have so arranged their credits a ability to finance their output, until it can be sold, that th do not have to force their goods upon the market and acce whatever price the wholesalers choose to pay for them, and a today in a more independent position than ever before in t history of the industry. This explains the fact that we n have a "sellers' market" throughout the entire line of cann foods.

The wholesale grocers are not displeased with this conditi of affairs, because they feel that they have more dependabili as to quality than ever before, and that there is a stability prices which almost certainly assures them of a profit on pu chases, and the advantage of a market which slowly, but sure advances as the output of the season grows scarcer, and protec them from the dangers of speculative loss occasioned by we holders and the preying upon their necessities by greedy spec lators operating entirely outside of the legitimate responsibiliti of the business of regular distribution.

The canned foods market is unchanged today from yeste day's reports, and can be quoted as fairly active, and in so lines of staples as urgent on the part of buyers with a dispositi on the part of canners to accept but little business until the orders are completed.

Corn Shaker

Black Discoloration in Corn.

Mr. Corn Canner :-

If you are troubled with Black Discoloration in your corn here is a remedy- use our Corn Shaker.

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

AYARS MACHINE COMPANY --- SALEM, NEW JERSEY.

Brown Boggs Co. Ltd., Hamilton, Ont. Sole Agents for Canada.

Why the Manufacturer's Agent and Merchandise Broker?

Address of A. F. BACKER before Class and Faculty of Tulane University, College of Commerce and Business Administration, New Orleans.

(Note:—Mr. Backer is of A. F. Backer & Co., well-known manufacturers' agents and merchandise brokers of New Orleans. His outline of the broker is one of the best we have read, and he deserves much credit.—Editor.)

OWING to the fact that the manufacturers' agent and merchandise broker does not come in contact with the general public, it is a business of which there is comparatively little known except to those in the wholesale grocery trade.

Before we can understand the function of the manufacturers' agent or merchandise broker, it may be well to explain, briefly, the channels through which food products and grocery specialties flow from the producer to the consumer.

The manufacturer or canner generally purchases raw material through contract or upon open market from the farmer, grower or fisherman as the case may be. His big job is to manufacture, His next job is to get his product to the consumer by the most direct and economical means. In the great majority of cases he sells to the wholesale grocers, who in turn sell to the retailers. There are some exceptions to this rule, but we shall not discuss exceptions this morning.

It is said that half of the business of the world today is transacted through the medium of agents. The manufacturers' agent or broker is such a medium or agent.

This business is not a new fangled scheme by any means. It is as old as the canned foods business itself. Such agents and brokers sell approximately 80 per cent of the items and volume handled by the grocers.

The difference between a merchandise broker and manufacturers' agent is that a manufacturer's agents represents one or more concerns exclusive in their lines. For instance, a manufacturers' agent would represent only one condensed milk manufacturer, one soap manufacturer or one ginger ale manufacturer. On the other hand, a merchandise broker represents more than one concern in this same line placing the wholesaler's order with the lowest seller. For example, a merchandise broker will represent several firms selling dried beans, cheap unadvertised sardines or such articles that are sold purely on price and not on brands.

Manufacturers are not generally philanthropists. They use an agent or broker because this system has stood the acid test of time and is recognized as the most efficient and economical means of distributing food products and grocery specialties. The broker performs a necessary function which cannot be eliminated. It may be possible to eliminate the broker, but you could not eliminate the function he performs. And as the broker specializes in that particular function, he can perform it more efficiently and economically than the manufacturer or canner, who divides his attention between the problems of manufacturing and the details of selling.

The broker receives the smallest margin of profit of any factor in the chain of distributors between the producer and consumer. It should be borne in mind that the broker, unlike most other salesmen, is paid for his services only when and if a sale is consummated, and then only on that portion which is actually shopped and paid for. I mention this for the reason that very often there are short deliveries in the canned foods business or no delivery at all. In such cases the broker or agent is out of pocket not only the commission that he has really earned, but the expenses of consummating the sale as well.

By short deliveries, I mean cases where the seller delivers only part of his contract or none at all. This is permissible under the terms of most canned food contracts on account of crop uncertainties and the fact that the size of the crop and pack depend upon the whims of nature.

Now to explain just what the broker does. Ordinarily a manufacturer or canner has only one agent or broker in each city or territory. He wires that representative a price. T broker personally gives this price to the wholesaler, and ve often consumes several hours or, perhaps, an entire day offeri the goods, and sometimes without making a single sale. If is a capable broker, he then gives his principal a full report existing conditions and competitor's offerings. In this case aga the broker is paid nothing for his efforts, although the seller h had the advantage of having his merchandise brought to t attention of the wholesale grocer and has received a full repo on conditions for his further guidance, absolutely free of co and the wholesaler has been posted on such offerings.

Prices on canned foods (you will note, we no longer s canned goods, because goods is too indefinite and is apt to me anything or nothing. Canned foods is more specific), such canned fruits, vegetables, salmon, dried fruits, catsup, jelly a the like, are named and sales made early in the year. The b packing season is in the summer, when such products matu Deliveries are generally made in the fall, and brokers' compens tion comes along toward the end of the year. This is call future selling. You will see that the broker has to wait long for his remuneration than any of the other merchants.

I said before that the manufacturer does well not to divi his time, attention and activities between the problems of man facturing and the details of selling. If he studies carefully a intelligently his manufacturing problems, he has his hands fu As a rule, he knows more of the manufacturing business a has no time or inclination to negotiate with each individu buyer. If he sells the wholesale grocery trade direct with the aid of a broker, he or his own salesmen have over 3,0 wholesalers to call upon. It cannot be done by circulars. If attempts to sell direct to the retail trade, he has over 100 (to call upon. Either way would require a large staff of sal men, a salesmanager and necessary staff to handle the deta of such a sales organization. The expenses can also be imagin You can readily see the advantages of giving prices to a numb of trained brokers and letting them do the necessary.

In fact, selling direct without the aid of a broker or man facturers' agent is possible only in cases where the manuf turer has a commodity that can be packed and sold through the year. For example, matches, soap, condensed milk. It not at all practical in cases where the manufacturer or can has a seasonal commodity. That is to say, where he packs tom toes or other vegetables for three months in the year, and th closes his cannery for the remaining nine months of the ye This, also, happens in the case of canning salmon, sardines, tu lobster, etc., which can be caught and packed only a few mon of each year. How could any of these canners with merchand to sell only a few months of the year maintain their own sell organization? If they pack only 5 000 or 10,000 cases, wh would they go first to try to sell their pack? How much eas it is to give their quotations to trained merchandise brok throughout the country and let them do the necessary.

A manufacturers' agent or merchandise broker with a pr erly equipped organization can serve half dozen or more ma facturers or canners as efficiently and advantageously as if th canners or manufacturers had their own representatives on ground, with an obvious saving in expense. A manufactu having his own sales force has an all-year-round selling expe which, like the babbling brook, goes on forever—during the o or closed season just as well as the busy season. You can accumulate an efficient selling organization over night and th disband them after the season's pack is sold—say, in th months time.

Here, again, it should be repeated that the expense of sal men's salaries, traveling expense and office expenses is incur whether or not a sale is made. Whereas, on the other hand the brokerage method is employed, the broker is paid comm sion only on actual sales and deliveries. The broker meet

OMPANY, Inc., and the SPRAGUE-SELLS CORPORATION.
ies will be issued jointly.

the trade daily and continually and discussing many lines is in a better position to know general market conditions than a direct representative handling only one line.

Jobbers prefer to do business with brokers many of whom they have known practically all their lives, and in whom they have entire confidence, rather than with a stranger, as the case would probably be with the direct-selling plan. Another reason in this connection is that the agent or broker is on the ground at all times, and the buyer may confer with him at any time regarding the purchase. Then, if the delivery does not come up to specifications or there is any other trouble, the broker is right on the job, whereas if the wholesaler had purchased from a traveling representative of the packer, that salesman would probably be many miles away when the merchandise arrived.

Where the manufacturer employs the direct-selling plan, he is never able to figure accurately in advance just what his selling cost per case will be. When handling his output through the broker, he knows exactly what it will be. His agreement may be to pay his agent or broker 1 or 2 per cent of the amount of the invoice, or 5 or 10 cents per case. Therefore, his selling expense for the year is definitely fixed and will not change.

The present-day broker sometimes goes further than merely selling to the wholesale grocers. He or his salesmen solicit business on certain lines from the retail grocery for account of the wholesale grocers. This is generally done when a new line is being introduced. The work is very costly, however, and extra compensation is generally given by the manufacturer when such work is done.

A merchandise broker generally represents a number of canners, manufacturers or first-hand dealers. He sells varied lines, such as canned corn, tomatoes, peas and other canned vegetables; canned fruits, such as peaches, apricots, pears and pineapple; dried fruits, such as peaches, prunes and raisins; canned fish, such as salmon, sardine and tuna; dried beans in sacks from California, Michigan or New York, as well as from foreign countries; jams, jellies, preserves, catsups, cereals, etc. Most of these lines are seasonal goods that are offered and sold during certain periods of the year only. The wholesaler must purchase his year's supply at one time and carry the goods throughout the year. Here in New Orleans there are many classes of manufacturers' agents and merchandise brokers. There is a class which specializes in handling canned foods. Another class which handles principally dried beans. As this is a primary market for rice, sugar molasses and coffee, there are many brokers who handle one or two of these commodities exclusively. In interior points the average broker handles all these commodities, and in many cases hay and grain in addition.

Wholesale grocers support the manufacturers' agent and merchandise brokers loyally and look upon them as a necessary and important link in the chain of distribution.

Some few years ago, during and immediately after the war, when business was in a most chaotic condition and reform was rampant, the question as to the value of the merchandise broker was raised. The Southern Wholesale Grocers' Association sent out a questionnaire to the wholesale grocers, asking their opinion on this subject, and the President of that Association at a convention said he had received more replies to that circular than any other which had ever left his office. Ninety-seven per cent of the replies were strongly in favor of the broker.

A wholesale grocery buyer cannot possibly keep in touch with market conditions on all of the thousands of items which he handles without some outside assistance. Through brokers he is kept posted daily on all the markets of the world and on every conceivable item handled by the grocery trade.

When a buyer is in the market for a certain article, whether it be grown in California, New York or in France, whether it be packed in Alaska, Portugal, Norway or Japan, he can get an accurate report on the prospective crop or pack and the situation in general within a few moments by merely calling upon the telephone a few of those brokers who specialize in the particular line in which the buyer is interested at that time. Consider what a convenience this is. The wholesale grocery business would have to be reconstructed if the broker was suddenly eliminated. And this information is gladly given free of charge to the buyer. In this the merchandise broker differs from some other class of brokers like, for instance, a stock broker who collects tribute from both the celler and buyer.

Another point: Wholesale grocers do not always buy in carload lots. In such cases the broker assembles all of the orders which go to make up a carload and has the car shipped to him for distribution. This is called a pool-car shipment. The advantage being that the jobber receives the benefit of the carload rate of freight and quick delivery.

The broker, while not assuming responsibility for credits, keeps his principals informed of any changes that may affect the financial standing of a customer, and if an account is not settled promptly, he assists in securing payment and, in short, looks after the interests of his principal in every way possible.

There is no class of men in American business life who render as much service for as little remuneration as the merchandise broker, who is generally recognized as the master salesman of the community. Commissions run from ½ to 10 per cent, depending upon the services required. The average commission is very small, and on canned foods is generally 2 per cent of the amount of invoice. This rate has been in effect for many years, and has not advanced in keeping with higher living costs. In cases where it is necessary for the broker to employ salesmen to solicit business from the retail trade for account of the wholesaler, provision is generally made by the manufacturer to take care of this extra expense.

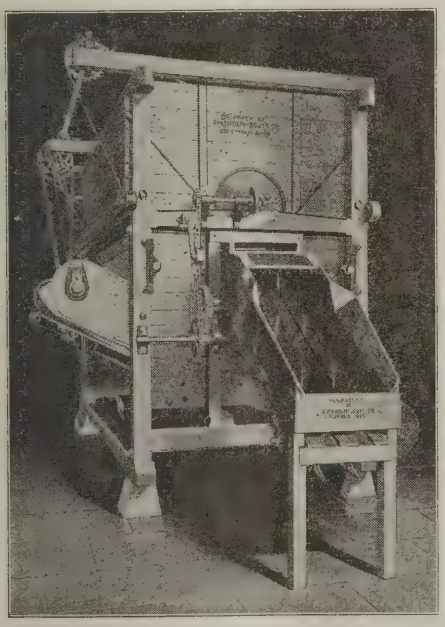
You will see from this that the manufacturers' agency and merchandise brokerage business is an honorable one. That the broker is worthy of his hire. That his existence is justified. He assists in getting life's principal necessity—FOOD—from the producer to the wholesaler and specializes in selling. He is really an economy rather than expense.

In this I have always thought that a broker is in a class similar to that of doctors, lawyers, architects, etc. They all sell their personal services, the difference being that doctors and lawyers are trained at an institution and cannot sell their services until they pass an examination prescribed by law. The broker gets his knowledge from the school of experience. But we all sell our personal services, our skill, our ability, our personality.

Comparatively little capital is required in carrying on the manufacturers' agent and merchandise brokerage business, because in this business capital is not an income-producing factor. Personal services alone is what brings home the bacon.

As a clincher to the value of the merchandise broker, let me say that during the war, when the distribution of food products was under the jurisdiction of the United States Food Administration they not only recognized the economy and value of the broker, but gave him a high place in the food administration. This branch of the Government was organized during the war to see that food products moved from the producer to the consumer by the most direct and economical means, and had it not been for the fact that the broker is an economical and necessary link, he would have been eliminated by the Food Administration, because that highly efficient body did not operate on sentiment. In fact, he would have been automatically eliminated many years previously had he not proved his value.

I cannot close without saying a few words with reference to the canned foods industry. Few people know that it is the outgrowth of a war necessity. During the latter part of the eighteen century England had blockaded France's ports, and there was little chance of foodstuffs reaching the French. Napoleon found that during the seasons of plenty his army had ample food, but during the other seasons there was a shortage. The French Government, as a military measure, offered a prize of 12,000 francs ($2,400) for a method for a better preservation of foods. Among the many capable men attracted by this offer was Nicholas Appert, who began experimenting in 1795, and in 1804 succeeded in preserving food by first heating and then hermetically sealing the container. He did not know at that time what really kept the food from spoiling. It was not until 70 years afterward that another Frenchman named Pasteur discovered that it was bacteria that caused the spoilage, but that heat would kill these bacteria, and then by permanently excluding new bacteria by hermetical sealing, as is done in canning foods, the contents would keep indefinitely without spoiling.



Since then the food industry has made wonderful strides and is now a billion-dollar industry. However, we feel that inasmuch as the per capita consumption is less than a case per year, the surface only has been scratched. Everyone admits that the broker has played a prominent part in the upbuilding of this industry which has reached such enormous proportions, and he will continue to do his share in the future. I thank you.

CANNED FOODS WANTED ON THE CANAL

Louis Fernando Prada, P. O. Box 256, Colon City, Panama, writes us that he wants to represent some American manufacturers of canned foods—jams, jellies, etc.—and groceries in general, and refers to the U. S. Consul at Colon as reference. He says he has had experience in the work and believes there is a good opportunity there for the foods. This may be the opportunity some canners are looking for.

DUNNE-McCORD CO. MOVE

The well-known brokerage firm of Dunne-McCord Co., Syracuse, N. Y., has recently moved its offices to the second floor of the Byrne Building, where it has better facilities for the care of its increasing business. Visitors and patrons should bear this change in mind.

FIBRE BOXES IN EXPORT SERVICE

IT is only within very recent years that fibre boxes have been used at all for shipments by water routes, but their use in such service has now come to be of considerable consequence. Managers of steamship lines at first were skeptical as to the safety of fibre boxes as a part of their general cargo, just as were managers of the railways in the beginning when these packages were offered for ordinary freight service by rail. Apparently they were not able to realize the progress that had been made in the development of fibre boxes and their adaptation to so many articles of commerce which encounter severe strains and unusual handling conditions. These steamship people were not aware of the success met with in that direction, and they had to be convinced.

It was, therefore, the task of the exporter who wanted to use fibre boxes, and by fibre boxes is meant both corrugated and solid, and of the boxmaker who wanted to supply them for use in water-borne traffic, to present convincing evidence that they were safe and serviceable. In doing this it was found desirable in most instances to submit for inspection one or more packages of the exact type to be used, filled with the goods to be exported, and sealed as would be done in the ordinary course of business, together with supporting data concerning the previous use of similar boxes in railway freight and other service, including photographs of such boxes in warehouses at destination showing their condition after actual transportation.

When convinced of their serviceability, it has generally been the practice of the manager to authorize acceptance at receiving dock, at least for a tryout in active service under observation, and finally as a permanent practice if found satisfactory. In some cases the authority to accept is given as a definite order in the beginning, subject only to withdrawal in the event of subsequent dissatisfaction.

This method of approach and presentation is still followed when new or untried articles are to be exported, or when new shipping routes are desired, since the steamship companies do not publish their terms and conditions with complete packing specifications, as is done by the railways.

It is a common practice with the Trans-Atlantic and Trans-Pacific steamer lines and others who handle the far overseas traffic from this country to contract with the exporter for a stated quantity of cargo for specified shipping dates upon agreed terms, and where it is desired to use fibre boxes in packing such goods the exporter should at that time submit his sample boxes and other evidence.

One of the earlier experiences in exportation in fibre boxes was that of a well-known soap-manufacturing concern operating a large plant on the Pacific Coast, which made arrangements with certain steamship lines for the acceptance of laundry soap packed in substantial solid fibre boxes for transportation via San Francisco to Hawaii, Philippine Islands and various ports in the Orient. This movement has continued during the past several years to the entire satisfaction of the steamship companies, the manufacturers and their customers.

The established steamship lines operating upon regular schedules from New York and other Eastern ports to the West Indies, Central and South America, as well as those operating from New Orleans to the same destinations, have for several years, under general instructions of their managers, accepted goods packed in either corrugated or solid fibre boxes when, in the judgment of the superintendent of docks or of the port agent, the packages offered were sufficiently sturdy to be reasonably safe for handling. Under this general authority there has bee a more or less steady movement of traffic, consisting of food in tin and glass, electric lamps, glass fruit jars and other miscel laneous manufactured articles.

Another instance of acceptance of fibre boxes under genera authority was that of the Inter-Coastal lines operating throug the Panama Canal between the Pacific Coast ports and those o the Atlantic Coast and the Gulf, and while not export traffic, a that term is customarily used, it is carried under substantiall similar conditions.

This particular movement has been increasing steadily—ha now assumed very large proportions—and consists chiefly o fruits, vegetables and milk products in tins and in glass; also dried fruits in cartons east-bound, and foods in tin, glass an other packages, glass goods, paper and a variety of manufac tured articles west-bound.

It has been found, too, that in instances of some goods o extra heavy density or goods of excessive weight that the pack ages may be reinforced with metal bands or strapping, and particularly successful instance of this character might be men tioned in the use of this style of package in the importation o rubber from Java.

In the physical handling of fibre boxes in export and in coast to-coast service, no different or special treatment has been foun to be necessary or required beyond the usual or ordinary method used in conveying, trucking, stacking and stowing of goods i other sorts of boxes or packages. Continuous conveyor system sliding chute, rope or net sling, hand truck or other customar method may be and is actually used in handling such package into and out of ships and upon docks and through warehouses.

A recent report contains the definite statement that not onl do the managers of certain steamship lines like the fibre bo because of its inherent good qualities as a sturdy package, bu the foremen and cargo handlers both on ship and on dock prefe them because of the ease of physical handling and freedom fro risk of harm to hands and clothing which these boxes afford Both managers and men comment favorably upon the absence o damage to boxes and contents and the small amount of re-coop ering required.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, OCTOBER 29, 1923

WEEKLY REVIEW

Market Improves While Waiting—The Breathing Spell—Holders Have Confidence—Tomato Canning Ceases Its Last Effort —An Enormous Increase in the Consumption of Canned Foods—Tomatoes and Corn Advance—All Articles Show a Strong Tendency.

GAINING STRENGTH WHILE WAITING — The canned foods market in all items, but more especially in tomatoes, is generally described this week as waiting, or breathing—taking a short rest, it might be said, after the energetic efforts of the past few weeks. This sort of thing almost invariably happens after an active period, the buyers stopping to look around and get their bearings; but it must be recorded this time that the market is gaining strength in its rest, and prices, or tomatoes at least, have advanced during the week. And not only tomatoes, but corn and pumpkin have joined in the improvement. Gradually, but surely, it is becoming recognized everywhere that canned foods are on a strong basis, and that any changes likely to occur are almost surely to be in an upward direction. The backbone of this condition is that holders have confidence in their holdings, and are not generally pressed for ready money. This gives a solid backing to the market that cannot be moved easily.

TOMATOES—Much is being made of any appearance of fresh tomatoes in the market, and attempts are seen to stretch the canning of tomatoes up to this time. Missouri, for instance, which lost half of its expected crop of tomatoes, due to unfavorable early weather conditions, later had very favorable weather, and the tomato plants revived to an extent, a new crop set upon the vines, and the canners were able to get more than had been expected. And yet with this added amount the packs of the canners there are not above 50 per cent of their preparations. And as they had sold about this amount as futures, the goods are practically gone, or such few as may have a surplus are held hard for better prices, and they cannot be secured for less. Missouri, of course, like most other sections, and with most other crops, had figured upon a largely increased output, and had the acreage for it, so that when the figures of the tomato pack for 1923 are shown, it will not be surprising if Missouri turns in figures approximately as large as usual. A normal pack this season, however, sinks into abnormality, because more than a normal amount of tomatoes, particularly, were needed from the pack of 1923 just to provide the bare necessities of the market. This was seen with canned peas, and it is now very clearly seen with tomatoes, corn and many other crops. The increase in the consumption of canned foods has been enormous, and market students, therefore, are forced to figure supplies upon a very much larger basis than of yore. A twelve-million-case pack o tomatoes formerly was a-plenty, because there was always good carryover from previous years, and because consumptio just about equaled that figure. Now such a pack will not suppl more than three-quarters of the actual demand, and leaves notl ing for stocking purposes, or, as it is generally termed, carryove

Some sleuths may have found that some Tri-State canne worked up some tomatoes this past week, or just recently, bu if so, they were hard to find, and the cold, driving rains of th week, accompanied with snow and sleet, have ended all this fo the year. If they did pack any tomatoes, the amount added t the total is as a drop of water to the ocean; but it makes a dand talking argument for the man who wants to buy, and perhaps does catch some unwary canners. They are born every momen Barnum said. More use, however, is being made of the approacl ing cold weather. We have had a real touch of wintery weathe and this makes the canner with poor warehousing facilities shive and fear for his goods. Interested buyers see in this an oppo tunity to get some tomatoes at a little below the market, an some canners have been rash enough to be scared into such sale Again, however, the amount of such sales is trifling and of n consequence to the total market. The proof is shown in the ac vances this week of No. 3s to a minimum of $1.35 county, wit $1.40 and $1.45 quoted in the city, and the moving of the pric on No. 10s to a full $5. It is said some county 10s may yet b bought at $4.75, but the gunner after them will find more hun ing than shooting. The strong movement in tomatoes at th time of the year constitutes a near record, and is the subject o comment in all sections of the country, because such a mark is not usually looked for until after the turn of the year and a spring approaches. Based on this condition, what will the ma ket be next spring? The answer is probably that the canne will not be at all interested in next spring's market, because the will have long since parted with their last case of tomatoe "New York State red with tomatoes," "Missouri's crop has com on again," and "The Tri-States are still canning tomatoes," a all falling on deaf ears, the holders of tomatoes regarding thes remarks as early Halloween pranks, and that is about all the are. The tomato market is firm with an advancing tendency.

CORN—Reference to our market pages will show that canne corn has advanced from 5c to 10c all along the line, an not only here, but in most sections of the country. Th shortage of the Maine pack, as well as the inadequate packs o the better grades in many sections, has sent buyers scurryin for fancy corn, and as a consequence all items in corn are ac vancing and promise to continue to advance. What the tota pack of corn will be is a good guess now, but whether or no there will be any surplus of consequence is "another thing agai yet." The crop of corn, unlike tomatoes, is a steady and regula thing and possible of some kind of an estimate, but the pack o corn does not seem to follow this ordinary procedure. Rarel do the corn statistics meet with the approval of corn canners, an this certainly can be nobody's fault but that of the corn canner A market operator of experience made rather disparaging re

marks about the corn canner liars, and this is certainly not to he credit of the canned corn market. They are making a decided improvement in the quality of canned corn, and we would like to advise a decided improvement in the manner and method of their statistical returns. Let's have the count of the corn pack for 1923 so accurate that all hands will be able to endorse it honestly and truthfully. The figures will not be such as to hurt the market, the carryover in corn has gone, and all that has been canned will be badly needed. There is more harm done this market by the continued appearance of unexpected blocks than in any other item of canned foods. Let's end that condition this season and start with the known pack, and we can then accurately gauge the consumer ability in corn.

PEAS—This item is such a gentleman that he hardly deserves market space in a review of this kind. That is not an Irish bull, and gentlemen are welcome to this column; but it is a fact that a market has interest for canners only when they have goods of that kind to sell. It does no good to comment upon a strong and advancing market, showing prices 15c to 25c per dozen higher than the canners' obtained for their packs as futures. That is merely waving a red rag in a bull's face. Canned peas are unchanged in price, and there does not seem to be a chance in a million that they will ever be cheaper than they are today. The jobbers know this, and canners who have any surplus are well aware of it, too.

SPINACH—We have had torrential rains this past week, completely undoing the long drought and soaking the soil in splendid fashion. It was said the spinach crop needed this. It is too soon to note results, but if the weather does not turn freezing cold, it will help to a better yield and better quality, and both are needed, although the quality has been good, even through the dry spell. There are no changes in prices to record.

OYSTERS—The real oyster season is now close at hand, and the outlook is anything but bright in this great Chesapeake Bay region. The crop does not seem to be there, and if raw prices continue upon the level, they have maintained so far this season, there will be but little oyster canning done. Prices for oysters are firm, and with the approach of cold weather better demand is to be expected.

OTHER ITEMS—The beet pack is reported as only a fraction of what is needed, with no possibility of a surplus. Those who failed to place their future orders for beets will be hard put to find supplies. Pumpkin is gradually advancing to the prices which experienced operators in this item predicted earlier in the season. It is said the pack of pumpkin will be short of requirements, as the crop is not there. More canners are handling this product than usual, and this may help, but not a great deal. String beans are gaining strength with the passing of the fresh market. and although a few of them were recently canned in this market, the prices are advancing. The pack of this article is about finished for the year. These items, together with sweet potatoes, kraut and some other items, have been quite active this week. Fruits remain unusually quiet.

NEW YORK MARKET

Fair Trading, but on Hand-to-Mouth Basis—Futures Being Received Satisfy for the Time—Tomatoes Hold Firm—Corn Is Attracting More Attention—Advertising Campaign Bearing Good Fruit—Fruits Quiet Pineapple Strong—Peas Wanted.

New York, October 26, 1923.

TEMPORARY Quiet in Market—The New York canned foods markets showed no developments of outstanding importance during the past week, trading continuing in fair volume on a hand-to-mouth basis. Distributors have been operating quite extensively in the general market for the past several weeks. They are now taking in shipments of new pack goods which they have been purchasing, and are not in the market for additional large lots at this time, preferring to wait until they have checked their purchases against their sales and know just where they stand with regard to the necessity of buying more. The usual tendency to hold down stocks until after January 1st, inventory time, will not doubt be largely adhered to this year, despite the strong position of the market. There will, of course, be exceptions to this rule in the case of several commodities which are particularly strong.

Tomatoes Hold—Southern tomatoes have held up surprisingly well in price during the week under review. There has been a natural reaction following the extensive buying of the past several weeks, but, save in isolated instances, this reaction has not been accompanied by falling prices. There have been instances of packers shading 2½ cents on 1s and 2s, and possibly 5 cents on 3s in a few cases, but the majority of the packers have held firm at list. One explanation of the unusual strength this year is seen in the fact that buying by mid-Western distributors has taken up the slack left by the curtailing of buying by New York jobbers. The new pack has been largely marketed now, and the outlook for the remainder of the season would seem most favorable from the standpoint of the canner.

Corn in Limelight—Canned corn has been of rather outstanding importance during the past week or so. Following notification by Maine canners of short deliveries on new pack fancy corn, buyers endeavored to secure additional supplies from Wisconsin and other Western packers, but found the market on fancy corn well sold up in all sections of the country. The market for standard corn has strengthened in sympathy with the market for fancy quality, and we find a strong market in all sections. The canned corn market, by the way, has shown a complete reversal in form over the conditions obtaining last year at this time, when the outlook was very unpromising for the corn canners.

The National's Ad Campaign—The unusual demand for canned foods of all descriptions this year has been one of the most important topics in trade circles for some weeks past. Several theories for the improved consumption have been advanced, among them the theory that increased quality was the cause. Yet in one or two instances we find the quality not up to that of last year, as a general rule. A theory which has not yet been advanced, yet which appeals to the writer, is that the national advertising campaign of the National Canners' Association, which was rather a fiasco at the time it was staged several years ago, is now bearing fruit. The campaign came on at a time when the purchasing power of the consumers was limited, and so canned foods met determined sales resistance, despite the great publicity which they were receiving. But the splendid work of advertising canned foods must have borne fruit in the minds of many of the consumers, and it is quite possible that this is one of the factors making for increased consumption this year. The theory may be far-fetched, and many require the services of an expert in psychology to be proven or disproven, but it is nevertheless advanced as the thought of at least one market observer.

Salmon a Little Stronger—Weaker holders of salmon in the Seattle market are being gradually cleaned out of their stocks, and the market appears to be getting into the hands of the larger operators, who are holding pinks at $1.25 and reds at $2.23, as against the prices of $1.20 and $2.25 quoted by the smaller holders on these grades. The market for salmon, both on the Coast and on spot, is rather quiet at the moment.

California Canned Fruits—The Coast market continues quiet, although a gradual firming up in prices is noted. The market will probably continue rather quiet for the remainder of the year, it is believed, although prices may advance slightly, and in an orderly manner. British buying of California canned fruits is practically at a standstill just now, and with this important outlet temporarily closed, the Coast packers have to rely mainly upon the domestic trade for the purchasing of their goods. Any material increase in export buying would undoubtedly be reflected in an immediate strengthening of the Coast markets, however.

Pineapple Strong — Sliced Hawaiian pineapple is meeting with a good inquiry on all sizes at present. Prices have firmed up a little on the 2½ sliced in the New York market and offerings are not heavy. No. 10 pineapple is meeting with a good inquiry from the bakery trade.

Sardines Nominal—Prices on Maine sardines are quoted on a nominal basis, in the absence of important offerings. Many of the packers are withdrawn from the market, and are concentrating their activities in taking care of business already on their books. Comment of well-posted market authorities indicate a stronger market and higher prices before the 1924 packing season arrives.

Peas Wanted—There has been a steady inquiry on the part of jobbers in the local market for standard and extra standard quality peas, and stocks are growing scarce in first hands. Most of the Wisconsin packers are now quoting a minimum price of

$1.35 per dozen on standards. Buying of peas in the Southern markets, however, is reported as quiet.

The Swells Problem—General trade opinion seems to be that the question of canned foods swells will be held in abeyance until the annual convention of the Western Canners' Association, in Chicago early in November. Representatives of the canning industry of the entire United States will gather with representative wholesale grocers for a conference which is expected to result in a definite settlement of the entire problem. The National Wholesale Grocers' Association, which has been polling its members on suggested plans for handling swelled canned foods, will probably know by the time of the Western convention which plan its members are prepared to endorse, and will be able to submit its proposals then. The American Wholesale Grocers' Association is also expected to have a proposal for the settlement of the dispute ready. All indications point to a rather warm meeting, however, when the conference committees representing the two industries get together.

Holidays Coming—Canned foods are expected to be rather quiet for the next few weeks, as the wholesale grocers will be concentrating their attention on their holiday business. Retailers are beginning to stock for the Thanksgiving trade, and will shortly be in the market for Christmas supplies. In the canned foods line California fruits, Hawaiian pineapple, canned mincemeat, plum pudding, cranberry sauce, pumpkin, figs, etc., are expected to get a good demand.

Notes—P. E. Harris, of P. E. Harris & Co., well-known salmon canners, with headquarters in Seattle, is in the market, stopping with Butler & Sergeant, Inc. Mr. Harris is accompanied by Walter Munro, in charge of his sales.

W. F. (Billy) Leonard, of the Portland Packing Company, is visiting the New York market this week, stopping with H. F. C. Killian, his broker.

E. A. Simon, of Greenabaum Bros. Co., Inc., of Seaford, Del., was here this week, stopping with North & Dalzell, his local brokers.

Theodore F. Whitmarsh, president of Francis H. Leggett & Co., has been nominated a Class B director in the Federal Reserve Bank, succeeding Richard H. Williams, who died a short time ago. Mr. Leggett will take office the first day of 1924.

"NEW YORK STATER."

ST. LOUIS MARKET

Buying Only for Immediate Requirements — Occasional Large Buyer Seen—All Hands Promised Profit—Tomatoes Lead in Firmness—Fancy Corn Looked For—Peas Are Growing Scarce—The Scarcity of Fruits Makes Them Stronger.

St. Louis, October 26, 1923.

THE Market—The canned foods situation has not changed during the last few days, and is today just the same as it was a week ago. Buying is being done, but not in as good a volume as the conditions require. The same hand-to-mouth buying continues. Some distributors are purchasing for transient wants and what they want for the future. Others do not seem to take any interest in the future, and it is this class who are only buying for immediate requirements. Spot goods are in demand, and when they can be obtained they are taken quickly. Somehow it appears that goods of this kind always appear when wanted. Carryover vegetables are nearly gone, or disposed of to make room for the new pack.

This year's situation has been hard to solve. It is a pronounced fact that there are more large block buyers than ever before. It is largely due to this fact that the market is in such an unusual position. As a well-known broker here said: "With the coming of the larger buyers comes responsibilities to meet actual and required distribution needs. With a pack of canned foods not too large for the real needs of an increased consumer demand, the buyer is forced to cover rather than speculate on possible profits through any kind of manipulation. The better the average quality and fill, the better the material effect in stabilizing consumer demands. With the coming of a good sellers' position on top of the heap, instead of under, there is a reasonable certainty that everyone handling canned foods this year will do so with a reasonable profit all along the line."

VEGTABLES—Tomatoes—Tomatoes is one of the strongest vegetables on the list. One operator said that some of the larger canners are obliged to buy to fill orders, as they have not t surplus they expected when they booked their contracts. Southern goods are being moved to the consumer or are being put warehouses for future requirements. Advices from one Oh packer states that there has been only 20 per cent delivery No. 3 fancy, and 40 per cent on No. 2 of the same grade. Bo Ohio and Indiana pack have been short. All of this affec Southern. Brokers here say there is a better demand for No. Southern puree, and they are quietly cleaning up. Tomato pro ucts of all sorts are considered to be good bets to the packers.

Corn—Considerable attention is being given by jobbers corn, and all grades are being sought. With the Maine and Ne York shortage admitted, there is a strong call for fancy co from all sections, either on direct factory or in resales. Stan ard is affected and is held with confidence. Southern crushed in better request as a substitute for whole grain. Maine a New York short deliveries affect the market where certain grad are used.

Sweet Potatoes—There has been much interest shown sweet potatoes for present and later uses.

Peas—Peas are firm, but are in more limited quantity to turnover, because the desirable grades and sieves cannot had from first hands, and there is no urgent need for resal Standards and extra standard are harder to get than fancy line One broker here said he believed that peas would bring hig prices next spring before new packs appeared, and he would n be surprised if the price level would break a record. Many jo bers have sold out to reduce their contract stocks, and will ha to compete with each other for resale stocks later on.

Pumpkin—Pumpkin is strong, owing to short deliveries.

Fruit—It was not known when California packers advance their prices some weeks ago that packers were limited. It w thought that the advance was to inspire confidence. It now d velops that the canners did not overpack on their contracts. Th has caused a better demand, particularly for peaches in No. 2½ and No. 10s sizes. Clings are in better demand. Many canne are said to have sold out on the various grades, especially No. 1 low grades. This same was a drug on the market last year.

Apricots—Apricots are routine sellers.

Apples—Gallon apples remain quiet.

Milk—Trading in milk continues quiet and prices remai unchanged.

"MISSOURI."

CHICAGO MARKET

Market Livelier—Futures Going Out as Fast as They Come In—Buying Maryland and Delaware Tomatoes—Shortage on Tomatoes— Missouri Worries—Buyers—Corn Strong—Association Matters—Some Samples Are Exhibited.

Chicago, October 26, 1923.

MARKET Livelier—The brokers state that the activity the market for canned foods is well sustained and tha buying is livelier than it has been previously for abou two years.

It is evident that the buying of canned foods for future de livery by the wholesale grocers of this season's pack was ver light, and that they sold more futures to the retail grocers tha they realized, and are now busy searching for the goods an grades required for their private or house labels.

Brokers say that wholesalers are buying canned tomatoe freely from Maryland and Delaware. Virginia does not seem t be offering canned tomatoes freely, and I have heard of no sale to the Chicago market. It is quite probable that the South an Southwest is taking all the canned tomatoes which Virginia ha to sell.

A reliable report from Missouri is to the effect that man of the tomato canners of that State will be able to deliver no more than 50 per cent of their future sales, and that a full de livery will be exceptional in that State. Our correspondent say that there are several large canning combinations in that Stat that have packed, or bought, a surplus of canned tomatoes, bu that they are withholding them from the market until spring

when they expect to obtain much higher prices for them than can now be had.

This situation takes away from the big canned-tomato-consuming Central West a source of supply to which buyers had confidently looked. I do not think that a single price has been named to Chicago from Missouri canners on canned tomatoes of this season's pack, and have heard of no purchases made from that State by Chicago buyers.

The canners of Missouri candidly state that they prefer to sell their goods to points closer to home and to the big Southwest, for the reason that in selling to Chicago they have to compete with Indiana, Ohio and the Tri-States usually at a freight disadvantage, and that Chicago uses such a large proportion of private labels and is so exacting therefore as to quality, that they prefer to sell to localities where they can use their own labels and sell on grade rather than on samples.

Altogether this position seems to be complimentary to Chicago buyers, as it admits that they are exacting as to the quality of the goods they put their private labels upon.

I have seen samples of some tomatoes of Delaware pack this week on a broker's cutting table. They were the Viola brand, packed at Viola, Del., and Greenebaum Bros.' pack, made at Seaford, Del., and though the goods were offered for standard quality only, they were of good color, well filled, and were nicely handled. Taking the irregularity of the weather of this season into consideration, I would grade them as extra standard.

Corn—Iowa is selling some extra standard, extra sweet, canned corn to Chicago at a few cents under the prices of Wisconsin, Illinois and Ohio, but the price of standard corn is the same in all those localities, namely, 90c per dozen, and brokers say that the price cannot be broken by offers from buyers on large lots.

The Western Meeting—I note that the editor of this paper thinks that I dropped a brick in his vicinity when I proposed that some trade paper editor say the invocation at the Western Canners' Association Convention, November 7, 8 and 9, at Chicago.

Nothing of the kind! I had noticed that several trade paper editors seemed to object to an invocation and address by a minister at the opening of convention, and I attributed it to a feeling of jealousy at the distinction given the ministers, and suggested that the editors, or some of them, undertake the duty.

My purpose was to permit one of those pious editors to achieve a reputation as a convention opener. But I stand accused of malice, and of throwing bricks at them. "The wicked flee when no man pursueth, but the righteous are as bold as a lion." The last division of the verse applies to me.

It would seem that I was in error in announcing that conferences would be held between the committees of the National Canners' Association and the wholesale and retail grocers' associations and brokers' association at Chicago, November 5 and 6.

The committee meetings called were those of the National Canners' Association's Executive Committee and the Committee on the Definition of Standards in conference with the Committee of the Western Canners' Association and the representatives of the Federal Government as to the definition of standards. I have advised all the associations mentioned of the error.

Many attending the 79th Convention of the Western Canners' Association at Chicago, November 7, 8 and 9, 1923, will find it convenient to attend the annual convention of the Wisconsin Pea Packers' Association, to be held at Milwaukee, Wis., the following week, beginning November 13, 14 and 15, to be held in the Milwaukee Auditorium Building, with a big canned foods exhibit in Juneau and the adjoining hall. The Association has applied for special rates of one and a half fare over the various lines of railroad.

Pumpkin—Iowa seems to have raised a fairly good crop of pumpkin, and is selling some of it to Chicago, although there are only one or two canners in that State who are offering any. Their price seems to be 95c to $1.00 for 3s and $3.00 for tens, f. o. b. annery. The quality of the pack is fine.

Samples—I saw some extra standard, extra sweet, double-cut canned corn which was packed by the Grimes Canning Company, of Grimes, Iowa, this week, and it was entitled to be called "near fancy," and I have seen corn offered for "fancy" that was not so good.

I also saw samples of hominy packed by the Morgan Packing Company, of Austin, Ind., inside enameled cans, labels lithographed on the cans, which never tear or soil, and the hominy was as near perfect as any I have ever seen. Snow-white, and could not find a black eye or tip of the grain in the can I opened. took it home and fried it for breakfast, and in consequence got down to business late. I hated to leave it.

"WRANGLER."

MAINE MARKET

Heavy Rains Cause Improved Conditions—Industrial Conditions Also Better—Corn Canners Busy Making Pro-Rata Deliveries—Canned Apple Market Is Easy.

Portland, Me., October 26, 1923.

NEARLY an inch of rain has fallen during the past week, and conditions in New England are much improved. Hunting has been suspended in Massachusetts and New Hampshire, owing to the danger from camp fires, and in Maine every precaution has been taken to prevent serious fires. This rain has lifted the ban, and has made hunting easier, because it is less dry in the woods and less noisy. Game is reported to be very plentiful this year, and the out-of-State sportsmen who are flocking to the "happy hunting grounds" this season far outnumber and previous records.

Industrial conditions are also better, the recent rain having raised the water in storage basins and permitted resumption of business in some of the mills which have been idle because of lack of power. Maine is fast becoming an important State industrially, because of her almost unlimited water power and the reasonableness of labor restrictions. Nothing will have a more immediate and lasting effect on the food and grocery business in Maine than this constant addition to her manufacturing and consequent increase in population.

Corn canners are busy making pro-rata deliveries on their 1923 contracts. The average delivery is around 50 per cent, varying from 35 per cent from some who were unfortunate in pack and fortunate in sales, to 80 per cent and even 100 per cent from others who were more fortunate in production and less heavily sold up. There is still a good demand for Maine corn, but buyers and canners do not agree upon the proper price for such small lots as may be held in first hands. Fancy Maine Crosby corn is worth $1.75 factory, and some small transactions have been made on this basis. Golden Bantam is worth anything above $2.00 that the packer can get, but it is even more scarce than Crosby, owing to the fact that the 1923 growing season did not agree with Golden Bantam seed, and it is very late in maturing, too late to be canned. No. 10 Crosby corn is very short, and buyers still asking for offerings. Ear corn, Golden Bantam, fared rather better than some other styles, and the delivery on this was practically 100 per cent from all canners. No. 10 size is still offered in small quantities at $7.75 factory. The new No. 4 size, 7½ inches tall, has been very popular this season, and doubtless next year will see an increase in this style.

The sardine canners are running in mighty poor luck this season, which shows no sign of letting up during the few days left to them before the law prohibits further packing. The entire year's work has been far below anything recorded since the beginning of the industry, lack of fish and scarcity of labor have combined to make costs prohibitive, and the end of the season finds them with summer contracts still unfilled and no stock to take care of their usual winter business. An idea of costs may be had from a recent item in the Eastport paper, to the effect that, while the current $12 price to fishermen was considered prohibitive, it was actually known that as high as $18 was being paid in order to secure fish for this last few weeks' run. The season closes November 15th.

The canned apple market is easy, with goods already going out to the trade, factories at work, and orders coming in fast enough to suit the canners under the present factory conditions. Just at this time speculation among orchardists and competition among buyers are at their height, and until this flurry is over and orchardists settle down to steady business, canners are unable to ascertain just how much fruit they will get or exactly how much some of it will cost. The quality of fruit this year is said to favor the canner, being principally of the size most used in the fancy apple; but lack of higher-grade fruit has made the demand for this size very heavy, so that the supply and demand of the entire crop must be considered. Cider apples are high for the same reason, growers using judgment rather than a grader in grading their fruit.

"MAINE."

CALIFORNIA MARKET

Losses by Rains to Date Very Light—How the Crops Turned Out —Market Continues to Improve—Buyers More Anxious —Packs Cleaning Out—Tomato Pack Now On— Corporation Recently Withdrew All Tomato Offerings—Coast Notes.

San Francisco, October 26, 1923.

THE Crops—California crop conditions, as reported by the statistical service of the State and Federal Departments of Agriculture, are in good shape, with the losses sustained by rains to date very light. The apple crop is in better shape than was shown by the September report, now being estimated at 84 per cent of a normal yield. The output for the year is estimated at 7,148,000 boxes. The harvesting of the peach crop is at an end, and a yield of 390,000 tons is indicated, as compared with 420,000 tons last year. The output of pears will be about 112,000 tons, with the canned pack definitely below that of 1922. The dried tonnage will also be smaller. The prune crop has been harvested and is estimated at 62 per cent of a normal production, compared with 80 per cent last year. Olives improve with the advance of the season, with Northern and Central California making by far the best showing. Picking is now in progress in favored places. Figs were damaged by the recent rains and canning operations were cut short, the fruit souring on the trees. The output will be much lighter than was indicated early in the season. The crop of raisin grapes will be lighter than original estimates, the cool summer having caused mildew. The feature of the season has been the exceedingly large shipments of fresh fruits and the diminished quantity handled by canners and dryers.

The Market—The canned foods market continues to take on added strength, and buyers are showing an eagerness to place orders at prices which would not have been considered a few weeks ago. Advances are being made from time to time, and but few packers have been forced to come on the market to meet liabilities, a condition for which many buyers apparently waited. The longer the trade waits to secure its requirements, the more it pays, and there is every prospect that this condition will continue until the pack is disposed of. Trading among canners has already become quite general, but even with that few orders can be filled in full. California packers put up only such quantities as promised to move into consumption without difficulty, and there is now no doubt but that the cleanup will be practically complete.

Tomatoes—The packing of tomatoes is still under way on quite an expensive scale, the warm weather during the past week having ripened the crop rapidly. The California Packing Corporation recently withdrew its entire line from the market, but may have some limited offerings to make later should packing conditions continue favorable for a time. The pack is proving of good quality, and the inspectors in the field are having little to do.

Pineapple—Huge quantities of Hawaiian pineapple continue to reach this port from Honolulu, but stocks do not remain in warehouses very long, most buyers desiring immediate shipments. The steamer Wilhelmina recently brought in 138,961 cases, and almost every Matson vessel has a capacity cargo. Packing operations are still under way on a limited scale on the islands, and the output is well ahead of early estimates. Prices are firm, but premiums on contracts are not being paid, as was the case last year, and stocks are going into consumption, with only reasonable profits added.

Coast Notes—Shippers are being advised that shipments of many products to Japan will be admitted duty free until March 31, 1923, as a relief measure. The free list includes condensed milk, infant foods, rice, beans, barley and meats.

Federal Judge John S. Partridge recently adjourned Federal Court to a canning plant in Oakland to watch a peach-peeling machine in operation. The trip followed arguments in the case of the Dunkley Company, of Kalamazoo, Mich., against California canning concerns, charging that they are infringing upon the company's patented machines by using a similar machine made in California. The defendants in the action are Central California Canneries, Griffin & Skelly Co., Sunlit F Company, J. F. Pyle & Sons, Inc., Hunt Bros. Company and Anderson-Barngrover Manufacturing Company. The suit commenced so long ago that several of the concerns are ou business.

A number of California canners, wholesalers and ship have joined in signing a protest against any change in the p ent demurrage plan, or in the average agreement. The ave agreement provides, in effect, that forty-eight hours free t is granted to load or unload a car of freight. If the shi loads or released the car within the free time, he gets credit; if he has to hold some other car for a longer period, the cred balanced against the debit, these balances being made at the of each month. For years the average agreement has bee effect in other parts of the United States, but was not in ef in California, New Mexico and Arizona until the roads placed under Government control during the war. The der rage charges put in by the Federal Administration throug the United States carried the rate of $2 per day the first days and $5 per day thereafter. The Pacific Car Demur Bureau has announced its intention of filing an amendment the Interstate Commerce Commission, asking for a flat rat $3 a day and doing away with the average agreement, thi apply to the three Western States. Among the firms signing protest are the California Packing Corporation, the West Sugar Refining Company, the William Cluff Company, the G fith-Durney Company, the G. W. Hume Company and Haas B

The old Porterville cannery at Porterville, Cal., which not been in use for several seasons, is being utilized as a rec ing station for raisins this year.

A. M. Clair, of Juneau, Alaska, is promoting a plan for establishment of a cold-storage line for conveying fish f Alaska to San Francisco. A floating cannery will be fitted for the packing of varieties suitable for that purpose.

A new company, with Alexander B. Stewart at its head, been organized to operate the plant of the Curtis Corpora at Long Beach, Cal.

R. M. Barthold, vice-president of the California Pack Corporation, and Preston McKinney, secretary of the Cann League of California, will attend the conference on swells t held at Chicago, November 5 and 6, in conjunction with the convention of the Western Canners' Association. They are c mitted to the warehouse plan of handling spoiled canned fo and hold that destruction must be real and not accomplis through the medium of a typewriter or billing machine.

"BERKELEY."

The Muse Remodeled.

It's time that poems once so prized
Should be a trifle modernized.
'Mid jazzy strains so lightly tossed
Some little gems should not be lost.

The boy stood on the burning deck;
Said he, "I will not budge, by heck!
Here's heat enough and maybe more.
The coal strike may leave none on shore."

"Oh, curfew shall not ring tonight?"
Examined the flapper with delight.
"Late hours don't cause me any shock;
I'll dance till 12 or 1 o'clock."

"Drink to me only with your eyes,"
Though vamps are dangerous none denies,
I'd rather risk a glance or two
Than take my chances on home brew."

—Washington Star.

A SUGGESTION

EDITORIAL

CONVENTION MATTERS — November starts off with a bang in Convention work for the canners, and as our Convention Dates column will show, the sessions of the various State Associations will go on, from then, in a quite continuous session.

The first and most important will be the sessions of the National Canners Association Board of Directors, at the LaSalle Hotel, in Chicago, because at these sessions all the work of the minor associations focus, and are given force and effect. Not that the minor associations are not able to take independent action, but because through the National the work that is of benefit to the whole canning industry is unified, the different and independent strings tied into one knot and the action presented to the world as the industry's united front. All Associations are now working in such complete harmony with the National that greater progress is being made and can be expected. This makes for the ideal in Association effort—business-like, efficient work by the various units, brought together under the auspices of the National body and presented to the world as the action of the canning industry.

THE SWELL GUARANTEE—First and foremost is the matter of the proper and, it is hoped, the final settlement of the swell guarantee matter. The N. C. A. will be ready to submit in all detail the warehousing proposition. The representatives of both of the big wholesale grocery associations will be on hand to consider this matter as also will be the representatives of the Chain Store Association, and from what we know of this warehousing proposition we believe they will find it so eminently fair to all parties concerned—food authorities, buyers and sellers—we believe they will consent to it and put it in force for next year's transactions. Certainly it will make an interesting session, and all canners in attendance upon the Western meeting are invited to take part in the sessions at the LaSalle.

STANDARDIZATION OF CONTAINERS—During the past several years there has been more or less desultory discussion of the standardization of the cans used in the industry, but no definite action has ever been taken, and it seems to us the time has come when this must be done. Secretary Hoover has been working along this line for many months, and has shown the immense benefits and savings to be effected in other lines; and canned foods, we are sure, will show equally as great. Moreover, we are now in a position before the public where their confidence must be nursed and nurtured if we expect to retain and promote the wonderful increase in consumption of canned foods now everywhere evident. Instantly all thoughts will turn to the No. 2½ and the No. 3 cans, and all will agree that there is so slight a difference between the two that one should be entirely discarded and the other accepted as the standard everywhere. The little housewives of our country are not as unobservant as many might suppose. They very quickly see the difference in these cans, where the two sizes meet on the grocer's shelf and are inclined to think that the smaller size is more or less of a swindle, the smaller being short measure, in her estimation, and the industry cannot allow such a thing to exist in the mind of the public. The No. 2½ is slowly, but surely, displacing the No. 3 size, and we urge that the change be made complete, so that there will be but the one size of tin offered the public. We do not believe that it is the best policy to cut to the No. 2½ size, because the No. 3 size is a full quart, and the public understands this, and it is always politic to run with the public understanding. The old basis upon which these sizes were originally decided upon—the No. 2 equal a pint, the No. 3 a quarter, and the No. 10 a gallon—are fixed measures in the public mind, and any deviation from them simply invites doubt and distrust. We call attention to the importance of this point, although we know that all the country has been following in the steps of the Far West, which brought out this skimped-size No. 2½ can. And if the industry is determined to have this, let's end the discussion and decide upon that as a fixed size. This is a work that should be done this fall, so that the canmakers and others may be ready to enter the new season without hitch.

But if you will look about you will see that there are all kinds of sizes and "cuts" beginning to creep in, and if this is not stopped in the beginning, there will result confusion worse confounded, and the whole industry will suffer from it. You know what happened before the Pure Food Law put a stop to slack-filling. To undersell a competitor, one canner cut his fill just a little; then the next man, to undersell him, cut that a little, and so on down, until, as the late Mr. Hosiah Going put it, they brought out a Shadow Brand, in which the product was merely passed over the can and the shadow allowed to fall in it. That has been stopped by the law which requires the statement of weight on the label; and now they are seeking to get around that law by cutting the size of the container, but stating the actual weight in the can.

Here is the copy of a circular letter sent out by one of the well-known canners of the country, under date of October 18th:

SPECIAL—PORK AND BEANS T/S

We have been working for some time on a special can of good quality PORK AND BEANS in TOMATO SAUCE to retail at 10c per can and make a profit for the Jobber and Retailer, and have decided on an 18-oz. tall can which has the **appearance** of a full No. 2 on the merchant's shelf. We have named a price of 75c per dozen f. o. b. factory on this special can, which will be packed 8 dozen to the case. In naming this low price we are anticipating a lower market on beans and will not be in a position to consider any lower offers.

We will be pleased to forward samples on request.

The "black letters" are ours, because there is the kernel in the nut and the danger point to the whole canned foods industry. The canner is technically not guilty in packing a smaller can if he puts the actual weight on his label; but after it leaves his hands, then what? It has "the appearance" of a No. 2 can, is known to the canners as a "short," because the full No. 2 can of such beans should have at least 2 ounces more to the can; but what does the consumer know about this? This merely puts in the hands of an unscrupulous retailer a chance to wreck the whole canned baked-bean business; is bound to react adversely upon the entire canning industry, because the consumer is the one who must be considered. Doubtless you can find the wholesaler willing to push this along, and the retailer, especially if his attention is not called to it, willing to palm it off on the public. The industry must protect itself against this kind of bad work and play four-square with its consumers, for they are far more important than wholesalers or retailers.

Again we notice that Maine has taken to the packing of a No. 4 can of corn, so now we have a No. 4, a No. 5, a No. 6, a No. 8 and a No. 10 can, all supposed to be a gallon, or real No. 10. The canner will reply he does not pack them as a No. 10, but as No. 4. Must we repeat what we have said above?

If the canners' conventions do nothing more this year than settle the swells question and adopt the standardization of cans, they will have done magnificent work for the general progress and prosperity of the industry. The National Canners' Association has a special committee on the standardization of tin cans, and we know they have studied this question in an exhaustive manner. Let the results of their determination be brought out and be put into effective force this year for next season's packings.

OUR THANKS—We want to take this occasion to thank our many friends for their co-operation in sending us new subscribers, for recommending this paper, for we have had a surprisingly large number of such actions this year, and it would seem that no new man or firm has entered the industry without being directed to us. We can no more make every issue of The Canning Trade invaluable to every man in the business than can a daily newspaper make every issue ring with important news matter. Some issues must be more interesting and valuable than others—we can't always give you a banquet, and if we did you would grow tired of it. But it is encouraging to note that canners and others realize that our constant drive to be of service to this industry can only reach a maximum of efficiency when all, or practically all, men in the industry receive that service. And that is why they recommend others to read it; why they help us to help the entire industry and so help themselves. We have waited many a long day for the canners and others to see that it is to their interest to spread the reading of The Canning Trade, to go out among the non-readers and advise them to read, to the end that they may be better informed, and, therefore, better competitors. In other words, that the work we do with this journal is their own work, for their own good, and ought to be helped and encouraged. The supply man, where he finds a canner who does not read The Canning Trade, invariably urges that canner to send in his subscription. Many of the brokers are doing this, and now the canners are taking up the practice. It is gratifying, and we thank you, gentlemen, because this knits our big family more closely together, and helps us all.

IS SLACK-FILLING RETURNING?—The recent issue of Notices of Judgment under the Food and Drugs Act shows two actions because of short weight in the packing of clams, two similar charges with respect to the packing of oysters, two alleged in the use of excess brine in the packing of kraut, one that the amount of jam delivered was not equal to the weight that was declared on the label, and one for misbranding in the case of imitation jelly. Ten seizures out of fifty are for violations of the simplest provisions of a law which has been in force for over 15 years and on which not even an amateur in the canning industry should not be well informed.

If a man were to go to the bank and arrange for a loan of a thousand dollars and the cashier passed out only nine-hundred through the window, there would be a prompt protest there and then. The canner who delivers only three and a half ounces for four, or seven ounces for eight is no better than the banker who would retain 10 per cent under a pretext of accommodation after having agreed to a certain loan. The fact that the shortage is small as affecting the individual is no justification for the principle, and if the practice in filling cans is tending toward the slack side, the sooner it is corrected the better for the entire industry. Some other canners might well weigh the contents of some cans and examine their labels.

CONVENTION DATES

November 5th, 1923—Board of Directors, Natior Canners' Association, Hotel LaSalle, Chicago, A. M.

November 7th, 8th, 9th—Western Canners, Hotel She man, Chicago. Semi-Annual Meeting.

November 13th to 16th—Wisconsin Pea Canners, M waukee Auditorium. Annual Meeting.

December 4-5, 1923—Iowa-Nebraska Canners, at Om ha, Hotel Fonteneke. Annual Convention a banquet.

December 6-7, 1923—Ohio Canners, Southern Hot Columbus, O. Annual Convention.

December 12th and 13th—New York State Canne Hotel Powers, Rochester. Annual Meeting.

January 21st to 26th, 1924—National Canners, Canni Machinery and Supplies, National Food Broke Machinery Exhibit, etc., Buffalo, N. Y.

Note:—Secretaries can help their cause by keeping informed as far ahead of time as possible, and keep this column correct and complete.

ARABOL

PASTES and GLUES

For Labeling, Wrapping or Sealing

No matter what your requirements are - - there is a guaranteed ARABOL adhesive for every purpose.

Whether you label by hand or machine - - on tin, glass or other surfaces - - there are special ARABOL adhesives that have been tested and indorsed by the Canning industry for 35 years.

Let us know your adhesive requirements and we will gladly send free samples for a test.

Our Imports and Who Use Them

Their Value and Diversification—Vital to Many Key Industries—Their Relation to the Well-being of All the American People.

Issued by the National Foreign Trade Council India House, Hanover Square, New York City.
October, 1923

(*Continued From Last Week*)

Imports for Canning Industries—Consider, for a minute or two, the use of preserved fruits, vegetables, sea-food and meat. The consumption of these foods in the United States is very great. There are in this country roughly some twenty-two million families. It is probably a fair estimate to say that in each family, on an average of once a day, use is made of some "put-up" food product — meats, fruits, vegetables, soups or oils, that have been packed in tin or glass containers for later use. One concern alone sells over thirty million cases of soups a year, with four dozen cans in a case.

This use of preserved food products has had an incalculable effect in the diversification of our modern life. It has facilitated our industrial development through lessening the importance of proximity to sources of food supply, and has improved our general condition of living by giving us, during several months of the year, palatable and appetizing eatables, which otherwise we should have to use in their dry or dessicated state, or do without. All this is made possible by our import trade.

Preserved foods are put up in glass or in cans of imported tin. If in glass jars, there is either a metal cap in which tin is an element, or a glass top held down by wires made of steel, coated with a mixture of zinc and tin; in either case a rubber ring is absolutely essential in sealing the jars. Both tin and rubber come from abroad. Without these two products some other method of canning fruits and vegetables might be found, but it would surely be much more troublesome and inconvenient, and probably more expensive.

Fruits are sometimes put up in bottles which are corked and sealed, usually with wax, often under a soft tin and lead top. The cork is obtained from the bark of cork-oaks which grow in Spain or Portugal; cork trees do not grow in the United States.

Vegetable Oil Imports—International trade in vegetable oils has assumed very large proportions in recent years. Many countries, mainly in the Orient, produce a surplus of oil and oil materials which are exported to countries which have crushing equipment, a local demand for oil, and markets for the disposal of by-products of the oil-crushing industry, such as cattle feed and fertilizer.

Drying vegetable oils have already been referred to in connection with the paint industry. The non-drying and semi-drying oils, among which are coconut, cottonseed, peanut, palm, palm kernel, soya bean and olive oil, are used primarily in manufacturing edible products, soap and toilet preparations. Cottonseed oil is obtained in the United States; olive oil comes from Italy, Greece and Spain. The other vegetable oils are obtained mainly from British India, the Philippines, Straits Settlements, Dutch East India, Egypt, China, Japan and Brazil.

Recent inventions have made possible to deodorize and decolorize these vegetable oils to such an extent that they can now be used for human consumption. Large quantities are now used in manufacturing vegetable shortening, lard substitutes and margarines. More important in the daily life of every American family, however, is the use of these imported vegetable oils in th manufacture of soap and toilet preparations. In 1921 over 188,000,000 pounds of coconut oil, 23,000,000 of palm oil, 16,000,000 soya bean oil, and huge quantities of rapeseed oil, peanut oil, cocoa butter oil and olive oil were imported. Approximately 2,000 000,000 pounds of soap and soap products are now being consumed annually by the 22,000,000 families in the United States at an average cost of $10 per family. The soap industry consists of 283 establishments, employs 16,558 wage earners, and turns out finished goods with an annual value of $240,194,619. All this vast industry, with its many ramifications, is now largely dependent upon imported vegetable oils. Every time you wash your hands the chances are you are using the products of foreig trade.

Imports for Consumption—Probably the most familiar ar most easily understood illustration of the connection betwee inward foreign trade and our every-day requirements is furnishe by the things we eat and drink. Our tea leaves come from Japa China, India and the East Indies. There is one town in Brazil- Santos, in the State of Sao Paulo—from which more than 6,000 000 bags of coffee beans are shipped every year to the Unite States. Each bag weighs 137 pounds, which gives a little ide of the amount of coffee imported by Americans every year. addition, we import coffee from Colombia, Venezuela, Guatema and other parts of Central America and the Dutch East Indie Another favorite drink is cocoa or chocolate. This is made fro cocoa bean obtained principally in British West Africa, Braz Ecuador, Dominion Republic and Trinidad. Cocoa is also use in the manufacture of chocolates of all kinds. Every chocolat coffee or vanilla soda uses an imported flavoring; so does ging ale and sarsaparilla.

Essential to the preparation of all kinds of beverages ar all sweetened foods is sugar. Approximately half the sugar co sumed in the United States is supplied from foreign countrie notably Cuba and Java; one quarter is imported from Porto Ric Hawaii and the Philippine Islands, and one quarter is produce in this country.

The following imported fruits are in common use: Banana from Honduras, Jamaica and other Caribbean countries; curran from Greece; dates from Turkey and India; figs from Turkey ar Greece; grapes from Spain and Canada; grape fruit from Cub lemons from Italy; olives from Spain; pineapples from Cuba ar Hawaii; raisins from Spain. Some of these fruits are grown the United States, but in such cases foreign sources are calle upon to increase our supplies.

A recent development of great interest is the importatio of fresh fruits and vegetables during our winter months. Th winter fruit and vegetable industries of Florida and Californ have been supplemented by imports from Mexico and Centr America. Even more striking have been our winter imports apricots, cherries, peaches, pears, plums and berries from Sou Africa and South America. How can these be grown during ou winter season? Simply because Cape Colony and Buenos Air and all other points south of the Equator have their summe when the United States and lands north of the Equator are ha ing their winter. Thus the demand for comforts and conven ences is bringing all parts of the world into closer and close relationship.

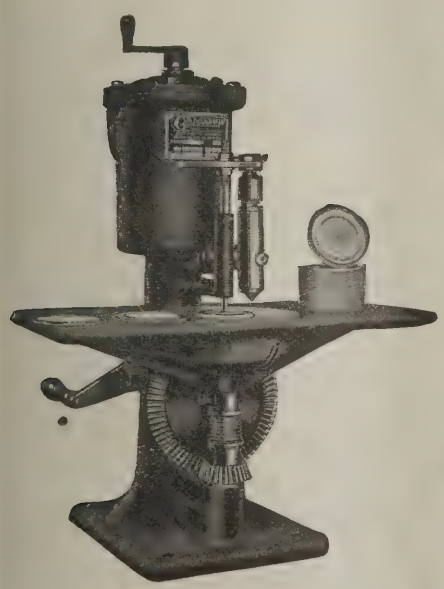
We import almonds from Spain, Italy and France; coconu from the Philippines, Trinidad and Central America; coconu meat from Oceania; shredded coconut from the British Ea Indies; Brazil nuts from Brazil; filberts and marrons from Ita and Spain; peanuts from Japan and China, and walnuts fro Italy, France and China.

Among the common breadstuffs we import—to supplemen domestic supplies—are rice from Hongkong and wheat fro Canada and Australia. Sago and tapioca, found in the Ea Indies, are not produced in the United States.

Of the vegetables, beans and lentils are brought in consi erable quantity from Japan; garlic from Italy, Spain and China onions from Spain; dried peas from Mexico and Japan; potatoe from Canada; mushrooms from France, and honey from Cuba.

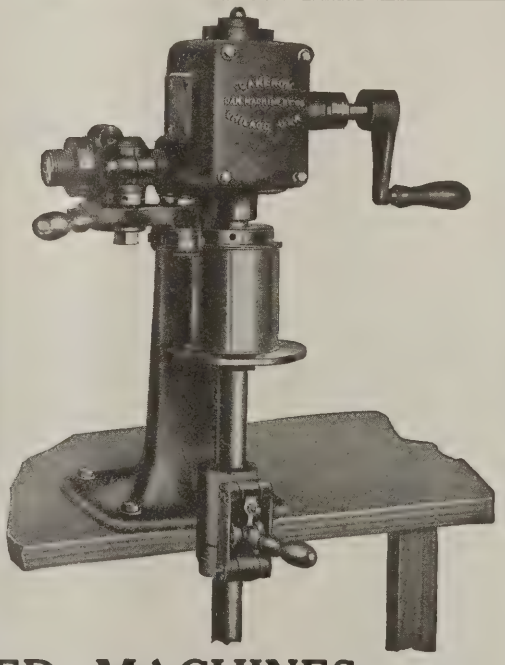
Spices are particularly the product of foreign countries. Re pepper comes from Japan, Spain and Africa; cassia from Hong kong and China; cloves from East Africa and South Africa; gi ger root from West Africa and Jamaica; mustard from England nutmegs from the Dutch East Indies and British West Indie and black pepper from the Dutch East Indies and Straits Settle ments; cinnamon, pimento and sage are also imported.

Sanitary Cans for 1924.



IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:



Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

Baltimore, - - Maryland

CAMERON HAND OPERATED MACHINES

This double-seamer attaches bottoms to can bodies and covers to filled cans. The Compound Applier spreads the rubber cement on the edges of the can ends. These machines are suitable for cans from 2" to 6" in diameter and up to 9" high.

CAMERON CAN MACHINERY CO. 240 N. Ashland St., Chicago, U. S. A.

23

PLENTY OF FRENCH PRUNES

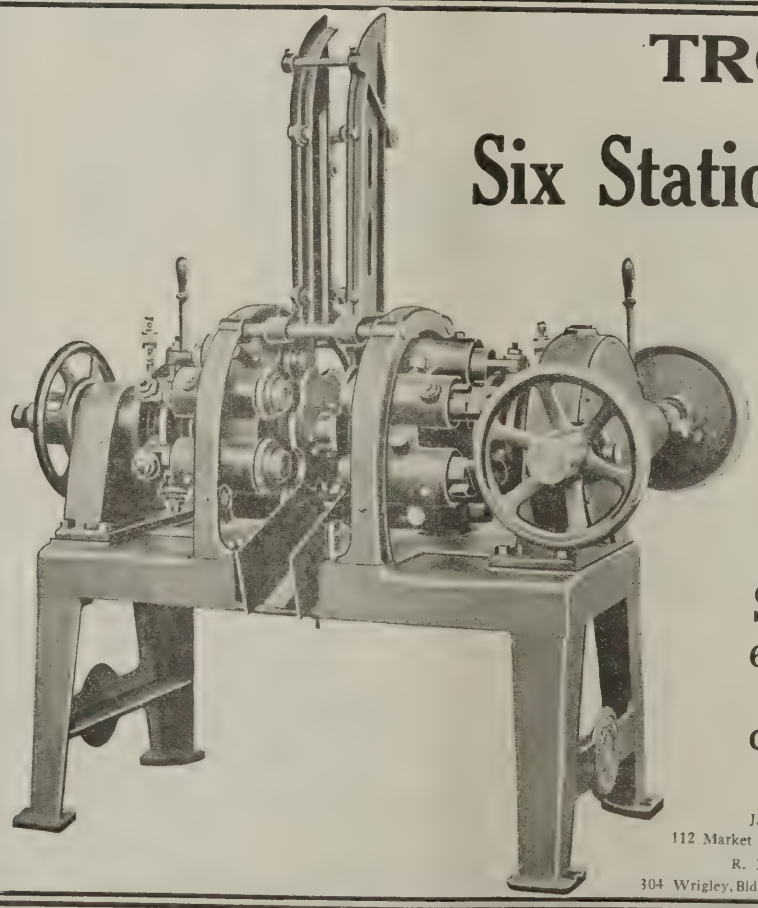
Lot-et-Garonne Department Produces Twenty Times as Many Plums This Year as Last.

THE bulk of the French prune crop is produced in the Department of Lot-et-Garonne, in the consular district of Bordeaux. The Director of Agriculture of that department advises the American Consulate, under date of August 28, 1923, that this year's harvest of plums will be twenty times larger than that of last year. The prune merchants estimate that the harvest will be from 260,000 to 300,000 metric quintals for this year.

The consumption of fresh plums will amount to about 25,000 quintals, and about 15,000 quintals will be made into marmalades, while none is used for distilling. The total quantity which will be transformed into dried prunes will be about 200,000 quintals.

QUEEN OLIVE CROP IN SEVILLE

A FAIRLY large crop of queen olives is assured for 1923, Consul William C. Burdett reports to the Commerce Department, and while the crop will not be a bumper one, it is estimated that it will be 50 per cent larger than the 1922 crop. The extent of the crop will not be realized before the first day of November, but some basis for prices should be reached in October.



Most of the first-grade olives are shipped to New York.

HONGKONG MARKET FOR FRESH APPLES

THE demand for fresh apples in Hongkong is excellent, Consul Leroy Webber informs the Commerce Department, and practically the entire supply now comes from the United States. A good trade has been built up by American exporters, the average annual imports being estimated at about 12,000 boxes, one American exporter shipping 10,000 boxes per year.

Purchases are made direct by local firms, who import against orders placed with them by the smaller dealers. The contracts are generally signed with the fruit growers in the United States during July or early August, for delivery as soon as the crop is ready. Orders for shipment by certain steamers are generally placed by cable. The quotations are usually c. i. f. Hongkong, and payments are made on delivery of the goods.

TROYER-FOX
HIGH SPEED
Six Station Rotary Flanger

Speed 200 to 225 flanged can bodies per minute. A continuous speed - Six sets of Flanging Dies, each brought into position by 3" slides, working in bronzed bushed bearings. The slides actuated by stationary cams, so designed as to bring the dies quickly into position for flanging and then drawing the flange verp slowly. Giving high speed without cracking flanges. Gears enclosed, running in oil.

More Speed—Less Cost in Conveying

From one end of your building to another, through crowded stock rooms, to or from the shipping rooms, cases of bottles and cans are carried quickly and smoothly by the force of gravity. Labor expense is cut, breakage loss reduced, and unnecessary delays eliminated.

The Mathews Gravity Roller Conveyer provides the simplest and most satisfactory utilization of gravity for conveying that can be had. It is the logical and lasting solution of your conveying problems and raises the general efficiency of your plant.

Portable sections make a flexible system readily adaptable to all parts of your building. Switches and other ingenious devices permit the routing of different products at will.

It is imperative that manufacturers take measures to offset labor shortages. The installation of a Mathews Gravity Roller Conveyer is a safeguard that pays for itself in labor saved. Our engineers are prepared to study conditions in your plant and estimate on the conveying system particularly adapted to your needs. Further details will be valuable. Write for them.

Western Canners' Association Review

Issued from the Secretary's Office

12 East Grand Avenue, Chicago, Ill.
October 30, 1923

THIS publication is sent free of all charge to each of the members of this Association. No advertisements are accepted for insertion. Advertising should be done in the legitimate canning trade papers. They should be sustained, as they loyally support the canning industry and deserve support in the way of subscriptions and advertising.

This is not an official publication. No one is responsible for what appears in it but the editor, and its opinions are entirely unofficial and sometimes they are unacceptable.

The wholesale grocers are complaining that the allowance for labels made them by the canners is unfair, and that since the prices of labels have so heavily advanced that they should be allowed their cost. They want a conference.

The 79th Semi-annual Convention of the Association will be held at the Hotel Sherman, Chicago, on Wednesday 7th, Thursday 8th and Friday 9th of November, 1923. A rate of one fare going and half fare returning has been granted from all parts of the United States. When buying a ticket to Chicago get a certificate of purchase from your station agent; when validated at the Convention it will enable you to purchase a ticket back for half fare. That is, provided we have 250 railroad validations. We are more than likely to have that many, but be sure to get your certificate, as all will be needed, and yours may be the 250th.

The National Canners' Association will co-operate in this Convention, and Frank Gorrell, its splendid secretary, writes me as follows:

"We are calling a conference of our different committees for Monday, November 5th, 1923, in the morning at LaSalle Hotel, Chicago. These committees will take up the general business of the Association.

"On Tuesday, November 6th, 1923, our semi-annual meeting of the Board of Directors will be held at the LaSalle Hotel.

"As you know, we want any and every canner to attend the meetings of the Board, and the only limit we will put on the size of the attendance is the number that the largest meeting room of the LaSalle will hold. I think that is about 400. If any more come, we will adjourn to the city hall.

The principal subject to be discussed at the meeting will be the much-mooted swell controversy, although we will have a regular program of other matters. We have also arranged to have a meeting of the Committee on Definition and Standards for Canned Peas on the evening of Monday, November 5th, 1923, together with Dr. Blanck, of the Government."

Put this copy of the Review in your pocket and bring it to the Convention. It may be useful to you as a memorandum of things to take place.

Here is a synopsis of the program of the Convention of the Western Canners' Association. We think it is a good program. The floor is free to all members, however, and if the proceedings don't suit you, get up and start something yourself. There will be open discussion of all subjects, for which there will be plenty of time, and there will be no blinders or bridles and no silencers on revolvers. The fourth session, Thursday afternoon, will be "National Canned Foods Week Session."

WESTERN CANNERS' ASSOCIATION PROGRAM

79th Semi-Annual Convention—Crystal Room

OPENING SESSION, WEDNESDAY, NOV. 7TH, 1923, 10 A. M.

Invocation—J. A. Lee

Report of Secretary-Treasurer.
Appointment of Special Committees.
- (a) On Secretary's Report.
- (b) On Resolutions.
- (c) On President's Address and Recommendations.

President's Address—J. W. Hill, Des Moines, Iowa.

Address by President National Canners' Association—J. A. Anderson, Morgan, Utah.

Address by President National Wholesale Grocers' Association—J. W. Herscher, Charleston, W. Va.

SECOND SESSION, 2 P. M.

Address by President Canning Machinery and Supplies Association—Frank C. Engelhart, Chicago.

Address by General Manager Sales, American Can Co.—George W. Cobb, New York City.

Warehousing and Financing Canned Foods.
- (a) Representing Illinois Association of Warehousemen—A. H. Millward, Chicago.
- (b) Representing Philadelphia Warehouse Co.—William P. Cosgrove, Philadelphia.
- (c) Representing Eastern States Warehouse and Cold Storage Co.—Charles N. Dunn, Springfield, Mass.

General Discussion.

Address, "Insurance From Canners' Standpoint"—James E. Hoff, Milwaukee, Wis.

THIRD SESSION, THURSDAY, NOV. 8TH, 10 A. M.

Address by Vice-President Western Canners' Association—J. J. Rogers, Pendleton, Ind.

Address by President American Wholesale Grocers' Association—J. H. McLaurin, Jacksonville, Fla.

Address by Vice-President National Association of Retail Grocers of United States—John C. Sheehan, Minneapolis, Minn.

Address by President National Food Brokers' Association—Chas. P. Whiteman, Oklahoma City, Okla.

Address by President National Kraut Canners' Association—W. W. Wilder, Clyde, Ohio.

FOURTH SESSION, 2 P. M.
NATIONAL CANNED FOODS WEEK SESSION

Address by National Chairman—Royal P. Clark, Beaver Dam, Wisconsin.

Address by Assistant Secretary National Canners' Association—Frank Shook, Washington, D. C.

Address, "The Brokers' Co-operation"—Walter A. Front, Chicago.

Address, "The Wholesale Grocers' Co-operation"—Chas. E. Wilcox, Chicago.

FIFTH SESSION, FRIDAY, NOV. 9TH, 10 A. M.

Address, "Return of Swells From Laboratory Standpoint, Representing Research Laboratories, National Canners' Association"—W. D. Bigelow, Director, Washington, D. C.

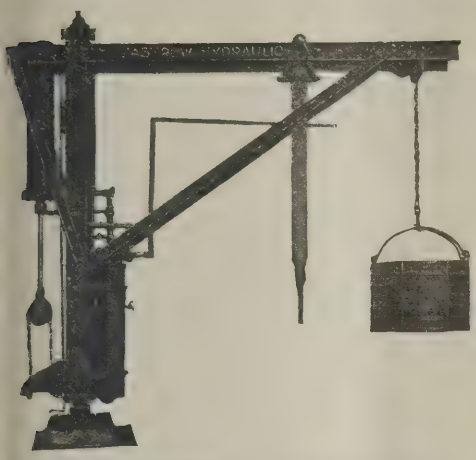
Reports of Standing Committees:

Conference—E. W. Virden, Grinnell, Iowa (Chairman).

Auditing—Albert T. Bacon, Chicago (Chairman).

Traffic—William Claper, Grimes, Iowa (Chairman).

Cost Accounting—H. W. McCartney, Chillicothe, Ohio (Chairman).

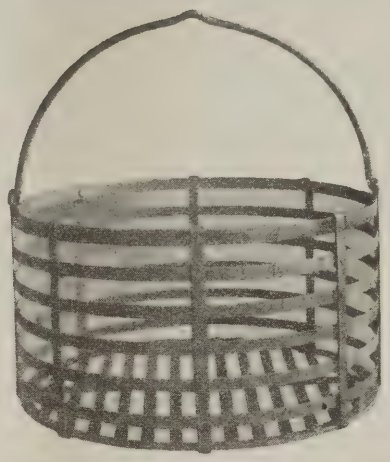


Factory Efficiency—E. B. Gill, Central Lake, Mich. (Chairman).

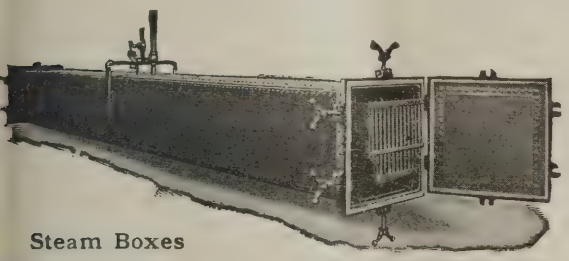
Soil Conservation—G. H. Seare, Chillicothe, Ohio (Chairman)

Membership—F. A. Stare, Columbus, Wis. (Chairman).

Seed Supply—R. C. Dickinson, Eureka, Ill. (Chairman).



ZASTROW'S PROCESS ROOM EQUIPMENT



Zastrow Hydraulic, Steam Impelled Circle Crane, radius up to 18 ft.

Improved Process Kettle or Retort 40" x 72" and other sizes.

Process Crates, Standard 3, 4 & 5 tiers. Also Special Sizes

Steam Boxes

Illinois Canners' Association—Robert Dickinson, President, Eureka, Ill.
Iowa-Nebraska Canners' Association—M. W. Jones, President, Sac City, Iowa.

SIXTH SESSION, 2 P. M.

Address, Representing Wisconsin Pea Packers' Association—W. E. Nicholey, Madison, Wis.
Address, Representing Canners' League of California—Preston McKinney, San Francisco.
Address and report of National Councilor J. A. Lee, Chicago.
Reports of Special Committees:
(a) On President's Report.
(b) On Secretary's Report.
(c) On Resolutions.
Continuation of Discussion on Reports of Standing Committees.

During the Convention there will be timely and appropriate discussion of many important subjects, and of the subjects on the program. All members, active or associate, are invited to participate, but canners only are eligible to vote.

Iowa is rapidly closing out her 1923 pack of canned corn. In thirty days hence it will be difficult to find any canned corn in that State in first hands. Maine is delivering 50 per cent on her future orders for canned corn, and Minnesota is doing about the same. Indiana, Ohio, Wisconsin and Illinois are indifferent sellers at 90c cannery for standard quality, and there is free buying.

What did we tell you about canned tomatoes? Indiana is sold out, Michigan is sold out, Ohio has only a few extra standards and fancies left. Buyers are jumping onto the small surplus in Maryland and Delaware, and the canners there are beginning to run from the brokers and hide what they have left.

That record pack of peas of nearly fourteen million cases is all shot to pieces, and looks like "the last of pea time." If twenty million cases had been packed, they could all have been sold before the 1924 crop arrived.

There are two conventions a year held by this Association—April and November—and the annual dues are good for the year. Heretofore the dues have been collected somewhat irregularly, causing confusion and occasionally a misunderstanding. Hereafter all dues will be payable in January, and all bills will go out the first week in January, and will carry a membership through the year. New members coming in before April convention will pay a year's dues; after that convention they will pay only a half a year's dues, so as to make all payments due January 1st of each year.

Everything in canned vegetables is cleaning up, and nearly all articles are short. In canned fruits the market has been overloaded so with fresh fruits—grapes, plums, apples, peaches and oranges—that canned fruits have been side-tracked for a little while; but cold weather is due, and that will remedy the situation and bring canned fruits into demand.

There has been a big crop of dried fruit produced in California—prunes, apricots, raisins, etc.—and prunes have been very, very low. This has drawn away consumers from canned foods to some extent, but the dried fruits are being rapidly sold out. Prices advanced last of this month (today) from half a cent to two cents a pound on prunes and apricots, and other goods are slated for a rise in price very soon.

That new constitution and by-laws of the Western Canners Association will be issued shortly after the November Convention. The name, address and business of each member will be printed in it and classified by States and lines of business. A copy will be furnished to each member, and we will then all know Who's Who and What's What and can proceed to use each other for our mutual benefit. Get that new member in and his name will be in the preferred list.

We are asked by several brokers who are members of this Association to request all canners to be more prompt in replying to correspondence and to try to be more helpful in their letters

BROWN, BOGGS CO., LTD., HAMILTON, ONT , Sole Agents for Canada

to their brokers in sending quotations:

First—Give quantity of each of offerings, grade where it is possible.

Second—State grade on labels and mark price.

Third—State whether in wood or fibre cases.

Fourth—State terms and cash discounts.

Fifth—State shipping point of goods.

Sixth—Quote all offerings, not just one or two items.

Seventh—Label all samples with factory labels and not with a piece of white paper poorly glued on.

Eighth—State if goods are unlabeled and available for buyers' labels.

The reasons for asking these things are as follows: So that the broker can sell entire lots where possible. So that freight rate can be ascertained for information of buyer. So that freight can be figured accurately. Fibre cases weigh considerably less than wood cases. So that goods can be sold for private labels when so wanted. So that samples can be identified with quotations by mail. So that shipping instructions can be secured. So that assorted carloads can be made up.

Mr. Thomas D. Guthrie, traffic manager of the American Wholesale Grocers' Association, Jacksonville, Fla., requests that all shippers of canned foods insert in their bills of lading notation to the effect that containers used in shipping their goods meet with requirements of Rule 41, Consolidated Freight Classification. This is very important and will save trouble. Your local agent will have a copy of Consolidated Freight Classification. If not, write to this office of the Western Canners' Association for one.

The Wisconsin Pea Packers' Association will hold its annual convention in the Auditorium Building, Milwaukee, Wis., on Tuesday, November 13th; Wednesday, November 14th; Thursday, November 15th, and Friday, November 16th, 1923. There will be a canned foods exhibit in Kilbourne and Juneau Halls. Write to W. E. Nicholoy, Business Secretary, Madison, Wis.

APPROVES STANDARDIZATION OF RAW PRODUCTS

R. T. O. GOERES, of the Lodi Canning Co., Lodi, Wis., believes that the Government should be backed up in its efforts to bring about a standardization of canning crops, and says something about the corn used for canning that should be listened to. He wrote as follows:

Lodi, Wis., October 24, 1923.

Dear Mr. Judge:

I enjoyed your article "Must Buy Crops by Grade" very much, and the sooner 100 per cent of the canners are convinced of this fact, the sooner our quality will be near perfect.

The pea industry has hammered away at this until they finally got results, and in my humble way of thinking the corn packers will have to take an awful hammering to get better results. We corn packers seem to be careless as to our crop grade. The big, course variety of Evergreen ought not be put into cans at all. It has been said: "There is no such a grade as Fancy Evergreen." If this is true, why not drift away from the Evergreen and substitute the more favorable varieties, such as Country Gentleman, Crosby, Narrow Grain, etc.? What is the use of packing a variety which in itself is not of a high quality? Minnesota has proven what can be done if the right product is used. What would Minnesota's reputation be today if they had not "specialized" rather than "packed" just any kind of "corn"?

You are doing a good work with your paper, and I am sure that it will have the needed effect, but I think you will have to keep hammering away.

The beet market is very active . The price of No. 3 cut beets has advanced to $1.35 per dozen, factory, but even at that price there are few to be had.

There is little corn left in the hands of the canners. Quite a little extra standard Evergreen has moved at $1.10½, factory. Near fancy Evergreen is selling for $1.10 to $1.20. Some nice sales have been made at $1.25, for No. 2 tin corn is practically gone, also the No. 10 peas.

Yours very truly,

T. O. GOERES,
Lodi Canning Co.

EMPLOYER CO-OPERATION

(Reprinted from The Superintendent, House Organ of the Ka
Kiefer Machine Co., Cincinnati.)

IN the manufacturing and merchandising of any product the are three principal divisions of effort or departments, unde which are included the multiplicity or detail that are requisi in a going concern. The three departments, if we may refer them as such, may be classified as follows:

1st—The securing of raw materials.

2nd—The manufacturing of such raw materials into the fi ished product.

3rd—The disposing of the finished product.

Given adequate capital and a reasonable knowledge of th particular industry, there is no difficulty in firmly establishin the first department or the first step toward success.

Given a practical understanding of the requirements of th trade that may purchase the finished product and by adoptin a policy of quality, fairness and equity, the selling of the factor output does not present obstacles of a serious nature, and th the third step may be completed.

In between these two departments is that of productio which naturally is the most vital and important of all, for production is so motivated, business success is gained or lost.

In none of the three departments does the human eleme enter so directly as in production. Equipment may be, and, fact, is, a factor that is rapidly standardizing production. Ne ertheless, there must enter in, to an astonishing degree, the d pendency upon human integrity and conscientious effort.

The head of an industry may build up a very strong organ zation, and yet the least important member may be an eleme of danger to the smooth operation of the whole.

The business leaks that cause serious loss and that are th cause of constant vigilance may arise from the most unexpecte source and in the least thought of department. In many i stances these result from misunderstandings and lack of appr ciation on the part of the employee of his responsibility, and ve often this lack of knowledge is the fault of the head of the fir

When a man hires another man to work for him, he pays certain wage and expects a certain amount of work in retur but if the employer is a smart man he expects more than ju the amount of actual labor—he expects intelligent effort, but secure that intelligent effort means co-operation between er ployer and employee. Very frequently the employee perform his duties to the very best of his ability, but because of lack knowledge, due to past environment or experience, he fails accomplish all that the boss expects of him, and then the ve man who should help him, on the contrary, blames him.

How often do you hear an employer say: "I am sorry, b this one or that one won't do." "They are unable to make good And how often you hear a most painstaking employee receive severe "balling out." The boss simply roasts them alive becau they did not think to do something that he who knows how do thinks they should have known or should have been able accomplish. He thinks they are lazy or indifferent, and in mo cases he is wrong. Don't get the idea that I do not believe discipline, because I do; but I do not believe in blaming a ma or a woman for what they do not know. If a man is blind, w do not censure him because he cannot see, neither do we censu a deaf man because he cannot hear. When I hear a man fi fault and fuss and scold an employee because the employee do not know as much as the employer, I feel like saying: "How you get that way?" It is probable that the employer's bank or a manufacturer who moves in a still larger niche says t same thing about him. And don't you suppose that the go Lord above looks down upon all of us and sees our many mi takes because we do not know any better? But He forgives just the same. Employers should realize that each man has h own niche. He may enlarge it, and any time that he does a knows as much as the one over him, he will push that one o of his niche.

Be human to your employees. Give them credit for all th know, and if they do not know enough about your business, tea them and help them, but don't scold them. If you want co-oper tion, if you want to eliminate leaks, secure maximum of produ tion with minimum cost, then co-ordinate all the knowledge a ability and muscle and strength in your business body and nouri it with a friendly word and a helping hand, and watch it pu the load up the hill.

THE DECENT MAJORITY

THE remarkable thing about the human race is not that a few people are hanged, but that so many escape hanging.

The remarkable thing about matrimony is not that so many persons get divorces, but that so many live together in peace and contentment.

A few wives are selfish fools, but most wives are good women who pet their husbands and try to do their part.

A few policemen answer grumpily, but most of them look human and set you on your way right gladly.

A few publications are nasty, but most of them maintain an unvarying respectability.

A few pounds of coal turn out to be slate, but most of the stuff will burn.

A few persons you serve say "Humph," but most of them say "Thank you."

A few boys go to the devil, but most of them turn out about as well as their dads.

A few taxi drivers will frisk you, but most of them charge you a reasonable price for the service.

A few friends will ask you to sign notes, but most of them wish to retain your friendship.

A few men use perfume, but most of them are regular guys.

A few shows are rotten, but most of them give you all the entertainment you pay for.

A few bosses are overbearing, but most of them endure well-meaning mediocrity because they haven't the heart to fire a man.

A few employes do only enough to get by, but most of them make an honest effort to deliver the goods.

A few foods are served with mayonnaise dressing, but think how many are really good to eat!

There is nothing perfect, but the world is rather a pleasant place to live in if the white of your eye is white and your tongue is pink.

CALIFORNIA BEAN GRADE ANNOUNCEMENT OF STATE DEPARTMENT OF AGRICULTURE

FOLLOWING is a copy of regulatory announcement No. 1 from the Bureau of Grain, Seed and Warehouse Standardization (L. M. Jeffers, chief) of the State Department of Agriculture of California, which establishes the first of the bean standards by the State under previously enacted legislative opportunity in this matter:

By virtue of the authority vested in the Director of Agriculture by the California Grain Standardization Act, approved June 3, 1921 (Stats. 1921, Chap. 718, p. 1231), the following standards are hereby established and promulgated as California grades for beans (other than any variety of limas). These standards will be in full force and effect on and after October 15, 1923, until amended or superseded by standards hereafter promulgated by the Director of Agriculture under said act.—G. H. Hecke, Director of Africulture.

Notice—The California Department of Agriculture has been co-operating with the growers and dealers for the purpose of establishing definite descriptive grades for California beans. Several meetings were held during the past year, and resulted in the drawing up of grades which included definite limits as to all factors and specifications as to size. These standards were to be established as State grades only upon their acceptance by all interests. Unanimous approval was secured on all points except the adoption of a No. 1 recleaned standard for limas and baby beans. It was therefore proposed that the Department establish as State grades the present grades of choice recleaned and No. 1 recleaned on all beans except limas and baby limas, and this suggestion was agreed to by the California Bean Growers' Association and the California Bean Dealers' Association (Northern Division). It is the intention of the Department to again take this matter up soon after January 1, 1924, and esta lish the more comprehensive grades for application to the 19 crop.

The establishment of these grades by the Department Agriculture need not change the procedure in securing certi cates of grade. Letters of authority to apply these grades w be issued by the director to the inspectors of the San Francis Chamber of Commerce and the Los Angeles Grain Exchang State certificates of grade may be secured by applying at Roo 244, 25 California street, San Francisco; 38 West Weber avenu Stockton, and 1217 L street, Sacramento.

California Bean Standards—Descriptive Standard for Choi Recleaned California-grown Beans: Choice recleaned bean other than any variety of limas, to contain not less than 98 p cent sound merchantable beans and not over 2 per cent in t aggregate of damaged, discolored, other beans, splits, adob and/or other foreign matter, and in no case more than 1 per ce of any one of the defects herein mentioned except splits. A to erance of 2 per cent shall be allowed for splits in the absence any other defect.

No. 1 Recleaned, California-grown Beans: The No. 1 r cleaned standard is established on the basis of the year's cro and agreed to by those interested in the bean industry. Suc standards as established for the 1923 crop are hereby promu gated as California standards for No. 1 recleaned beans.

Rules and Definitions Applicable to Choice Recleaned an No. 1 Recleaned: All percentages shall be determined by weigh Beans containing moisture in excess of 16 per cent shall not b graded. Beans containing more than ¼ per cent of rock sha not be graded. Aphis-damaged Blackeyes: If a bean is mis shapen in size or distinctly off color, it shall be classed as dam aged; however, if the defect is slight, a tolerance of 4 per cent aphis-spotted beans shall prevail in the choice recleaned stand ards.

NOTICE OF INTENDED PURCHASE

APPLES—Marine Corps, Quartermaster's Department, Wash ington, D. C., October 23, 1923. Sealed proposals, in dupli cate, will be received in this office until 11 A. M., Novem ber 6, 1923, and then be publicly opened for furnishing 1,60 cases apples, No. 2½ tins, for delivery to Depot Quartermaste Naval Operating Base, Hampton Roads (Sewell's Point), Va Proposal blanks and other information may be obtained upo application to this office. This office reserves the right to rejec all bids or parts thereof, and to waive informalities therein. Bid from regular dealers only will be considered. Schedule No. 20 C. L. McCawley, Brigadier General, the Quartermaster.

CALIFORNIA PEACH SEASON NOT VERY SUCCESSFUL

(From California Fruit News.)

GROWERS of peaches in California did not have a remuner ative season, in spite of the decrease in production fro last year. Eastern auction prices on Elbertas average scarcely over 95c per box. When costs of growing, picking packing, box material, freight, icing and selling charges are de ducted from this average market price, it is evident that som growers must have netted a loss on their crops.

The September crop report credited California with the pro duction of 384,000 tons of peaches, compared with 420,000 ton last season. About 1,350 more carloads of California peache were shipped as fresh fruit to Eastern markets this season tha during last year. The large carry-over of canned goods fro last season and the poor demand from Eastern jobbers cause a mid-July reduction in canners' prices of best-grade clings fro $45 to $30 per ton, and best free-stones from $35 to $25 per ton Other free-stones were reduced from $30 to $20, and canners prices for No. 2 clings also declined from a basis of $22.50 pe ton to $15. Dried peaches this year are several cents a poun lower than last season.

Surer of Results

No matter what you sterilize there's always one outstanding advantage in using A-B Continuous Agitating Cookers and Coolers—you are surer of results.

Quick uniform cooks insure quality in the can—sturdy, simplified construction eliminates delays producing quantity output.

Write for Catalogue.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

About the middle of July San Joaquin Valley Elbertas, in boxes, were selling at a range of 70-75c cash track, the "usual terms" price being mostly 75c. By the first of August these prices had declined to 50-55c cash track and 55-60c f. o. b. usual terms. Placer county stock during this period was quoted about 10c higher. A slightly stronger feeling was experienced in early August, but Elbertas were cleaning up and an insufficient volume of f. o. b. sales were reported to establish price ranges. Most of the California peaches at that time were rolled to Eastern auctions, and the prevailing auction prices were commonly used as a basis for f. o. b. or roller sales.

After August clings constituted the bulk of California shipments East, Orange, Phillips and Levy clings being the main varieties marketed.—United States Department of Agriculture.

FUTURE PEAS SELLING

SAYS the Grocers' Supply Co. under date of Wausau, Wis., October 27, 1923:

"There is considerable of an undercurrent movement on future peas. Quite a few futures have been booked on a firm basis. We have sold some ourselves. There has been some orders placed S. A. P. No one has actually named prices, but canners are disposed to book orders that look good to them. This early future movement did not originate with the canners, but appears to be the result of a rather widespread desire on the part of the buyers to cover early.

"We have done nothing to precipitate an early activity on futures. Ordinarily it would be too early. However, the time to sell is when the other fellow wants to buy. And inasmuch as the trade is apparently ready for futures, we can see no good reason for delay. We do not anticipate that future prices will be generally named until after (perhaps immediately after) the Milwaukee Convention. This meeting is only three weeks off.

"There have been a lot of orders for standard No. 4 Alaskas and No. 5 sweets peddled around the State at a dollar. Canners show little interest in this class of business. It is going to be extremely difficult, if not impossible, to place orders for straight cars of standards with the better class of canners at any price. Orders to be attractive must be well assorted, not over 25 to 50 per cent standards.

"From our contact with the canners, it is our impression that the price on the better grades of peas will be about the same, or, perhaps, slightly higher, than last year.

"However, the price on standards will be from 5 to 10 cents higher, with this difference: the canner will hold firm at his opening price. There will be no 95c peas sold. A few, perhaps, at a dollar, but not many, excepting by the fellow with whom you are better off without.

Do not overlook the fact that the canner with an established reputation for packing quality, who delivers what he packs, is going to sell up early. He is the kind of a canner you want to tie to.

"LET'S GO!"

SMALL SPANISH ONIONS

THE Valencia onion crop has suffered somewhat from lack of late rains and the onions are small, says Consul Robert Harnden in a report just received by the Department of Commerce. No definite figures are available, but the average of various estimates place the crop at 3,520,000 bushels. It is stated in some quarters that the crop this year has suffered from a slight disease, but until the onions are pulled and placed in open huts to dry for a few weeks, it is impossible to verify this.

FRESH MILK FOR THE EAST INDIES

FRESH milk, something which nearly everybody in the United States simply takes for granted, is a rare article in the Far East, and a project that is of great interest to the Straits Settlements and Malaya in general is the introduction of dairy farms at Singapore for supplying fresh milk. The Australian trade commission to Malaya is promoting the scheme, and it has the warm support of the public health officials, the medical fraternity and others to whom the public welfare is delegated, says Vice Consul Wade Blackard in a report to the Department of Commerce. The first venture of this kind, which has just been opened in Penang, with every success, was founded by the Australians, who have now turned their efforts to Singapore. The dairy farms are supplied with animals of an approved quality from Australia. The sites selected are ideal ones, well watered, and near the points of milk consumption. The buildings and drainage are of the highest sanitary order. The cleanliness of the animals and feedstuffs are assured, so the milk supply may be regarded as pure and untouched by hands in its journey to the consumer. The plans provide that matured cattle only are imported, no breeding to be conducted, cattle to be sold for butchering at the end of the lactation period and replaced by fresh imports from Australia. In the opinion of the commission, British Malaya is capable of supporting dairies in a number of towns from Singapore to Penang, and the supplying of the cattle and their feedstuffs would provide a new and valuable trade for Australia, for there would not be sent a few heads now and again for new establishments, but a constant supply.

PEAR TREE PRODUCES TWO SUMMER CROPS

WHILE poor fruit crops have been harvested in all sections of the Netherlands, a remarkable exception is reported in a pear orchard near Appeldoorn, 55 miles east of Amsterdam. According to Consul Frank Mahin, in a report to the Department of Commerce, a pear tree in the orchard has produced an average crop which was picked the first of August, and a second crop has now developed from numerous buds which were then beginning to form. The owner of this orchard is confident that this second crop will attain full growth and ripeness before frost.

BELGIANS BUYING CANNED FOODS

WHILE the exchange situation in Belgium is depressing the food commerce of that country, the effect on canned foods is slightly different from that of fresh staples, Commercial Attache Cross informs the Department of Commerce. American canned whole fruits, though regarded as a luxury product, meet with no local competition, and, therefore, sell in limited volume, regardless of exchange; it even appears they could be further popularized by a consistent sales campaign. The same is true of salmon. On the other hand, canned tomatoes meet close Italian and Spanish price competition, and the sales of the American article is thus rendered difficult by this factor. Price of the local product is also the principal factor in canned vegetables and jams, especially in Belgium. Restoration of the local cattle census, by assuring a sufficient fresh-milk supply, prevents household use of condensed milk, which is usually replaced among bakers by powdered milk of Dutch or native origin.

WHY MEAT GETS MOULDY

THE causes of mould growths upon cold-storage meat have been subjected to a very exhaustive investigation by the British Department of Scientific and Industrial Research, which has just issued a highly technical report describing the moulds as plant organisms of fungi, which, unlike many bacteria, do not produce poisonous substances. According to the American Consulate at London, in a statement to the Department of Commerce, "Black Spot," the most widely known meat mould, is due to the dark threads of the fungis ramifying in the superficial layers of meat. "White Moulds" are of two kinds: those which form small spots on the meat are common, but they barely penetrate the surface; the "whiskers" kind frequently projects its growth more than half an inch and collapses in a dry atmosphere. A certain degree of humidity at certain temperatures alone produces these moulds. The threads are so delicate that they cannot withstand exposure to relatively dry air, but in a close atmosphere saturated with water vapor moulds develop with great luxuriance upon suitable substrata as, for example, bread or cheese; in a contrary manner, bread or meat which has been dried and subsequently kept in a dry atmosphere will not permit the growth of moulds. Meat fungi are remarkable at being able to grow at low temperatures. Thus, meat in cold storage is liable to attack.

NEW PULLEY CATALOGUES

THE W. A. Jones Foundry Co., of Chicago, has just issued two new and interesting catalogues:

Catalogue No. 27—Pulleys.—Is full of new and valuable information on cast iron pulleys, such as weights, illustrations and extra lists for special types, rubber covering list; also describes, illustrates and lists "Lemley" ball-bearing loose pulleys, and ring oiling loose pulleys. Steel, wood and paper pulleys are also listed.

Catalogue No. L-28—Friction Clutches.—56 pages of valuable data on Lemley friction clutches, most of which is entirely new. Sleeve clutches, cut-off couplings, clutch pulleys, ball-bearing clutch pulleys, gas engine clutch pulleys are completely covered with price lists, dimensions, illustrations, horsepower ratings, etc.

The Markets

BALTIMORE, NOVEMBER 5, 1923

WEEKLY REVIEW

The Market All In Favor of the Sellers—Money to Be Made by Waiting—Next Spring Looks Very Rosy to Holders of Surplus—A Virginia Canner Complains—Future Peas Selling and Reason.

LET THE MARKET ALONE—That is the best piece of advice that we can give you right now—to get out of the market, lock up your warehouse and forget about what goods you may have, except to keep them from freezing, and you will probably make more money by that forgetfulness than the other fellow can make fussing in the market. There are some men, of course, who cannot get their noses from the grindstone, but must keep both eyes constantly on the market and its changes, and thus keep themselves in a constant state of worry. There ought not to be many canners compelled to go into the market at this time, and we do not believe there are many of them who have anything to go into the market to sell; so it ought not to be hard to carry out this advice. If we had a nice little surplus of anything or of all things, we would just look up the warehouse, tell the buyers the sale's over, and wait until next spring. And we have a hunch that the gamble on the goods would make us a very nice profit by that time. That is the situation of the canned foods market as we see it, and while we know that the brokers will not like this, because they want to see sales and active trading because that is where they make their money—and they deserve it—still it is our mission to advise the canners as we see it, and that we have done.

So far as the market is concerned, the canners are sitting pretty. There has come a lull over buying, but it is notable that the market is rather gaining strength than losing from this apparent inactivity, and this is true in every section of the country. Considering the fact that the buyers have been, and are, taking in their futures in large supplies, the wonder is that there is not weakness about the market. But it is beginning to be seen that in their future purchases they covered only a portion of their wants, and that immediate demands will about clean them out, leaving nothing for the future. These buyers know that the supplies of canned foods in canners' hands are a negligible quantity, and they see that there is very grave liability that the entire supply will have gone long before spring demand can be satisfied, but they are not worrying and not taking steps to cover these needs. That is how the market is now described, but it is noticeable that there is a steady stream of buyers in the market, and that their demands are steadily sapping the stocks of goods, some of them to the vanishing point. The strong feature of the whole situation is that prices are more than holding firm, though we have no advances to record at this time.

TOMATOES—Packers in the counties moved their quotations up to a par with the city quotations last week, and they are fully there this week. If we had to quote the market here, we would say that the rock-bottom on tomatoes is: No. 1 tins, 65c, mostly 70c; No. 2 tins, 92½ to 95c up to $1; No. 2½ tins, $1.35 up to $1.40; No. 3 tins, $1.37½ up to possibly $1.50 depending upon the holder; No. 10s, from $4.75, so quoted, but mostly from $5 up. No. 9s are from 80 to 85c.

From down in Virginia comes a complaint from one of our readers about a postcard sent out by one of the well-known Roanoke (Va.) brokers, and which read:

"The tomato market has settled at 90c for 2s and $1.30 for 3s. There is a fair demand at these prices, most especially for mixed cars of both sizes.

"We would be pleased to have you write us in return mail advising the number of cases, both 2s and 3s, you have on hand, and also advise if you will be interested in seling at 90c and $1.30, so that we can call you as we receive the orders at these prices.

Awaiting your prompt advice, we are ——"

The reader complaining wrote upon the bottom of this card:

"With dope like the above reaching unposted small Virginia canners, we ask you what can we who KNOW our costs do to combat such methods?"

The original postcard is postmarked October 24th.

This is a game that thrives on ignorance, and we can see no way to combat it except to do some missionary work among these "small, unposted Virginia canners" (and canners of other states as well), and have them read The Canning Trade, for instance, and become posted. The means is at their hands, but they will not enjoy it, and it seems to us that the best thing any canner could do would be to see that they do employ it, and do become posted. If there is any other way we will be glad to give it space in these pages. If the tomatoes quoted by this broker are full standards, there is no good reason why they are not worth as much as full standards of the Tri-States or other sections; and if this be so, and if the holders understood the real condition of the tomato market, they would not part with the goods for any such money as there offered. But what is the use railing against the broker as long as there are "suckers" of this kind to be caught? We have had our say about this sort of thing many times and in no uncertain tones, but after all it rests with the seller, and therefore the seller must be given attention and jacked up. Lest you may think we are trying to "feather our nest," we hasten to assure you every subscription on our list costs us nearly $2 for every $1 we charge (in actual figures about $5 for which we charge $3). Taken on this basis, we are doing our share to lessen the crop of "unposted" or "suckers," and one might think that we are not anxious to extend this service. If you do so think you are wrong. We want them all, because when they are all better posted there will not only be fewer "suckers," but the entire industry will be on a higher plane, the industry that much better, and we will profit from the improvement. This industry needs more readers and more thinkers, in the highways

byways, and then we will have fewer "unposted" canners and more "sucker" fishermen.

THER ITEMS—Corn, peas, and, in fact, all other items of canner foods come under the same category as the above in market considerations, and it is useless, therefore, to repeat e. If anyone wants to know the exact condition of any par-lar item he will find it recorded in one of the market reports ewith, and we merely have to add that conditions are the same ll sections. A feature relative to peas is that it is reported re selling of peas has opened up. This is usually early, but ot to be wondered at. Despite the large pack of yeas this r, following right behind the big pack of last year, it has been that if the pack had been half again as large there would e been found a waiting market for all of it. This is a big trib- to quality, and it will be a crime if the canners ever forget it. evidently longheaded jobbers see an advantage in securing r share of well-known packs before someone else takes them and as price is always a secondary consideration where quality oncerned, they see the wisdom of getting in early, knowing t they do not have to put down any money and will not have ay more than a fair price for them when they get them. So, le it may seem unusual to hear of futures selling at this son of the year, it is not surprising, and it conveys a lesson ch other canners might profitably learn. There are some can- s in all lines of goods who deliver their futures with one hand accept orders for the next season's supply with the other, that certainly makes very satisfactory business.

OHIO EXTENDS HEARTY WELCOME

RESIDENT ARTHUR HAMILTON, of the Ohio Canners' Association, writes us as follows:

"Through The Canning Trade I want to extend a cordial invitation to the canning industry to be present at our annual meeting, December 6th and 7th, Southern Hotel, Columbus, Ohio, and I ask all who expect to attend to notify us at the earliest possible moment."

He adds that a fine program is being arranged, that a theatre ty will be given to all, and he particularly requests that the ies make a special effort to grace the occasion with their pres- e. A further hint is that hotel reservations be made at once. Ohio usually does things in a big way, and it looks as if the 3 Convention is planned to top them all. The word has been en you.

NEW YORK MARKET

rket Prices Stiffening—Apple Week in New York—Scarcity of Cheap Fruits—Tomatoes Hold Steady—Corn Selling—Overlooking Government Business Peas Steady.

New York, November 1, 1923.

ARKET Is Tightening—While there have been no sensational price advances in canned foods during the past week, there has been discernible a gradual stiffening of ues, and prices are tending upward on several items in the e. Stocks of canned foods remaining unsold in canners' hands very light, and the packs of many commodities will be en- ly out of the canners' warehouses by the end of the year.

"Apple Week"—Apple Week is being observed in New York s week, and column upon column of publicity boosting the vir- s of the apple have been secured in the daily press by the ss agents working on the drive. The high light of the week he convention of apple growers and the Eastern Apple Expo- on at the Grand Central Palace this coming week. Numerous le canners will be here for this event, it is reported.

Low-Grade Fruits Scarce—Standard and seconds California its are quite closely cleaned up, according to stock sheets of various packers as sent to their sales representatives here. e pack of low-grade fruits was curtailed to some extent this son, and few canners carried any sizable surplus after they taken care of their future business. Stocks of choice and cy fruits in table sizes are also light, but sufficient to take e of present distributive demand.

No. 10 Fruits Firm—Material strength has been noted in the rket for No. 10 canned fruits during the past week, particu- ly on the pie grade. Canners' holdings are light, and offer- s in the re-sale market are also generally confined to rather all quantities. Peaches and apricots have stiffened somewhat in price, and pineapple is also tending upward.

Pink Salmon Higher—Quite some interest has been shown in pink salmon during the week, and holdings below $1.25, Coast, have practically vanished. One well-known packer, here during the week, ventured the opinion that if demand continues at its present level for the next sixty days the low grades of salmon will be entirely cleaned up by the first of April. Buying by the South has been a particular feature of the salmon market this year. Salmon canners are greatly concerned over the gradual tightening of Government restrictions against salmon fishing in Alaska.

Tomatoes Steady—A steady inquiry for 3s and 10s Southern tomatoes has been noted during the week, and prices have held firm on these sizes, with offerings small. Standard 1s and 2s, however, have developed a little easiness, owing to selling pressure on the part of a few canners anxious to clean up small unsold stocks of these sizes. Distributive demand was routine during the week.

Standard Corn Selling—Some of the chain stores have again been featuring standard Southern corn at 3 cans for 25 cents, while others are selling it at 10 cents per can. As a result of these comparatively low-price sales, there has been quite a good distributive outlet for standards. Packers continue to quote the market firm on the basis of 95 cents to $1.00 per dozen, f. o. b. cannery.

How About Government Business?—Many canners are, apparently asleep at the switch, to judge by a reading of the awards in various Army, Navy and other Government purchases of canned foods. The different Government bureaus notify the trade of their requirements far enough in advance to enable all canners to get in on the bidding, but it is noticeable that generally only the larger canners submit bids, while numerous wholesale grocers and canned foods jobbers are represented. In many instances jobbers and wholesale grocers who are successful in getting the orders go to the canners for the goods immediately. If the wholesalers can get in successful bids, and then go to the canner and buy to cover and still make a profit, it is evident that the canners are passing up a good bet.

Sardine Scarcity Continues—Maine canners are still "up in the air" insofar as their sardine business is concerned. Some of them are still oversold, and are making strenuous efforts to cover on their business before the closing of the packing season. Only a few of the packers are still quoting, and these are attaching so many strings to their quotation basis that prices are, in reality, quite nominal. Demand from the distributing trade continues active, stocks being short all along the line.

Peas Are Steady—No change in the canned pea situation was reported during the week. Buyers are still endeavoring, with more or less success, to obtain further supplies of Wisconsin pack, and are able to pick up small lots here and there. The Southern market is neglected for the time being, but the trade is looking for a renewal of interest in Maryland and Delaware offerings in the near future. Southern canners are believed to have only light stocks on hand.

Rumor Merges Packing Corporation and N. Y. Canners—A rumor which was heard in several quarters of the market a few days ago merged the California Packing Corporation and the New York Canners, Inc. Inquiry from officials of the California Packing Corporation promptly "unmerged" them. Investigation by a local paper disclosed the fact that the entire rumor was founded upon the fact that a few brokers had seen President James Moore, of the New York Canners, Inc., stopping in to pay a little social visit to A. L. North, of North & Dalzell, who represent the Del Monte end of the Packing Corporation account in New York. Of such fabric are some of the many rumors which find their origin in this market woven.

Milk Is Weak—Evaporated and condensed canned milk are showing considerable easiness on the local market. While canners are talking rather bullishly regarding the future outlook, Government statistics regarding holdings are directly to the contrary. In the interim the trade is operating conservatively, and buying only for immediate needs.

White Meat Tuna Scarce—There has been a continued active inquiry for white meat tunafish reported, the market being firm at $1.25 for halves and $25.00 for 1s. Stocks are very light on spot.

Cranberry Sauce Sells Well—Jobbers are getting a good inquiry for canned cranberry sauce, and sales thus far in the season have been satisfactory. Massachusetts packers are quoting Cape Cod berries at $1.90 for fancy 2s and $9.00 for 10s, strained,

f. o. b. cannery. Jersey packers quote the market at $2.00 for fancy strained 2s and $9.50 for fancy strained 10s, f. o. b. cannery.

Pumpkin Stocks Better—Indiana pumpkin canners who were talking pro-rata deliveries on new pack a fortnight ago have now changed their tune. Most of them are filling their orders in full, and some of them are now in position to take on additional business. The market for prompt shipment is being quoted as follows: Standard 2½s, 90 cents; 3s, 95 cents; 10s, $2.75; extra standard 2½s, 95 cents; 3s, $1.00; 10s, $3.00; fancy dry pack 3s, $1.12½; 10s, $3.50, all of the foregoing f. o. b. cannery, packed in plain tins. For pumpkin packed in enamel-lined tins, packers ask 8½-cent premium for 2½s, 10 cents for 3s, and 25 cents for 10s.

Notes—P. E. Harriss, well-known salmon packer, spent a few days in Boston this week. He has been visiting in the New York market for several days past, stopping with his brokers, Butler & Sergeant, Inc.

James Walsh, of the Keough Canning Co., Glassboro, N. J., was here during the week, making his headquarters with North & Dalzell.

Baltimore's brokerage trade was represented here during the week by Mr. Fredericks, of Harry H. Mahool & Co., Inc.

Mr. Church, of Thomas Roberts Co., Philadelphia, was here during the week.

Charles Engle, of Sergeant & Nicholoy, canned foods brokers, of Milwaukee, was in the local market during the week.

Ralph Crary, former well-known Wisconsin pea canner, was here during the week.

S. E. "Steve" Comstock, prominent canner, of Newark, New York, was visiting friends in the trade during the week.

"NEW YORK STATER."

ST. LOUIS MARKET

Market Prices Firm—Tomatoes Are Gaining Strength—Higher Prices Looked For—Corn Advancing—Peas So Well Sold Up That Offerings Are Few—Spinach Is Strong.

St. Louis, November 1, 1923.

FIRMNESS Evident—Business, locally, is of a routine nature, with a firmness prevailing on almost every item. Hand-to-mouth buying continues to prevail as in the past, and none of the distributors seem to be inclined to increase their holdings to any extent. Even the largest distributors are carrying on this policy and refuse to buy except what they wish for their immediate requirements. While this does not mean that there is a lack in volume of business being done, it indicates that brokers are handling small orders many times. All this is being done in spite of the fact that stocks in first hands are being reduced, and there is not the heavy carry-over of the past season to fill in when a scarcity comes in the late winter or spring.

Tomatoes—Buyers of tomatoes are going rather slowly on account of the strength of the market. Standard Southern are held at good prices, and it is more difficult to buy them at inside prices than it was earlier in the season. Fancy hand-packed Southern are sparingly offered, because there was a lack of labor, and this caused a short pack. There is a good demand, although there is a fear expressed by the jobbers that it is dangerous to work up prices too high. In some instances canners have sold at a few cents below market values, to effect a clean-up of a small lot, to meet some financial obligations, but there have been but few instances where this has been done. In fact, tomatoes are showing an unusual degree of strength for this season of the year. Puree and catsup are also prominent. Tri-State canners, it is said, are not particularly anxious to let go, and there are no supplies in the Middle West. Some of the latter will make short deliveries of fancy in No. 2 and No. 3 cans. California canners, like the Tri-State, believe there will be a lively buying on the coast on account of the Middle West markets, and, therefore, all sizes of standard pack and puree are held firm.

Corn—Corn is more than holding its own. Fancy lines from first hands would be a ready seller if brokers could get packers to take on additional business. The Maine shortage is one reason for a strong demand. Standards are being bought readily.

Peas—There is a firmness in peas, and they are being sparingly offered, as first-hand offerings, in desired kinds, have been very closely sold out. Distributors quickly buy any odd lots that are offered. Resales are increasing because of the shortage all over the country. Regarding Wisconsin peas, a well-known St. Louis broker gave out the following information: "Peas continue in daily demand. If there was any doubt about peas moving into distributive channels at the price levels of the past several months, that doubt has been swept away by the persistent call which in many instances constitutes reorders. As last advised, there is little left for the buyer to choose from. Of the total pack in Wisconsin this year, aggregating seven million cases, there is less than 5 per cent remaining unsold. The situation today as regards available spot stocks can be compared to that which rules on the first day of May last."

Spinach—There was a light pack of spinach in the South, and the result is that the market continues firm.

Fruits—A quietness prevails in California and Northwestern fruits because first-hand offerings are not being pushed. The spot market is steady. Peaches are firm, and apricots are showing a steady tone. Pineapples are steady to strong on all lines.

Blueberries—Maine blueberries are in better demand for jobbing lots. Stocks are mainly in the hands of those who can carry them, as they believe the advancing season will mean advancing prices.

Milk—Neither evaporated or condensed milk are showing much life. There seems to be more of a desire to liquidate than to buy. Some concessions are being made by weak holders, so prices are irregular. There is a surplus in the hands of the manufacturers, so spot or country holdings show about the same strength. Only a buying from hand-to-mouth business is being done.

Fish—Maine sardines are showing some strength, and there is an advancing tendency in the market. Salmon are quiet and no change in the market is reported.

"MISSOURI."

CHICAGO MARKET

Market for Canned Foods Continues to Show Activity—Wholesale Grocers Anxious to Keep Their Private Brands Going —Many Notes of Interest to the Trade.

Chicago, November 2, 1923.

THIS market for canned foods continues to show activity in buying at wholesale and a large distribution to retailers. It is evident that the wholesale grocers sold more futures in canned foods to the retail grocers than they realized, until they began to fill their orders.

It is the custom among the wholesalers who sell canned foods for future delivery to the retail grocers under their own or house labels to fill their orders 100 per cent, even though the crop is short and canners make pro-rata deliveries.

The reason is that the wholesalers do not care to make short deliveries to their customers, as the retailers object to it, holding that wholesale grocers have the whole country and its canning facilities at their command, and if an article in canned foods is short in one locality, the wholesalers can obtain a supply from some other State, whereas the canners who deliver short or on a pro-rata basis are dependent upon the crop in the locality of their canneries or nearby.

Then the wholesale grocers are always vigilant and anxious to keep their private brands going and their customers who handle them at retail well supplied all during the season in order to avoid the replacement of their brands with those of competitors.

It is quite true that wholesale grocers do have the advantage of selection throughout the entire country for quantity and for quality, and that they avail themselves of that privilege. This is one reason why the wholesale grocer nearly always has fine quality under his labels—he has the whole country to choose from.

An effort on the part of wholesalers to buy extra standard and fancy canned tomatoes in Maryland and Delaware has brought the information from several brokers located in those States that none above standard quality are to be had. I have seen some of the Delaware and Maryland standards, however, and they certainly are fine this season, although the canners are selling and pricing them as standards.

There is an irregularity, however, that precludes them from ng classed as extra standards, which is that the crop seems ave been spotted, as some cans run perfectly ripe, while others w evidence of unripeness or partially so.

I have seen some samples of fancy narrow grain corn from a packed by the Grimes Canning Co. which, in my opinion, y equaled fancy Country Gentleman corn, and was cheaper.

The supply of canned pumpkin is better, as a number of ners in Indiana and Iowa, finding that the demand exceeded supply, have packed some surplus above their sales, and are offering it to the trade. Among them are the Morgan Pack- Co., Austin, Ind., and the Dexter Farmer Canning Co., of a.

The State of Michigan has had a fine business with Chicago year, and has sold a large proportion of her output to Chi- o, Detroit and St. Louis. That State packs a fine variety of ned foods and does not depend upon one or two items, as is case in some States.

The output of Michigan canneries consists of cherries, pears, les, blackberries, blueberries, red and black raspberries, plums all kinds, corn, tomatoes, peas, graded and sized white and en beans, lima beans, kraut, pumpkin, squash, beets, succo- h, gooseberries and peaches, and several Michigan canneries winter canning of pork and beans and red beans.

It will be seen that the variety produced in that State of ned foods is great, and freight rates are low, as there is a ter rate to Chicago and Detroit from many canning points Michigan of 20 cents per hundred pounds, and a low all-rail e from all points.

There is no good reason why Ohio, Indiana, Illinois, Iowa and sconsin cannot plan to pack a variety of canned foods as does chigan in a few seasons' preparation, and thereby avoid the nger of depending upon one big staple crop like corn, peas or natoes and of taking the risk of a failure of that crop.

Then it is evident that, if properly arranged for, a varied duction would be more profitable than the production of a gle staple, even thought the cost of production for the first son or so might be high.

Why should the Central West allow the business for canned its to go to the Pacific Coast when it can be kept at home? matic conditions do not furnish a sufficient argument to jus- it. The difference in the freight rates alone between nearby duction and freight from the Pacific Coast would be a fine fit for the canners of the Central West.

It seems that the shipment of fresh oysters in the shell and erwise to all parts of this country by express has about super- ded the sale and use of canned cove oysters, as wholesalers said to buy the latter now in 25 and 50 case lots, whereas y used to buy them in carload lots.

It may be that the high prices which have prevailed for sev- l years past have caused the falling off of sales, but some- ng surely has in this market.

The California Wholesale Grocers' Association has wired a test to the Western Canners' Association against the adoption the Zoning Warehouse Plan for the collection and destruction swells. The telegram will be presented to the Executive Com- ttee of the National Canners' Association, which meets No- mber 5 and 6, 1923, at Chicago, as well as to the Western nners' Association.

The Wisconsin Pea Packers' Association meets in annual sion at the Auditorium Building, Milwaukee, Wis., November 14, 15 and 16, 1923, and there will be a fine canned foods monstration and exhibit in Kilbourn and Juneau Halls in the ditorium Building at the same time.

The Indiana Canners' Association will meet in annual ses- n at Indianapolis, November 25 and 26, 1923. President Clar- ce Tourmail says that he expects to have a fine meeting.

"WRANGLER."

CALIFORNIA MARKET

Buyers Call for Immediate Shipment—Speculation Is Entirely Lacking—Packers Likely to Fill Future Tomato Orders in Full—Cut-out Weight of Tomatoes—Salmon Is Quiet—Coast Notes of Interest.

San Francisco, November 1, 1923.

THE Market—The California canned fruit market is showing but little change, but is marked by a steadiness that is very pleasing to the trade. Oysters are not large, but they are numerous, and available stocks are being steadily whittled away. Immediate shipment is still being specified, and canners are getting out orders with all possible dispatch. Neither wholesalers or retailers have anticipated their requirements as far in advance as usual, and the speculative element has been entirely lacking, despite the steady increase in prices. Withdrawals are now of such frequent occurrence that it is rarely the case that orders can be filled in full.

Tomatoes—Ideal weather conditions are still being experienced in the San Francisco Bay district, where the bulk of the tomato pack is made, and it now seems likely that canners will be able to fill all orders that have been accepted to date. The early rainfall did no damage, and clear, warm weather has been the rule of late. Some of the large factors are entirely out of the market, as far as tomatoes are concerned, but will probably have some limited offerings to make when the packing season closes. From the present outlook it seems likely that packing operations will extend into November.

The Canners' League of California has been giving considerable attention of late to the question of drained weights on tomatoes, and has issued a communication to members on the subject. The bulletin reads as follows: "From time to time we receive requests for cut-out weights on the various grades of canned tomatoes. It is impossible to comply with these requests for the reason that the nature of the product prohibits absolute uniformity. If made low enough to cover extreme conditions, under which every good canner must at times operate, such figures would lead down the bars to any operator who might desire to just "skimp by."

"While going-in weights can be determined at the time of packing, yet these weights obviously cannot determine the cut-out weights. In no case should cutout drain weights alone be considered, for they are only one factor to assist in determining whether the tomatoes are up to grade. All of the facts surrounding each lot should be taken into consideration. Tomatoes vary from year to year, and those grown in one locality may vary from those grown in another locality. If the tomatoes received from the growers are running green. it is possible to get a cutout materially above the average, but the product would be a poor delivery. Rich, red color is one of the foremost requirements in high-grade tomatoes, but ripeness, of course, always is at the expense of firmness, and thus a can of particularly well colored, ripe tomatoes may drain light, although the full value is in the can.

"Another reason which makes it impossible to determine definitely the cutout weights is that canned tomatoes of the most desirable color will break up somewhat in shipment. Thus, a lot of tomatoes which had a good cutout at the cannery may cut out considerably less after it has been moved across the continent. In fact, one of our members mentions an instance where a lot of tomatoes of a most desirable color and general grade drained two ounces less in San Francisco than at the plant at San Jose. This is further evidence of the inability to standardize the cutout definitely. Arbitrators or buyers should take into consideration all of the above facts in order to determine whether a fair and just amount of tomato meat was put into the can originally."

Salmon—There is not a great deal of activity in the canned salmon market, despite the fact that the Alaskan pack is light. Pink salmon is coming in for more attention than Alaska reds, owing to the marked difference in price. The trade is inclined to buy its stocks of canned fish largely as they are needed. The last of the salmon fleet has arrived at San Francisco from northern waters, bringing receipts to 1,035,339 cases.

Coast Notes—The California Packing Corporation, which recently withdrew its entire line of tomatoes, has come on the market again with offerings of No. 2½ Solid Pack at $1.65. This grade opened at $1.50 and was later advanced to $1.60.

The California pimiento crop is three weeks later than usual and the outlet is that the pack will be very light. Some packers do not expect to pack more than 20 per cent of the quantity put up last year, but should weather conditions remain satisfactory a better showing may be made.

The California Walnut Growers' Association will shortly put out an addition to its line of vacuum packed walnut meats in the form of a tin which will contain between three and four ounces. This tin is being put out to meet a popular demand for a 25-cent selling article, the eight-ounce tin having proved too large for many buyers. The larger tin will, of course, be continued.

J. C. Mullins, a tuna packer of Los Angeles, Cal., recently visited the San Francisco trade, accompanied by his broker, Wm. G. Goldberg.

C. L. Rowe, with Libby, McNeill & Libby, Chicago, is visiting the San Francisco office.

B. J. Jones, of the Seattle branch of the American Can Company, is paying a visit to the San Francisco office.

The San Francisco trade recently enjoyed a visit from C. T. Lee, of New York, director of sales for the Nestles Food Company, who is touring the Pacific Coast territory.

E. B. Deming, salmon packer of Bellingham, Wash., was a recent visitor at San Francisco.

Haas Bros., of San Francisco, Cal., have arranged to take over a two-story warehouse building to be erected at Fresno, Cal., and will use it as their San Joaquin Valley branch.

"BERKELEY."

MAINE MARKET

General Business Very Good—Maine-packed Peas Now on the Market—Maine Corn Growing Scarce—Apple Pack Goes Merrily On—Notes.

GENERAL business in Maine during the present fall has been very good, indeed, especially considering that many industrial centers have been hampered by factory shutowns. Recent rains have somewhat alleviated the water shortage, and work is being resumed in nearly every town, so that the temporary lull will have no serious effect upon trade in general. Retailers report that they are having a good demand for all kinds of foodstuffs, particuarly canned foods, as the garden yield this season was light.

The Maine-packed peas are now on the market, and are proving very popular here as in other centers. While the season was consistently unfavorable and the experiment sadly handicapped, the limited amount produced was of very fancy quality and certainly enough to encourage further experiments with pea canning another season.

Maine corn grows more scarce each week, and many small lots have been traded during the past month. The few blocks, none very large and some very small, which are now held in first hands will doubtless be carried through the winter for spring selling, as canners anticipate a very hungry market before many months. Recent prices rumored on fancy Crosby corn have ranged from $1.60 to $1.75, and on Golden Bantam around $2.00 or more.

The apple pack goes merrily on for the time being, but will doubtless be of shorter duration than usual, owing to the shortage of fruit. $3.50 is a fair price on regular grade Maine apples, and is being accepted by the buyer as often as offerings can be had. Canners are getting a bit wary about accepting heavy orders, as the apple crop has been rather light and the demand for fresh fruit holds active. This inclines the grower to boost his price for apples suitable for canning, and makes production costs too high for profit. While some of the canners are still a bit shy of the cider proposition and the possible difficulty with the ever-changing rulings on shipping and sale, others are working under permits, and are, if anything, increasing their business this year.

The E. S. Noyes Co. of Augusta, has opened its new apple cannery at Livermore, and reports finding that locality very satisfactory for its work. It has a very modern factory and improved equipment, and is running to capacity. Other new shop this season are operated by E. W. Marble, at West Farmington and by J. M. Lawrence, at Skowhegan.

The sardine business has no chance of recovery before i legal end, and, as a consequence, prices are mounting with eac new sale. Quarter oils keyless are easily bringing $4.50 whe they can be bought, and will doubtless be worth $5.00 if any good are carried over for later selling. This has been the poorest sea son recorded for many years, and a sad contrast to the immens business done during the wartime demand.

This is the time of year when Maine clam canners usuall get interested, but this season they seem to show distaste fo the subject when it is mentioned. The cost question of last yea has again arisen to annoy them, since it is impossible to ca clams for commercial selling at the costs which are entailed Diggers are few and their prices high, and they are not incline to co-operate with the canners in any way. Prices are alread uncertain, running from $1.20 to $1.30 for 5-oz. and from $1.8 to $2.00 for 8-oz.

"MAINE."

BUFFALO CANNED FOODS EXHIBIT

Plan for Canned Foods Exhibit to Be Held During th Seventeenth Annual Convention of the National Canners' Association, Canning Machinery and Supplies Association, and National Food Brokers' Association, at Buffalo, January 21-26, 1924, Inclusive.

FOR the Food Exhibit at Buffalo, Elmwood Musi Hall will be furnished with its meeting rooms, pip organ and stage, from January 14th to 31st, in clusive, light, heat, electric current, custodian, assis tant custodian, three special officers, carpenter, ma chinist, head porter, four regular porters, two char women and two laborers, also the necessary polic patrolmen to watch the building and protect the ex hibits during the period of time above mentioned. Thi is all to be furnished free of charge.

Shipments, therefore, of supplies by exhibitors ca be made for delivery direct to Elmwood Music Hall a any time on and after January 14th. This will enabl all shipments to be made in ample time for arrival an preparation for the opening of the Exhibit on the 21st

Music—Arrangements will be made for an orga recital or some other form of music for each afternoo and evening. (Cost to be apportioned equally amon the booths.)

Lectures—It is planned to have well-known au thorities on foods lecture each afternoon, and possibl arrangements can be made for interspersing the lec tures with lantern slides and movie films. If there i space available, the committee may permit dancin each evening from 9.00 to 10.30.

Booths—The contractor has agreed to furnis booths 10x12 feet each, back panel to be 4 or 6 fee high, all woodwork and beaver board panels painte ivory, signs lettered with black letters (exhibitor' name and address). Booths with sign will cost $12.75 Allowance for division panels between booths when no used will be 75c. each. Counter shelves 18 inches wid and 10 feet long may be added to any of the booths a additional cost at $1.50 each. The ceiling, stage, sid wall and balcony to be decorated with American fan and clusters for the sum of $125. (This last item wil be apportioned equally among the booths.)

Members desiring to participate in the exhibi should apply to the National Canners' Association 1739 H Street, N. W., Washington, D. C., for space.

SMILE AWHILE

MISPLACED KICKS

A young married man met a friend of his bachelor days a insisted on taking him home for lunch. His wife was unpr pared for visitors. Calling him aside, she told him she had on one dozen oysters, and that when his friend had eaten his quo of four he must not be asked to have any more.

In spite of his promise to remember, when the guest h eaten his four oysters, the host pressed him to take more. T wife looked distressed and the friend declined. The husband i sisted, the wife looked on in agony, and the guest refused firm to have the rest of the oysters brought from the kitchen.

Later the wife said to her husband: "How could you ur him to have more oysters when I had explained to you that the weren't any?"

"I'm sorry," said the penitent husband, "but I forgot abou it."

"Forgot! What do you suppose I was kicking you under th table for?" retorted his wife.

"But you didn't kick me," said the husband.

NO TROUBLE OVER HER TRUNKS

The cave man had some advantages. He never had to pa excess baggage charges when he took his wife on a trip that wa to last for a week.

HIRED

Salesman—I'd like to work for your concern, sir.
Manufacturer—Doing what?
Salesman—Taking orders.
Manufacturer—What experience have you had?
Salesman—Been married 30 years, sir.

SLANG

Daughter—Has my mail come yet?

Mother—Daughter, you must stop using that terrible slang —Goblin.

GOOD NIGHT

"Unless you consent to be mine," he said, "I will leave thi town and never come back to it."

"I'll think it over," she replied, "but, remember, that's promise."

THAT BIRTHPLACE

Absent-minded Professor P. Smith had left his berth in the sleeper to find a drink of ice water, and was hopelessly lost in the middle of the aisle. It was about midnight and the train was speeding through the country.

"Don't you remember the number of your berth?" asked the conductor.

"I'm—er—afraid not," was the reply.

"Well, haven't you any idea where it was?"

"Why, uh—oh, yes, to be sure."

The professor brightened up perceptibly. "I did notice at one time this afternoon that the windows looked out upon a little lake!"—Judge.

DISTINGUISHED

"What do you mean by calling my husband a fish egg?"

"My dear madam, I merely meant that he was one in a million!"

WHAT COULD BE BETTER?

"Bridge, bridge, bridge," stormed Mr. Wampus. "You'll die at the bridge table."

"Bury me with simple honors," said Mrs. Wampus, sweetly.— Life.

EDITORIAL

MAKE RESERVATIONS AT BUFFALO — Now that the Convention fever is on in full force, most canners are turning their attention to the big annual Convention in Buffalo the week of January 21st, and it is timely to tell them that if they have not made their hotel reservations, to do so at once. All reservations are handled by a Committee on Hotels in Buffalo, and those who have reserved their rooms thus far—that is, those who have written in for rooms—have been assigned by the Committee this week. All reservations will be made in this way, but if you wait until the last minute, you cannot expect to be taken as good care of as if you come in early, before all the best rooms have been assigned. Write to Hotel Statler or Hotel Buffalo, or any hotel you care to, and your request will go into the hands of the Committee, and you will be assigned to the hotel desired, if possible, or to an equally satisfactory hotel, depending upon the time at which you make the request. We are promised splendid accommodations and that Buffalo is going to take fine care of us, and you may depend upon that. Don't wait until the last minute and then "kick" about the accommodations you get. There will be a big crowd, lots of whom have already registered. So take this tip.

HELP YOUR PRODUCTION MEN—Dr. W. D. Bigelow, of the National Canners' Laboratories, tells us that the Laboratory has sent out many very important bulletins this year—important to the production men of your factory—but that in investigation he found that many of these bulletins have been kept in the office or filed away with correspondence, or otherwise put aside, instead of being handed to the men who could use them profitably and as they were intended. This is a costly oversight on the part of the office, and it should be corrected. These bulletins should be handed over to the men who can use them and would welcome their help. It ought not to be necessary to make such a suggestion, but that it is necessary was proven on a number of occasions this past year.

THE WAREHOUSING PLAN ADOPTED—In the long discussed proper settlement of the swell-claims matter, we have had much to say about the proposed plan to establish regional or sectional warehouses to which such spoiled goods could be sent, and there passed upon by experienced, trained chemists and others, and proper settlement made. It was announced that the Executive Committee of the National Canners' Association would take up this question at its Chicago meeting on the 5th and 6th, submitting the plan in its entirety and acting upon it if the members thought well of it. It has been the talk of the industry for many months, and many of the best brains of the industry have been thinking it over and studying it. This was clearly shown when the special meeting of the Committee having it in charge assembled at the LaSalle on Monday morning and discussed it from every angle for many hours. Most of these men had worked out of their minds every possible objection to it, and when the U. S. Bureau of Chemistry joined the 19 State food authorities with its approval of the idea, the Committee heartily endorsed it. But it must be said that most men came to the meeting with a lurking doubt in their minds, mostly as to the extent of its cost to canners. They were fearful that its cost would make it prohibitive. A few moments' study of the plan dispelled that idea entirely, and it was little short of wonderful how all grasped the real intent and great possibilities of the movement, and we believe that if the cost had threatened to be four times what it could possibly be, they would have adopted the plan because of the immense benefit it will be to the whole industry. The cost will not be heavy, and the National Canners' Association will assume most of it, and will gain more from meeting the real troubles of the industry right out in the field, in the further training of its specialty men of the Laboratory, than any cost now possible to estimate.

The account of this will appear in the report of the Executive Committee meeting next week in all its details, but we will not detract one bit from that by pointing out here the salient features of this plan and what its enactment means for the good of the industry.

Dr. Geiger, of the U. S. Health Service Bureau, very plainly told the canners that he doubted if they really understood what spoiled canned foods meant to the industry. "You look upon it as a loss, trivial or great as the case may be, but it is more than that to the health and food authorities of the country. A spoiled can of food is to a health enforcement officer as a red rag in a bull's face—they can see all kinds of trouble from it." He had statistics to show that in the City of Chicago alone in 1920, 1921 and 1922 there had been destroyed 6,000,000 pounds of canned foods, much of which were possibly not actual spoils, but were soiled or dented cans, flippers, springer and other not well understood troubles. But this amount gave a black eye to all canned foods, and if these figures be multiplied, as they must to cover all sections of the country, it could readily be seen what a tremendous force for evil this matter has become against the consumption of canned foods. So he urged the canners to take hold of this problem, as it was essentially and entirely their own; that they must protect themselves by getting such goods off the market and making it impossible that they should ever get into the hands of unscrupulous dealers for resale. This put a different complexion on the matter, and made it a very serious consideration. The canners have been anxious to rid the buyers of the troubles incident to spoiled canned foods, but here is a matter of far more grave consideration.

So far there have been selected nineteen points, covering the entire country, at which regional warehouses are to be established, and in each instance state and city health authorities have been consulted, and all have expressed an eagerness to take part in the work, to have their chemists on hand during the examinations so that these chemists may see and understand the troubles and thus better understand canned foods. Think what this alone will mean as compared with the old style of handling goods that were claimed to be spoiled. If one can in a case bursted it be-

spattered all other cans, ruining the labels and making the cans a dirty, sticky, unpleasant mass. Generally the whole case was thrown aside as spoiled goods and destroyed. Now the 23 good cans will be kept in the food supply, relabeled after cleaning, and sold for what they are—perfectly good goods. The State and local food authorities will gain a true insight into canned foods; they will become their friends and champions, and this alone is worth a pretty penny to the industry. But above all the really spoiled cans will be destroyed under the supervision of the food authorities, after they have learned the cause of the spoilage, and there will be no possibility of them getting into anyone's hands to be used. Still another added advantage to the canners is that they will learn what caused the spoilage from the expert, trained men who are competent to examine and study such spoilage, and the canner may be able to change his methods or in some way avoid the trouble in all other goods. Today you pay a spoilage claim without knowing what the trouble is; pay hundreds of them if they are trivial in amount without caring what the trouble is that caused the spoilage.

So this warehousing plan will not only assure you of payment for only such goods as you should pay for, but after the goods have gone out into the markets of the world will keep the spoiled cans from being a detriment and a hindrance to the consumption of all canned foods; will educate the State and local authorities upon canned foods and be a lesson to the canner to mend his ways or change his methods to avoil further spoilage. The great thing is that the goods must be gotten off the market when they spoil, and this the warehousing plan does surely, efficiently and cheaply.

In putting the plan into force there is no radical change from the old method: the goods are merely shipped to a designated warehouse instead of back to your factory. Instead of being examined by an inexperienced or disinterested party, the spoiled goods are examined by experts of the N. C. A. Laboratory; instead of a claim that rankles in the back of your head as unjust, a robbery by the buyer, and a feeling on the part of the buyer that you are a poor canner, not knowing your business, a definite, scientific disposition of the case is made, the buyer is reinsured in full for his loss, the canner pays no more than he justly owes, the public is protected against bad food, the food authorities are considered and worked with in perfect harmony, and every possible interest served in the highest possible way.

It is possibly the greatest thing the industry has ever done, and no canner will fail to heartily endorse it when he understands it.

It had to be done so that it would be ready for the opening of future selling as it must be incorporated in all future contracts. It is ready and here is the clause that should be inserted in your contracts, drawn up and accepted by the Committee, and which you are urged to use.

> Goods sold under this contract are packed in compliance with the "Food and Drug Act of June 30, 1906", and are guaranteed against spoils.
> (a) If sold for delivery from future pack, to July 1st following date of billing.
> (b) If sold for delivery from spot stocks, for six months from date of billing,
>
> Payment shall be made by seller on certificate of indentification and destruction of spoiled goods at Zonal warehouses, maintained by the National Canners' Association, to which spoils shall, at the request of the seller, be shipped by the buyer for official inspection, identification and destruction,
>
> Claims so established shall be paid within thirty days at invoice price, and freight to warehouse, if incurred.
>
> All claims for spoils must be made and bills rendered by buyers to seller on or before July 10, in case of sales against future pack, and not later than six months from date of billing, in case of sales from spot stocks.

STAND TOGETHER—If you are a canner, whether you be a member of the National Canners Association, of your local or State Association or of no Association whatsoever, adopt this plan, and stand with your industry. No sane or honest buyer can object to anything in this plan, and they are sane and honest, and when they understand it, and its effect upon the ultimate consumption of canned foods, they will be back of it more strongly than the canners. It is the first few months that will be the hardest when some designing buyers, or buyers and brokers who do not understand the intent and purposes of the plan, try to persuade you to sign contracts giving them a flat allowance, saying that others are doing this. Others will not be doing it; the largest and the best canners, and vast majority of the smaller canners will use this contract and stick to the warehousing plan. It is the salvation of the industry and the solution of this distasteful question. But it will only go over rightly when all canners stand together.

TO BURN OR NOT TO BURN, OR BOTH

Plant Refuse Divided Between Fire and Soil

EVERY fall after the vegetable patch and the home grounds have been given their clean-up and all refuse and plant remnants have been gathered in a heap, the amateur gardener faces the question: "To burn or not to burn?"

Soil experts tell him "the more vegetable matter you work into your soil, the better crops it will grow," and advise him to dig in all the leaves, stalks, weeds and other vegetation that he can get hold of in order to keep up the supply of humus in the soil.

The plant disease expert, on the other hand, emphasizes the value of the bonfire as a means of destroying fungus enemies of our garden plants, which, if not thus dealt with, will pass the winter comfortably on the old dead plant remains and be all ready for business when next year's garden vegetables are started in the spring.

Which advice is he to take? Shall he sacrifice humus and protect next year's crops from disease or shall he gain some vegetable material in the soil at the risk of loss from diseases next season?

The Bureau of Plant Industry of the Pennsylvania Department of Agriculture points out a middle ground in this matter which satisfies both sides without taking undue chances either way. The State plant specialists advise the burning of refuse from such garden plants as are likely to carry disease into the coming year, the refuse from all other plants to be dug under as the soil expert advises.

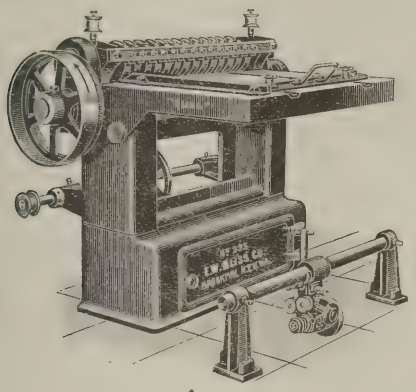
Among the plants which should go on the bonfire are: Potato and tomato stalks, cucumber vines, beet leaves, beans, asparagus tops, celery, refuse, and from the flower garden the above-ground parts of hollyhock, all fallen rose leaves, the entire aster plant, including the roots, and the old tops of phlox.

Plants which may be dug into the garden soil with comparative safety include: Weeds, the refuse of salsify, spinach, parsnip, onion, horseradish, corn, lettuce, turnip, cauliflower, cabbage and carrot. If additional vegetable material is desired and a good supply of barnyard manure is not available. the leaves of shade or other trees make a good substitute. While these leaves often carry diseases, none are likely to affect garden plants, and they may be used safely as a source of humus.

CONVENTION DATES

November 13th to 16th—Wisconsin Pea Canners, Milwaukee Auditorium. Annual Meeting.

December 4-5, 1923—Iowa-Nebraska Canners, at Omaha, Hotel Fonteneke. Annual Convention and banquet.



December 6-7, 1923—Ohio Canners, Southern Hotel, Columbus, O. Annual Convention.

December 12th and 13th—New York State Canners, Hotel Powers, Rochester. Annual Meeting.

January 21st to 26th, 1924—National Canners, Canning Machinery and Supplies, National Food Brokers, Machinery Exhibit, etc., Buffalo, N. Y.

Note:—Secretaries can help their cause by keeping us informed as far ahead of time as possible, and so keep this column correct and complete.

LANDRETH GARDEN SEEDS

THE LANDRETH

SPOT OR 1923 CROP SEEDS

Before buying any of your Spot Seeds, take the matter up with us, stating kinds and quantities you want and let us quote you.

We have carefully grown stocks of——

Peas	Okra	Cabbage	Cucumber
Corn	Tomato	Spinach	Snap Beans
Beet	Squash	Pumpkin	Cauliflower

Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

D. LANDRETH SEED COMPANY
BRISTOL, PA.

Business Established 1784
139 years in the Seed Business.

ANALYSIS OF PEANUT BUTTER

By R. O. Baird

Commissioner and Chemist

North Dakota Agricultural College, Fargo, N. D.

THE large spread in the price of the various brands of peanut butter suggested to the writer that an adulteration might be found in this food product. Fifteen samples of peanut butter were purchased by the food inspectors representing the different brands placed on the market in North Dakota.

The samples were thoroughly mixed and placed in glass containers. An approximate analysis was made of the samples according to the methods adopted by the Association of Official Agricultural Chemists. It was necessary, due to the high oil content, to thoroughly mix the samples before each weighing.

Extration was also made of the oil and a determination made of the refractive index and iodine number.

In Table No. 1 will be found information as to the manufacturer or jobber—the brand—contents claimed and found—shortage, if any—the kind of container and the cost per pound to the consumer.

PEANUT BUTTER

Table I

Sample No.	Manufacturer or Jobber	Brand	Contents Claimed Per Oz.	Contents Found Per Oz.	% Shortage If Any	Container	Cost per Pound to Consumer
1351	Beech Nut Packing Co., Canajoharie, N. Y.	Beech Nut	6.25	6.19	0.97	Glass	$0.64
1356	Stone-Ordean Wells Co., Fargo, N. Dak.	Bulk	16	16	0.00	Bulk	0.25
1357	Kidd & Co., Chicago, Ill.	Perfection	12	10.94	8.83	Glass	0.44
1358	Bayle Food Products Co., St. Louis, Mo.	Acorn	16	14.60	8.20	Pail	0.27
1359	Sprague Warner Co., Chicago, Ill.	Monsoon	16	15.88	0.75	Pail	0.30
1360	Fargo Mercantile Co., Fargo, N. Dak.	Argood	16	15.00	0.62	Pail	0.26
1361	H. J. Heinz Co., Pittsburgh, Pa.	Heinz	10	11.00	0.00	Glass	0.43
1362	Winston Harper Fischer Co., Minneapolis, Minn.	University	12	11.13	7.25	Glass	0.40
1363	Geo. R. Newell Co., Minneapolis, Mnn.	18-K	16	18.25	0.00	Pail	0.17
1364	Griggs Cooper & Co., St. Paul, Minn.	Home	8	7.50	6.25	Glass	0.53
1365	Foley Bros. Grocery Co., St. Paul, Minn.	Foleys	16	16.94	0.00	Pail	0.24
1541	J. H. Allen & Co., St. Paul, Minn.	Dainty	11	11	0.00	Glass	0.35
1542	Reid Murdock & Co., Chicago, Ill.	Monarch	10	11.25	0.00	Glass	0.42
1543	W. B. & W. G. Jordon Co., Minneapolis, Minn.	Dakomin	22	20.94	4.82	Glass	0.26
1544	The Standard Trading Co., Minneapolis, Minn.	Como	8	8	0.00	Glass	0.50

It will be noted in the above table that over one-half of the samples were short weight. This shortage is due in most cases to leakage of oil. In this connection it might be well to state that the pails used are a continual source of annoyance to the retail dealer. The large percentage of peanut butter is put up in tin pails, and the oil leaking out, running over the shelves and counters, makes a nasty mess, to say the least.

The price per pound ranges from seventeen cents to sixty-four cents. Consideration, of course, must be given to the products put up in small glass jars, as this naturally increases the price per pound.

There was no adulteration detected in any of the samples analyzed. The nutritive calories per pound shows peanut butter to be a valuable food product high in fuel value. The keeping qualities of peanut butter are very good. Samples that have been in the laboratory almost a year do not show any evidence of rancidity.

THE EDWARDS FAMILY GATHERING

ALL old hands in the canning game and many of the second and third generations remember Julius S. Edwards, Secretary of the Western Association for years, and whose proud boast is that he is one of the first and, therefore, oldest canners in the business. Recently the Edwards brothers had a family gathering in Atlantic City, and the account of it as given in The Atlantic City Evening Union proved interesting to us, and we know it will to you. We regret we have not the photos to reproduce with it.

"Gathered around the festive board in the Colonial Room of the Haddon Hall this afternoon at 1 o'clock (October 20th) and for the first time in forty years, eight brothers, children of the late Dr. and Mrs. Steen Edwards, of Bridgeton, N. J., met in reunion and celebrated the occasion with a banquet tendered by Devoux B. Edwards, one of the brothers, a prominent florist in the resort.

"There were forty people at the table, which brought together the brothers and their families and the latter's children from all parts of the United States. One of the brothers came from Palo Alto, California, in order to attend the celebration, and it was his first visit to the East in forty years. It was a double anniversary for Leslie E. Edwards, who journeyed from the Golden West, for today he is celebrating his 66th birthday.

"The oldest brother, who claimed the seniority in years at the table, was Julius Edwards, of Bridgeton, where he was formerly a packer, but has since retired. He is 74 years old. The youngest member of the family was Veila Warren, granddaughter of Leslie Edwards, who is just two years old. The other six brothers who sat around the festive board were Theodore E., 71, of Bridgeton; Rev. Odin R., 68, of Quakertown, Pa.; Adolph E., 63, of Bridgeton; Devoux B., 59, of Atlantic City; Otto B., 56, of Lansdowne, Pa., and Valdemar E., 52, of Bridgeton.

"The eight men all boast that their present excellent health is due to the abstainence from intoxicating liquors and tobacco. Leslie Edwards claims that he has never had a headache in his life. The total ages of the eight is 508. The father, who was a surgeon in the Seminole Indian uprising, died at the age of 89. He celebrated his golden wedding after marrying at the late age of 38. Dr. Edwards was a native of Copenhagen, Denmark.

"A second reunion will be held by the family at the Edwards homestead at Bridgeton on Monday. This place is now occupied by Theodore Edwards, who is a florist in that town.

"Devoux Edwards, who has been in the florist business here for the past thirty-five years, and is a prominent member of the Lions Club, started to work for $1.50 a week in Bridgeton forty-five years ago. He was employed by A. M. Heston, former treasurer of Atlantic City, when the latter operated the Bridgeton Chronicle, and in commenting on the fact today Mr. Edwards said: 'I was employed as an apprentice boy, and after working for three weeks I asked Heston for a raise to $3. This he refused, so I quit and went into the floral business, where I have been ever since.'"

We but voice the feelings of the entire industry when we wish our old friend Julius and his brothers et al. many more years of health and happiness.

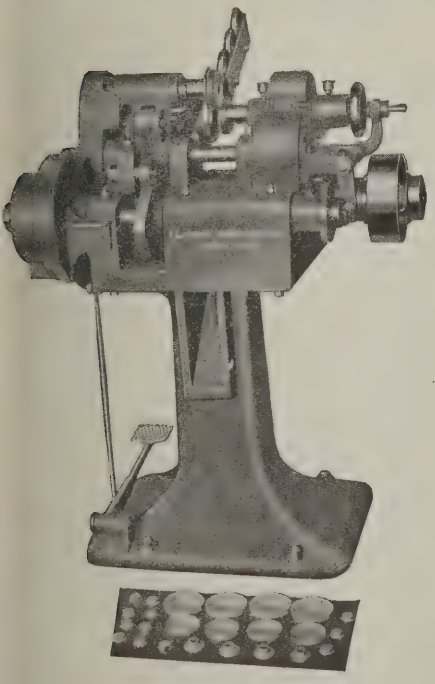
CANNED FOODS WEEK

An Address by President C. P. Whiteman, National Food Brokers' Association, Before the Western Canners' Association, Chicago, Nov. 8th, 1923.

WHEN Col. Lee, your Secretary, asked me to address you gentlemen, he said I could talk about anything that I might have on my mind. The biggest thing on my mind at the present time in connection with the canning industry is Canned Foods Week, and that is what I am going to talk to you about.

Selling goods is like courting a girl. You must go often and have the right line of goods. I do not believe most of you men, the rank and file, are really sold on Canned Foods Week. I say this because of the manner in which most of you support it. You know if a fellow is in love with a girl, he is going to sell himself to her and put it over, as it were, at all costs. He figures that she is worth all the effort that he can possibly put forth—all of which generally spells success. Now, if

Sanitary Cans for 1924.



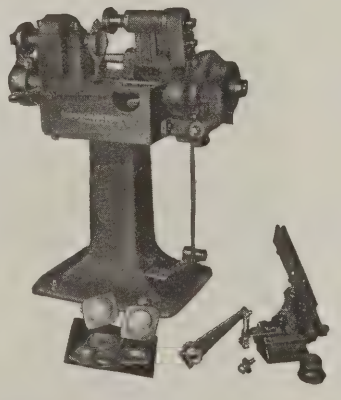
IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

Baltimore, - - Maryland



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

We make every machine for "can-making."

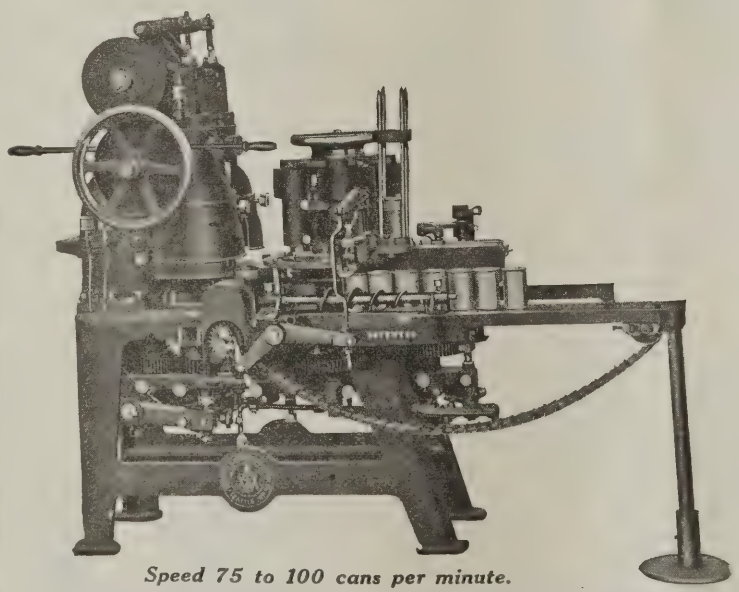
CAMERON CAN MACHINERY CO.

240 North Ashland Avenue CHICAGO, U. S. A.

you fellows were sold on Canned Foods Week to the extent the fellow is sold on the girl he loves, its success would be assured before you start. It takes enthusiasm and effort to put anything over that is worth while With the proper support from the canners, Canned Foods Week can be made one of the biggest annual events in the canned foods game. Most of you evidently are not in love with Canned Foods Week or are not sold on it as you should be, because if you were, it would not be like pulling eye teeth to get a few dollars from each one of you to put it over.

The way I see it, every new consumer that is created, due to Canned Foods Week, is an additional asset to every one engaged in the canning business. The more people we get to eating canned foods, just that much more canned foods are going to be sold—and every one in the game has a shot at that business.

I feel sure there is not a man here but what would put a hundred dollars into any kind of a legitimate proposition if he felt reasonably certain he would get two hundred dollars in return. Well, that is just about the basis to figure on for what you put into Canned Foods Week. I honestly believe you get back just about double what you put in. You are probably saying to yourself right now, "How do you get that way? Show me!" Well, if you were on the selling end like we brokers are and could see the results first hand, you would not ask such a question. Do you know there are thousands upon thousands of people that rarely ever eat canned foods of any description?



How are you going to get these people to eating canned foods? Educate them. How are you going to educate them? Right here is where Canned Food Week comes in. You get more publicity, for every dollar spent, of a constructive nature from Canned Food Week than from any other source. How do you get so much for your money? Because you have so many different agencies working for you; the wholesale grocers, the brokers, the retail grocers, the newspapers, etc. Are you aware of the fact that brokers, jobbers and retailers put in a vast amount of time on Canned Foods Week that should cost thousands of dollars if you could hire them to do it, to say nothing of the thousands of dollars they put into it in real money. You could not hire these people for money. They put in their time for the good of the industry, and nothing else.

Now, if the jobbers, brokers and retailers (who are certainly less interested than the canners) put in so much of their time and money, pray tell me why is it such a hard matter to get the proper support from the canners, whose very existence depends on the consumption of canned foods! I think I hit the keynote of the whole proposition at the beginning of my talk the majority of the canners are not sold on Canned Foods Week.

I sincerely hope that what I have said here today will be given some thought by at least a majority of those present, and after thinking it over they will become sold on Canned Foods Week and "kick in" with sufficient amount of money to put the proposition over as it should be this time.

If you will furnish the material, the brokers will see that it is properly used. Thank you!

Who Pays the Bill —

Speed 75 to 100 cans per minute.

When your neighbor canneryman can, by uptodate methods, the elimination of waste and highest efficiency, make his opening price so low that you are forced to take a loss or hold your pack for later advances.

HEEKIN CANS

Heekin Cans Meet Every Requirement

For years the Heekin Can Co. has made good on its contracts in both quality and service.

Many large canners are enjoying their canning seasons and saving money by using Heekin Cans. For these cans are exceptionally satisfactory - - the strongest cans made. They prevent loss of time and money.

There is a Heekin Can for every need, from the small fruit and vegetable cans to the large lard or sorghum containers.

Mother nature specifies the crop you will pack. Heekin Cans will be delivered at your door to meet these specifications.

Let us know your estimated canning requirements and we will gladly send you complete information. Write today to

HEAVY EXPORTS OF APPLES

By John S. Dennee

Agricultural Statistician, United States Department of Agriculture, Division of Crop and Livestock Estimates, Bureau of Agricultural Economics.

EXPORTS of apples have been exceptionally heavy this season. And most shipments are going to England and Scotland. Movement has been stimulated by the short crop overseas, and by the high opening prices. Foreign markets have thus far proved move profitable than domestic trade for shippers of Eastern apples. But recently British prices have declined sharply.

For the three months—July, August and September—total exports this season were 179,869 barrels and 566,744 boxes, compared with 136,432 barrels and 257,582 boxes during the corresponding period a year ago.

During the entire 1922-23 season exports amounted to nearly 593,000 barrels and 3,491,000 boxes.

This present season the early fall varieties of apples were less abundant in the Eastern States, and were mostly sold in domestic markets. But the large crop in the Northwest provided an early surplus of boxed apples for export. The abundant main crop in Virginia and West Virginia was the chief source of a very active September movement to foreign markets.

The peak of the barreled movement seems to have passed, but shipments of boxed stock are increasing.

Apple growers in the Cumberland-Martinsburg-Winchester belt of the Potomac Valley have found the export trade a welcome outlet for their record crop this season. Shipping records for the three weeks preceding October 20 show that factors in the apple deal there have been quick to take advantage of export opportunities made possible by the failure of Great Britain's crop.

Price returns from exported apples have been in striking contrast to those of some other agricultural products for which outlets are sought in European markets.

Apples are perhaps the only American crop being sold abroad at greater profit than in this country.

Average net returns will probably be higher at the season's close than those from domestic markets, even though heavy exportation has relieved American markets of excess offerings.

Growers and shippers in the Potomac Valley, attracted by the excellent price returns from exported apples, have exported every 2¼-inch apple available. Jonathans moved first, followed closely by York Imperials. And Ben Davis 2¼-inch have been moving to English markets for some time.

It is estimated that 25 per cent of the apples shipped from the Cumberland-Martinsburg-Winchester belt have gone into the export trade. But the peak of the movement has been reached and a rapid decline in volume is expected.

Perhaps the most important contributing factor to heavy exports has been the lack of profitable signs of improvement. On the other hand, export prices have declined since October 11, due to heavy supplies.

The wisdom of exporting just now is questioned by some dealers, and, although net returns are still above the domestic price to growers, many expect a further break in the English market.

Outstanding requirements of the export market are good color and medium size.

The total production of apples in the United States this season is estimated by the Bureau of Agricultural Ecomonics, Department of Agriculture, at 10 per cent less than last year—190,727,000 bushels; in 1922 the harvest was 201,252,000 bushels. The commercial crop of 1923, based on October 1 condition, is forecast at 33,104,000 barrels, against 30,955,000 barrels last year.

IT COSTS TOO MUCH TO SELL OUR FOOD.

B. F. Yoakum, in The Nation's Business.

THE importance of co-operative marketing and organized association of consumers for direct dealing between producer and consumer, is a subject I have discussed with farm organizations, consumers and commercial bodies.

Response and willingness to formulate a plan to commercialize farming met with enthusiastic and hearty support from the farming element, but not from the commercial and banking interests. A few, engaged in commerce and banking, gave cordial endorsement, but as a general rule business interests were cold and indifferent. They thought little, and cared less, concerning the forecasts which I then made regarding agriculture, which are now so generally in evidence.

I then foresaw that the margin of profit between the producers and consumers especially of food was being gobbled up through a marketing system, which has steadily become a greater burden upon both the producer and the consumer.

At some expense and a lot of time I have undertaken to locate the principal cause of this big economic waste between the farm and the table. I had a careful investigation made in several of the largest centers of population. The information I acquired from this investigation and from other sources is interesting and is sufficiently accurate for us to approximate the real situation.

When I first began to investigate this subject the business and financial world were not ready to co-operate with the farmer. The situation is now different. No subject is receiving more attention than the farming industry, commencing with those at Washington down to the smallest community politician. Bankers, manufacturers and commercial interests generally are beginning to realize the importance of the relations of the farming industry to the general business and welfare of the country, but they have not as yet gone to the root of the real difficulties. They have not extended the kind of co-operative effort that is needed. I do not mean by this in a monetary or credit way.

A wise policy for the readers of The Nation's Business to pursue for the greatest good would be whole-hearted co-operation with the farmers in their efforts to establish closer contact with consumers. Farmers, for the first time, are organizing in a permanent and substantial manner. They have seen all other industries grow and prosper, while theirs has gone down to a point of bankruptcy. They know that, unless their business can be made profitable and placed on a sound business basis, it is better for them to seek other vocations.

The farmers know the need of an equitable marketing system that will take them to the heart of the big consuming centers. They also know that all the big organizations—industrial and labor—have been able to get what they need for the protection of their respective interests through political power. Therefore, the farmers, through their organizations, are seeking political influence that will aid them in advancing the best interests of their business. I can't make my meaning any clearer than to quote an extract from a recent letter written to me by a genuine farmer of many years, and influential in one of the large farm organizations of the country whose membership consists only of real and practical farmers. He says:

Let me assure you that our affiliation with the American Federation of Labor is only in a fraternal way. We are associated together by a common bond of interest. We are laboring for the mutual benefit of both—**industrially** and **politically**. I mean both organized and unorganized laboring people. So you see, there is no amalgamation between the Farm Labor Union and the American Federation of Labor; just a mutual working understanding.

I have read your Third Series. You bring forth some points in a way that is startling to readers of your articles, and I am proud to say that they are going to be a great means in assisting the farmer in receiving equal rights, both industrially and politically.

When the business interests of the country realize that it is costing $2 to distribute foodstuff, including cost, profits, commissions, etc., to each $1 paid the producer, they will realize that it is of paramount importance to their business and the continuation of the country's prosperity that they throw their influence and force toward co-operative work with the farmer that they may carry on their business with a profit to themselves and under the same general rules that govern other industries. As financial heads and managers of great industrial enterprises they must know that no business, big or little, can operate on one-third of the dollar others pay for their goods. It can't be done!

For the purpose of showing what a tremendous loss the farmer sustained in 1922 by this burdensome distribution cost, I will use for comparison the potato, a standard daily food that finds its way to every table:

Taking the financial results to farmers on potatoes as they are with what they should be, the total potato crop of 1922 was in bushels, 451,185,000.

The average farm price for potatoes was 56 cents per bushel or (using round figures) $252,000,000.

Estimating the consumer paid 3⅓ cents per pound, or $2 per bushel of 60 pounds, the cost of these 56-cent potatoes to the consumer was $902,000,000.

Had the farmer received two-thirds of the price paid by the consumer, he would have received $601,000,000.

GOLD SEAL TIN PASTE

Reg. U. S Pat. Off.

For Spot Labeling

Gold Seal Tin Paste sticks your labels so that they *cannot be pulled off.* It never gets brittle nor allows the labels to loosen up on the dealer's shelf.

It comes ready for use without mixing, shipped in 5 gal. cans, 30 gal. and 50 gal. barrels.

1923 Model, Patented

MAX AMS MACHINE CO. FOR ALL ANITARY CAN YSTEMS PRODUCTS NEW YORK CITY

THE MAX AMS MACHINE COMPANY

101 Park Ave., New York, N. Y.

BRANCHES: Chicago, Ill., 20 East Jackson Blvd.
Rochester, N. Y.. 705 Commerce Bldg.
London, England, 50 & 51 Lime St., E. C. 3

A difference between the farm price as it was and what it should have been of $349,000.000.

New York is the third potato-producing State of the Union. There are 193,195 farms in the State.

The 1922 crop report of the United States Department of Agriculture showed that the average price for potatoes received by the farmer was 56 cents per bushel. I wrote to the department inquiring what the consumer paid for these 56-cent potatoes. Officials replied they did not have the information and that "the ideal way to make this comparison is to take the farm price of certain shipments of potatoes and the price of same in the retailer's market." This I have done for two years, and the results of my investigation disclosed, among other things, that Long Island potatoes sold on the farm at 60 cents a bushel were sold at retail to the consumer in New York at the rate of three pounds for 10 cents, or $2 per bushel. In this connection I find that this difference between farm prices and retail prices prevails at all times, regardless of the price paid to the farmer. To illustrate, if the farm price of potatoes is $3 per barrel, the retail price to the consumer is 5 cents per pound, or $9 a barrel, 180 pounds.

I made similar tests on other articles of food besides potatoes, and in some cases these sold to the consumer at 300 per cent in excess of the prices paid to the farmers. All of these tests were made on foodstuffs grown within thirty or sixty miles of New York, the greatest center of food consumption in the world.

The wheat farmer has suffered tremendous loss. His wheat has cost 30 cents a bushel more to produce than he can sell it for, yet dealers make large profits by selling bread to consumers.

From a survey made by the Bureau of Markets of New York City, under the direction of Mrs. Louis Reed Welzmiller, deputy commissioner, with a corps of 125 market inspectors, it was found that the retailers were making from 30 to 50 per cent profit on bread sold to consumers.

An inquiry affecting 3,500 bread makers demonstrates another important fact, which I have asserted, which is that the profit made on a food article can be checked, and that every charge between the farm and the consumer be made known, so that all unnecessary costs, profits, commissions and expenses can be cut out. The best and quickest way for this to be accomplished is through producers' and consumers' co-operative orga izations. One is the grower, the other the buyer.

Getting back to the political aspect arising from the lo neglect of the farmers' interest by the Government, the questi as to whether or not organized labor will become an asset liability to the farmer is debatable.

In a recent publication touching upon this subject, form Vice-President Thomas R. Marshall says:

"The farmer seems to think that the farm-labor combin tion is of benefit to him; the labor side is easy to understan if the laborer has to pay more for farm products, he will ha to have more pay—and he very probably will get more. T condition of the farmer is anything but funny; the thoug however, that the farmer should hook himself up in a politi combination with the fellow who has been responsible for condition is, to me, amusing."

The farm-labor proposition analyzed presents some qu tions that may be regarded as fundamental. As I have sa there are approximately 34 million farm population cultivati 6½ million farms, who have the job of feeding the other million people, 40 million of whom are workers. As far ba as 1911, before the Southwestern growers, I said:

"The two classes who will receive the greatest bene through co-operation between themselves are those who produ the food and those who consume it. The closer relations a established between the two, the better it will be for both."

Therefore, may it not become advantageous to the farm to utilize industrial labor, who may in addition to being lar consumers, be helpful to the farmer through their politi strength and influence? Unquestionably, the farmer would better off, from a business standpoint, by avoiding entangli political alliances. They have been "chestnut pullers" for othe long enough.

"A business which produces enormous new wealth annua is a business which, when concretely organized, can stand alo without amalgamation with other interests, except where it made to its interest and under terms of its dictation."

The farm value of last year's crop in the United States w $7,500,000,000, deducting the value of animal products, cott and tobacco. Therefore, as the farmer receives only one-thi

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

AYARS MACHINE COMPANY --- SALEM, NEW JERSEY.

Brown Boggs Co. Ltd., Hamilton, Ont. Sole Agents for Canada.

of what the consumer pays, as established by the highest authorities and common knowledge, a simple sum in arithmetic tells us that the consumer pays $22,500,000,000 for the $7,500,000,000 crop, distribution costing the enormous sum of $15,000,000,000. I contend that this division should be reversed, the farmer receiving the $15,000,000,000 and $7,500,000,000 going to the distributor.

For instance, in New York City 80,000 concerns are selling foodstuffs of all kinds to 6,000,000 people. On the basis of five to a family, 400,000 food-dealer population in New York are supported through distribution, not to mention the army of employes—office help, clerks, delivery people and others—or one food-dealer population to every fifteen of city population, exclusive of employes.

Hartford, with a population of 138,000, has 1,000 food dealers, or 5,000 food-dealer population, which means one food-dealer population, exclusive of employes, to every twenty-eight of city population.

In Trenton, a total population of 128 000 has 700 food dealers, or 3,500 food-dealer population, which means one food-dealer population, exclusive of employes, to every thirty-six of city population.

Boston, with a population of 760,000, has 4,000 food dealers, or 20,000 food-dealer population, which means one food-dealer population, exclusive of employes, to every thirty-eight of city population.

Dallas, with a population of 165,000, is served by 1,035 food dealers, or 5,175 food-dealer population, which means one food-dealer population, exclusive of employes, to every thirty-two of city population.

There are 6,500,000 families on farms, and estimating five to the family gives approximately 33,500 000 farm population. Taking as a basis the figures shown by my investigation, there are about 3,793,000 food dealers engaged in selling foodstuffs of every kind produced by the 33,500,000 farm population. Using the same ratio as for farm population, five to the family, there are about 19,000,000 food-dealer population to each one and three-fourths of farm population. Or, to put it another way, there is one dealer selling foodstuffs of all kinds from each one and a three-fourth farms—a heavy load for the farmer to carry.

At the same time I can see how those engaged in a losing business may be influenced to join with labor which promises to find ways and means through which a marketing under which producers can market their products and retain for themselves sufficient to pay all expenses, taxes, interests, etc., with a fair surplus.

In asking for a more efficient marketing system, the fact should not be overlooked that the agricultural interests do not seek to impose in any way new tax burden upon the public nor conditions that will in any manner disturb the business of the country. They only want what rightfully belongs to them, and every business interest can afford to unstintingly support such a policy.

The next big thing of national importance in connection with the farm problem is to push co-operative consumers' associations in large consuming centers. With family food bills constantly increasing and the farmer producing at a loss, it opens up a big problem of the greatest mutual interest to the producer and the consumer, which all interests should exert themselves in the most earnest manner to correct.

Producers' and consumers' co-operative associations will become nation-wide, and will exert an influence which will carry power sufficiently strong to force the recognition that they deserve, eliminating the enormous burden that the farmers and consumers are compelled to carry.

MARKET FOR CONDENSED MILK IN AUSTRIA AND HUNGARY.

By Prentiss M. Terry, Assistant Trade Commissioner, Vienna.

AUSTRIA is importing less canned milk this year than in previous years, and only a small part of it is coming from the United States, while in 1920 43 per cent of the total American milk imports was American made.

Fresh Milk Supply Increased.—Of several reasons for the falling off of the United States sales of milk to Austria one is that there is much more fresh milk on the market. During the war thousands of animals, including a large number of cows, were slaughtered to replenish the meat supply, but since the war Austria has not only imported cows from Hungary and Poland, but has also expended great efforts in improving its own local stock and increasing the numbers. As a result of these improvements in stock and imports there is at this time more fresh milk on the market than at any time since the war, and while the supply is still below normal, there is almost enough to cover th local demand. During the first quarter of 1923 Austria importe 1,570 metric tons of fresh milk from Hungary.

Government Control Ended.—Fresh milk is to be had now i the cafes and restaurants and can be bought in the local dair shops without ration cards. In many places whipped cream i served, which indicates a decided improvement in the fresh mil supply of the country; for until a year ago milk sales were co trolled by the Government and were allowed to be made onl upon presentation of a card showing that it was to be used fo children or for the sick. The selling of whipped cream was an o fense subject to fine. This increase in the supply of fresh mil has naturally been marked by a corresponding decrease in th consumption of canned milk, which is now used largely in cook ing and baking.

Canned Milk Imports Largely from European Sources.— The Netherlands is the largest exporter of milk to Austria, a shown in the table below. The Netherlands also supplies Vienn with a large amount of canned skim milk with 3 per cent butte fat, a much cheaper product than the American standard, whic contains 8 per cent butter fat. This 3 per cent milk is used i cooking.

The American milk compares favorably in quality with tha produced in the Netherlands, Denmark and Switzerland, but i more expensive. The Swiss produce a grade which is more ex pensive than the American product, but it contains 13 per cen butter fat, as compared to 8 per cent, and the high-class trad prefers this to the American brands, which cost very little les As a result of these conditions the United States has been re cently exporting only an insignificant amount of canned milk t Austria, while for the years 1909 to 1913, inclusive, such export averaged about 2,000 metric tons annually.

Imports of powdered and condensed milk into Austria.

Years.	Nether-lands.	Denmark.	Switzer-land.	United States.	Total
	Met. Tns	Met. Tns	Met. Tns	Met. Tns	Met. Tn
1920	1,354	272	3,126	4,946	11,49
1921	5,700	1,662	1,943	2,243	16,18
1922	4,393	1,063	890	3,033	12,16
1923 (first 6 mths)	2,401	894	813	366	5,97

Of Austria's total imports of powdered and condensed mil the United States supplied 43 per cent in 1920, 14 per cent i 1921, 25 per cent in 1922, and only 6 per cent during the first si months of 1923.

Fresh Milk Preferred in Hungary.—In 1913 Hungary was a exporter of fresh milk and milk products, although in that yea 218 metric tons of condensed milk were imported. But this, i is reported, was largely consumed by the non-Hungarian elemen of the population, since the Hungarians prefer fresh milk, o which there was a sufficient supply and which could be obtaine at a low price. In 1919 and part of 1920 the stock of cows wa so greatly reduced in Hungary that the importation of condense milk became a necessity. But in 1920 Hungary began to in crease its stock of cows by breeding and by foreign purchases with the result that the importation of condensed milk was grad ually curtailed. In August, 1923, Hungary was not importin any foreign milk.

According to the milk-import statistics, Hungary importe 155 tons of condensed milk in 1920, all of which came from th United States. In 1921 the imports amounted to only 53 tons none of which came from the United States; 27 tons came a compensation from the Netherlands, to which Hungary had sen wheat and rye, and 26 tons came from Switzerland in paymen for oats. In 1922 Hungary imported only 6.4 metric tons o canned milk, all of which came from the United States. Durin the first three months of 1923 the official statistics show no im ports of condensed milk from any source.

Exports of Fresh Milk.—It is interesting to note that i 1920, even though Hungary had a very low supply of milk, 5 tons of fresh milk were exported to Austria. In 1921 this was in creased to 64 tons, while in 1922 fresh-milk exports amounted t 1,435 metric tons, all of which went to Austria. For the firs quarter of 1923 Hungary has exported 1,570 metric tons of fresh milk to Austria. These exports are sent from those province bordering on Austria, near the industrial cities of Wiener-Neu stadt and Vienna. The peasants of these provinces find it t their advantage to ship to the nearest market, since Hungary does not possess refrigerator cars. This helps supply the Aus trian demand for fresh milk, and marks a corresponding decrease in the requirements for condensed milk on that market.

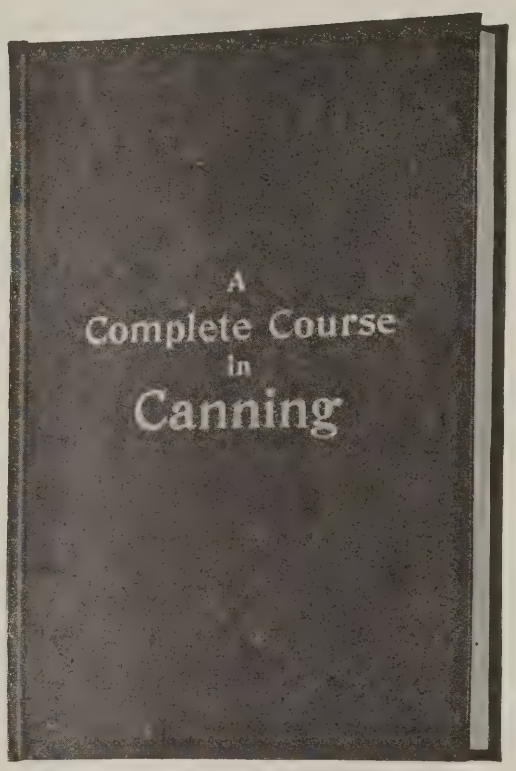
At present the Hungarian Government will not grant per mits for the importation of condensed milk. It is considered a luxury, and only in case of sickness or upon an order from a phy sician is it to be obtained, and then only at fancy prices.

Are people familiar with your brand?

Goods well displayed are half sold, and actual tests prove that good looking counter displays (silent salesmen) will positively increase sales.

How many brands of Canned Foods are actually called for by name? And isn't it true that crowded shelves confuse the purchaser so that the grocer's suggestions are usually accepted.

Why not let people become familiar with your label and ask for your brand by name? An attractive counter display will bring your can off the shelf down on the counter where it can be seen by everyone entering the store.



We have made a study of this subject and originated some particulary successful displays. May we plan one for you?

Announcing: Sprag

Successor to Spra

An Open Letter to the Canning Industry

Buffalo, N. Y., Oct. 20, 1923

We are glad to announce that we have organized and fully control the *Sprague-Sells Corporation* which on November 15th will take over the assets and assume the liabilities of the Sprague Canning Machinery Company.

Sprague-Sells Corporation
will have as its President and General Manager, Ogden S. Sells who will make his future residence in Hoopeston. All manufacturing and experimental work will be directly under his supervision. The General Offices and accounting records of the new Corporation will be located at Hoopeston, Illinois, in connection with the Factory.

Peerless Husker Company,
will continue to operate as a s
Corporation, but as the control
companies is owned by us, th
be close co-operation between
We will build all of the *P*
Machines that are now offered
Trade, and will energetically c
our present program of exper
and development work.

Millar W. Sells will be the Mar
our Buffalo Factory, and un
direction our organization wil
to reach even higher standards
cision and accuracy than hav
achieved in the past.

THE ECONOMY IN PREPAYING "DELIVERED" GOODS.

By "Pop" Corn, in the National Wholesale Grocers' Bulletin.

THOSE of us doers, who are of necessity constantly in the spotlight, frequently find it advisable to become news reporters—not for the purpose of stimulating applause, of course—but rather with the idea of engendering confidence in our efforts and also passing on the real inside story of results. "It is generally agreed by everyone, everywhere, and every time, that the manufacturer who sells at a delivered price should prepay freight," my wholesale grocers have chorused me. "What is 'Pop' Corn doing about the fact that some manufacturers sell at delivered prices but do not prepay freight?" The answer is, as always, that "Pop" Corn is well aware of this evil and that he is on the job! I have pondered this problem, and I am going to open up and tell my wholesale grocers about one of my great victories for them. I always plan my moves with the greatest circumspection. I make sure that I am right first, and then I proceed to get results in just the way to get results.

In this case I selected a most representative manufacturer; one who stands high with us all. My train dropped me off in the metropolis early in the day, and I immediately repaired to the best hotel in town to rest and dress for the occasion. Dressing (an important detail too many business men overlook these days) is a ceremony with me. It includes just the right suit, hat, shoes and gloves. It includes a cane and the most carefully selected neckwear and matched hosiery (I always indulge my flare for a splash of color here).

"Well, this is honor, pleasure and surprise combined, 'Pop,' I am delighted. You look prosperous and happy too, and I cannot help but wonder what you came up to do to us this time." Such were Frank's cordial greetings, which I reciprocated in this fashion:

"Frank, I appreciate all that, and further I reciprocate the personal references If I look prosperous and sleek, it is because I am doing a big work for good business men But you know my clientele. They could talk for themselves, but 'Pop' Corn is doing the talking for them these days.

"Frank, you are known as a man of some general influence in the food manufacturing field. I am here to enlist your support in my campaign to get all manufacturers to prepay freight, when they sell at a delivered price, wholesale grocer's point."

"'Pop,' I find you are reasonable, as always. Please tell me in detail, though, if you are prepared, why wholesale grocers want that policy."

"'Pop' Corn is always prepared. Here is the story, Frank. In the first place, a 'delivered price' policy, in itself, presupposes the prepayment of freight. Do you follow me?"

"You are right again."

"But aside from that, the question of economy and efficiency is involved. Where the manufacturer does not prepay, my clients are compelled to make a memorandum record of the freight bill in their offices. They must invoice the freight to the manufacturer. They must pass the record on to their journal clerks, and then on to the bookkeeper, who in turn must post it on the ledger account against the manufacturer. But I am not through yet, Frank. Now let us turn to the manufacturer. When my grocers make a freight charge back to the manufacturer against his account, it has to pass through the hands of some one of the manufacturer's employes to be checked up. It also has to pass through the books of the manufacturer in many different entries. I firmly believe that the policy I declaim against was invented by the Bookkeepers' Union. Do you follow me, Frank?"

"I most certainly do, 'Pop.' You have thrown a flood of light on this situation."

"Then, Frank, I want you to do two things. First, amend the phrashing of your inquiry when I entered. You asked 'What have you come up to do to us this time?' You see, I didn't come up here to do anything to you. I came here to do something for you manufacturers."

"'Pop', the amendment is accepted. But your fine memory does deserve a compliment."

"The amendment is duly passed. Then, Frank, I do want to enlist your services in this matter. Can 'Pop' Corn and his wholesale grocers depend on your active and continuing support in this matter?"

"You and they can—to the hilt."

"Frank, one readily understands why you are where you are, after such a visit as this. Believe me, my own appreciation of your fine qualities is equalled only by that of my wholesale grocers."

This sketches one of the day-by-day results of "Pop" Corn's struggles for his wholesale grocers. If that other old battler, J. Caesar, were commenting on such results as these, he would resort to such blare as "I came, I saw, I conquered." But Juliu was not as modest as your old "Pop" Corn.

A PRETTY GOOD RELIGION.

By "Uncle Jerry," in The Farmers and Merchants Messenger.

ONCE when Tom Dreier, house organ editor, and Frank B Gilbreth, industrial engineer, were talking about religion the latter said: "My religion is to do everything I can to increase the number of happiness moments in the lives of my fellow human beings."

"Now, you may not entirely agree with me, and of course you are entitled to your opinion, just as I am entitled to mine but it does seem to me that that's a pretty all-inclusive sort of religion to live up to.

Never very religious myself, I yet have always taken off my

mental hat to the person who is sincerely so. For the hypocrite —the man or woman who uses religion as a cloak—I have nothing but the deepest contempt. Such people (and I know quite a few) must certainly be a thorn in the side of God.

My own work in the world I have conceived to be the spreading of the cheering, helpful word. It is a delightful work. More and more opportunities come to me these days for circulating what I write. Each month now, through the various house organs I edit and the magazines I write for, I am talking to pretty nearly half a million people. And, say, if I can put a ray of hope into the minds, if I can inject a bit of kindness into the hearts, if I can spread a touch of fellowship among even a very small proportion of those readers—don't you think I am helping along a practical, workable religion such as is embodied in Mr. Gilbreth's idea?

There are men who know every line in the Bible "by heart," and yet they are scoundrels. We must LIVE our religion here and now, in our work, in our play, in our offices and in our homes.

LEADING WHOLESALE GROCERY EXECUTIVE URGES PRESENT AS TIME FOR CLOSE CREDITS

By C. R. Winslow

Nash Shareholders' Co., Minneapolis, Minn.

In National Wholesale Grocers' Association Bulletin.

Note—As the wholesale grocer or jobber is generally recognized as a good trader, canners may learn a trick worth knowing from the article herewith. This may cause some of them to "eat crow" or "take their own medicine," but they cannot object to the canners following the advice they themselves give.—The Editor.

JOBBERS in the wholesale grocery business and in other lines unite in pronouncing 1923 a year in which it is most difficult to show net profits.

Volume is not lacking, but the narrow margin of gross profit and the persistent high percentage of expense of doing business render net earnings negligible. These conditions affect the retail trade in exactly the same manner. For this reason it is to be expected that to the usual number of failures from all causes must ultimately be added a rather large number of failures which will be the direct result of the present adverse trade conditions. This is especially true in all districts where the distribution of food products is carried on by the country merchant in territories where the main occupation of the consuming trade is agriculture. The most doubtful asset in the country merchant's financial statement today is his accounts and bills receivable.

Type Statement—A review of a large number of financial statements from country merchants in 1922 and 1923 revealed a large number in which the net worth of the merchant was just about equal to the sum of accounts and bills receivable. So many of these were submitted that one jobbing organization referred to them as "Type Statements."

Below is reproduced a copy of an actual statement selected from among these Type Statements:

Assets	
Merchandise	$16,000
Book Accounts	24,000
Notes	9,000
Fixtures	1,350
Cash	900
Real Estate	2,800
Insurance Premiums	265
	$54,315
Liabilities	
Owing for Merchandise	$20,000
Owing to Bank	5,000
Taxes	320
Trade Money	150
	$25,470
Net Worth	$28,845

The pressure from accounts of this type for more credit has been one of the most fruitful causes of the credit man's troubles in 1923. Farmers without money wanted more goods in exchange for more promises to pay. Retailers too often succumb to the pressure and bring the same pressure on jobbers to increase their lines of credit. Here originates one of the most fruitful causes of failure—the increase of the past-due account.

A Suggestion—It is doubtful if it is ever sound credit practice to increase any past-due account, no matter what the reason or what the promise for which it is increased. The outcome is nearly always unnecessary loss. This is no reflection on the good faith of the farmer or the retailer. It is rather the inexorable fact that a farmer who is behind a season's purchases cannot catch up and in one season pay two season's store debts to the present selling prices of farm products. The retailer trades his goods for accounts which do not convert into money as fast as his bills mature. Extensions or liquidations follow as soon as the condition becomes extended enough to catch him in the jam of uncollected accounts and unpaid bills.

A Policy—There is only one way to handle such accounts with safety, and that is to insist on payments equal to purchases until accounts receivable are reduced by collection. It is no kindness to give a retailer time on more goods with which to increase his own accounts receivable—eventually throwing him into bankruptcy or a trusteeship. Jobbers and retailers both have enough frozen accounts to carry over until better times without acquiring new loads of the same type or increasing old ones.

This is a gruesome process which involves some orders held and strained relations between old friends. It also means that some business will leave old channels and seek new ones. This is what we want to talk about in this article. The jobber who gets new business under these conditions should have it understood that it is accepted on regular terms. This is for the safety and protection of all.

Watch Out!—There never was a time when credit men should so carefully scan the sheets of ledger interchange where the order comes from a retailer who has been stopped from increasing a past-due account somewhere else. It should be handled with care. If it is unsafe for the jobber already interested to increase the account. it is equally unsafe for an outsider to step in and take the liability.

Is this not a field for comity and co-operation among jobbers? It contributes to discpline and to sound methods by the retailer when he finds that while his account is past due in one quarter and no increase invited, it is also regarded with caution in other quarters. Like the farmer, what most country merchants need is not more credit, but less debt. Everything which the jobber can do to bring this about stabilizes business for all.

Another frequent cause of credit loss is inertia. Under present conditions events transpire quickly. Sudden failures are happening everywhere. Accounts which were shipped or increased a few days previous to failures get into our losses because of trusteeships, bankruptcy or extensions which happen suddenly. It is a time to scrutinize every order, having in mind the effect of shipping it on the account. If we are in a worse position after shipping than before, we should hold it. We are in a worse position every time we ship an order which increases a past-due account. Making them pay was never more important than right now!

Get Busy!—If an account ignores the usual collection methods, do not remain inactive. Do something promptly. There may be forces at work which do not appear on the surface. Follow up the slow man with diligence.

Lack of thorough investigation is another cause of many unnecessary credit losses. In every list of creditors appear the names of those who got in for the first time just before the failure or permitted their accounts to increase while the retailer was failing. At a recent meeting of creditors a jobber presented his statement for an amount $600.00 less than the debtor had listed the liability in his schedule. On investgation it was found that an order taken several weeks previously for future shipment had been OK'd at the time it was received and shipped without any fresh investigation the week before the failure. It had not yet been charged to the customer's account, but he had included it in his schedule. This was not losing money; it was throwing it away.

We have mentioned these three causes of unnecessary credit loss in failures

1. **Increase of past-due accounts.**
2. **Inertion.**
3. **Lack of investigation before shipping.**

A period of low net profits is a time for tight credit handling. Such a period is upon us. Let us do what is necessary to prevent unnecessary loss, as we may be sure that the necessary and normal loss will be enough under present business conditions.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, NOVEMBER 12, 1923

WEEKLY REVIEW

Canners Are So Well Cleaned Up They Are More Interested in Futures Than Spots—A Very Contented Lot—Some Buyers Feeling Around for Futures—A New Selling Clause to Be Added to New Contracts—How Some of the Flat Allowance Demands Work—"Sucker" Class Getting Small.

THE New Contract—It may seem too early to speak about future sales at this time, when the season of 1923 is not yet over for some of the canners, but time moves so rapidly in these days that we no sooner end one big effort than we are forced to begin the next; and whether we want to consider the selling of future canned foods or not we are forced to do so because their sale is right here or very near. It must be remembered, of course, that the pea canners have been done their work for some months, and as the market has taken their 1923 pack down to an unusually low level for this time of the year, they are ready to consider their 1924 operations. And there are buyers willing to consider their futures, so what else can be expected but that futures will be sold.

This proximity of future selling was well shown at the meeting of the National Canners' Association Executive Committee in Chicago this week, where the delegates were reminded that preparations for the 1924 season were not merely to be considered, but that action would have to be taken at once if contracts were to contain the clause in question. And so they set to work to perfect the Warehouse plan, in this settlement of the swells dispute, and whipped it into shape and adopted it, together with the form of clause that is to be added to all future contracts. This form is printed in our Editorial, and we refer the reader to it, and merely wish to say that it is the product of some of the smartest canners in the business, former President Pames Moore being one of the draftees, and the clause has his entire endorsement, which means that it carries legal approval as well as good canners business. The biggest canners in the business will sell on this plan, using this clause in all their contracts, and so the so-called little canner, who may say that the buyers will insist upon the flat allowance and that he cannot afford to refuse, can well afford to refuse and insist upon this form of spoilage settlement. Of course if a canner hasn't backbone enough to protect himself he will not be protected, and he probably is not worth protecting; but there is nothing in saying that he cannot stand alone, that he cannot do this while all others are doing otherwise, because he will not be standing alone, and all others will not be doing otherwise. If there are any canners who sign up on the old flat allowance plan it will be spineless canners just like themselves, for the men of vision and backbone, and ability to conduct their own business will use this new plan to the man. Of that you may rest assured, and can assure your fellow canners whom you meet. If you stray off and try to stand alone, the way the canners have been stalked since the earliest days, you may expect to sign any kind of a contract the buyer, and his broker, puts under your nose. If you will stand with your fellow canner—and that means with the leading canners of the country in every section, you can expect protection and you will have protection. There is nothing unfair in this warehousing plan contract to either buyer or seller, but if we are a buyer and could induce a canner to give us a flat allowance of ½ of 1% we would do it, because it would be just like finding money. If the swells did not amount to that much we would be ahead just that much, and if they amounted to more then we could bill the canner, so why not insist upon that sort of a contract if the canner is fool enough to grant it. Picture this, for instance: One of the leading chain-store men bought from a well known kraut canner a carload of kraut, in cans, every week. The 600 cases of kraut, in the car, supplied just one case to each of his 600 stores, and so of course it went directly into the shelves, and since he had to buy every week, it is supposed was sold out each week. Yet he demanded and received the flat allowance of ½ of 1%, although this kraut never had a chance to swell. Of course if a canner does not care for profits he need not bother himself about such things, although he owes a duty to other canners in the same line of business, and should not impose losses on them.

CANNERS are Comfortable—As we stated last week, the canners are sitting pretty, resting easy and not in the least worried over anything, least of all any small surplus they may have of any product. One had only to mingle with them and talk over matters on the floor of the meetings, canners of all manner of articles and from all sections of the country, and he found this condition. "What kind of a year have you had?" "Oh, very fair, quite satisfactory; had a right nice pack." "Pretty well sold up?" "Yes, we are about cleaned out." That is a sample of the talk. And it is just as true of the machinery and of the supply man—they all seem happy and well contented this year, although for most of them it is the first good year in five, and they need it. But there is one thing about them: the jobbers will find it hard to take their goods away from them, except at the prices they put on them, The "sucker" class is growing very small and hard to find. Of course there are some because there are some who enjoy their ignorance and do not want to learn or be posted. There are decidedly more who look with pity upon the canner who cuts the price, and with distrust upon the broker who says that Jim has cut the price, and then asks him to meet it. In other words there is more backbone evident in the industry to day than was ever seen before. Is this market data? You just bet your life it is, for it has been the lack of backbone that has caused all the troubles in the canned foods market for years—that and the lack of information or the energy to try to get it, and the belief that every other canner is a crook. They are very rapidly becoming informed, and they

joining in Association work in a way that is astounding. In the membership of the National Canners Association was with total cases of about 18,000,000. So far this year the bership shows 503, with nearly 44,000,000 cases, and more more are coming in every day, Virginia, for instance, has led its membership to over 50, some States are practically %, and more will be soon. The local and State Associations doing the same thing. The canner who stays out is decidedly e now, and is to be pitied. Because he is uninformed, poorly ed, the victim of every shark.

HE Market—We have said that the canners at these two big meetings are so low in spot supplies that they are not interested in the market. So there is not much of a market. atoes, corn, peas and most other items are all strong and ing firm, although demand is slacking off as might be cted at this season of the year. One hears now and then of e canner who has eased up in his prices and taken some rs, but his fellow canners only wonder why he did it, and se to meet the price. And the orders come along just the e, if they want them, but not many seem to want them.

There was some talk of pear canning on the Peninsula week, but it is very light there; only a few run up to meet e little orders on the books. Out in Western Maryland fine es are going begging for buyers. They cannot get the help ick them, and the freight is so high that it does not pay to te them and market them in that way, so they are offering n at any price to anyone who will call and get them. Prices rom 5c to 10c per bushel in the orchards were said to have made, according to the daily papers. We know they are ping them in bulk carloads, loose, with the doors wide open the track hands helping themselves wherever the car stops.

The spinach canners of Baltimore have been forced to run on this crop by the high prices which have been maintained he fresh shippers, who have been taking the crop as fast as me to market. Here again the canners are running up the rs on hand, and will not accept these except at full prices. n then it is said there is no profit in them.

What the oyster canners can do remains to be seen. Old ermen say the crop is not there, and that common standard ers are selling eagerly at $2 per gallon—for fresh oysters—that while the advent of dredging may help matters a little, ill not last long. The dredging season is now on, and they probably clean up the small supply in jig time. The south-oyster canners will have to supply the market to a very large ee.

ST. LOUIS MARKET

ket Firm—Tomatoes Slow Up—Show a Weakness—Fancy Corn Cleaned Up—Other Items.

By "Missourian,"
Special Correspondent "The Canning Trade."

November 9, 1923.

O material change has been noticed in the canned foods here during the past week. The majority of the jobbers have enough stock on hand of all staples to supply their trade. ddition to what they have on hand, the delivery of their con- goods is coming in. The result is that nearly all of them so fixed that they will not worry for quite a while. Firmness ails in the market, and some advances are taking place, but ers as yet are not ready to buy additional stocks until after irst of the year, and they are not a bit worried. They think by that time there may be a change in prices. Jobbers are sed to the policy of carrying light stocks it looks as if they going to have their stocks at the very minimum when the comes for taking their inventories, at the first of the year. practice that the jobbers have become accustomed to of re- ng stocks frequently and disposing of them quickly has n them one of the best years they have had for a long time. this reason they are not inclined to change their policy.

Tomatoes.—In a jobbing way there is not much buying of to- es being done, so prices are a little weak. At points of origin s are firm. Most dealers here have enough goods on hand n sight, and they are not inclined to test the strength of the ket. Canners are not inclined to unload. In the South the ers are firm in all sizes, and there is no reaction in quotations. Middle Western canners have no surplus, so the buyers are more anxious than buyers to sell. Canners in California, it is reported, are holding at full list price, and turn down any suggestion of a discount. Few carload lots are reported.

Corn.—There is not quite as much activity reported on fancy packs as there was a week ago. This is because offerings of fancy have about been cleaned up from first hands. Canners are waiting for a final check up of sales and output before trying to re-enter the market. Standard grades of corn are firm and a fair volume is selling in all sections.

Peas.—Second hands now control nearly all the peas, and others who are possible buyers are not seeking resales when they still hope to do better from first hands. It seems almost impossible, that with the big pack, the canners have so few on hand by this time of the year. It gives an idea how strong peas are. Resales are not large at this time but it is not likely that this condition will last long, as there is already a demand for prices in new packs, indicating a speculative interest.

Pumpkins—The deliveries of pumkins are short and as there seems to be more of a demand for this pack than usual, there is more strength being shown.

Asparagus—It is difficult to get asparagus tips. This has resulted in more strength.

Spinach—Canning of spinach, in the South, it is reported, is backward.

Fruits—Trading on spot by moving goods into consuming channels, and by taking in contract lines as they arrive, is about all there is doing in the California fruit line. There is very little speculation or future buying being done. Canners who have odds and ends, left over, are finding a ready market for them all over the country. They are not forced to shade their prices, either. The strong operators have faith and are awaiting a better price list.

Apricots—This fruit is very quiet at the present time and prices are unchanged.

Pineapples—Pineapples are also quiet, although there is a routine movement going on all the time.

Cherries—Cherries are firm.

Apples—Gallon apples are developing some strength.

Fish—Pink salmon is showing more strength although the trading is confined to small lots. Sardines remain unchanged as to prices.

Milk—Condensed and evaporated milk are in light demand. As in other canned goods, distributors are buying from hand to mouth.

CALIFORNIA MARKET

Demand for Canned Fruits Holds Out Strong—Tomato Packing Season End in Sight—Salmon Pack Greater Than 1922—"Marketing Day" Carrying Interest of California Canners and Growers—Big Program Is Being Planned—Coast Notes.

By "Berkeley"
Special Correspondent "The Canning Trade."

California, November 8, 1923.

IN general the demand for California and Pacific Coast canned foods is keeping up in fine shape. Here and there may be an item that is being neglected, but most lines are moving in a very satisfactory manner, and the outlook is that by the end of the year there will not be a great deal left in first hands. Buyers are not speculating, but are moving their early purchases so readily that they are coming back for more and more, and are finding it increasingly difficult each time to get orders filled. The cold weather is bringing the fresh fruit and vegetable season to a close, and canned products will have a more general demand from now on.

Tomatoes—California has been visited by another light rain, with frosts in some places, and the end of the tomato-canning season is now in sight. In fact, most of the canneries handling tomatoes have closed. The late pack has been quite satisfactory, and some concerns which withdraw quotations in October are back again with offerings. Surplus stocks are limited, however, and withdrawals will likely be in order again shortly. The California Packing Corporation is again quoting prices, its list being as follows:

No. 2½ Standard, with puree	$1.15
No. 2½ Solid Pack	1.60
No. 2 Standard, with puree	.95
No. 2 Solid Pack	1.25
No. 1 Standard, with puree	.80
No. 1 Solid Pack	1.00
No. 10 Standard, with puree	4.00
No. 10 Solid Pack	5.15
Del Monte, buffet, tomato sauce	.50
10 Del Monte Catsup	7.25
10 Standard Catsup	6.00

Salmon—That sales of canned salmon have been heavier this fall than many in the trade have been led to believe is the intimation of a well-known handler of fish products. While the Eastern demand has been of a more or less routine character, a good call has been experienced of late from the Middle West and the South, especially from the latter. Pink salmon has been in especially good demand, and prices on the Coast have firmed up quite noticeably. Estimates of the 1923 pack run higher than were indicated earlier in the season, a gain over last year's pack being reported from most districts. Alaska is now credited with a pack of 5,500,000 cases, Puget Sound with 650,000 cases, British Columbia with 850,000 cases, and the Columbia River with 31,000 cases. The latter output of Hawaiian canned pineapple will fall below the peak production of 1920, when approximately 6,000,000 cases were packed, this year's pack will be well above that of 1922, and will closely approach the figures of the banner year. Reports from the Islands indicate that the average is being rapidly increased, and predictions are being made that within six or eight years the output will be doubled. Large plantings are being made on new land, notably those of the Hawaiian Pineapple Co., Ltd., on the Island of Lanai; Libby, McNeill & Libby on the Island of Molokai, and the Haiku Fruit & Packing Co. in the Hana district on the Island of Maui. These three projects alone involve about 25,000 acres, or about half as much as the present acreage devoted to this fruit. The output of the Hawaiian Pineapple Co. will be between 4,000,000 and 5,000,000 cases when its new acreage comes into bearing. The Haiku Fruit & Packing Co. has purchased the plantation of the Kipatula Sugar Co., and is preparing to substitute pineapples for sugar cane, with an ultimate output of 500,000 cases a year. The pineapple pack of 1923 will bring a revenue of almost $30,000,000 and practically every case has already been disposed of.

The Near East Relief—A number of members of the Canners' League of California have made contributions of canned foods to the Near East Relief, and the membership is being advised that these contributions will go forward on a vessel leaving San Francisco on December 5. These gifts will be placed in the hands of the needy, free of all transportation costs.

Marketing Day—California growers and canners of fruits and vegetables are taking much interest in "Marketing Day" planned by the University of California, to be held in California Hall, on the University campus, November 22. The program that has been arranged includes the following: "Address of Welcome," President W. W. Campbell, University of California; "Price Fixing in Co-operative Marketing," C. C. Thorpe, manager of the California Walnut Growers' Association; "Meeting the Problems of the Raisin Grape Growers," Ralph Merrit,, manager of the Sun Maid Raisin Growers; "The University and Co-operatives," Prof. H. E. Erdman, University of California; "Transportation Problems of 1923," Clyde Seavey, President of the California State Railroad Commission; "Marketing Fruit Green," J. A. Teagarden, President of the Auburn Fruit Exchange; "Marketing Problems of the Producer of Apricots and Prunes," A. M. Mortensen, general manager of the California Prune and Apricot Growers' Association; discussion, led by E. W. Moorehead, sales manager of the California Peach and Fig Growers' Association; "The Present and Future Outlook for Canning Apricots," Preston McKinney, Canners' League of California; "Canning Peach Growers' Problems in Relation to Marketing," Dr. E. S. Moulton, chairman Executive Committee of the California Canning Peach Growers, and "Marketing Canning Fruits," Frank T. Swett, President California Pear Growers' Association.

Coast Notes—Following investigations conducted in Alaska last summer by Prof. Frank R. Weymouth, of Stanford University, regulations are being drawn up by the Government to place the clam industry in the territory on a permanent basis. Cordova and Cook's Inlet will be particularly affected.

The fruit products laboratory of the University of Califo Berkeley, has been devoting considerable attention of late to development of a simple method of preparing and canning cocktail. The new product, intended to be served as an appe or as a dessert, consists of minced fresh California fruits grated Hawaiian pineapple. A small amount of grape fruit improves the syrup. The process was devised by Prof. M Cruess.

Thomas Leslie, of the Van Alen Canning Co., Ogden, U was a recent visitor at San Francisco.

The first car of 1923 oranges to be shipped out of Califo left Lincoln, Placer County, the last day of October. The pick of olives is in full swing in this district and throughout Nort California, having ripened earlier than usual.

NEW YORK MARKET

Market Steady—All Attention Turned to Western Canners' A ciation Meet—The Question of Swell Claims— Decision—Jobber and Chain Store Attitude—Notes.

By "New York Stater"
Special Correspondent of "The Canning Trade"

New York, Uovember 9, 1923.

HOLIDAY Quiets Market—Trading in the local market t week has been curtailed somewhat as a result of Tuesda elections. Monday's market was a dull affair, and market did not get into its stride today, business being of sm volume throughout.

Await "Swells" Decisions—By far the feature of the mar this week is the convention of the Western Canners' Associat in Chicago and the conference between representatives of wholesale grocery and chain store industries and canners rega ing the settlement for swell allowances. Arthur P. Williams, R. C. Williams & Co., of New York, is chairman of the Spe Jobbers' Committee, on which J. W. Herscher, president of National Wholesale Grocers' Association, serves as a membe

Jobbers' Position—The wholesale grocers are definitely co mitted to the plan for graduated percentage allowance for settlement in advance of swells claims. The recent poll of National Wholesale Grocers' Association showed 225 members favor of the graduated percentage allowance, 194 in favor of label return plan, 343 in favor of the one-half of one per c flat allowance plan, and 27 in favor of the warehouse inspect plan.

Chain Store Attitude—According to Alfred H. Beckma secretary of the National Association of Chain Store Groce the position of the chain stores is essentially the same as t of the wholesale grocers. The chain stores want the percenta plan. The return of spoiled canned foods is not only unfeasil all classes of distributors declare, but in many markets it illegal. The New York Department of Health is now enforci its regulation providing that spoiled canned foods must be stroyed where and when found.

Decision Awaited—The conference retarding this probl was scheduled for Chicago today, but up to the time of writi no word has been received regarding the outcome. Wholes grocers generally are confident that their plan, with, perhaps modification here and there, will be the one adopted.

Fancy Corn Sharply Up—Sales of new pack fancy Mai corn have been made during the past week at $1.65 per doz f. o. b. cannery, for fancy Crosby, as against the opening pri of $1.40. While most of the canners were forced to deliver p rata on all grades this year, one or two of the packers sold lit or no futures, and have since profited by their foresight. P rating on orders for fancy Maine succotash is also being done.

Jersey Packing Pumpkin—Jersey canners are concentrati on pumpkin this year, and indications point to a heavy pac The Jersey packers are specializing in fancy stock, many them packing in enamel-lined cans. The pack this year is ru ning about 60 per cent plain tins and 40 per cent enamel. India

ers are still taking on a little business, quoting the market rompt shipment at $1.00 for standard 3s and $3.25 for 10s.

Offer New Spinach—California canners are booking business ate pack spinach at $1.20 for 2s, $1.40 for 3s, and $5.00 for f. o. b. cannery. The spinach will be ready for shipment in January.

To Withdraw Sardine Prices—The acute situation regarding ines continues in Maine. The Seacoast Canning Co. has an-ced that it expects to withdraw its prices on the tenth, and not expect to have any additional stock to offer after that. With the close of the packing season on November 30th, y of the canners are entirely sold out, and in a few instances reported oversold, and making strenuous efforts to pick up gh raw fish from day to day to pack enough to take care of f their orders.

Maine Apples Lower—Maine canners have cut the market No. 10 apples somewhat, and goods are now being quoted as as $3.50 per dozen, f. o. b. cannery. Canners anticipate a tage of stock for packing later on in the season, and are sing their trade to buy the canned product now while it is lable at present low prices.

Salmon Stiffening—Prices on low-grade salmon are steadily ing up on the Coast, a good buying movement having been rted from Southern and interior markets during the past k. While a little pink is still available at $1.20, buyers are ving a great deal of discrimination as to quality, and business eing done at $1.25 by buyers who prefer to pay the extra cents to assure their trade of first quality fish. Chums are tically cleared, remaining holdings being quoted firm at 0 per dozen, f. o. b. Seattle. Alaska reds are still available air quantities at $2.25, although the large factors continue uote firm at $2.35.

Southern Tomatoes Unchanged—No change has been noted he market for Southern tomatoes. A few transactions were rted at 2½ to 5 cents under prevailing levels, but in most s these reports prove unfounded. In instances where such s were actually made it proves that the transatcion was the anup" of some packer who had only a car or less and was ous to clear his holdings. Indiana tomato canners are prac-ly cleared, and prices are nominal. Standard 3s were last ed at $1.60, with fancy at $1.85.

Standard Corn Firm—While a little standard Southern corn be had at 90c per dozen, cannery, most of the packers are ing firm at 95c to $1.00, and are doing a fair business at these es. The market for Western corn is in good shape. Iowa Nebraska corn canners report spot sales of 78,015 cases of between October 18 and 25, reducing the unsold surplus of dard corn in canners' hands in these two States to 425,530 s, as compared with more than 2,000,000 cases at this time year. Standard Western corn is quoted all the way from o 95c, cannery.

White Meat Tuna Scarce—Tuna is scarce on the white-meat le on spot, and a similar situation exists on the Coast. Re-s of white meat have been made in California at $13.00 per for halves, while the local market is held anywhere from 50 to $13.00. Buyers are paying the high prices wherever tuna is available, as it is more a question of getting the goods price at this time. The supply of white meat is so short the fish is placed in the luxury class at retail, and the trade ects to see the total pack consumed long before 1924 pack be available.

Northwestern Berries Sell—There has been a good move-t on No. 10 Northwestern berries during the past week, and market is firm. Following the cleanup of low-priced No. 10 fruits in California, buyers have now transferred their atten-to Oregon and Washington and are picking up desirable lots rever available.

California Low-Grade Fruits Wanted—Demand for California canned fruits during the past week appeared to center on the low grades. Peaches are wanted in both standards and seconds, the latter grade in particular being well sold up.

Off for Coast—A. L. North, of North & Dalzell, left for Chicago this week. After the close of the Western Canners' Association Convention he will make his annual trip to California.

H. F. C. Killian, of Killian & Clark, is in Chicago at the convention this week.

COUNTY AGRICULTURAL AGENTS ACCORDED HIGH HONORS

Washington, November 11, 1923.

W. F. Gahm, Scioto County, Ohio, and five other county agricultural agents from widely separated sections of the country have been awarded high honors by a committee of prominent agriculturists, headed by Prof. F. E. Bear, Ohio State University, for the soil-fertility programs which they have developed among their farmers this year.

For some time a large number of county agents have been giving special attention to the importance of developing definite county programs for the maintenance of the fertility of land under cultivation. The successful candidates, who come from counties in Minnesota, Kansas, Ohio, Delaware and Vermont, were obliged to satisfy extremely rigid requirements by the Committee of Judges, which included Professor Bear, Dr. A. G. McCall, University of Maryland; Director S. B. Haskell, Massachusetts Experiment Station, and Prof. M. F. Miller, University of Missouri.

Through the courtesy of the Soil Improvement Committee of the National Feltilizer Association, the men have been awarded diplomas certifying their work and trip to Chicago, November 12, where they will attend the annual meetings of the American Society of Agronomy.

Mr. Gahm, whose work received the highest ranking, has been accorded the unprecedented distinction of a place upon the society's program.

GOVERNMENT NOTICE ON INTENDED PURCHASE

Subsistence Stores, Marine Corps, Quartermaster's Department, Washington, D. C., November 3, 1923. Sealed proposals in duplicate will be received in this office until 11 A. M., November 13, 1923, and then be publicly opened, for furnishing 240 tins cocoa, 480 packages Cream of Wheat, 3,000 pounds flour, 960 tins soup, tomato; 300 packages sugar, tablet; 200 packages tea, and 360 packages Wheatena, for delivery to Post Commissary Officer, Marine Barracks, Quantico, Va.; 2,000 pounds cocoa, for delivery to Post Quartermaster, Marine Barracks, Parris Island, S. C. Proposal blanks and other information may be obtained upon application to this office. This office reserves the right to reject all bids or parts thereof, and to waive informalities therein. Bids from regular dealers only will be considered. Schedule No. 217. C. L. McCawley, Brigadier General, The Quartermaster.

QUALITY SAUERKRAUT

To Kraut Packers:

While you're right in the busy part of the kraut-packing season, we believe you will be interested in knowing that, after visiting several plants this fall, we found a very few packers who were shipping out kraut that was not sufficiently cured. Most of this was very little better than cold slaw.

In one instance the kraut was being shipped only a short distance, and, upon inquiry, the packer was told that the kraut was not cured. He only shrugged his shoulders and said that his trade wanted that kind. Now, if his trade should happen to get a-hold of some real honest-to-goodness sauerkraut just once—that man would have to change his method of doing business.

The kraut in question had just started to ferment, and could not have contained any amount of the health quality, lactic acid, which we are advertising.

There are several methods of determining the time when fermented cabbage really is sauerkraut. (Some packers ascertain regular acid-testing apparatus.) But a packer should never let the time for packing out be decided by the amount of future orders that are waiting to be filled. Sometimes the buyer gets insistent and you get nervous; so, after shutting your eyes, you pack out a tank of "green" kraut and fill it up again. But, nevertheless, you're sure to be sorry you did it.

Remember, we are advertising sauerkraut as a fermented article, and properly fermented sauerkraut is a good, wholesome, health-giving food. We must back up this advertising and give the buyers a well-cured, first-quality article or we will lose out entirely.

THE SANCTITY OF CONTRACTS

By J. H. Tregoe

Secretary-Treasurer National Association of Credit Men.

WITHIN four decades it was customary for the traveling salesman to do no more than show samples of his wares. The merchant would go to the market twice a year or so for the purpose of laying out his lines and getting ready for the seasonal business. This was the rule when our business was not more than one-fourth of its present volume, and it was possible for manufacturers and wholesalers to provide in a brief period what the retail merchant would need each season. With the expansion of our commerce this condition had to change, else manufacturers and wholesalers would be unable to provide for the seasonal needs of the retail merchant. Goods must be ordered in advance, in some lines months in advance, so that a sufficient period can be given the manufacturer and the wholesaler to provide for estimated requirements. The risk of so doing should be shared by the retail merchant.

In our complex commerce it is important that sales contracts be faithfully adhered to. If in apprehension of lower prices or diminished consumption the seller wilfully and without the consent of the buyer cancels orders or suspends their execution indefinitely, a real hurt has been done to the whole body of business, even though the one transaction is infinitisimal when proportioned to our entire commerce.

To keep the courses of business even, to keep men and capital properly employed, there must be a reasonable division of the risk, and the responsibility of the buyer is just as strong as that of the seller in maintaining a fair division. The seller must hold the sales contract inviolate; if the upward trend in prices may develop a larger consumption, he must live true to the sale and execute the order just as faithfully as though conditions had remained neutral or prices were moving downward.

The relation of the buyer and seller, debtor and creditor, is delicate, and the integrity of the relation is in proportion to the fine sense of honor which dominates its execution.

It is difficult to get this doctrine into the hearts of business men, but we must work persistently until the whole of America's business is based on the utmost integrity and honor.

Aside from the moral effect, the material effect must be considered, for no forced cancellation occurs or any evasion of the credit contract that does not entail a cost on someone which the public must eventually bear.

AUTUMN.

By F. H. Bilderback, Bristol, Pa.

Autumn, with her fairy fingers,
Touches where each flower lingers,
Tinting leaf and tiny tendril,
Singing in a voice with quaint trill.

Autumn is a vagrant maid
Lavish on an escapade,
She will turn the somber blades
Into gaudy renegades.

THE WAY OF SOME ADVERTISERS.

There was once a hen who never laid two eggs in the s place. All went well until she tried to set. She had her scattered all over the farm, and she tried to **hatch** them all. third day she went crazy.—Efficiency Magazine.

HOW'S YOUR TEMPER?

NO, I do not mean your risabilities. I mean this: Have been hardened to the storms of life? Has the white steel of your backbone been dipped in the chilling wa of difficulties often enough to bring your temperature of cou to the right level?

Unless steel is properly tempered it isn't as good as it sh be. Unless men are properly tempered, they don't measur when the strain comes. Philip D. Wagoner, President of the liott-Fisher Company, says much in little space on this sub in a recent issue of Forbes Magazine, New York. He beli it is up to every man to find his work, and then to **work.** But him tell it in his own words:

"When a man finds that he is on the wrong track," says Wagoner, "the best thing he can do is to 'switch' to another for no man ever makes a success of a line of work into which cannot throw himself with all his heart and soul.

Men wear themselves out from worry, dissatisfaction, mi rection of their energies, low morale, improper leadership, di gard of health or many other irritating causes, but they ra wear themselves out from overwork.

When a man's heart is in what he is doing, where he is lowing a properly chosen occupation, where he holds before h self continually the thought it can be done, he is bound to s ceed, for all our struggles, after all, are largely mental confl and due to a state of mind. The minute we fall down in our termination to conquer, defeat is inevitable.

Success comes, therefore, to the man whose will is strongest; whose faith is the most sincere; who never falters his confidence in his own ability to succeed, and whose spirit the finest flexibility; for men, like steel, are known by their te per."—Exchange.

SMILE AWHILE

CAN'T MISS IT

Prospective Purchaser—Will that gown spot easily?
Salesman—Yes, indeed, madam, about four blocks away!

TIP DODGERS

Albert Keller, the well-known hotel man, was telling stories about tip dodgers.

"A mean man," he said, "ate a good meal at a restaurant, and then, when he was through, dropped a half dollar on the floor.

"Waiter," he said, as he paid his bill, "I just dropped two half dollars. Find them for me, will you?" The obliging waiter disappeared under the table, and in a short time emerged, very red in the fase.

"I've found one of them, sir," he said.

"Thanks," said the man as he pocketed the coin and rose. "When you find the other, keep it for yourself—tip, you know."

THE TWELFTH PLAYER

Mabel—Is he in the football team?
Madge—Oh, yes! He's some kind of a drawback!

AND HE HELPED FILL THE JAIL

Motorist—It's preposterous, old man; I'm an expert driver. What I know about driving would fill a book.

Constable—And what you don't know would fill a hospital. Give us your name and address, now.—Sydney Bulletin (Australia).

A HARD TASK

Ed—I guess you've been out with worse-looking fellows than I am, haven't you?

(No answer.)

Ed—I say, I guess you've been out with worse-looking fellows than I, haven't you?

Co-ed—I heard you the first time. I was just trying to think.—Oregon Lemon Punch.

HIS REFERENCE

A merchant, advertising for a clerk "who could bear confinement," received an answer from one who had been seven years in jail.

WHAT IS TO PAY?

"Now, waiter, what's to pay?"
"What have you had, sir?"
"Three fish."
"Only brought up two, sir."
"I had three, two trout and one smelt."

A PEACH

Saleswoman—We have the same model in orange, lemon, plum and strawberry.

Jovial Little Man—I know how it's going to finish. "But, yes, we have no bananas!"

GOING TO THE DOGS

Two little fleas together sat,
And one to the other said:
"I have no place to hang my hat
Since my old dog is dead.

"I've traveled this world from place to place,
And further will I roam;
But the first darn dog that shows his face
Will be my home, sweet home."

—Chicago Phoenix.

EMPHATIC HUNGER

Five-year-old Freddie was spending the day with his aunt. Dinner was late, and the child began to grow restless.

"Auntie," he said, finally, "does God know everything?"

"Yes, dear"

"Every little thing?"

"Yes, dear, every little thing."

"Well, then," he said in a tone of conviction, "God knows I am hungry."

EDITORIAL

HE WAREHOUSING PLAN—The zonal warehousing plan has been put in force, as shown in our last week's issue, and the National Canners' Association is going ahead with work. If you have studied it, you are in favor of it, be- e it has many favorable things about it that you cannot help from favoring it.

Those who understand it find it the only real solution of swell claims matter. But there is a peculiar twist to the er in that while the American Wholesale Grocers' Associa- n has endorsed it, and the food authorities of most States many cities are heartily in favor of at least giving it a trial, the National Wholesale Grocers' Association has endorsed it, and some say that they will not. An even e peculiar thing, or outcome of this effort, is found in the ion taken by the Chain Stores Association, which, as yone knows, is as friendly to the Wholesalers, and vice a, as two lovable enemies could well be; yet they have e common cause in this matter, the Chain Stores asking Wholesalers to act for them at the Conference Committee ing in Chicago. Aside from the fact that the Chain Store do not know that a Wholesale grocer exists, in the buying trading in foods of all kinds, the wholesale grocers have as sore as a mashed thumb at the Chain Store men be- e the chain men have been able to demand and secure canned foods on the ½ of 1 per cent contract, while most ie wholesalers were not able to do so. It is our private ion that if it had not been for this fact the National lesale Grocers' Association would have ratified the zonal ehousing Plan. In other words, that the wholesalers are e" because the chain men put this one over on them, and rebuke to the canners have refused to go along with this od of settling claims. We say this is merely our own ion, but there seems to be reasons to back it up. The n stores had said that they wanted the flat allowance od of settlement; but, of course, until their committee l meet the committee of the canners, and a decision be ned, no one can or could say where they stood or how they d act. But instead of appearing they "paired" with the esalers, and therefore stand with them in their refusal to ot it. To say the least, it makes a strange pair, and very rally causes much speculation.

We do not pretend to say, nor do we believe, that this e last of the matter from these two important interests. are in too uncomfortable a position to long endure it. the American Wholesalers in favor on the one hand, and ood authorities on the other, the position of these recalci- s is—not a pleasant one. We will undoubtedly hear more from both of them, and that quite soon. In any event, Plan is now in force, and every canner ought to be able e the value of adopting it and using it in his future con- s, and in every instance. If the industry can't stand to- r on this matter, it is in a deplorable condition. They are not seeking any unfair advantage of anyone in asking for this plan of settlement for swell claims; the Plan is absolutely fair to everyone concerned—seller, buyer and consumer as well as food authority. The one argument made by the contestants against it is that it will be expensive.

THE COST OF SWELLS—The research made by the National Canners' Association into the actual loss on the various kinds of canned foods showed that the staples run very low—far below the ½ of 1 per cent generally demanded, and that only seed fruits and some few articles of that kind—and some tomatoes packed in certain States according to some buyers—run up to this figure by actual experience. Now, then, take the item of peas. Let's take the total pack of peas for this year, and placing it at 14,000,000 cases, at the low valuation of $1.25 per dozen, or $35,000,000. One-half of one per cent on this amounts to $175,000, which the jobbers and chain store men ask the canners to grant them in lieu of swell claims. Canners of peas say that the loss does not amount to one-tenth of one per cent. Are they then going to take their share of such a loss, rather than pull with their fellow-canners and pay merely for only the exact amount of their losses? We think they will stick to the Plan. And what is true of peas is equally true of other items in the list.

There is not going to be any contest over this. The National Wholesale Grocers and the Chain Stores will stick out for their contention only so long as they can make the canners grant it; but they have no ground to stand upon, and they will not insist upon it to the exclusion of future buying. They will test the metal of the canners, and if they find the canners standing pat for the Plan, the right way, they will give in. They can't afford to antagonize the food authorities. If you do not understand the Plan, go back and read it over again in The Canning Trade of November 12th, and learn it in every detail, and you will favor it.

THE HONOR OF THE INDUSTRY AT STAKE—Once more they have launched the drive for Canned Foods Week, to be held next March, but before which time a whole lot of work must be done, and for which they must have money at once. The wholesale grocers and the brokers have determined to take care of the real advertising, besides the work of getting retailers into action. They are not asking the canners for any money on this, but they are asking the canners for "streamers," banners, etc., with which to decorate the stores and to make the announcement of the week. It is said those interests will spend upwards of a hundred thousand dollars, and all the canners are asked to do is to contribute the small amount necessary to pay for printing the banners, etc., an amount which has been figured down to $10 per line of machinery used. It is inconceivable to think that the canners would allow these "outside" interests to go to so much expense to put on a Canners' show without furnishing this little amount of money to provide the trappings. You will recall that last year we had to refer to "the noble 400" out of

the 3,000 canners who subscribed anything to Canned Foods Week. The canners have money this year and they will surely hold up their end in a way that will do honor to themselves and to their industry. But if they are going to do this, they must do it now; the money is needed now, and the National Canners' Association committee that is attending to this for the entire industry—free of charge—ought not to be made to go begging for this paltry sum. The National Canners' Association has nothing whatever to do with Canned Foods Week. It is the industry's matter, and they merely lend their well-organized force to handle the matter. You've seen how the consumption of canned foods has increased in a truly marvelous manner during the past two years; you are reaping the reward of this in better prices, which are the effect of this better demand. You have the money in your pocket from this right now, and all that is asked is that you send your check to The National Canners' Association, Canned Foods Week Committee, 1739 H St., N. W., Washington, D. C., for such amount as you think you ought to give, or figured upon the basis of $10 per line of canning machinery with which your factory is equipped Are you going to be proud of your industry or are you going to pinch these few dollars and make your industry hang its head in shame before all your good buyers and best friends? The drive for this money is on and they want your answer.

THE WESTERN MEETING—There should be a report of the big meeting of the Western Canners' Association in this issue, but we are forced to let it go another week, because the official reporter on the job was new at his job and did not realize that his "copy" must be produced at once. In other words, the report is not in hand at the time this is being written, so there is no way to get it into type and give it to you. We ask pardon for the delay and trust you can bear with us. Our Western readers in particular are due this explanation, but the entire industry is looking for this report and the actions taken by that important Association.

EXPERIMENTING WITH COLD PACK CANNED FOODS

THE University of California announces experimental success with a new canning process, which is under the experimentation and supervision of Prof. A. W. Christie. The value of the process is said to be that the fruit cuts out like fresh and has fresh flavor. It is a canning process under the cold pack system, and the University reports on it are optimistic.

The experience of recent years has been all against cold packing for canned preservation, however. While deterioration of the enclosed product is prevented, thus making it appear an entirely edible product, the fact that the food is not sterilized is a hazard. All of the best practice and advice recently has been in the direction of increased sterilization rather than the avoidance of it, and it would seem that the University is moving in the wrong direction in this.

PINEAPPLE ONE DOLLAR PER CAN

WHILE the food standards of the majority of people in southern Spain are very simple, a promising demand has been created for preserved foods, and every grocery store is stocked with a creditable assortment of canned and dried foodstuffs, says Consul W. C. Burdette, Seville, in a report to the Department of Commerce. The fruits, jams and preserves on the Seville market are largely from Valencia, Spain. Marmalade is much used, but is prepared by the individual housekeepers from the inexpensive Seville sour oranges. Crushed pineapple is sold in No. 2 cans at a retail price equivalent to $1 per can.

Canned peppers, peas, string beans and tomatoes proceed from the Valencia and Alicante sections of Spain. The first three find a ready sale, but the fresh tomatoes available in Seville throughout the year at reasonable prices curtail any considerable demand for the canned product. Asparagus, both fresh and canned, originating in the Aranguez region, finds a ready demand. Neither lima beans nor sweet corn are sold.

Pickles, sauces, catsups and similar relishes are not much used. The Worcestershire type of sauce in various brands is obtainable, but is used chiefly by foreigners or Spaniards who have lived abroad. French mustard is manufactured in Logrono. The English variety is little used.

BAKED APPLES IN TINS

BAKED apples packed in tins are being packed by the Sanford Foods, Inc., of California, and marketed in New York. Five apples are packed in each tin, each apple wrapped in parchment, the core removed and filled with a combination of banana and raisins and currents.

CANNED FOODS GET ANOTHER SLAM

(From Editorial in "Modern Merchant and Grocery World")

THE "American Magazine," which claims a circulation of ov 2,000,000, published in its last issue a story called "T Law of the Trap Line," by Barrett Willoughby. The su title is "A Story of Revenge." The following is an extract from —her husband, a trapper, had awakened that morning, apparently in the best of health, but after lunch he had been taken with convulsions—ptomaine poisoning, she thought, from some canned peaches he had eaten.

Something like 10,000,000 people, one-tenth of the total po ulation of the country, read this pleasant little advertisement f canned foods—ptomaine poisoning from eating canned peaches.

Millions had their suspicion of canned foods intensified; m lions more, now friends of canned foods, felt it breed doubt. wonder if I had better take the chance any more?"

There may have been a case of ptomaine poisoning from eati canned peaches; but, if so, I have never heard of it.

If I were the National Canners' Association I should crea a revengeful sequel to this "story of revenge." I should appoi a committee, of which John J. Hallowell, of Philadelphia, shou be the chairman, to seek out Barrett Willoughby, the author, a give him an earnest bat in the head with an unopened can tomatoes. At the same time I should clearly inform him th this is the sole way in which canned foods can hurt anybody.

SOUTH AFRICAN CANNED PINEAPPLE COMES IN

SHIPMENTS of some thousand cases of South African cann pineapple have been readily sold, and the 4,000 addition cases in sight have been partly sold against arrival orde Quality is very good. The pineapples are packed from ripe fr and the flavor is said to be delicious. The color is bright oran and is quite different from the Hawaiian offering, but the col is not regarded as at all objectionable. The same gradings as Hawaii are used, but the South African fruit is of smaller si and is about five-eighths of an inch thick.—New York Journal Commerce.

CONVENTION DATES

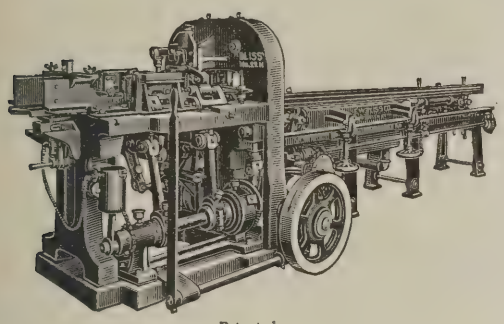
November 20-21—Indiana Canners, Hotel Claypo Indianapolis. Annual convention.

November 24-25—Minnesota Canners, Hotel St. Pa St. Paul. Annual meeting.

December 4-5, 1923—Iowa-Nebraska Canners, at Om ha, Hotel Fonteneke. Annual Convention a banquet.

December 6-7, 1923—Ohio Canners, Southern Hot Columbus, O. Annual Convention.

December 10-11—Tri-State Canners, Hotel Adelph Philadelphia, Pa. Annual meeting.



December 12th and 13th—New York State Canne Hotel Powers, Rochester. Annual Meeting.

January 6-7, 1924—Utah Canners' Association, Ut Hotel, Salt Lake City. Annual convention.

January 21st to 26th, 1924—National Canners, Canni Machinery and Supplies, National Food Broke Machinery Exhibit, etc., Buffalo, N. Y.

Meeting of the National Canners Association Board of Directors

Hotel LaSalle, Chicago Nov. 5th. & 6th. 1923

Warehousing Plan Considered in Detail and Adopted--Financial Standing of the Association--The Work of the Past Year--New Pea Definitions and Standards Adopted.

WE WISH the entire industry could have been present to observe with what care and attention these big men of the canning industry considered every detail and possibility of this important question; how they brought to bear upon it their best thoughts and energies, looked at it from every angle, and weighed carefully every possibility before recommending it to the industry as the basis upon which trading should be conducted in the future. Many of these men are leaders in this industry, heads of great concerns which might easily ignore associated action of this kind because they are big enough to protect themselves, but who came thousands of miles to lend the weight of their wisdom and experience for the welfare of the entire industry. True, they benefit along with every other canner in anything that benefits the canning industry, but they are made of the kind of stuff that is willing to spend their own money and take their valuable time to help the industry of which they are a part. The so-called little canner ought to realize and appreciate what it means when these biggest men, financially and intelligently, put their shoulders to the load that good may be done for every canner and all in their business. The Committee which considered this Warehousing Plan in the settlement of the spoiled canned foods question included canners from every section of the country—from Maine to Oregon, and from Hawaii to Florida, and included canners of almost every product put into tin cans. Their consideration and conclusions, therefore, eliminates any possibility of the plan not fitting any sort of a canner, large or small or wherever situated. And the plan, upon its full explanation, proved so attractive that every member of the Committee heartily endorsed it, and this in face of the fact that when first presented many of them did not approve of it—thought it might be too expensive and for various other reasons, all of which, however, they learned were due to the fact that they did not fully understand its intent and purposes. And, possibly better than all else, Dr. Blanck, of the Bureau of Chemistry, and Dr. Geiger, of the U. S. Health Service, sat in at the considerations, listened to all arguments, and added their appeal for its adoption. To jump from the beginning to the last chapter of the story, the Plan was finally pronounced the most important work ever done by any Association of the industry.

Monday's Sessions—The meeting of the Board of Directors of the National Canners' Association was called for Tuesday, November 6th, but they assembled in Chicago at the Hotel LaSalle on Monday morning, and joined the Special Committee having charge of this Warehousing Plan, and helped thresh out all points in relation to it.

President James A. Anderson, of Mongan, Utah, was in the chair. Secretary Frank E. Gorrell, Vice-Presidents and the members of the Advisory Council were all there, and all members of the Board, as we have stated, Dr. Blanck and Dr. Geiger, and some other canners and others were welcomed.

"Roy" Clark, Chairman of the Conference Committee with the Wholesale Grocers, at the President's request, took up the immediate matter, and after explaining that the ruling of the Bureau of Chemistry, prohibiting the return of swelled or spoiled canned foods to the canners, was not actually a new addition to the Pure Food Law, but merely an announcement that this feature, which had always been a part of the Law, though held in abeyance, was to be rigidly enforced hereafter, explained that the settlement of such claims by a flat allowance of half of one per cent, or of any per cent, was not feasible, and was, in fact, only a bid for inefficiency throughout the industry, and, further, instead of removing these objectionable goods from circulati had a tendency to force them into use, read the following det of the Plan:

WAREHOUSE PLAN OF THE NATIONAL CANNERS' ASSOCIATION

Purpose of Plan—The purpose of the plan is to give canner a chance to investigate swell claims and insures the struction of spoiled cans. The Warehouse Plan accomplishes t purpose better than any that has hitherto been proposed, an fair to distributor as well as to canner. It makes no fundame change from the practice in the past, except that swells are be shipped to a designated warehouse instead of to the canne

Attitude of Food Officials—The Bureau of Chemistry given its written consent to have the plan tried out under pro safeguards. The convention of food officials in Duluth appoi a committee to consider the proposed plan, and the member that committee have indicated their willingness to co-oper with the National Canners' Association.

Executives of the Association have interviewed a suffici number of other food officials to be able to state authoritati that the proposed Warehouse Plan can be tried out in a which will largely meet the demands of the present situatio

Outline of Plan—(1) The buyer of canned foods will no the canner, within the period of the swell guarantee, of swell claims against the canner and where such swells are loca

(2) The canner will notify the buyer that he desires avail himself of the warehouse examination on any or all of lots reported, and will ask the N. C. A. to give the buyer shipp instructions.

(3) The canner will notify the N. C. A. of swell cla (copy to buyer), and ask the N. C. A. to send the buyer shipp instructions.

(4) The N. C. A. will send the buyer shipping instructi and notice thereof to food officials.

(5) The buyer will send notice of shipment to wareho enclosing bill of lading (copy to N. C. A. and canner).

(6) Warehouse will send notice to the N. C. A. of rec of shipment (copy to shipper).

(7) N. C. A. will notify canner, buyer and food official time and place of examination.

The spoiled canned foods will be examined by technical trained in the laboratories of the National Canners' Associat and the examination will be made, first, for identification, second, for spoilage. Food officials will be invited to particip

(8) The N. C. A. representative will report to the W ington office the results of his examination.

(9) The N. C. A. will notify the canner, buyer and officials of the results of the examination, and, when possi will state the cause of spoilage.

(10) The spoiled foods will be destroyed under the su vision of food officials. Springers and other unmerchanta but sound, cans will be handled according to arrangement tween canner and buyer, with consent of food officials.

Location of Warehouses — Preliminary arrangements already been made for location of warehouse facilities in following cities. The locations have been selected after consu tion with State food officials concerned.

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

Southern Can Company

Baltimore, - - Maryland

NEW YORK OFFICE: 17 Battery Place.

Manufacturer of newly developed "SOCOCAN" for Coffee, Peanut Butter, Lard Substitutes, Dry Milk, etc.

CAMERON HAND OPERATED MACHINES

This double-seamer attaches bottoms to can bodies and covers to filled cans. The Compound Applier spreads the rubber cement on the edges of the can ends. These machines are suitable for cans from 2" to 6" in diameter and up to 9" high.

CAMERON CAN MACHINERY CO. 240 N. Ashland St., Chicago, U. S. A.

23

Austin, Texas; Baltimore, Md.; Chicago, Ill.; Columbus, Ohio; Detroit, Mich.; Indianapolis, Ind.; Los Angeles, Cal.; Madison, Wis.; Philadelphia, Pa.; Pittsburgh, Pa.; Raleigh, N. C.; St. Paul, Minn.; San Francisco or Oakland, Cal.; Sioux Falls, S. D.; Syracuse, N. Y.; Topeka, Kan.; Desmoines, Iowa.

These places will be sufficient to get the plan started, and other warehouse facilities can be secured as needed. Arrangements are being made for monthly storage rates per package, so there will be no charges accruing at any warehouse, except for actual storage.

Advantages of the Plan—(1) It insures the destruction of spoiled canned foods under the supervision of food officials, and gives these officials an opportunity to familiarize themselves with the character of such spoilage.

(2) It gives every canner an opportunity to determine whether the swells in question are actually swells, whether the cans are of his own pack, and to study the cause.

(3) The examination of such claims will be made by scientific men familiar with commercial canning.

(4) The information and experience which can be gained in this way regarding the various types of abnormal canned foods will be helpful to food officials and distributors as well as to the canning industry. The advantage of co-operating in this work will be evident to the industry in many other ways.

(5) The experience which will be gained by the Research Laboratory in the investigation of such claims will be invaluable. At the present time the laboratory's experience in the examination of swells is limited almost entirely to samples sent in by the canners. This plan will enable them to study types of decomposition which are taking place after they leave the canners' hands, and will enable them to study the cause of spoilage.

Special Questions Arising Under the Plan—What will be done with cans sent to the warehouse and found to be merchantable? They will be held for the instructions and at the expense of the shipper.

What will be done with cans which are spoiled, but on which the guarantee has expired? They will be held for destruction at the expense of the shipper.

How can such obsolete claims be identified? It has been customary for canners to use some form of coding on their cans, at least indicating the year of pack, and the Association should be notified of the code marks at the time of requesting examination of any claim.

What will be done with canned foods which are spoiled, but are not the product of the packer claimed? They will be held liable for such expense as is incurred.

Will members be required to pay for this service? Members will have the services of the N. C. A. representatives in visiting the various warehouses and examining the claims without charge. Member canners will bear the actual expense of transportation, storage and destruction of swells. Non-member canners may avail themselves of the service, but will have to pay all of the above charges as well as a special charge to cover overhead expenses.

How are swells in the hands of retailers to be handled under this plan? If they are located so the swells can be assembled by the wholesaler, he may ship them to the warehouse for examination. If the buyer includes such swells in his claim, the canner may request the buyer to have any or all lots of swells reported in retailers' hands, or samples of the same shipped to the warehouse at the canner's expense.

Who is held responsible for transportation and storage charges on such claims? The N. C. A. is held responsible by the warehouse companies for all charges incurred in connection with these shipments, and they will bill all charges to the Association. Shipments to warehouses must be prepaid in order to insure delivery and examination of the shipment, under Section I, Rule 9, Consolidated Freight Classification No. 1. I. C. C. O. C. No. 45 reads as follows:

> "All charges must be prepaid or guaranteed on any shipment which in the judgment of the agent at point of shipment would not at forced sale realize the total amount of charges due at destination."

How will spoiled cans, due to rough or improper handling after leaving a canner's hands, be disposed of? The canner is not responsible for such spoilage, and the examination and destruction must be at the expense of the shipper.

If the finding of the N. C. A. representative to be final? Yes, as far as the condition of the canned foods is concerned, subject to approval of the food officials. Representatives of the buyer and canner may be present at the examination.

Who will receive notice of shipments to warehouses? The N. C. A., the canner, the warehouse and food officials. In case of interstate shipments, Federal officials will be notified as we as both State officials concerned. In some cases it may be nece sary to notify city authorities.

Does the plan contemplate handling questions not involvi spoilage? No; the plan will cover only swell claims covered the usual swell guarantee.

How about springers? Springers due to hydrogen g formation to overfilling, insufficient exhaust or improper sealin are unmerchantable. Assuming that the contents are sound, t canner should arrange with the buyer regarding disposition these cans.

How will cases be handled where there is disagreement b tween the N. C. A. representative and food officials? The fa that the examinations are made in the presence of food officia will probably make disagreement rare, but in case a food offici should hold a product unsuitable for food against the opinion the N. C. A. representative, it may be necessary to settle t matter in court. The food official has the advantage of bei able to hold the suspected foods in his custody.

What procedure will be followed in case food officials fa to co-operate in this plan? At the outset arrangements are on being made for warehouse facilities where we have reasonab assurance of official co-operation. In case local food officia make a practice of destroying spoiled foods on sight, as has be the practice in certain large cities, it is up to local distributo to secure a modification of such rulings as will permit of t carrying out of this plan, otherwise the buyer will have to sta the loss. If food officials otherwise fail to co-operate and sei suspected lots en route to or at the warehouse before examin tion, resort can be had to the courts, or the whole propositi can be thrashed out and its legality determined.

Mr. Clark explained that the State and local food authoriti where it had been arranged to establish such warehouses had given their consent to the Plan, and that many of them welcom the method of solving this troublesome question, because it wou give their chemists an opportunity to colaborate with the N. C. experts while examining the goods and passing upon the cause spoilage, and assured the destruction of the spoiled goods befo they could possibly get into the hands of unscrupulous deale or others. He then added that the Bureau of Chemistry has giv it its endorsement and read the following letter:

Why Not Eliminate

UNITED STATES DEPARTMENT OF AGRICULTURE

Bureau of Chemistry

Washington, D. C., October 18, 1923.

Mr. Frank E. Gorrell,

Secretary, National Canners' Association.

Dear Sir:

This will acknowledge your letter of October 11, with enclosures consisting of communications from Messrs. E. J. Lea, Guy G. Frary and W. P. Hartmann, food officials, respectively, of California, South Dakota and Michigan. You review the efforts which have been made by your Association and by the National Wholesale Grocers' Association since the issuance of Service and Regulatory Announcements, Chemistry No. 381, to find some practical method for adjusting claims between buyers and sellers of canned foods which will obviate all possibility of improper disposition of such goods.

You propose a tentative plan of action which you desire to place in operation in order that its practicability may be studied. You point out that the officials named above are members of a committee appointed by the American Association of Dairy, Food and Drug Officials to study this question, and that each of them is ready to co-operate with you in your plan within his own State.

The plan, in brief, contemplates the selection of certain warehouses designated by State officials themselves in those States in which the officials are sympathetic with the plan. These warehouses will be located at San Francisco or Oakland, Cal.; Los Angeles, Cal.; Detroit, Mich.; Sioux Falls, South Dakota; Madison, Wis.; Columbus, Ohio; Austin, Texas; Topeka, Kan.; Indianapolis, Ind.; Pittsburgh and Philadelphia, Pa.; Baltimore, Md.; St. Paul, Minn.; Syracuse, N. Y.; Raleigh, N. C., and possibly also at Boston, Chicago, New Orleans and Atlanta.

You propose that when claims for spoilage are made upon consignments of canned foods, the spoiled goods, instead of being returned to the canner for adjustment, as has heretofore been the case when question regarding the correctness of the claim was raised by the canner, will be forwarded to the nearest designated warehouse. At the time of forwarding this shipment, notification of all the facts will be given to the Bureau of Chemistry. Upon arrival of the goods at the warehouse, a representative of the canner will make a technical study of the situation, determine the justice of the claim and the cause of the spoilage, if any, and will then arrange for destruction of the unfit goods under supervision of the State or city official. In a letter communication, dated October 16, you state that no goods will be removed from warehouses without notice being sent the Bureau of Chemistry and the State official long enough in advance to permit steps to be taken to prevent their removal if such a course seems necessary.

You ask whether this plan may be put into operation in an experimental way without opposition from the Bureau.

You are undoubtedly familiar with the reasons which led to the issuance of Item 381. The practice of permitting spoiled goods to be returned in interstate commerce to the shipper for adjustment purposes had gone on for many years. Reports from State officials, as well as from the Bureau's own field representatives, indicated that the return of swelled canned foods to the packers created abuses which could not be effectively corrected by the State authorities so long as interstate traffic in such goods was permitted unchecked. Item 381 was, therefore, issued as a step toward the protection of the consumer against the redistribution of such products after they had passed in interstate commerce and in recognition of the fact that all interstate traffic in material of this kind constitutes a violation of the Federal Food and Drug Act,

The plan which you propose appears to offer a system of immediate control of such swelled canned foods products by State authorities which presents certain advantages over the control which can be exercised under the Federal Food and Drugs Act. Emphatic representations have been made to the Bureau that, while Item 381 may be of material protection to the consumer in that it prevents the return of decomposed food products to the canner, any failure to carry out agreements between the canning trade and the distributors contemplating the destruction or absolute removal from the market of such goods as an outcome of trade adjustments will inevitably create an incentive to the retailer or jobber to assume the risk of placing articles unfit for food in the channels of consumption. Because the plan you offer appears to have the advantage of removing this incentive, it would appear to make for the protection of the consumer. Since this matter was taken up with the American Association of Dairy Food and Drug Officials, and since that Association appointed a committee to study and report upon the proposal at its next meeting, the Bureau would, under no circumstances, take action of a final character upon the plan at this time. Because however, it offers advantages in the way of protection to the consumer as indicated above, because it has the approval of many State officials, and because the committee of the Association is favorable to a trial of the scheme, this Bureau will not be disposed for the time being to offer objection to its inauguration in an experimental way in and between those States whose officials are favorable to the scheme. It will expect, however, that proper notification will be given in each case before shipment to the State official where the goods are located, and also to the official of the State of destination. Similar notification should be given to city officials when they desire it. It will further be expected that shipments will not be made over the objection of officials. The Bureau will regard the plan as experimental only and, of course, reserves the right to withdraw its approval should future developments show the plan to be impractical or to result in abuses detrimental to the interests of the consumers. Shipments of spoiled canned foods moving in the ordinary channels of interstate commerce without the control by State officials at destination contemplated by this plan will be proceeded against as heretofore.

There will be no objection to your giving out this letter to the members of your Association and other interested parties.

Respectfully,

(Signed) C. A. BROWNE, Acting Chief.

A member asked if the carrying out of the Plan would not entail a tremendous expense on the Association, and whether or not the Association had the men to do the examining and inspection. It developed in answer to this that Secretary Gorrell, Dr. Bigelow and Dr. Loomis had examined into this feature of the matter very thoroughly, visited the food officials in the States where warehouses are to be established, and found that the expense would be moderate, and that they had the men to do the work, with the possible addition of one or two more men as the work developed. In response to the request as to the cost, based upon their experience with swell claims, they submitted the following:

SUPPLEMENT TO PROPOSED WAREHOUSE PLAN

This estimate is based on the supposition that an examination must be made of three hundred cases per month per warehouse and that the work will require the entire time of three technical men.

Warehouse, drayage and destruction charges (15 cents per case)	$ 9,180.0
Salaries of N. C. A. representatives (on basis of four days at each warehouse per month, at $15 per day)	12,240.0
Traveling expenses	10,000.0
Clerk hire	2,500.0
Warehouse help at $1.00 per hour	2,500.0
Total	$37,920.0
Credit on warehouse charges	9,180.0
Net total	$28,740.0

When a canner has his goods returned to him he is put to the expense of freight and handling and reconditioning, and, of course, the allowance for such cans as may be his and are spoiled or swelled. Usually he has to pay for more than the mere number of actually spoiled cans—the other 23 cans that are merely soiled by the bursting of one can in the case, for instance, etc. Non-members of the N. C. A. will have to pay cost of examinations, and in this way the credit shown will be made up.

Dr. Geiger pointed out the wonderful effect upon the consumption of all canned foods there will be when these really spoiled cans are removed and destroyed, saying that the canner may not realize how large this item is. And he recited the statistics of the destruction of canned foods in Chicago during the years 1920, 1921 and 1922, totaling 6,000,000 pounds, which must grow to a formidable figure when all other points of the country are added to Chicago's. He said he thought the canners ought to welcome the interest and co-operation of the local and State food authorities, as the good-will of this important body of men is easily worth many times the estimated cost of the Plan as now set forth. He read a report from one bulletin showing that one firm had been circularizing food handlers and dealers offering to buy up such spoiled goods, and evidently found a market for the purchases, and that the practice was growing. He showed the

canners that it was their job to put an end to such trafficking. Dr. Blanck spoke along the same line.

The consideration thereupon changed from one of a monetary saving on swell claims to one of protection to the public and of the fair name of all canned foods.

Ex-President of the N. C. A. James Moore presented a form of clause to be incorporated into all contracts upon the adoption of the Plan (this was published in last week's issue), and after lengthy discussions upon all points, indulged in by all members, (luncheon was served at 1:30, and the meeting went right on after it, until nearly 6 P. M.), it was unanimously decided to place the Plan as outlined before the meeting on Tuesday as the solution of the swell claim problem.

Other matters of a routine nature were considered in preparation for the official meeting on the next day.

NEW PEA STANDARD DEFINITIONS ADOPTED

The Pea Section of the National Canners' Association has been working on pea definitions of standards for a long while, and at the Atlantic City Convention adopted tentative standards. A special committee at that time was appointed to perfect these definitions, and they worked on them, and finished their work in a long session, lasting from 8 P. M. to 1 A. M. Monday, November 5th. Mr. Charles H. Hunt, Chairman of this Special Committee, and its members were present, and with them Dr. Blanck, of the Bureau of Chemistry and member of the U. S. Committee of Standards, and some others.

The outcome of their long deliberations was as follows:

Canned vegetables are properly matured and prepared fresh vegetables, with or without the addition of potable water, salt and sugar, as specified in the separate definitions for the several kinds of canned vegetables, sterilized by heat, with or without previous cooking, in equipment from which they take up no injurious substance, and kept in suitable, clean, hermetically-sealed containers.

Canned peas are the canned vegetables prepared from t fresh seeds of the common or garden pea (Pisum sativum) shelling, winnowing and thorough washing, with or witho grading and with or without precooking (blanching), and by t addition, before sterilization, of the necessary amount of potal water with or without sugar and salt.

Canned Pea Qualities: Fancy quality peas are fresh, your succulent peas of practically uniform color and size, unless clared to be ungraded for size, with reasonably clear liquor a are free from flavor defects.

Choice quality peas are fresh peas and may be less succule than the "fancy quality" of reasonably uniform color and si unless declared to be ungraded for size, with reasonably cle liquor, though not necessarily free from sediment, and are re sonably free from flavor defects.

Standard quality peas are fresh, but may be mature pe may not be uniform in color and size, and may have an o liquor.

Off-grade peas are fresh peas that lack in some other respe the qualifications of the standard quality.

Canned Pea Sizes: No. 1 peas are peas which were, befo precooking (blanching), small enough to pass through a scre of 9/32-inch (7mm.) mesh.

No. 2 peas are peas which were, before precooking (blan ing), small enough to pass through a screen of 10/32-inch (8mm but too large to pass through a 9/32-inch mesh.

No. 3 peas are peas which were, before precooking (blan ing), small enough to pass through a screen of 11/32-in (8.7mm.), but too large to pass through a 10/32-inch mesh.

No. 4 peas are peas which were, before precooking (blan ing), small enough to pass through a screen of 12/32-in (9.5mm.) mesh, but too large to pass through a 12/32-inch me

No. 6 peas are peas which were, before precooking(blan ing), too large to pass through a screen of 12/32-inch (10.3m mesh.

Ungraded peas: Ungraded, unsifted or run o' pod are p not graded for size before precooking (blanching).

TUESDAY'S GENERAL SESSION

THE schedule meeting of the Board of Directors of the National Canners' Association was held in the Crystal Room of the LaSalle Hotel on Tuesday morning, November 6th. The Presidents of the State and local Associations had been invited to participate, and they were there, together with many others, and the gathering took on the appearance of a small National Convention.

The meeting was called to order at 10:35 A. M. by President Anderson, who stated that the Secretary would cover any address he might make in the report of the work done by the Association since the last meeting. The President, however, heartily welcomed all, and invited everyone to take part in the proceedings. He asked for quiet and attention and quick action, so that the work could be gotten through with.

He then called upon Secretary Gorrell to read his report, and Secretary Gorrell read as follows:

REPORT OF SECRETARY OF THE BOARD OF DIRECTORS
November 6, 1923.

Since the last meeting of the Board of Directors the Association has been functioning along its regular lines which have been established by the Board of Directors and approved by experience. It can be said that the Association is back to its normal position and is in splendid working shape to help meet canning conditions and render enlarging service to its membership.

The membership has been greatly increased during the present year. The dues have been cut in half, and yet the income has been greater than last year. Every possible effort should be made to still further reduce memberhip dues consistent with the efficient service planned.

The budget adopted at the May meeting of the board covered the expenditure of practically $200,000 for the fiscal year ending December 31, 1923. This was based on a total membership output of 40,000,000 cases. In point of fact, the present actual membership of the Association is 501, representing 43,716,000 cases. A year ago the Association had 205 members, representing 19,000,000 cases. It is pleasing to note this healthy growth backed by a membership interested in Association efforts, accomplishments and ideals.

The report of the Finance and Executive Committee will show that the Association is in excellent financial shape, and that there will be a cash balance beyond that anticipated by the budget adopted at the May meeting. It should also be borne in mind that the Association has a reserve fund of $25,000 in U. S. Treasury certificates, and that the Board of Directors passed a resolution at the May meeting requiring that 10 per cent of the income of the Association on and after January 1, 1924, be set aside annually to increase this reserve until it reaches $100,000,000.

The big effort which now has promise of fulfilment was the evolution of a practical plan to settle the matter of spoilage claims, which have been the contention between buyer and seller ever since the industry assumed any size. The details of this plan will be presented to the Board by the proper committee, but it is interesting to note the history leading up to what is now believed to be a successful solution.

Before any plan could be considered, it was necessary to get reliable information on which to base calculations. Fortunately, there were a sufficient number of canners who had kept detailed account of the payment of their actual swell claims, and this was made available for information purposes. A similar effort on the part of a large organization representing a portion of the distributors indicated that no such record had been kept by their membership; therefore, it is on the figures of the canners themselves that the Association has relied.

After these figures were obtained, they became the basis of several conferences between the Conference Committee of the National Canners Association and the National Wholesale Grocers' Association. While at times these conferences were promising in results, the outcome has been that the National Canners' Association has been compelled to handle the entire question single handed. At one time it was thought that it had the co-operation of the Conference Committee of the National Wholesale Grocers' Association, and, indeed, it did have its unanimous vote; but at the critical moment, when the whole proposition was being presented to the Association of National and State Food Officials at Duluth, not only was this support lacking, but open opposition to the plan was shown.

This association of food officials appointed a strong committee to consider the plan and report at the next annual meeting in 1924. Meanwhile the executives of the Nation Canners' Association have not been idle. A number of St food officials have been interviewed and expressed sufficie interest in the plan to see it tried out in their respecti States. This is, indeed, most encouraging, especially as t States include the three States represented by the commit appointed to consider the plan.

The Bureau of Chemistry has given written assent to trial of the plan, and, in its letter assenting, it says, in part

> "The plan which you propose appears to offer a system of immediate control of such swelled canned food products by State authorities which presents certain advantages over the control which can be exercised under the Federal Food and Drugs Act. Emphatic representation has been made to the Bureau that while Item 381 may be of material protection to the consumer, in that it prevents the return of decomposed food products to the canner, any failure to carry out agreements between the canning trade and the distributors contemplating the destruction or absolute removal from the market of such goods as an outcome of trade adjustments will inevitably create an incentive to the retailer or jobber to assume the risk of placing articles unfit for food in the channels of consumption. Because the plan you offer appears to have the advantage of removing this incentive, it would appear to make for the protection of the consumer."

This expression from such high authority answers a criticism of the plan except as to its practicability and expens There are no precedents, and experience alone will sho whether or not the plan is a practical one and should be ge erally adopted.

President Harding's Illness Blamed on Canned Foods—While the Association has handled a large number of co plaints involving canned foods during the past few months, was confronted with the responsibility of successfully obtai ing official denial of one of the most damaging charges th had ever been made against the canning industry. Witho this correction the industry might have gone down in histo along with John Wilkes Booth, Charles J. Guiteau and Le Czolgosz as assassins of a President of the United States. T details of all this have been fully given to the memberhip the Association. The Associated Press and other press ass ciations, and the many special correspondents of the leadi newspapers carried the story. The canning industry h cleared its name and nothing more need be said.

Investigation of Other Complaints Involving Cann Foods—During the present year the Association has inves gated 120 complaints involving canned foods. During t same period last year 109 cases were investigated. T products involved in this year's cases are as follows:

Vegetables:	
Corn and Tomatoes	1
Spinach and Baked Beans	1
Corn	10
Peas	13
Tomatoes	7
String Beans	4
Baked Beans	1
Spinach	7

These investigations include six cases of Botulism, five of which were traced to home canned products. In the remaining case it was impossible to determine the food product responsible. So far this year no case of botulism has been attributed to commercially canned food, nor have there been any since February, 1922.

Suits have been filed or threatened in 37 of the cases investigated this year. Although in a number of instances claim has been made that illness was caused by the presence of some foreign substance in canned foods, no case of food poisoning or so-called "ptomaine poisoning" attributable to commercially canned foods has been proven.

Legal Assistance to Members—Conforming with the recommendations of the board at the last meeting, the Association has rendered assistance to its members by furnishing them with legal advice in connection with claims against canned foods where suit is brought or threatened. So far this year the expenses for such legal services have amounted to $200. The Association is giving such assistance on a number of cases which are still pending.

News Service to Editors—Following the instructions from the board, representatives of the Association interviewed the editors of prominent newspapers and magazines, acquainting them with the products of the canning industry and, incidentally, the work of the Association. In all, the editors of newspapers in 68 large cities were called upon, and the editorial staff of practically every representative magazine published in the Eastern part of the United States was also visited. As a result of these visits, a series of special news letters for the editors of food page has been prepared. The reading matter is presented in pithy form, short and to the point. It is certain that this material will be popular with many of the editors who have been visited. Although the work is only in its infancy, the lead is a promising one.

Home Economics Bureau—The President and Secretary were directed by the board to look into the advisability of establishing a Home Economics Bureau or Section of the Association. One of the best domestic science teachers and writers in the country was interviewed and, through her, a comprehensive plan was presented, which is now receiving the consideration of the Finance and Executive Committees.

U. S. Public Health Service Exhibits—The exhibit made by the U. S. Public Health Service at the annual convention of the American Medical Association in San Francisco received the first award of merit—a proper recognition. This exhibit visualized the research work on botulism and ptomaine poisoning, which was largely financed by the canning industry through the National Canners' Association. The exhibit was again shown in Boston before the American Public Health Association, where it attracted attention, not only of experts, but many practical men engaged in the enforcement of health and food laws in the United States and abroad.

Conference With Food Officials—During the past few months a large number of State and city officials have been visited by representatives of the Association for the purpose of acquainting them with the preparation of canned foods and different problems to the industry. This work is quite necessary, because many of the food inspectors, while practical men, are not acquainted with the science of canning. As one State food official aptly put it—"It is a privilege, indeed, for the food authorities to be brought directly in touch with the splendid work of the National Canners' Association."

Meeting an Unfounded Charge—Statements of a British physician and food official have been published recently, particularly in the British press, indicating that increased prevalence of cancer is connected with increased consumption of canned and preserved foods. The Association has taken prompt steps to refute such statements.

Definitions and Standards—The Pea Section, through its chairman and a committee appointed by him, will meet during the present week to formulate definitions and standards for canned peas. It is hoped that the results of this committee's work can be placed before the official joint Committee on Definitions and Standards and be approved at its next meeting, to be held in Washington early in January.

Other Sections have been working on definitions and standards and the time is, perhaps, not far off when the entire industry will have its products graded, classified and labeled in such manner that the consumer can intelligently purchase them.

Excess Profits Tax Service—This office and the counsel of the Association have given considerable service to the members of the National Canners' Association in tax matters before the Excess Profits Division of the Internal Revenue Office. The Government is checking many returns, especially 1917 and 1918. Numerous questions have arrived regarding canners' reports of income. The service of the Association have become exceedingly valuable to member canners.

Tin Plate Conference—The Committee on Tin Plate Research, through its chairman, Dr. W. E. Elwell, appeared before the Bureau of Standards on August 15th, when the entire subject was discussed. The outcome of this meeting was the authorization of a special committee to be named by the different branches of the industries affected to work out some plan that will be acceptable to all parties in interest. A report of this meeting will be made by the chairman of the committee to the board of directors.

Coding—The last report of the secretary to the board gave considerable space to the desirability of canners coding their output. It is gratifying to state that this method of identification has been adopted by a number of canners, and it is hoped that in time the entire industry will accept it as a safeguard, for the many reasons that have heretofore been presented.

Railroad Situation—The Washington office kept in close touch with the railroad situation during the entire time that the canners were needing their greatest help in moving in supplies and moving out the finished product. It is gratifying to state that the calls for this service were not nearly so numerous as last year, and the Association was able to render the help that was requested.

Canned Foods Week—The outlook for Canned Foods Week in 1924 is far more encouraging than any of its predecessors. Chairman Clark and his associates have exerted considerable effort to get all the canners behind this campaign and it looks as if they are realizing results. While the amount of money so far pledged by canners for the 1924 campaign is nothing like adequate, it is four times as much as it was this time last year.

Membership Letter—The secretary's report touched briefly on the establishment of a Membership Letter as a means of conveying promptly to the members of the Association important information concerning the industry. This Letter is no longer an experiment, but has become part of the service of the Association. It is a clearing house for many and varied subjects, and gives the members first-hand information when it can be of service to them.

The Association has received many commendations for this additional service, and numerous members are having copies of the letter mailed to their different executives and superintendents.

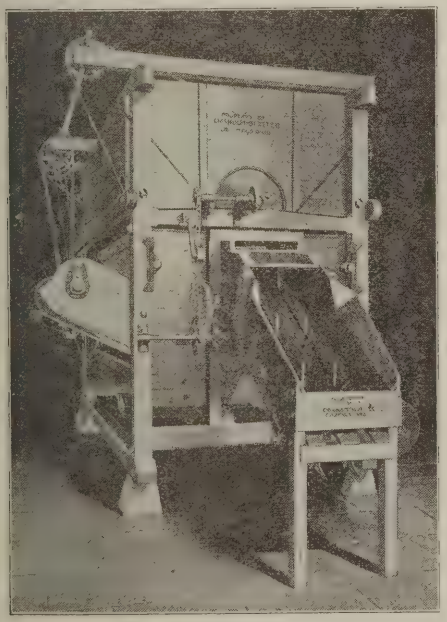
Tin Plate—The tin plate investigations of the preceding five years are being prepared for publication. This report is now in press.

Vitamins—The Association has organized a study of the influence of canning on the vitamin content of foods, in cooperation with the Departmet of Physiological Chemistry of Teachers' College, Columbia University, New York. Information in this field has been greatly needed, and the work now in progress will throw valuable light on the subject.

It has already been demonstrated by Dr. Eddy, of that institution, that canned cabbage contains substantially four times as much of the antiscorbutic vitamin as the same cabbage cooked in the ordinary way. Work with spinach and apples is now in progress, and it is hoped that definite results with those products will be obtained within the coming year.

Processes for Canned Foods—The Association has continued its work in determining processes necessary to prevent spoilage, and distinct progress in this subject has been made. During the summer processes have been published for peas, string beans, beets, corn and pumpkin.

Tomato Products—During the last eight years the Association has issued a considerable number of publications regarding the manufacture of tomato products. During the present year all of this information has been brought together, additional data added and published in bulletin form.



Hard Water—The influence of hard water in the canning of certain vegetables has been studied and a bulletin on that subject published.

Surer of Results

No matter what you sterilize there's always one outstanding advantage in using A-B Continuous Agitating Cookers and Coolers—you are surer of results.

Quick uniform cooks insure quality in the can—sturdy, simplified construction eliminates delays producing quantity output.

Write for Catalogue.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

Bacteriological Investigations—A series of experimental packs of peas and corn have been put up inoculated with bacteria of known resistance to heat. Bacteria were selected which would cause spoilage in these products and which are likely to be encountered in canning plants. The results obtained are of value in the work the Association is doing in establishing methods of calculating process time.

Pollution of Water—The Association has extended further its study of the objectionable flavor and odor sometimes given to canned foods by water contaminated with the effluent of gas plants and by-product coke plants. Publications on this subject have been issued and it has been pointed out that this is a general question and one to which every canner should give careful attention.

Perforations—Substantial progress has been made in studying the causes that lead to perforations and in introducing the results of that study into the procedure of canning fruits. Numerous experimental packs were put up which will throw additional light on the question. Detailed suggestions regarding this matter will be given to members of the Association during the coming winter.

Canning Plants Visited—A considerable part of the canning season of 1923 was devoted to visiting the plants of the members of the Association. Extensive trips were made in nearly all canning districts. These visits covered a study of canning methods, problems of sanitation, raw product problems, etc. It is expected that during the coming year the work will be continued.

Corn Black—The experimental work on corn black has been continued. A considerable number of experimental packs have been put up with a view to making further trials for preventing black by coating all metals developed for the can covers with zinc. Experimental packs on this subject were put up in all of the corn-canning districts.

Middle West Work During Past Summer—Since the last meeting of the board the field work has been continued in New York, Michigan, Wisconsin, Indiana, Illinois, Maryland and Virginia. Principal attention has been devoted in the Middle West and East to vegetable crop problems, especially peas, sweet corn, tomatoes and beans.

Tomato Improvement—An illustration of the effective work with which the agricultural colleges is found in the tomato improvement work in Maryland. It was possible to enlist the active interest of one of the county agricultural agents, who had himself been a successful tomato grower. Demonstrations were organized in his county in 1922 to illustrate improved methods of producing plants and growing the crop. The yields of some sixty growers who co-operated in this work were increased to over eight tons per acre, as compared with the average yield for the State for that year of 3½ tons per acre.

At the request of Virginia canners, arrangements have been made to undertake similar work next season for the improvement of production in that State. The authorities of the Virginia Agricultural College are co-operating cordially. A similar plan can be put into operation in other States where canners may be sufficiently interested.

Co-operation With Canners and Universities—Following the conference with the Raw Products Committee of the Wisconsin Pea Packers' Association, written suggestions were made covering service needed by the Wisconsin canners on variety improvement, insect and disease control, and related problems.

The Agricultural Experiment Stations in New York State have been interested further in the improvement of canners' crops. Research work is in progress to develop better varieties of fruits and vegetables, more fully adapted to the needs of the industry and more resistant to plant diseases.

Pea Aphis—Encouraging progress has been made by the combined efforts of the State and Federal entomologists in devising practicable means to control pea aphis. At the suggestion of the Association, the Department of Agriculture has called a conference in Washington for November 20th, at which the progress made during the season will be presented and plans made for further prosecution of the work.

New Contracts—In the last report mention was made of the new contracts established with the Agricultural Experiment Stations in Oregon, Washington and Utah, of the work on the Pacific Coast in the spring and the studies relating to research on pineapple production in Hawaii. It is hoped that the investigations may be extended in the inter-mountain States during the summer of 1924, and that beginnings which have been made in the Northwest may be followed up to definite results.

There are many new contracts which ought to be developed with colleges and experiment stations. A close follow-up of the research already in progress is equally necessary. It is hoped that with the increased membership in the Association it will be possible soon to take advantage more fully of the important opportunities for service.

State Presidents at Board Meetings—President Anderson has wisely invited the presidents of the State associations to the meetings of the board of directors. This was an experiment at the May meeting, and the results were apparent to all of the directors who were present. Again an invitation has been extended to the executives, and their presence at this meeting means that the detailed work of the National Canners' Association will be vividly brought home to the local canners through reports that these executives make to their membership. There is a feeling that the National Canners' Association is something that is remote; that its work does not come home to every canner. What splendid results would follow if this feeling could be overcome and each canner in the United States made to realize that the National organization is composed of men of flesh and blood just like himself. If he could also realize that the splendid work of the president, vice-presidents, directors and committees was being given unselfishly for the betterment of everyone in this important industry, you could be assured of receiving his full support.

The next was the report of the Finance and Executive Committee, and Mr. James Moore reported, but as his report was largely summarized in the above report, we will not repeat.

Swell Claims—Vice-President Roy Clark was called upon to explain the matter of the Warehousing Plan in the settlement of swell claims, and he did so, as outlined above. There was very considerable discussion following this, some of the members plainly showing that they had not grasped the full intent of the Plan, but saying that with its full explanation they were ready to give it their hearty support. During this discussion one member said that the Plan must be put into immediate force or otherwise the matter would become merely a football to be picked about by all interests and never definitely settled. He urged the protection of the consumer, and immediate steps to get spoiled goods off the market.

This debate was kept up until dinner time, when an excellent dinner was served to everyone present. It is worthy of note here to observe how rapidly and without confusion waiters changed the rows of chairs in this big room to places around circular tables, which appeared as if by magic, set a splendid dinner before each one, and that finished, as rapidly cleared away all parts of it, removed the tables, rearranged the chairs, and the meeting went on as if nothing had happened.

Before dinner it had been moved and seconded that the Plan be adopted and put into execution at once. A vote was taken on this, and it was unanimously carried.

The resolution was as follows:

Whereas, it is deemed of great importance that all spoiled or swelled canned foods be eliminated from the channels of trade as speedily and effectively as possible, and,

Whereas, a simple, just and workable plan has been developed by the members of the National Canners' Association Conference Committee, and,

Whereas, this plan has been endorsed and co-operation promised by the Bureau of Chemistry, Department of Agriculture, nineteen State and many city food officials, and,

Whereas, the proposed plan will furnish exceptional opportunities to scientific men for the study and control of the causes of spoilage and thus assist in perfecting the art of canning;

Therefore be it resolved, that the officers and Conference Committee of the National Canners' Association are hereby directed to put such plan into effect at once; and be it further

Resolved, that the officers and Conference Committee are hereby authorized to make such amendments to the plan as in their judgment are for the best interests of the industry.

(Signed) L. A. SEARS,
MERRITT GREENE, JR.,
J. A. HAGEMANN.

Report of Tin Plate Committee—Dr. Elwell made an exhaustive report on the matter of better tin plates, and showed by figures what it would mean to both canners and canmakers if this could be produced in a definite and standardized manner. His report covered experiences in actual cannery operation, and he showed that claims for spoilage could be materially reduced by the use of better tin plate, or the careful sorting out of bad cans and covers as now received. His report was received and accepted and a vote of thanks tendered to him and his committee.

The Committee on Simplification of Containers, through Secretary Gorrell, read a letter from the Department of Commerce

outlining the need of standardization of can sizes, and it was moved and carried that a committee be appointed to co-operate with the Department of Commerce.

Mr. W. R. Roach reported for the Refinancing Committee, and had Mr. William Fromm read the record for this account and the balances due.

Mr. Roy Clark, speaking to the question of Canned Foods Week, said the canners would have to bestir themselves and send in their contributions, so that the canners might make some kind of a showing against the big contributions of both time and money being made by the brokers and wholesale grocers. The unit of $10 per line of machinery is called for and expected, and no one is exempted. All must have share in this big advertising effect of the industry. Contributions may be sent to the office of the National Canners' Association, Washington, and should be sent at once. It is necessary to order and have ready all the mass of printed matter, banners, etc., and it takes time to prepare this.

Mr. Charles H. Hunt, as Chairman of the Pea Section, reported on the new definitions of standards as explained above, and these were unanimously adopted.

The members learned that the National Canners' Association is in stronger financial position than ever before; has more members, and is in a more flourishing condition, and they had seen safely passed the Warehousing Plan, and they were well satisfied with the work.

Note—The Conference Committee, with the Wholesale Grocers, presented the Plan to the Committee of the National Wholesale Grocers' Association on Tuesday afternoon and night. The grocers' complete committee was not present, but those present were clothed with authority to act, and they would not accept the Plan, holding out for a flat allowance.

On Wednesday morning the Plan was submitted to the committee of the American Wholesale Grocers' Association, and was rather enthusiastically accepted, and on Thursday President McLaurin, in his address before the Western Association, said he thought the Plan would be welcomed.

GOOD APPLES AVAILABLE IN ANY SEASON OF YEAR

THAT Pennsylvania annually produces a bounteous crop of apples as fine in quality and flavor as any of those imported from other States or other countries, is a conviction held in many a Pennsylvania home today as a result of the Apple Week celebration.

Commenting on the readiness with which people in every part of the State joined in the movement to learn more about Pennsylvania apples and to help in the greater distribution of this season's large harvest through local markets, Secretary of Agriculture Frank P. Willits urged that the great amount of interest displayed be continued and that the use of apples in the daily menu be extended as long as the supply is as plentiful and the price as moderate as at present.

In a great many families the consumption of apples ceases as soon as the fall season closes. From the wide variety of apples grown in Pennsylvania it is evident that the eating of apples is not curbed by any lack in the supply of apples suitable for the purpose. The housewife finds a good choice of varieties on the Pennsylvania market in all seasons.

For use from September until the first of the year, the favorite varieties include Delicious, Jonathan, King, McIntosh, Grimes, Ewalt, King David, Smokehouse and Bellflower. Through the winter months, Stayman Winesap, Northern Spy, Baldwin and the Rhode Island Greening are enough to gladden the heart of any housewife. For late winter and spring use, Rome Beauty, Ben Davis, Pound, York Imperial and Gano are most popular on the market.

DR. FELLERS RECEIVES APPOINTMENT

Dr. Carl R. Fellers has been appointed Associate Professor in charge of the newly-established Department of Food Preservation, University of Washington. Dr. Fellers was formerly associated with the U. S. Bureau of Chemistry and with the National Canners Association. He assumed his new duties on October 1, 1923.

John H. Post, Receiver. 1151 Logan St., Dever, Colo.

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) Wm. C. West & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

generally are backing up the jobbers in their attitude regarding warehouse plan as against flat allowance, and the chain-store interests have placed themselves on record as being against the warehouse plan.

Local Laws—At present New York City health laws demand the immediate destruction of spoiled canned foods, where and when found. The authorities, however, have been rather easy in their enforcement, and have permitted retailers to sort out their spoils from the rest of their stock and hold it until inspected by the jobbers' salesman and credit allowed. In some instances the retailers have been returning labels for credit. It is not believed that the local officials will enforce the law to the letter until the entire situation has been ironed out in a national way.

Salmon Restriction — The Bureau of Fisheries in issuing licenses to salmon canners to operate in the Bristol Bay section next year has curtailed the fishing facilities of the canneries to such an extent that canners estimate 600,000 cases of reds will be cut from the pack during 1924. The reservations embrace Bristol Bay, Cook Inlet and waters adjacent to Afognak and Kodiak Islands, as well as the Alaska Peninsula. The restrictions have been based, to a large extent, on the curtailment of fishing gear. In the Nushagak district of Bristol Bay during the past year canneries were permitted to operate 12 gill-net boats per line of machinery, each using 200 fathoms of gill net. During the coming season only seven boats per line of machinery will be permitted in this district. On the Naknek-Kvichak side of Bristol Bay, where it is considered that the fishery is in a more healthy state, the boats have been reduced from the 12 permitted last year to 10 for next season. In the Cook Inlet district operations have been reduced 50 per cent, and in this district restrictions apply not only to the reduction in gear, but to the maximum pack permitted. In what is known as the Ikatan False Pass district the maximum pack permitted for 1924 has been reduced about 10 per cent.

To Market Pack in U. S.—Far from being discouraged by these restrictions, salmon canners in some instances welcome them. The pack will not be so unwieldy, the canners believe, and they will be able to market their pack in the United States at good prices. The regulations, of course, affect mainly the pack of reds. With Great Britain giving the Canadian pack a preferential tariff, and with Japanese competitors cutting into American sales in England, the packers will now be able to market practically their entire pack in the United States.

Sardines Again Advance—Continued scarcity of sardines has forced another upward movement in Maine sardine canners' quotations, and the market was advanced today to the following basis: Key quarter oils, $5.75; keyless quarter oil, decorated, $4.65; key three-quarter mustard, cartons, $5.40; key three-quarter mustard, decorated, $4.80; key quarter, smoked, cartons, $6.00; key quarter, smoked, wrapped and labeled, $6.30, all prices per case, f. o. b. Eastport, subject to sellers' confirmation and pack, and prior shipment of orders already on hand. Packers are predicting a still higher market later on in the year.

Book Future Peas—The future pea game has gotten under way very early this year, and several Wisconsin canners have already booked business on their 1924 pack. Local buyers, it is understood, have booked 1924 Wisconsin peas on the basis of 1923 opening prices for the entire line. Reports from Chicago, however, indicate that business has been booked there at 1923 opening prices, save on the larger siftings of standard quality, which were quoted 5 to 10 cents over the 1923 basis. Several prominent local canned pea brokers are attending the convention of the Wisconsin Pea Packers' Association in Milwaukee this week, and it is probable that further trades will be reported when these brokers get back to their offices here.

No Change in Tomatoes—There has been no material change in the tomato situation reported during the week, and prices remain quotably unchanged. Spot buying is confined to small quantities. California canners will deliver pro rata on standards in some instances, it is reported. The market for Coast shipment is nominally quoted at $1.15 for 2½s and $3.85 for 10s standard in puree, with solid pack at $1.60 for 2½s and $5.00 to $5.15 for 10s, all prices f. o. b. California. Indiana is practically cleaned out of 1923 pack, and no accurate price basis is available.

Corn Movement Quiet—Standard corn movement has slowed down somewhat during the week, and sales were reported at 90 cents per dozen, f. o. b. cannery. Many canners continue to quote the market firm at 95 cents for standards, however. Fancy corn is practically unobtainable in first hands. Trading in the retail market is not active, as distributors require the stocks they have for the needs of their own retail trade. Many of them received only pro-rata deliveries on the future purchases this year.

Fruits Steady—Additional buying of canned fruits for factory shipment has continued quiet. Jobbers are now adequately supplied with the fruits which they purchased on future contracts this year, and they have no desire to further increase their stocks until after they have taken stock at the turn of the year. The Coast situation is strong, however, and the market is rather closely sold up. There has been an advance in low grade No. 10 goods all along the line.

Pack Own Lye Hominy—California canners are coming to the fore as packers of lye hominy, and sales of Eastern canners are consequently falling off in Western markets. The California packers can afford to take care of the Coast trade better than the Eastern canners, as Eastern packed hominy has to stand a heavy freight rate in reaching the Pacific Coast markets.

Personal Notes of the Trade—Members of the sales force and buying departments of R. C. Williams & Co., Inc., tendered a "Honeymoon Dinner" to Arthur P. Williams, president of the Corporation, last Saturday night.

E. E. Chase, Jr., and E. N. Richmond, of Richmond-Chase Co., prominent canners, with headquarters at San Jose, Cal., were in the market this week, making headquarters with their brokers W. D. Breaker Co., Inc.

J. E. Baker, of the Wilson Canning Co., of Monroe, N. Y., was in the market during the week, stopping with George A. Mendes.

Archie Clarke, of A. C. Clarke Co., is attending the Wisconsin Pea Packers' Association Convention in Milwaukee this week.

Allan Bacon, of Bacon & Trubenbach, is also taking in the Pea Packers' Convention.

Another member of the local brokerage fraternity at the Milwaukee meeting this week is John Gilliam, of J. M. McNiece & Co.

CHICAGO MARKET

Meeting of Western Canners Most Resultful Ever Held—Indiana Pack About Three-fifths of 1922 Output—Many Fine Quality Peaches Packed in Michigan—Notes of Interest to the Trade.

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chisago, November 16, 1923.

THE Western Canners' Association Convention, held here last week, is said to have been one of the most resultful ever held by that Association. There was quite a large attendance of canners and others, and much interest was taken in the addresses and proceedings, a summary of which will appear elsewhere in this paper.

It was reported that a number of Wisconsin canners named prices of canned peas of 1924 pack for future delivery, and that some considerable contracts were closed during the week.

The President of the Indiana Canners' Association in his address stated that the pack of canned tomatoes in 1923 would aggregate not to exceed 750,000 cases of 3s, or, rather, of all sizes reduced to 3s. This is about three-fifths of the size of the pack for 1922. He also stated that there was only a very small quantity of canned tomatoes left in the State of Indiana, consisting of less than carload lots, and that quite a number of the canners of that State had been compelled to deliver short on the orders they took for future delivery.

I heard of a sale the past week of 2 000 cases of No. 3 extra standard tomatoes to come to Chicago at $1.50 per dozen, f. o. b. cannery. This was said to be about the only lot of importance to be found in that State.

Indiana has packed quite a quantity of canned corn of excellent quality in Evergreen, Country Gentleman, fancy, extra standard and standard, and still has unsold a portion of the pack. Standard is being priced at 90c, and the other grades at proportionate prices, f. o. b. cannery, Indiana.

Michigan has packed quite a quantity of canned peaches this season, and the quality is said to be unusually nice, especially of the early varieties which ripened a little more thoroughly before they were packed. Michigan canners have a few peas left unsold, but they are of grades that are not so promptly salable. They have no standards and only a few of the higher grades and smaller sizes. Michigan is making a fine record this season in canned apples.

She has seized the opportunity of packing heavyweight or olid-packed apples, and has almost entirely excluded the Pacific Coast canners of apples from the Chicago market by so doing. t is a little remarkable that the Southern canners of sweet potatoes or yams seem to be indifferent this season about pushng sales. Whether this arises from the fast that they are oversold to their production, or whether they are reluctant to meet he competition of Maryland, Delaware and New Jersey packers, vhose prices are lower, is not known.

Higher grades of yellow cling California peaches are in request in this market, and jobbers are temporarily buying from each other. The output of the fancy and choice grades is said to be small this season because, although the crop of peaches was large, it ran to small sizes, too small from which to make the fancy and choice grades, and, therefore, those grades are restricted as to output.

The Wisconsin Pea Packers' Association is holding its convention at Milwaukee this week, and there is said to be quite a large attendance. The National Kraut Packers' Association will hold a convention at Hotel Sherman, Chicago, at 10 A. M., December 4, 1923, and all kraut packers, whether they belong to the Association or not are invited to attend.

There does not seem to be that interest in canned spinach that has been evidenced in previous years for some reason. It is possible that the price has been advanced to a figure that renders the article a slow sale to the consumer. It is known that the price is very much higher this year, and was higher last year than formerly.

The demand for canned pumpkin is somewhat easier than it was, as the requirements of the wholesalers have been pretty well taken care of by the Indiana and Iowa canners.

Canned corn is gaining strength, for although there is considerable canned corn yet unsold in Illinois and Iowa and some unsold in Wisconsin, Indiana and Ohio, still the quantity remaining in first hands is very much smaller than at this period last year, and canners all feel confident of their ability to dispose of their holdings at prices now asked or even at higher prices.

On the other hand, the wholesale grocers are trying hard to buy canned corn at prices beneath the average asking price, which is 90c for standard. I can hear of no sellers at a lower price than that.

It seems likely that the new plan for the disposition and destruction of swelled or spoiled canned foods which has been installed by the National Canners' Association will prove acceptable to nearly all the wholesale grocers. The National Wholesale Grocers' Association refused to accept the plan, but the individual members of that Association, when spoken to about it, do not seem to be very deeply interested—in fact, seem to be rather indifferent—so I do not anticipate that there will be any strong opposition, unless the canners continue to give the flat half of one per cent discount in lieu of a swell grauantee to the chain stores. If that practice is continued, of course, all wholesale grocers in the United States, including all the members of the National Wholesale Grocers' Association, will demand the same allowance.

All the canners have to do in order that the plan go into effect is to stand firmly by the resolution adopted by the National Canners' Association and the Western Canners' Association and insist that the swells and spoils be shipped to the zone or regional warehouse for inspection, destruction and the remuneration of the buyer.

CALIFORNIA MARKET

Market Steadily Strengthening — This Year's Fruit Pack Lighter Than Last—Holidings in All Lines About Cleaned Up—Trade Mark Act to Be Enforced— Coast Notes.

By "Berkeley,"

Special Correspondent "The Canning Trade."

San Francisco, Nov. 15, 1923.

THE market for California canned products is in a firm shape and is steadily growing stronger, although no advances in prices have been made of late by packers. Withdrawals are in order, however, and considerable trading is being done by first hands to accommodate buyers. An interesting feature of the situation on fruits is the fact that the surplus on standards and seconds, which was quite heavy in the spring, has been moved, and in many cases these grades are more difficult to locate than choice or fancy. Some canners did not pack the lower grades, except against orders, and now find that they could dispose of additional holdings, if they were available.

Fruit Pack—Federal Reserve Agent John Perrin has compiled figures on the canned fruit pack in the Pacific Coast States and has announced that the output will be lighter than in 1922. Of course, this has been known to packers for several months, but a statement from this official will attract attention in quarters where reports of canners do not reach. In speaking of the pack he recently said, in part: "The peak of the fruit canning season in California has now been passed, and although official statistics of the 1923 pack are not yet available, commercial reports indicate that canners did not materially alter their early season plans, which called for a pack appreciably smaller than that of 1922. Canners in the Pacific Northwest this season have generally followed the policy of packing fruit only to fill orders received. Rising prices for canned fruits during recent weeks have caused an increase in the volume of such business, and, as these packers are still operating on the later varieties of fruits, it is reported that the total of the 1923 pack may be somewhat larger than was previously estimated, although still below the pack of 1922. Domestic demand for canned fruits has increased moderately during recent weeks, and some wholesalers and jobbers are reported to have abandoned their earlier plans of buying to meet current needs only, and to be now satisfying a part of their future requirements. Export sales have continued in relatively small volume, although activity in the foreign market during the first weeks of October was reported to have been greater than during the previous period this season. Opening prices, and those advances over opening prices which were announced about the middle of September, have been well maintained during the past four weeks. On October 10 the largest factor in the trade withdrew from the market its offerings of some grades and sizes of apricots, cherries, grapes, peaches and plums."

Fruit Packing Ends—Since this report was compiled packing operations on fruits have come largely to an end, but the references to market conditions continue to hold good. The export demand, however, is nothing to get excited over and no one in the trade is depending upon foreign markets.

Tomatoes—Warm weather continues in California and a few canneries are still handling tomatoes, but the quantities packed from now on will be light. Some packers are still quoting prices, but are not in a position to care for any large orders, and are keeping one eye on stocks and the other on orders. It is very likely that within a few days after the season is definitely ended the leading factors will be out of the market. The pack is larger than seemed likely a few weeks ago, owing to the length of the season, but a much larger one could have been disposed of without difficulty.

Pears—The Bartlett pear season has come to a close, canners having worked up all their holdings held in cold storage and all shipments having been made to Eastern points have been disposed of. It is estimated that the canned pack will not be more than 65 per cent of that of last year, or in the neighborhood of 1,250,000 cases in round numbers. The dried output was very light, being about 1,000 tons, as compared with 6,000 tons in 1922. Splendid results were secured in shipping Bartlett pears to the Eastern fresh fruit markets, and this business will probably be greatly developed in the future. That it will be good for the canning end of the business is the opinion of many who hold that the demand for fresh pears during the fall months will result in a call for the canned fruit the rest of the year. The fresh fruit market offered better returns this season than canners, and shipments were made from districts which had never sent pears East before.

Spinach—Holdings of California spinach are now very light and the demand is such than an early clean-up of the pack is assured. Firms making a winter pack are quoting opening prices at $1.22½ for No. 2 and $1.45 for No. 2½. The winter pack, however, is light, compared with the spring pack.

Shipping Problems—At a recent meeting of the Eastbound Intercoastal Conference held at San Francisco, a resolution was passed that Collector of Customs William B. Hamilton be asked to continue the old method of billing canned foods under that heading alone. Some time ago an order was sent ship operators from the Customs House requesting that canned foods be specified in kind, as canned salmon, canned fruit, canned crab, etc, on manifests turned in. Operators are

protesting this ruling on the ground that their bills of lading do not show the kind of canned foods shipped, and that they have no means of ascertaining this information. If the ruling is enforced, ship owners state, it will mean a loss in time and money. They are asking Collector of Customs Hamilton to lend his assistance in having the ruling withdrawn.

Notes—California canners are complaining that their branded boxes are being used by growers and others, and warnings are being sent out to the effect that violations of the trademark act will be prosecuted. According to the law, a jail sentence, a collective fine or individual fines for each of the containers used can be levied by the court.

The freighter West Notus, which arrived at San Francisco recently from Buenos Aires, brought a shipment of 9,951 cases of canned corned beef, a new commodity in South American trade.

Zeddie R. Teagarden, former president of the Placer Packing Association, of Auburn, Cal., passed away in that city November 4. He was a well-known orchardist and was the son of J. A. Teagarden, regional director of the California Farm Bureau.

MAINE MARKET

Steady Business in the Jobbing Trade—Corn Situation Fails to Improve—Blueberries Out of the Market—Clam Season About to Start—Notes.

By "Maine,"
Special Correspondent "The Canning Trade."

Portland, Me., November 16, 1923.

THE jobbing trade in this market reports a steady, but not brisk, business, the usual pre-Thanksgiving buying being somewhat lighter than in other years. Collections are very good and business is healthy, if not large. General conditions throughout the State are improved since our recent rains, but even now the water supply is very low, indeed, and many industries are unable to operate to capacity. This, of course, has direct bearing on the grocery trade, as idleness in the manufacturing centers is quickly felt by all branches of merchandising.

The corn situation has not improved in the past month, the only change being the confirmation of former rumors into definite reports. It all resolves itself into "Yes, we have no corn." If there are any lots now in first hands, they are evidently being carefully guarded for later selling, and there are practically no offerings on the market today. There is still an active demand, and the last prices reported were $1.50 or better for Crosby and $2.00 for Golden Bantam.

Blueberries are out of the market, too. This puts the industry back onto its old-familiar footing of being cleaned up at the end of the season and starting the new year with a clean slate. It is safe to prophesy that never again will the berry canners produce a surplus of stock, even in the rare years when they have a bumper crop. As a general thing, blueberries are sold in advance of the pack, and then the crop fails! However, with the movement now on to improve the berry fields as well as the factory methods, doubtless the yield will be increased and a full delivery on future orders practically assured.

The clam season is starting in, though offerings are not as numerous as in other years. $1.25 and $1.85 for 5-oz. and 8-oz. are firm quotations today.

The sardine production is another thing which shows no improvement as the days go by. The end of the season is with us, and the small pack is becoming more plainly realized by all interests. To say that the up-put is half of 1922, and to remember that 1922 was a very light year on account of market conditions, is one way of understanding how small this season's business has been. There really are no prices to quote. When standards can be sold, they bring something over $4.50 factory, and have been quoted at $5.00 or better. Other grades are scarce and bring varied prices for occasional sales.

Notes—E. M. Lang, Jr., is in New York and Chicago on a business trip this week.

Mr. T. H. Johnson has just been elected president for the coming year of the Portland Club, the largest men's club of this city. Mr. Johnson has been a canned foods broker in Portland for many years, an active member of the Portland Club, and his election is evidence of the high honor and esteem in which he is held by his associates. Mr. Johnson was for many years a familiar figure at the canners' conventions, and has a very wide friendship in the trade throughout the country. Even now, though he admits being eighty-one years old, he is active in his business and in many civic and social movements.

MARYLAND CROPS WILL BE DISPLAYED AT CHICAGO

THE International Grain and Hay Show, to be held in connection with the International Live Stock Exhibition at Chicago, December 1 to 8, inclusive, will exhibit all of the Maryland leguminous crops and other farm products.

A large display of apples will include specimens of the Grimes Golden, Jonathan, Norman Beauty, Black Twig, Stayman Winesap, Banana and Baldwin varieties. In addition, this booth will feature three different kinds of honey produced in the State, namely, white clover, locust and wild tulip. Maple products from the western portion of the State and tobacco products from the southern portion will also be shown.

At the International last winter the quality of the corn produced in Maryland was the wonder of the show crowd, and this year corn will again be given a prominent part in that State's exhibit. Daily shipments of oysters will be received for distribution to those particularly interested in the products of this progressive State. Other educational matter which will be included in the booth will treat with the various types of dairy and beef cattle now being raised in Maryland and with the selection of seed corn and the handling of tomatoes for canning.

The Maryland State Exhibit will be in charge of K. A. McRae, of the State University, College Park, and, together with the other official exhibits from various parts of the country, should prove one of the most popular features of the exposition.

400 BUSHELS OF POTATOES PER ACRE

IF W. W. Stauffer, of Kosciusko County, Indiana, can raise 400 bushels of potatoes per acre, why does the average Indiana grower raise only 69 bushels? That probably is a question that the average Indiana grower must answer himself. He can get a lot of help through from the experiment station, and also by talking it over with Mr. Stauffer, who has averaged over 300 bushels per acre for the last four years.

This year he used 450 pounds of potash and acid phosphate per acre on most of his potato land. When the fields were inspected late in September, it was estimated that one field of rurals planted June 8 would yield 439 bushels per acre. Another field of Irish Cobblers planted June 30 was estimated to run 400 bushels.

—— Too Late To Classify ——

WANTED—By Western New York State factory an assistant superintendent who has a full knowledge of packing Peas, Green Refugee Beans, Golden Bantam Corn, Tomatoes, Beets, Pears and Apples. We wish a man who is thoroughly competent in securing and handling Italian or Polish help. Must have good habits and not be afraid of work. For a man answering these qualifications there is an opportunity for advancement to position of superintendent or manager. Kindly state full particulnrs in first letter giving the places you have worked for the past five years.

SMILE AWHILE

THE ONE WAY OUT

As I gaze upon the clothing
In the windows on display,
And read the price-tags on them,
I am filled with deep dismay;
And the gazing starts a yearning
For the tropic South Sea Isles,
Isles of never-ending summer,
Blossoms, love and crocodiles.
Ah, 'tis these I'd love to wander,
Breathe the warm and fragrant air,
Far from clothing shops and price-tags,
For they wear no trousers there.

Chorus:

Yes, I'm yearning, yearning, yearning,
For a lovely South Sea Isle,
Where a man can cut expenses
Wearing sunburn and a smile;
There I'd hasten me tomorrow
Did I have the steamer fare,
Far from shiny pants and patches,
For they wear no trousers there.

Many times my searching fingers
Find my trouser pockets bare,
And there comes the sad conviction
That friend wife has beat me there.
Then, indeed, my heart starts yearning
For that sunny South Sea Isle,
Where it profits not the ladies
To be guilty of such guile;
Where a man can sweetly slumber
With a mind that's free from care,
Far from wives who rifle pockets,
For they wear no trousers there.

GOLLUF

"What is considered a good score on these links, son?"

"Boss," replied the colored caddy, "most of de gents wha plays heah tries to do it in as few strokes as they kin, but i usually takes mo."

PROGRAM

I am Progress. At my bidding
Age-old customs melt away;
Constantly the world I'm ridding
Of the things that cause decay.
New inventions ever springing
At the beckon of my hand,
To a fuller life are bringing
All the world whereon we stand.
If you'd serve me and adore me,
Bow, and bend the knee before me.

EDITORIAL

THE TRI-STATE MEETING—In this issue we give you the accounts of the great western meetings of canners—that of the Western Canners and also of the Wisconsin Pea Canners Associations, in full as far as we have them. The Indiana anners have met this week, and we hope to give you an account that in our next issue; and other western meetings are booked r meetings—the Minnesota canners on November 26-27; the wa-Nebraska canners on December 4-5; the Ohio Canners on ecember 6-7, and then these meetings switch to the East, and e big meeting of the Tri-State Canners Association will be held December 10-11, at the Adelphia Hotel, in Philadelphia. This the great meeting of canners of the East, calling them from l States on the border, and not alone from the three States vered by the title. There is always a big crowd; the meetings e business-like and important, and there is likewise much good ntertainment. The Get-Together Committee, which is but anher name for the Machinery, Supply Men, Brokers, etc., to entertain the canners, are now at work upon an elaborate enterainment program, and we need mention nothing more to the nventionite who has been present at one of these entertainents. But the Tri-State meeting will not be all entertainment. resident Records is a business man, and he will see that the g questions of the hour will be well considered. A. D. Radeaugh will have more interesting results to resort on his Better omato growing experiments; and the Executive Committee, all xperienced canners and convention men, are planning a busiess session which no canner can afford to miss. This convenon is not confined to members of the Association; the doors and wide open to all, and all are welcome and wanted. If you re wise you will make hotel reservations early.

Immediately following the Tri-State meeting will come the ew York State meeting, at Rochester, on December 12-13. hen you will be let alone for a while to enjoy the Christmas eason.

VIRTUE (Quality) Has Its Own Reward—Since the earliest days of the industry the cry has gone up that it does not pay to pack quality, because the buyer looks only at the price. ften this has seemed true; but only to the same extent as when man says that it does not pay to be honest because all the orld is dishonest. There is a distorted sense of morality about ich thinking that is not right and we all know that it is not ght. "To the bad all things are bad," and "to the crook all men re crooks."

The pea canners of Wisconsin have learned that quality pays ot only in dividends, but in quick turn over of an ever-increasing mount of canned peas, and we doubt if anyone would be able o make those canners again believe in the sophistry that packg quality does not pay. And other sections are rapidly learng this basic policy that honesty is the best policy. California aw this truth long ago, and Hawaii has built to undreamed of heights upon this one solid foundation—quality. And be it said and understood that the canners of all other products have seen the light, and are following after it, so that more canners today are honestly striving after quality than ever before—Corn canners, Tomato canners, String Bean and Baked Bean canners, Kraut canners and canners of all kinds of food products; so much so that 1924 will clearly mark the distinction between the careful, quality canner and the canner of trash.

That distinction is clearly evident today in the sale of futures and if there is a canner who does not know how to read the signs let us tell him that the canner who has made a reputation for quality, dependable goods, is being "feeled out" on futures even if orders are not yet offered; but the canner whose reputation is uncertain, whose goods are uneven, poor or trashy, is being left alone. He may wonder why he is neglected; why no one seeks his goods; he may even doubt that anyone is seeking, much less buying futures, and the fact that he is always the last to feel the force of demand may not have been understood by him until now. He need no longer be in doubt. A few cents per dozen makes no difference to the buyers. Of course, they squeal and holler, but when it comes down to the question of goods in which they feel absolute confidence as to their uniform good quality at a higher price, and those of uncertain quality or known uneveness at a slightly lower price, they do not hesitate to take the better goods, and neither would you. That is but human, and so the market is first cleaned up of the known quality goods; then of the less well known or slightly lower quality and so on down until the trash packer finds himself the last holding goods and the last called for. You will say that this is how it should be, and we say that this is how it is, because it is simply human, natural, and all the sayings to the contrary, all the evidences of buying poor quality goods, because, as one well known broker said recently, retailers want a cheap can for a cheap trade, are the exceptions and not the rule and not nearly as true nor as extensive as they would have us believe. It used to be so, yes; but the really cheap buyer no longer exists; he went out of fashion with the advent of war wages. It is a point worth keeping in mind during your preparations for 1924.

THOSE "Business Sessions"—In deference to the evident wishes of the Wisconsin Pea Canners Association, we made no effort to report the "Business Sessions" of their convention—the Tuesday and Wednesday morning sessions, and the sessions of the Sections, leaving such report of these meetings to Secretary Nicholoy as he cared to make public through these pages. Unfortunately he was obliged to attend the conference of agricultural experts in Washington on the 20th and 21st, having been instructed by the convention to go there, and this left him no time to do this added work. Hence our report will be found without these important features. It will be published next week, and a delay of a week will detract in no way from its interest and importance; and certainly no blame attaches to this active, hustling, hard-working secretary.

USE the Warehouse Plan Clause in All Contracts—The industry must recognize that the method of swell claim adjustment is now by way of the Warehouse Plan. It is no longer open to debate. The industry has pledged itself to this, and all canners must use it. We have spoken of this so often and gone into such minute detail of the plan that it should not be necessary to repeat here; but if anyone is hazy in his views about it, or desires further detail, let him read the addresses of Royal F. Clark and President James A. Anderson in this issue. But we wish to say just this one thing: The Pure Food authorities of the country are practically demanding that this industry take this step, so that there will be a certain and sure ending to the misuse of these swelled canned products. They were forced to drastic action because there had arisen an extensive trading in swells, greater than any individual canner is willing to admit, because he knows little or nothing of it, but the facts of which are indisputable. The flat allowance is a direct feeder of this nefarious practice; in fact, the practice grew out of this style of settlement, as unscrupulous scoundrels found or saw the opportunity to collect the swell claims and then make an additional profit on the sale of the spoiled goods. It is not supposed for an instant that any of the great buyers are a party to such things; they merely made the claims for the swells, but warehousemen, truckmen or janitors with access to these goods, instead of dumping them, sold them, and had worked up a regular outlet for them. This is a bald statement of a nasty situation, but it needs be stated plainly, and once stated and understood no canner should be a party, directly or indirectly, to such procedure.

The industry is obliged to protect itself and the wholesale grocers, chain store men and jobbers, in all sections of the country, must rally behind the canners in this, and they will do so to the man. It has been truely said that this is a canner's problem, and the canners will handle it without gloves.

Therefore, write your contracts with this Warehousing Plan included, using the clause as it has been given in these pages, and do not let anyone talk you away from it for any reason. The industry is a unit on this and there should be no deserters. The National Canners Association has adopted it; the Western Canners Association also, and the Wisconsin Canners likewise, and every association will incorporate it as their set contract. It is today the method of selling canned foods, and let's have it unanimous.

PROMINENT BROKERS ENDORSE WAREHOUSING PLAN

Mr. Arthur I. Judge, Editor,

Baltimore, Md.

My Dear Sir: In the Canning Trade, issue of November 12th, referring to the Dr. Geiger article, The Quality of Foods for the year 1920, 21 and 22, Destroyed, Etc.

I am just real curious to know how these figures were obtained? How many times these goods were destroyed? Offered to junketers, resold, again picked up, condemned, destroved and the round continued, again to find their way into trade channels as jam, jell and preservers stock if fruit, or cheap eating houses if vegetables.

These figures look astonishingly large, and I do not dispute the count, but am doubtful of the method of arriving at the grand total. Has it occurred to you that if the warehouse plan that you have been advocating so long and justly had been in operation such a thing would not have been reported to the shame of the canning and jobbing interests?

Several years ago while in Chicago in detail work we were besought by a local preservative company representative and numerous times since to get the swells and otherwise unsalable good to them for that purpose of jam, etc., making.

We certainly highly endorse the warehouse plan and extending its scope to take in this class of stock and consigning to it the whole blooming mess and putting and end to it, and there will not be such a large count to shame the whole industry.

It is hard to draw the line against defective goods in its entirety as the overfill may have just the appearance of the swell. But the experienced canner can quite easily tell that which is defective and that which he can not tell he had better disregard at once. This will penalize him to the extent that he will be more careful in looking after details and what he has left will not be of much consequence. The whole industry will profit by it. Advertising will not be hobbled by such gross reports of results that follow the canning business.

The warehouse will be much relieved then if the canner will use some real good common every day horse sense in buying his raw material selected. The grain buyer does not pay the sa price for the grain, or the stock buyer for live stock. Why sho the canner pay the same for all tomatoes that come to his f tory? Peas, corn and other goods likewise. These things tell on the stock that finally will get to the warehouse. It not essential that every thing that has gone through the fact under some mishap be converted into pieces of silver and later make trouble for the wholesome stock that has gone throu right.

The jobber and canner have a great task before them, if accomplished rightly will yield tremendous returns towar much larger consumption of canned foods at very little out

Very truly, G. W. LAHR.

BROKERS COMPLAIN OF UNFAIR DEDUCTIONS

WE are inclined to agree entirely with the claims made Taylor & Sledd, of Richmond, Va., and we believe all c ners will, too, after a moment's thought. The brokers h just written the canners as follows:

> Gentlemen: We note that in paying brokerage you follow the practice of deducting the label allowance on buyer's label goods before figuring the brokerage.
>
> We do not think this is a fair practice. You certainly would not think of deducting the value of your labels before paying brokerage on peas sold under your own label. The cost of labels is certainly a part of the cost of production. It seems to us that it would be just as fair for you to deduct the cost of cans before paying brokerage, as to deduct the cost of labels. Are we not right?
>
> We feel very much the same in regard to the practice of deducting the cash discount, when taken by the buyer, before figuring the brokerage. We would like to have your opinion on this subject also.

CHANGES IN WELL KNOWN BROKERAGE HOUSE

New York, November 19, 1923.

The Canning Trade,

Baltimore, Md.

Dear Sirs: We beg to announce that Lestrade Bros., have purchased and will succeed to the business of Mailliar Schmiedell, in New York, as of January 1, 1924.

They will maintain the present offices of Mailliard Schmiedell at 105 Hudson Street, and practically the same sel force. The new concern is well-known in the food district having been packers and exporters of food products for ne half a century, and of recent years have been identified in jobbing of canned foods.

As of January 1st, Lestrade Bros., Inc., will be condu strictly as a brokerage concern, carrying no goods in New Y for their own account, and they succeed to the business of M liard & Schmiedell with the good accounts that Mailliard Schmiedell are now serving in the metropolitan district.

Very truly yours,

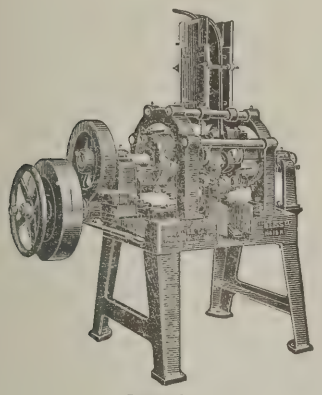
MAILLIARD & SCHMIEDELL.

New York, November 19, 1923.

The Canning Trade,

Baltimore, Md.

Dear Sirs: C. W. Glick, for the past four years manage the New York office of Mailliard & Schmiedell, will become m ager of the European business of Bisceglia Bros., with h quarters at London, England.



Bisceglia Bros. have risen to a very high position in canned food world from a very small beginning, and a s cannery at Morgan Hill, California, which they establishe 1902. Two years later they moved into larger quarters at Gil and in 1913 built the cannery which they now occupy at San J California. Today this cannery is one of the largest and equipped in the world, having a capacity of from 750,00 1,000 000 cases of canned food per year. At the present they have offices and warehouses in New York and Chicago, with their own European outlet will be in a very advantag position as regards marketing their products and serving t numerous friends.

Very truly yours,

MAILLIARD & SCHMIEDELL.

In Every Independent Can Shop

BLISS

Patented

"BLISS" Automatic Flanger

A CONTINUOUS operating machine. Four heads insure easy movement with high speed and minimum wear. It simultaneously flanges, without cracks, both ends of round sanitary can bodies at the rate of 150 or more a minute. That these machines are operating successfully in every independent can shop in the country is proof of their merit.

LANDRETH GARDEN SEEDS

THE LANDRETH

SPOT OR 1923 CROP SEEDS

We have for spot delivery, a few Alaskas, Green Admirals, Advancers and White Admirals. These are all short. Sweet Corn is short. We still have some however. Write us for prices.

We also have the following for spot delivery——

Peas	Okra	Cabbage	Cucumber
Corn	Tomato	Spinach	Snap Beans
Beet	Squash	Pumpkin	Cauliflower

Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

D. LANDRETH SEED COMPANY

BRISTOL, PA.

Business Established 1784

139 years in the Seed Business.

Meeting of Wisconsin Pea Canners Association

Milwaukee, Wis., Nov. 13-14-15, 1923

Work Accomplished: Accept Warehouse Plan—Form Seed-Raising Corporation—Adopt Association Label—Protest Higher Prices on Cans and Pea Seed—The Amusements.

IN some respects the Convention of the Wisconsin Pea Canners Association and its Sections did not seem to be as large in numbers as in former years, and yet when they were all assembled together as at the Wednesday evening Vaudevil and Dance, the usual big crowd was there. The Wisconsin Hotel was installed the favorite stamping ground during the meeting, and this had a tendency to divide the crowd somewhat because the brokers and supply men had booths in the Auditorium, where the meetings were mainly held, and not a few of the visitors spent their time there. In any event it was the most thoroughly contented crowd of canners and machinery supply men that one could wish to see. The canners have had quite good packs the past season and have sold them almost down to the bare floors, and at fair prices, by which we mean with profit to the canners; and the supply men and machinery men were busy with their order books, and threatened with writer's cramp from their steady occupation. Seedsmen who had any surplus to offer found that advancing prices, in the hope of keeping some little of it until a later day, did not stop the buyers. They followed right on through and grabbed everything they could get their hands on. And the machinery men were not far behind, for Wisconsin is not only going to have more than a dozen new canneries this next season but the old ones are making replacements upon a large scale, for the first time in some years, and some of them are increasing their capacities. If the seed buying is any indication of their intentions as to acreage—although is must be borne in mind that future seed peas were not all delivered in full and that this sent the 'short' ones into the market to cover their regular requirements—there will be "some" acreage of peas put out in 1924, and it will require "some" machinery capacity to take care of it, if the crop prove a good one. Right here let us say that the prophets are busy with the assurance that next season is to be a poor year in peas (every second year, they say, but forget that 1923 was a "second" year).

The canners of other articles, and those located in other sections of the country, must remember, or be told, that with the opening of the annual Convention of the Wisconsin Pea Canners the old season is pushed out and the new season is ushered in. King 1923 is dead, long live the King 1924. So it is not strange to hear that some futures have been sold—or were sold at this meeting, but what ones we heard of definitely proved to be with those old customers who always order new goods, because they are the kind they know and depend upon, and market prices have nothing to do with the sale. They want the goods, and place their orders every year as soon as the canner will take them. The common or garden variety of future-buyer was not over-prominent, and without intending any discourtesy to them, we can truthfully say that the canners were not sorry at their absence. There are many indications which promise a sure advance in costs in 1924 over '23—can, pea seed both spot and future and growers costs. three items which it is figured will add 10c per dozen to the '23 costs figured upon standard peas. The canners are rather "rothy" at these advances, as they are anxious to hold down the costs so that the goods will have a good, free distribution, and be able to go out at an entirely popular price. The splendid and quick distribution of the '23 pack has pleased them much, and they are pretty thoroughly determined that they will keep "quality" so constantly before them that there will not again be cause for complant on that score; but they want the consumers to get this quality at a price which will make sure quick distribution and consumption. Until they feel sure about costs they are not anxious to sell futures, and this is a wise act. With every possible contingency accounted for futures are always a gamble for the canner; what must they be, then, with the costs not known? Nine out of ten times the jobber profits by future buying, and canners should keep this fact in mind—and most of the canners are doing so.

THE MEETINGS

The meetings were scheduled to be held at the Milwaukee Auditorium, but they began in the private assembly rooms of the Wisconsin Hotel, where the Sections met on Monday, beginning with the Beet Section at 11 A. M. Chairman Geo. Greb of Shawano was not present at the opening of this Sectional meeting, but Dr. T. O. Georges, the Secretary, asked a member to act as temporary Chairman, and the meeting proceeded. They do nice work in these Sectional meetings; consider business matters before canners of the product in question, in a business-like way and freely, exchanging experiences and methods to the benefit of all. They are 'closed' sections to all but members, and while Wisconsin stands solidly behind The Canning Trade, and welcomes its Editor to these private conferences, we do not deem it wise to make public their deliberations, although there is nothing done which cannot stand the white light of publicity. But they are business sessions of canners, considering matters of peculiar interest to the canners of their State, on the product in question and most of the canners are there to take part and profit by the meeting. If there are any who were not there that is their fault and their loss.

The Kraut Section met at 2 P. M., the Corn Section at 4 P. M. and the Bean Section, which was scheduled to meet at 4 P. M., was posponed to meet another day and place in the very near future.

A brief account of each, with names of the Chairman and Secretaries for 1924 will be given next week.

The General Meetings—Tuesday, November 13th, the Annual Convention of the Wisconsin Pea Canners Association opened at 9 A. M. with a business or closed session, and Wednesday morning the same program was carried out. This is reverting to the old system of this Association when important events were held behind closed doors and the public—all but bona fide members—excluded. In those days the general public in attendance upon this Convention had to be satisfied with the addresses of welcome, speeches by public officials, special addresses of men of the industry, usually held in the afternoons, and it was much so this year. Tuesday afternoon was given over to the formal opening of the Convention, when Ex-Governor Phillips was expected to speak. Owing to a death in his circle of friends he was obliged to postpone his address until Wednesday afternoon, when he gave a very excellent one.

Mr. Burt Williams, one of Milwaukee's live wire boosters and talkers, took the ex-Govenor's place and made an address which caused the whole Convention to sing loudly his praises.

Mr. Henry M. Wollum acknowledged the welcome, and Mrs. A. C. Friday, President of the Women's Auxiliary of the Wisconsin Pea Canners Association, also spoke regarding the part being taken by the ladies in this food work.

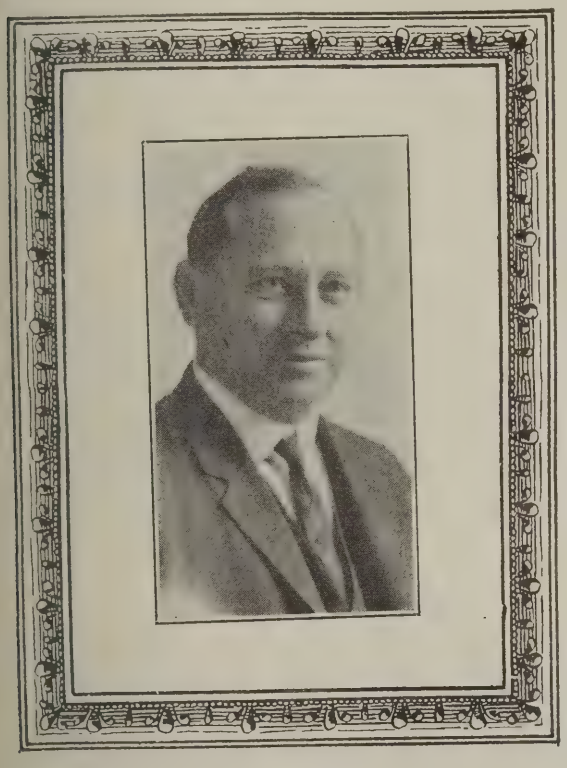
President J. A. Hagemann then addressed the meeting as follows.

PRESIDENT HAGEMANN REVIEWS THE YEAR

In 1912 I was honored with the election of Secretary of your Association. I served in that capacity until last November, when I was chosen your President.

The acquaintance and friendship which have resulted from the long contact with our Association work I appreciate and value highly.

I fully appreciate the honor of president at this, the 19th nual Meeting. It is a democratic American gathering—ners with their assistants, and wives, brokers and distribu-s, supply men, and that most important factor the press.



One conspicuous figure at practically every Convention since 5 is missing and missed—W. C. Leitsch. He was very much home in discussion and debate. He loved to match his wits h that of his fellow canner, with that of the broker and that the jobber. Perhaps no man in the United States was better wn than W. C. Leitsch.

This brought the Wisconsin pea packing industry into the elight frequently.

He will go down into history as one of the master minds in food packing industry, not only of his State but of his ntry.

In December, 1905, 18 years ago, at Appleton, Wisconsin, s organized the Wisconsin Pea Packer's Association—nineteen ning companies in all. Of this number the following com-ies are still members:

Chippewa Falls, Columbus, Lakeside (originally Landreth) Wm. Larsen, Markesan, New Helstein, Ostburg, Pioneer, ndolph, Sauk City, Waterloo, Wausau.

J. A. HAGEMAN
Retiring President
Wisconsin Canners Association

To-day the membership comprises 88 parent companies erating 103 factories.

The food product industry is the greatest business of Amer-a to-day. Wisconsin, as is quite generally known, is the big-st factor in the canning of green peas. She produces approx-ately 60% of all the peas canned in the U. S. She has doubled r output in seven years and the growth is still continuing. It no longer an infant industry, but ranks up well in Wis-nsin's list of industries. The packing of other vegetables so is moving along with rapid stride. Wisconsin to-day ranks st in the canning of beets, and before many years it is safe to edict that Wisconsin will rank first in the production of many her lines of vegetables.

Increasing numbers of consumers are being convinced that nned foods are wholesome, clean, the safest of foods to eat, d in many cases the most economical.

Association work generally should be credited with the owth in favor by the consuming public. Through the influence d work of the Association canners have greatly improved the t of canning and raised the quality at the same time.

Following the custom of past Presidents, I shall briefly review the work of the year, call your attention to present conditions, and make such suggestion as my humble judgment dictates.

The Greater Association—The first and most essential step toward the realization of an Association which can function efficiently 12 months in the year is a capable business secretary—one who devotes his entire time and energy to Association work.

Under authority voted by the last Annual Meeting, your Board of Directors contracted for the services of W. E. Nicholoy for a term of one year beginning April 1, 1923. The office was established at Madison, Wis.

Although it was deemed best by the Board of Directors to limit the lines of work of the business secretary for the time being, Mr. Nicholoy has proved himself efficient, ambitious and capable of carrying to success any resonable program which this Association or the Board of Directors may suggest.

With the big increase in plants already reported for next season, together with increases planned in both acreage and capacities of plants already in existence, the production end may easily overbalance the consumption end.

It is an undeniable fact that neither the pea canners nor our Association of Pea Canners has made an intelligent study of the distribution and consumption of its products. Careful study and expert guidance are needed. Such can best be rendered through your Association, if it is properly supported and made to function.

I commend immediate and through consideration to the question of stabilizing and increasing the demand for Wisconsin peas. A conservative plan of action should be initiated at once and extended from time to time as conditions warrant.

Such a program should be carried out by our Business Secretary under the guidance and with the advice of the Board of Directors. The Board of Directors should meet frequently enough and at stated intervals so as to provide continuity of thought and action.

Too many haphazard, too many spasmodic efforts to reach the consumer have been attempted. I believe a careful study of each market, the plane or planes in which the people are living, is an essential preliminary step.

For example, U. S. statistics indicate that the people of this country are living in different planes, about as follows:

16.7% on or below pauper standards.
38.84% on the minimum of subsistence.
44.64% on health and comfort standard.
3.82% on a luxury standard.

True, economic conditions may cause the percentages to fluctuate at times, but the percentages given are sufficiently stable to be used as a basis for the determination of consumption possibilities of qualities of peas for any particular market.

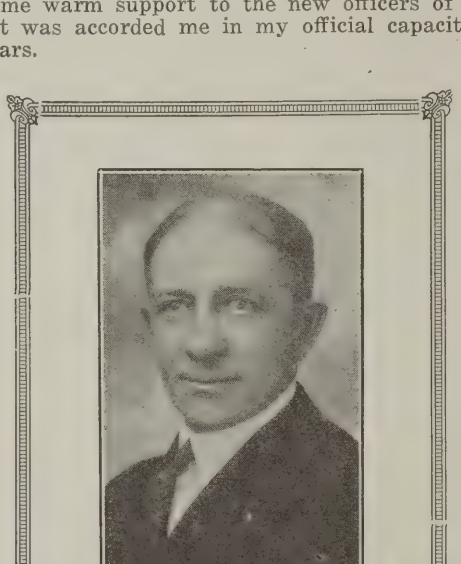
It may be possible to greatly increase the consumption of fancy No. 5 sieve sweet variety peas in one market and a few No. 4 sieve sweet variety peas in another market, and an extra standard No. 3 sieve pea in another market.

Utilization of State's Service—The pea packing industry requires thousands of acres of land, four times as many bushels of seed, employs thousands of men and women annually besides showing an investment in buildings, real estate and equipment of several millions of dollars.

The canner and the farmer, generally speaking, have not the resources, nor the training, nor the time for experimental work on any extended scale, while the State College of Agriculture and the several departments of State have means for carrying on research and experimental work.

Our Association, to a limited extent, has co-operated with the heads of some of these departments with good results. These state agents are only too glad and willing to help citizens and the industries with which they are connected. We have no one to blame but ourselves if we do not receive maximum of service.

A plan for carrying on a short course for canners, including field superintendents at the University of Wisconsin, has been worked out and will be submitted for your consideration and endorsement at the Convention. I believe the plan will commend itself to you and that you will definitely decide to have your company well represented.



Seed Strains—I need not dwell upon the utter dependability of the Canner upon pure well adapted seed stocks for quality peas in the can. The time is not far distant, in fact is already upon us in some sections, that if we must continue to use land which is infested with disease or root rot. a disease resisting strain of pea seed must be available. The development of disease resistant strains of pea seed suitable for the growing of desirable peas for canning purposes is well under way by Prof. Delweich of the Dept. of Agriculture of the University of Wis.

The canners, through their Association, should not only keep in closest co-operation with this work, but should stimulate further effort in the breeding of new strains of seed for canning, as well as clean-up varities of seed which were once pure and which are very desirable for the canning industry.

Plans for co-operation along such lines will be submitted to this Convention and should have your criticism and finally your approval.

As an association, let us continue, as we have in the past, to recognize the mutuality of interests that should exist among the canners, brokers, distributors and consumers. In criticising any of these factors adversely or favorably let it be to the end that fair play and honesty shall rule, that the business in whole or part shall be uplifted and kept in fair and honorable hands. Support to the extent of your ability your State Association work, canned foods week as it will be presented to you elsewhere on this program, and the recommendation of the conference committee of the National Canners Association, which likewise will be presented for consideration. I defer comment on these matters in advance of their full presentation by others, but I commend all of them for serious and conscientious consideration.

In closing, I am happy in feeling that once again I can join the ranks of the mass of Wisconsin canners, be it in the first, second or third line, and wish here to pledge the same loyalty and the same warm support to the new officers of this Association that was accorded me in my official capacity the past thirteen years.

"FRED" E. HULBERT
Secretary
Wisconsin Canners Association

WEDNESDAY AFTERNOON SESSION

November 14th, 1923

As on Tuesday the meeting was held in Walker Hall, Milwaukee Auditorium. There had been arranged a splendid exhibit of the new Horal pea, as it turned out when canned, and the opened cans attracted a great deal of very favorable attention. This is the new pea developed by Prof. E. J. Delweich of the State Agricultural Department, and is, as its name implies, a cross between the Horsford and the Alaska, giving it the small size, prolific yield and sweetness so much desired. It runs very largely to the smaller sizes. The Professor explained that the object was to produce a pea of pure type, with no mixed blood, good resistance to disease, small in size and of good flavor. He said candidly that they had many crosses and peas of other strains which might prove better than this Horal, but that it takes time to be sure that the new pea has all the desired requirements. He explained in detail the work his department was doing in its efforts to improve the strains of peas used by canners, and he urged assistance and co-operation. He stated Mr. Renauld had done the canning on a small scale, and requeste Mr. Renauld to say just how the work was done.

Mr. Renauld explained that he canned the peas, after shel ing and cleaning by hand, in a pressure cooker, in home-cannin style, but pointed out to the canners that despite this the pe opened up nice, with clear liquor and of very fine flavo President Hagemann then called attention to the fact that a see corporation or committee had been formed to develop better pe and urged all to take a share in it. Mr. Fred Stare was handlin this and took signatures at the meeting.

Ex-Governor Phillips Speaks—President Hagemann the introduced Ex-Governor Phillips who gave the canners an exce lent talk upon general business conditions, particularly pointin out the need of the voters sending to their Legislature busine men and not mere politicians. His was a sane, sensible, busine talk and greatly appreciated.

ROY CLARK EXPLAINS THE "PLAN"

Mr. "Roy" Clark, Vice-President of the National Canne Association and prominent member of the Wisconsin Canners, a also an ex-President of this Association, explained in detail th plan decided upon by the National Canners' Board of Directo in settlement of the Swell Claims matter, and which was adopte by the Western Canners Association. Our readers have seen th repeatedly explained and discussed in these columns, and the pla in detail was published in The Canning Trade of November 19t We will not, therefore repeat Mr. Clark's address here. He di his subject full justice, as he always does, and predicts that th entire jobbing trade will shortly accept this plan as the only fa one for all parties at interest—the canner, the jobber, and pu food authorities and the consumers.

President Hagemann suggested that a committee of thre be appointed to consider this plan and to report the meeting th next day. A member so moved and it was seconded and du decided.

President Anderson Speaks—Mr. James A. Anderson, Pres dent of the National Canners' Association, and always a favorit with the Wisconsin canners, as he is everywhere, was then calle upon, and responded with one of his fine addresses. He devote much of his talk to this Plan, urging its adoption as the or great protector of the consumer, because it assures the remov from the market of all spoiled canned foods. He paid a glowin tribute to the late "Billy" Leitsch, whom he described as or of the great men of the country, and he complimented Preside Hagemann for the efficiency shown in his Association. He close by urging all members to be present at the big Buffalo meetin in January. He announced that it had been decided at the Boa of Directors' meeting to establish committees on membershi and that Dr. T. O. Goeres had been appointed to the chairma ship of that committee for Wisconsin.

The big room had been packed to capacity, with many stan ing all during these many addresses, and the audience showe a degree of patience and interest seldom equaled, at least in th industry. The clock had moved around past 5 P. M., but whe President Hagemann announced Ye Editor as the final speake on the program, to talk upon the subject "Relation of Trad Papers to the Industry," most of the crowd sat back and pa a distinct compliment in listening to the writer's remarks. B cause it is the first time that any Association has brought u this really important consideration, we are going to reprodu our address here:

THE RELATION OF THE TRADE JOURNAL TO ITS INDUSTRY

By Arthur I. Judge, Editor The Canning Trade

LAST year your Association made me break a resolve nearly a quarter century standing—never to address a Co vention, a resolution made because I talk to nearly ever one of you every week through The Canning Trade, and it do not seem right, either, to take up some other fellow's oppo tunity, or to punish you further.

However, it might be well to definitely place the position the trade journal to its industry and make perfectly clear, possible, just what the trade journal is for, and how the industr and its journal can best co-operate. Co-operation today is th keynote of successful business, and I am prepared to say, aft the many years that The Canning Trade has served the canne that a better degree of co-operation on the part of the canne with their journal, and possibly on the part of the journal wi the canners, must work for the greater benefit of both. In oth

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.

words, there are possibilities here that should be taken advantage of.

Many of you may consider that any paper, whether it be the city daily, the popular magazine, or the trade journal devoted to its one prescribed line, is merely a "business" entered into by the owners for the money they can make out of it. With respect to the monthly or weekly magazine published to furnish good literature—"reading"—in other words, for the entertainment of its readers, that money-making charge might obtain, though there are ample grounds for defense there, too. But is your daily paper a mere personal effort to make money? Not at all. The daily paper is almost as necessary to our daily life as is food; it is a public institution, serves a place in life that cannot be measured by money, and especially by the 2c or 3c which you pay for the results of their wonderful combination of news-gathering, news-recording, news-printing and news-distributing systems. You buy your daily paper, glance rapidly over it, because it is expected to assort its news so as to cause you the minimum amount of trouble in finding just that particular thing you are interested in; you read it, gain the information you seek, and then toss the paper aside, with the expression that there is nothing in the newspapers today. Truth is, we are all badly spoiled; we have too many servants always at hand to wait on us, to even think for us. The daily paper has to cover every activity of the human family, in every city and State and country of the globe, and not alone lay before you an accurate account of it all, but, through its editorial, digest these happenings and interpret them in their likely effect upon us, our country or business, as the case may be. Think of it! Every activity of human nature, and yet men complain that the daily is not definite enough, not accurate enough, does not get the exact shading of the truth as the chief actor alone can see it. We quarrel with our obedient and willing and immensely busy servant because he does not take time to get down to the minutest details. The daily paper has not the time and cannot afford to have experts for every industry to "get down to the details." That is where the trade journal comes in.

The trade journal might be defined as your trade lawyer, one who is employed by you at the princely salary of $3.00 per year—and not always paid even that munificent sum—to watch the markets of the world and to advise you about everything of interest or importance. But I rather prefer the definition of the trade paper as the great wireless mast, which gathers from every quarter of the globe everything of passing interest to its readers, assembling, arranging and presenting these matters as viewed through years of experience and in the language or "lingo" of its industry. And not only presenting or doing its "newspaper work," but going into those details and particulars as no other publication can possibly do; assorting, arranging and translating them as they effect you; and not only that, but being in intimate touch with numerous members of your industry, in every section of the country, able to see the question from all angles and to present it in a knowing, understandable manner.

I once asked Secretary Frank Gorrell to write me a history of the National Canners' Association, and he answered that he had been too much in the thick of the battle, while I, as Editor of The Canning Trade, had always sat up on the mountain looking down on the battle since its earliest beginnings, and from my position could see every detail and things that he, as the active Secretary, could not possibly see. That I could see both sides of the contest and was better able to judge of its merits than anyone in the midst of the striving. And isn't that true?

In the more than 45 years that The Canning Trade has served the canners, and that is what the journal was created for—"and ever since ain't done nothing else but"—it has never owned or been financially interested in a case of canned foods, a machine or a supply; but having begun when canning first began in a commercial way, it has lived its whole life among you, but it can see things without the bias that must come from financial interest; it can and does look over the whole field of battle—not just in Wisconsin, or Maryland, or California, but in all these places, and everywhere else, and then give you the true version of things, backed up and bolstered by its long experience. That is the mission of the true trade journal.

But there is more than that to it. It can be of invaluable service to you in effecting thorough co-operation between the canners. I have said that a trade journal is like a lawyer to its industry. But a lawyer does not merely serve his client; his client has confidence in him, works with him, co-operates with him. If you did this with your trade journal, it would be able to do many things it cannot now do. Let me hasten to say that there is a very fine amount of this co-operation and absolute confidence in your trade journal, and I want to take this opp tunity to thank you for it. But fix it in your mind firmly t we are your friend, striving always to help you and to furt your interests; that we are working for you, and then you v feel that impulse to work with us. You need not be afraid us; we have never betrayed your interests, and we do not inte to do so if we know it—and we will know it.

We have a lot of jobber readers, and some of them h complained: "Judge, you always favor the canner." You your life we do, when it comes down to a choice of which s we take. This does not mean that we blindly see nothing the canner's side; it merely means that rightful interpretati of the Bible's injunction—"that no man can serve two master We serve the canners.

Just think what would be the result if it could be arrang so that every canner, everywhere, would co-operate entirely w us, furnishing information in confidence, and then, through ca ful, regular reading, accept and back up its trade journal. you put the confidence in and had the confidence in your tr journal, you could do the things you now dream about, but f it impossible to do. If that were the case, don't you think t the "fishing for suckers," the taking away of goods at pri far below the market, would end?

Make your trade journal actually your trade journal; use and make your fellow-canners read and support it. This ind try as an industry has never seemed to consider that it ou to help its trade journal. You know that your competitor bre the market because he does not know the market or conditio Yet how many of you have thought that you should urge such competitors to become subscribers? How many of you h told your supply man to show his confidence in his wares giving them the white light of publicity by advertising them your trade journal? If you had a house organ, like an As ciation bulletin, you would not hesitate to tell those who d with you to patronize it—and they would do it. You know t would. You can tell them to patronize your trade journal w a much easier conscience, and you will, thereby, be helping y self. With better support we can give you better service.

There is no more splendid industry at the disposal of Creator than the canning industry, because it is the feeding the multitude with the safest and best foods on earth; the c serving of the season's plenty for the time of want, and that the identifynig characteristic of the civilized man over the s age. So I am proud to be a fetish in such service; proud have a part in your great work; believe intensely, as did father ahead of me, the founder of The Canning Trade back 1878, that the day must come when the can will be the pantry the world; and my only plea now is that you understand a realize the position which your trade journal attempts to p in your business, and help it as it tries to help you.

Who Makes the Market?—Consider the matter of your m ket prices. Who makes them? We sometimes hear compla that our market page is not correct. If you happen to sell a price above or at a price below the quotations therein given, y say the market page is incorrect. Until there has been est lished an Exchange, where your broker can offer your goo have them bid for and sell them, as is done with wheat and ot commodities, there can be no such thing as an actual market canned foods. Without that market page of prices you wo have only a "rumor" market, and you know how you have b "played" for years by rumors. You "hear" or "are told" t a competitor has cut the price, and, not to be outdone, you cut the "rumored" price, and another competitor, cursing you, c again; and so the process goes on. That market page is ca fully corrected up to the last minute, and you can have confide in it and use it as a basis of trading. After all, it is only co dence in the grain quotations, for instance, that causes the gr farmer to turn to his daily paper to know the market price a base his price accordingly. In court cases that page is accept and if canners, everywhere, would but put confidence in t page, it would easily serve them in the same way. And t would stop "the fool selling" we so often hear about, and sa the canners money! Wall Street is only Wall Street because business recognizes that there must be some rallying point, so point of beginning. The industry of canning foods for hum consumption is as important as stock considerations, at lea but it has not, generally, followed in the footsteps of other bu ness. It is time it does this, and I have shown you the way.

Here is a kind of co-operation that can easily take your bu ness out of the "gambling class" and give it some form of s stance; for if every canner rallied about this standard th could not be the raids made upon it that now too often happ That is a service distinctly the part of your trade journa

eater, possibly, than all others because you make your money lling your products. It is well to have highly efficient produc- n methods; you must keep informed on all matters affecting ur business, the latest and best machinery, the most service- le and suitable supplies, and the latest scientific accom- ishments of your laboratories are all necessary and needful; t of what avail are all these if you sell your goods in ignorance their real value, upon a guesswork, or worse, basis? The aximum of service on the part of your trade journal will come ly when the rank and file of the industry learn to stand to- ther through the use of this service, and when all demonstrate eir confidence by upholding their trade journal and by striving make all use this service regularly.

And that brings me to one feature too often heard of—that any canners leave their journal lying on their desks unopened. matter how vital the message that issue may contain, it can of no value unless you read, and get it. You don't know how any opportunities you may have missed through not opening ur paper. This much we can promise you who may be guilty this practice: if you once get the habit of opening your jour- l as soon as received—on Monday mornings or sooner—you ill never want to be without it. Try it for a while, and I'll bet u will join that great mass of canners who say they would not without it for anything. Because it is your journal, published r canners, about canned foods, and nothing else. Your objec- nable competitor would no longer be objectionable if he were ell informed. He does what he does because he knows no bet- r. Spread the use of your trade paper and you will not merely lp the journal, but help yourself.

THURSDAY MORNING SESSION.

N many respects Thursday morning's session was more inter- esting and eventful than any other; first, because it was held in the open, with everybody present, and secondly, because it as the culmination of the meeting's activities. Reference to e program seemed to indicate that it would be all Raw Product esearch Work, lead by Prof. C. G. Woodbury, of the National anners Association, but results proved otherwise, as you will id by following this recital.

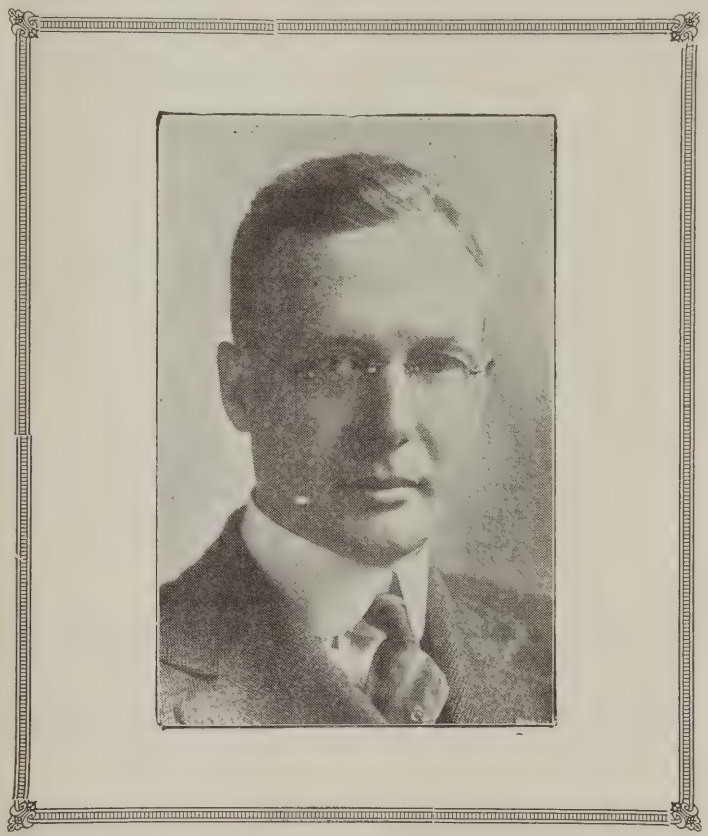
Prof. Woodbury opened the meeting by reading the report the Raw Products Committee, as given below; but he stopped ter each paragraph to explain and to enlarge upon the report. uch of this will appear at the end of the report, which we are ving in toto so that you may have the whole matter in front you.

BUREAU OF RAW PRODUCTS RESEARCH

National Canners Association.

aw Products Committee, Wisconsin Pea Packers Association.

TENTATIVE MEMORANDUM FOR UNIVERSITY OF WISCONSIN ON RAW PRODUCTS RESEARCH PROGRAM.



By C. G. Woodbury.

N November, 1922, the Wisconsin Pea Packers Association appointed a committee on raw products to foster the im- provement of canning crops used by the Wisconsin canning dustry. The idea underlying the appointment of the committee as to develop co-operation with the College of Agriculture and xperiment Station of the University of Wisconsin, and with ie Bureau of Raw Products Research of the National Can- ers Association, in promoting investigation and research look- g to the improvement of the yield and quality and the reduc- on in hazards of production of canning crops, especially peas, Wisconsin.

Need for Additional Information—Examination of the pres- t situation in the State shows that there is need for addi- onal information on the part of canners and growers of can- ng crops, along a number of lines. In some cases this informa- on is perhaps already available through previous research, but ay not be known generally to Wisconsin canners and farmers. other cases it seems clear that additional research must be dertaken in order to provide the information essential to pre- nt losses which now are sustained yearly both by growers and nners of peas.

Meeting Wisconsin Raw Products Committee—The following emorandum records a number of suggestions discussed at a rmal meeting of the Wisconsin Raw Products Committee, held Madison, June 14, 1923. This conference, arranged by Mr. . E. Nicholoy, secretary of the Wisconsin Pea Packers As- ciation, and C. G. Woodbury, director of the Bureau of Raw roducts Research of the National Canners Association, was tended by the Wisconsin Raw Products Committee, the officers of the Wisconsin Pea Packers Association, and by a number of representatives of the Agricultural College and Experiment Station.

Canning Industry Dependent on Research—The canning industry, by its very nature, has a special interest in agricultural research. Continued increase in efficiency of production, improvement in quality, and removal of the hazards of crop production by every means at the command of agricultural science constitute the foundation both for a successful and permanent agriculture and a successful and permanent canned foods industry.

CHAS. G. WOODBURY

Chief Raw Products Bureau

National Canners Association

The following memorandum includes a number of suggestions relative to the further expansion and development of certain lines of work of the Agricultural Experiment Station. We hope that these may meet with approval and be put into effect at an early date. Progress along the lines indicated, looking to the reduction in the hazards of growing canning crops, better protection from insects and diseases, and improvement in yield and quality of the product are, we believe, fundamental to the success of the Wisconsin canning industry.

PEA ROOT ROT OR BLIGHT

Rotations—We feel that the seriousness of the root rot problem in Wisconsin and the value of the crop involved abundantly justifies the expansion of the present research program in order that more rapid progress may be made in developing a thorough understanding of the subject. While the Wisconsin Station did pioneer work in showing the necessity for more general practice of rotations in order to reduce losses from root rot, the information seems not yet sufficiently complete to make possible clear-cut recommendations on rotation practices to growers and canners of peas. With a better understanding of the distribution of the diseases-producing organism in Wisconsin soils and of soil and crop factors which may pre-dispose to susceptibility, it would be possible to plan acreage more intelligently than is now the case.

The general recommendation at present seems to be to practice a three to five-year rotation in order to avoid root rot. There appears to be considerable variation, however, in the necessary time interval between crops of peas depending on the soil type and the amount or number of root rot organisms present in the soil. In some instances it seems possible to grow peas every

other year. In other cases on pea-sick soils the crop has failed even after the ground has been out of peas for eight to ten years. A better understanding than we now have of the reasons for these differences should make possible in each community or on each soil type the planning of such rotations as would permit the growing of peas as often as is consistent with safety from the standpoint of permanence of the industry. If a five to six year rotation is advocated for a given locality whereas a three-year rotation would be safe considerable additional burden is placed on the industry involving higher overhead costs, a wider distribution of viner stations, longer hauls to the cannery, etc. On the other hand, where peas are grown repeatedly on the same soil or with insufficient rotation it has been shown by experience that the soil may in time become so "pea-sick" that it must be abandoned for pea growing. Factors affecting the virulence of the organism under different cropping conditions and on different soil types should be investigated more thoroughly in order that the shortest safe rotations may be worked out definitely both for the older pea growing regions in Wisconsin, and for those parts of the state in which the industry is just beginning.

Varietal Resistance—There seems to be some evidence of differences in susceptibility to root rot of different varieties of canning peas. Some canners report that both green and yellow Admiral are less subject to damage from root rot than other varieties of sweets, and especially more resistant than Alaskas. We would recommend intensive research on the subject of varietal resistance to determine whether such differences actually exist, and if so the bearing of such difference on the varieties of peas to be used by canners on different Wisconsin soils.

Breeding Resistant Varieties—The subject of breeding for greater resistance should be given serious consideration. We wish to commend the valuable work which has been carried on along this line by the United States Department of Agriculture in northern Michigan, but respectfully suggest that, in consideration of the importance of the problem to Wisconsin, research on root rot and breeding of peas for resistance to disease might well merit intensive work on the part of our own institution.

PEA VARIETY IMPROVEMENT

We wish to record our appreciation of the effort which has been carried on for several years to breed superior varieties of canning peas. This work has been centered chiefly at the substation at Ashland. In view of the immense progress which has been made in the improvement of varieties of small grains, field corn, and other crops both in Wisconsin and elsewhere, it would seem that there is every reason for believing that similar decided improvement may be made in varieties of peas for canning. Such work should result in improvement not only from the standpoint of disease resistance referred to in the peceding paragraphs, but from the standpoint of flavor and other qualities of the finished product, and from the standpoint of high yield to the grower. We would suggest that the importance of work in these directions is sufficient to merit more liberal support. This type of work seems to afford a special opportunity for close and effective co-operation between the Experiment Station and the canning industry. Certainly new varieties which seem to have merit on account of high yield, uniformity of maturity, trueness to type, earliness, and other plant characters, should be subjected to critical canning tests before being disseminated to the trade. The Wisconsin Raw Products Committee begs to tender its good offices in arranging for early canning tests of new varieties which may be in process of breeding up at the present time. Provision for adequate canning tests may involve carrying on of the pea breeding work on a larger scale. We are convinced that such larger scale work would result in more rapid progress and earlier benefit to the growers of canners' peas.

Seed Distribution—There is perhaps another problem in this connection which should be mentioned. With peas, more than with most other crops, care in seed production is necessary if the purity and integrity of the variety or strain is to be maintained. Unless every precaution is taken to prevent mixture, and unless constant attention is given to rogueing of stock seed fields, a pea strain of the highest merit may deteriorate very rapidly and soon become commercially worthless. An effective method should be developed to protect the purity of improved strains and varieties which may be introduced by the Wisconsin Station. While this problem applies generally to introduction of improved station varieties of any crop, it applies with special force to peas. We shall be glad to confer at any convenient time as to how the canning industry may co-operate in helping to perpetuate the value of strains and varieties of peas of experiment station origin.

We would suggest that early provision be made for the employment of at least one thoroughly competent plant breeder with suitably trained assistants to give exclusive attention to improvement of varieties of peas for Wisconsin.

PEA APHIS

Losses from aphis constitute a production hazard to whi gorwers and canners are continually exposed. The available ev dence indicates that these losses are considerably greater tha has generally been supposed. While serious disaster from p aphis has been comparatively rare in any given locality the a gregate reduction in quality and yield from so-called moderate i festation is of serious economic importance. Every effort shou be made to speed up the work on aphis control and to furni an answer at the earliest possible date as to whether the u of nicotine dusts or other insecticides should be taken up ge erally by canners and growers.

Facts regarding migration of aphis from other crops to pe wintering over on perennial hosts, crop practices which may employed to reduce danger of serious infestation, development cheaper and more effective insecticide, improvement of m chinery for applying dust or other control agents, are all su jects on which work needs to be done. We note with satisfacti that the United States Department of Agriculture has great strengthened its investigational work on aphis control and h located its field headquarters in our state. The canning indu try is lending effective co-operation to the carrying on of t aphis investigations.

SEED INOCULATION

There appears to be a real need for more definite inform tion on the value of inoculating seed peas with nitrogen-fixing o ganisms. Information already developed on this subject by t Department of Bacteriology has been extremely helpful, but t general broad question as to whether Wisconsin canners as su should see that all canning peas are inoculated remains witho authoritative answer. If investigation shows that it is general profitable to inoculate seed peas, then the question remains as whether the university is prepared to supply the large quantiti of inoculating material required by individual canners, or wheth recourse should be had to commercial preparations. If canne are to be directed to commercial sources to obtain inoculati material for treatment of car lots of seed peas, then it is high important for canners to be informed by some method as to whe safe cultures may be procured.

The technic of seed inoculation on a large scale basis al needs to be developed. There is room for very helpful furth service in this connection from the Department of Bacteriolo

Professor Woodbury called attention to the fact that t amount of money spent by the state to help Professor Delwe in his work at Ashland, Wis., on the improvement of seed strai was very meager, and should be much greater. He reminded t canners that there was a very important conference of agric tural experiment directors with the Department of Agricult to be held at Washington on November 20-21st, and advis that by all means the Wisconsin canners be represented the In accordance with this the Convention moved that their fi secretary, W. E. Nicholoy, be sent there.

He likewise called attention to the fact that there are la blocks of degenerate Alaska seed stocks—wild cat stocks, rai by farmers, called all sorts of names, and which contain t dreaded Vandallia, or purple blossom seed; and in answer inquiries suggested that members consult with Secretary Ni oloy who has a list of reputable seedsmen, and who can larg guide the canners from this danger. Asked if there was a way to detect this purple seed, Mr. Stevenson, of the N. C. said there was a chemical method, difficult for the layman, whe in an iron sulphate is used to develop the iron present in t seed. He explained the seed is small, and the flowers purple pink, but that rogueing out can only be done by a trained expe and not easily then, until the plant has flowered.

In the study of the green aphis, or pea louse, he explai the interesting experiments which were made at Columbus detect the height at which these mingled lice—for when necess appears it seems there is a clan of them that can and does t wings to move to another section—and said that the 45 foot hi net, spread with a gummy substance, and marked so as to idcate the exact height at which these insects were trapp proved quite successful. They were caught as high as 35 to feet from the ground. Speaking of the aphis he questioned i were not better to charge off the losses due to this as inevita because while some methods of spraying and other treatme seemed partially successful, they had not as yet discovere sure cure. He explained that a grasshopper machine, which v rigged on two wheels, and beat the lice into a receiver, showed high as 85 per cent. efficient in removing the lice. This was best plan the students of this troublesome pest had yet devis

Corn Shaker

Black Discoloration in Corn.

Mr. Corn Canner :-

If you are troubled with Black Discoloration in your corn here is a remedy--use our Corn Shaker.

This thoroughly mixes the contents of the can and the black disappears.

Shaking also gives the corn a rich, creamy appearance.

AYARS MACHINE COMPANY --- SALEM, NEW JERSEY.

Brown Boggs Co. Ltd., Hamilton, Ont. Sole Agents for Canada.

After a long series of other questions on the matter the chair suggested that a motion to continue the work of the committee be made, and this was done and unanimously concurred in.

Modifying the Contract—In line with the adoption of the Warehousing Plan in the settlement of swell claims, Chairman Johns, of the Contract Committee, presented the form of clause drawn up by ex-President James Moore, and adopted by the Western Canners Association, and which reads as follows: (To be inserted in place of the Swell Claims clause as used in former contracts.)

> Goods sold under this contract are packed in compliance with the "Food and Drug Act of June 30, 1906," and are guaranteed against spoils.
>
> (a) If sold for delivery from future pack, to August 1st following date of billing.
>
> (b) If sold for delivery from spot stocks, for six months from date of billing.
>
> Payment shall be made by seller on certificate of identification and destruction of spoiled goods at Zonal warehouses, maintained by the National Canners Association, to which spoils shall, at the request of the seller, be shipped by the buyer for official inspection, identification and destruction.
>
> Claims so established shall be paid within thirty days at invoice price, and freight to warehouse, if incurred.
>
> All claims for spoils must be made and bills rendered by buyers to seller on or before August 1st, in case of sales against future pack, and not later than six months from date of billing, in case of sales from spot stocks.

After some debate this clause was unanimously adopted. An additional clause, in relation to the payment of such claims, was added:

> "or at seller's option in lieu thereof, on certificate of identification and destruction of spoiled goods by officers of State or municipal departments of health.

This was inserted to cover claims of a can or two, too small for reference to the warehousing inspection. Two other clauses were added to the contract:

> (1) This contract is not negotiable, except upon the written consent of the seller.
>
> (2) This contract is valid only if properly signed and returned to the seller in (reasonable time.)

These additions were likewise accepted.

Label Allowance Accepted—The request of the wholesale grocers for an increased label allowance was debated and it was finally agreed to increase the allowance, using the same basis as that adopted by the Western Canners Association, and which is published elsewhere.

A Canners' School at Madison—Secretary Nicholoy explained that the Madison authorities were ready and willing to devote some days to a school for canners, and that this presented an opportunity for the canners to show their interest in the help the State was willing to render; to demonstrate that they wanted this help, and that therefore all canners should take part in it This is not a thing that can be left to the Association or to some few members, but that all canners must take part. Upon putting the question the great majority expressed their willingness to be there, and the dates of December 10th to 15th were set.

Costs of 1924 Higher—The discussion on this important feature developed the fact that seed costs, both spots and futures, indicated an increase of 1¾c per dozen, advance on can prices 2½c per dozen; green product 2½c per dozen, making nearly 7c increase in these three items alone, and that labor was not taken into consideration. At 80 cases per acre it was shown that every advance of $1.00 per bushel on seed means 2½c per dozen.

The election of Directors and the revision of the By-Laws was then considered, but as these will be reported in the business sessions, we will leave that.

The present term of the business secretary, W. E. Nicholoy, expires on April 1st, 1924, but he was so loudly praised and sung to, that his retention for another year (and we predict for many years to come), was made by acclaim.

The treasurer's report was found correct and adopted.

The Memorials Committee brought in resolutions upon the death of two prominent men, which resolutions will be published elsewhere.

A committee was appointed to protest against the advance in can and seed prices, and to see the parties at interest and present the Association's protest.

The meeting wound up with a "three-times-three" for Secretary Nicholoy and the singing of the Wisconsin Canners Slogan, as follows:

On Wisconsin, On Wisconsin,
The State that grows good peas.
Win their favor through their flavor,
All to the good are these.
On Wisconsin, On Wisconsin,
Proud we are of you,
Spread the good news,
Spread the glad news,
Peas are good for you.

Dr Goeres and Secretary Nicholoy, both of good voice, prove real cheer leaders, and the assembly made the rafters ring, an brought the visitors in adjoining halls to see what was going o These Wisconsin boys sing well, sing lustily and believe in wh they sing.

THE AMUSEMENTS

On Tuesday evening the American Can Company and th Continental Can Company joined forces in entertaining the en tire Convention at a theater party. The show was a good vaud ville and all enjoyed the hospitality.

On Wednesday evening the Allied Industries, which mea the Canning Machinery Men, the Supply Men, the Brokers an others, played host to the entire Convention with a vaudevill dance and buffet luncheon, given in the big ball room of th Milwaukee Auditorium. And they needed all the room availab for the crowd was there, and bent upon dancing and feasting. good orchestra furnished the music; some imported talent, the shape of spritely young ladies who knew how to dance an sing, and "kid" the old boys, furnished the theatricals, and th Convention danced itself out, to a late hour, after partaking the bountiful lunch that had been provided. It will be noted th latter was in place of the usual Chisholm-Scott Co, entertai ment, as that firm withdrew in favor of all members of their pr fession, a graceful and neat act.

FINIS.

(NOTE—Report of the business session will be publishe next week, as owing to rush the Association was not able t complete same in time for this issue.—Editor.)

Meeting of the Western Canners Association

Chicago, November 7-8-9, 1923

Large Attendance Came Early--Hear Warehousing Plan And Adopt It--Better Label Allowance Granted--To Draw Upon Members For Canned Foods Week Contribution.

RESIDENT J. W. HILL, of Des Moines, Iowa, makes a very capable presiding officer, and it was not his fault, nor from lack of effort on his part, that all the meetings did not art promptly on time. With Secretary J. A. Lee, President ll did about everything he could to get the members into the eeting hall on time, except to go down into the lobby and carry em up bodily. Last year—and Presidents for years before m on end—the then President "Roy" Clark stormed up and wn and berated the members, saying if they did not want the eeting to say so; but they straggled in late, interrupting the eakers then and again this year. In fact, President Hill opted the plan of starting the meeting so that they would have e opportunity to interrupt, and it worked!

Nobody, of course, is individually to blame for this tardiness nich has become second-nature with canners' meetings; but mething ought to be done. We are not at all fond of the shion of the day—"there orta be a law"—but we would sug- st that in preparing programs it be stated at the top that the eeting will absolutely start at the hour set. And then start it. nd set the time for each address. A little preparatory work the program, allotting an exact time and number of minutes each speaker might work wonders. The opening session of is meeting, for instance, would then have read:

OPENING SESSION

Crystal Room, Hotel Sherman, Chicago, Nov. 7th, 1923

10:00 A. M.—Invocation.

10:03 to 10:10—Secretary-Treasurer's report.

10:11—Appointment of Special Committees.

10:12 to 10:27—President's Annual Address.

And so on down to the finish. Stick to it and the crowd ould stick.

There was a very good crowd present, for Chicago had been ceiving canners all week, first for the Board meeting of the ational Canners, and then to stay for the Western meeting. was a well-dressed and thoroughly contented crowd, as we ave said before, because none of them seemed anxious about ay goods they might still have in the warehouse. And once e meeting was well under way, they filled the meeting hall and tened attentively to all the speakers, and took keen interest the motions and actions. They had heard the decision of the nners to adopt the Warehouse Plan, and they were anxious know what the wholesale grocers would do with it. And be said to their credit, they backed up the action of the National ssociation in a very unanimous way.

The outstanding work of the Convention was the adoption this Warehouse Plan, which was done unanimously, and the anting of a better label allowance in response to the request ade by President McLaurin, of the American Wholesale Gro- rs' Association, and who had just intimated that he thought s Association would adopt the Plan. They responded to the peal to support Canned Foods Week by passing a resolution make a sight draft on any member who failed to remit the 0 per line of machinery asked. This came during the Thurs- ay afternoon session, which had been turned over to the Canned oods Week Committee, and the Chairman of that Committee, yal F. Clark, acted as Chairman of the meeting.

This resolution was as follows:

THE CANNED FOODS WEEK DRAFT RESOLUTION

Mr. Fred Stare—I make a motion that the Secretary (Colonel John A. Lee) be instructed to draw a sight draft against every member of the Western Canners' Association for $10 for each line of machinery, to be used in advertising of Canned Foods Week, who have not made their donations by December 1st.

Motion seconded.

Chairman Clark—The motion has been made and seconded that our Secretary be instructed to draw sight drafts on members who have not contributed to Canned Foods Week Fund. All those in favor of the motion will signify so by saying "Aye."

CARRIED UNANIMOUSLY.

The second matter of importance, the new label allowance was in the form of a report from the Committee as follows:

J. W. HILL
President
Western Canners Association

REPORT OF CONFERENCE COMMITTEE ON LABEL ALLOWANCE

By Mr. E. W. Virden, Chairman

I HAVE to report that the Conference Committees of the American Wholesale Grocers' Association and of the Western Canners' Association have had under advisement the subject of label allowance, and while a good deal can be said as to whether or not there should be a label allowance or what it should consist of, we face the fact that it is already in existence, and that there is no possibility of eliminating it, and I don't know that it would be at all desirable to do it.

I was at one time oposed to making any label allowance, but I have been educated into the matter.

We have arrived at the conclusion that the principal thing was the question of what is a fair allowance and have that graduated over the different sizes of labels—Nos. 1, 2, 2½, 3 and 10.

We feel that in reaching our conclusion in this regard it would not be fair to penalize the large canner to the extent that there should be a label allowance in excess of what his labels would cost him by buying them in large quantities. The manufacturer buying in small quantities pays a larger price. But in the conclusion we have arrived at, this small producer will save the difference between what he would pay by buying in small quantities and what he would pay if he bought in large quantities.

We, therefore, arrived at a basis of an allowance which we could recommend for the adoption or discussion of the meeting, as follows:

Label Allowance

On No. 1	cans.....	$1.00 a thousand
On No. 2	cans.....	1.25 a thousand
On No. 2½	cans.....	1.60 a thousand
On No. 3	cans.....	1.95 a thousand
On No. 10	cans.....	3.50 a thousand

with the understanding that this allowance is on full-length labels, lithographed in 3 or 4 colors.

I am happy to say that the Committee is united on this proposition, and it is met with approval on both sides.

Mr. Stare—Mr. Virden has explained the situation very fully. I want to say, however, that it has developed in my experience that there are many inequalities in the label allowance. There are some buyers demanding the full cost of their own labels, and are getting it. In other instances there were very nominal allowances made, with the buyers furnishing very good labels. The price they got was ridiculous in comparison.

Another fact is that the National Wholesale Grocers' Association is very sympathetic with our problems, and we thought it a very good time to get their views. Their ideas at first were far beyond what we finally agreed upon.

I hope this report of the Committee will be agreed upon and that the trade will meet the provisions. There seems to have been a policy of getting just as much out of you for their label allowance as they possibly could. This new provision gives you a starting place. I think it stabilizes the label allowance perfectly.

It was adopted unanimously.

As the entire work of the Convention is epitomized in the report of the Resolutions Committee, for the sake of the busy reader we append here this last act of the meeting.

REPORT OF THE RESOLUTIONS COMMITTEE

Whereas, It is with a deep feeling of regret upon the part of your Committee that we call your attention to the irreparable loss through death of your former associates—William C. Leitsch, of Columbus, Wis., and Carl E. Hutchinson, of Randolph, Wis.—who, as we all know, had for years been prominently identified with the canning industry of Wisconsin. They both gave generously of their time and talents to the work and interest of the canning industry as a whole.

Therefore Be It Resolved, That the officers and members of the Western Canners' Association extend to their bereaved families and relatives their heartfelt sympathy, and that the Secretary of this Association be instructed to place this resolution upon the records of this meeting.

Whereas, The success of this Convention has been largely due to those taking part in the program;

Therefore Be It Resolved, That an expression of appreciation be hereby tendered for the part each has taken.

Whereas, Any proposed increase at this time in the price of tin cans may be injurious to the canning industry, and,

Whereas, The best interests of the can manufacturers, canners, wholesalers and consumers might be adversely affected by any increase in tin can prices, and,

Whereas, A report is now being circulated that the price of tin plate to can manufacturers will be increased to a point affecting the price of tin cans, and,

Whereas, A report is also being circulated that steel manufacturers are not proposing an increase on certain other steel products;

Therefore Be It Resolved, That this matter be called to the attention of the Special Committee of the Western Canners' Association.

Whereas, It is recognized that in view of the advance cost of the operation of transportation by rail that the transcontinental carriers have at this time apparently granted the fullest measure of relief to the canning industry in the way of freight rates, West-bound to Pacific Coast territory, but that it is still a matter of very great concern for the Middle Western canner. That he finds one agency indulging in the handling of interstate traffic and commerce is not yet placed under the jurisdiction of the Interstate Commerce Commission, namely, vessels engaged in the handling of passengers and freight between Atlantic and Pacific United States coast ports of call by way of Panama Canal;

Therefore Be It Resolved, That it is the sense of this Western Canners' Association that the members of the National Congress of the United States have their attention drawn to this condition, which is adversely affecting the interests of the canners in the Middle West, and that they be requested to take such steps as will place said agency of interstate commerce and its rules, rates and regulations under the full and complete jurisdiction of the Interstate Commerce Committee, and,

Be It Further Resolved, That we express our appreciation to the Traffic Committee of this Association for the splendid work it has been able to accomplish for the benefit of the canners of the Middle West during the past year.

Respectfully submitted,
A. O. DAWSON,
MERRITT GREEN, JR.,
M. W. JONES,
Committee on Resolutions.

With this digest of the meeting's activities, we will r proceed to the detailed report of the Convention, but we w to impress upon all caners that the series of addresses is wor of the most careful reading and digestion. Almost every ph of the industry is covered, and by experts, and you would m a serious mistake if you skipped any of them.

THE OPENING SESSION

November 7th, 1923, 10 A. M.

AFTER the delays above referred to, President Hill deci to call the meeting to order, and requested the Rev. J. Lee to make the Invocation. He responed with a touch appeal to our Creator, during which all stood with bowed he

After announcing the special committees, the President t read his semi-annual address, as follows:

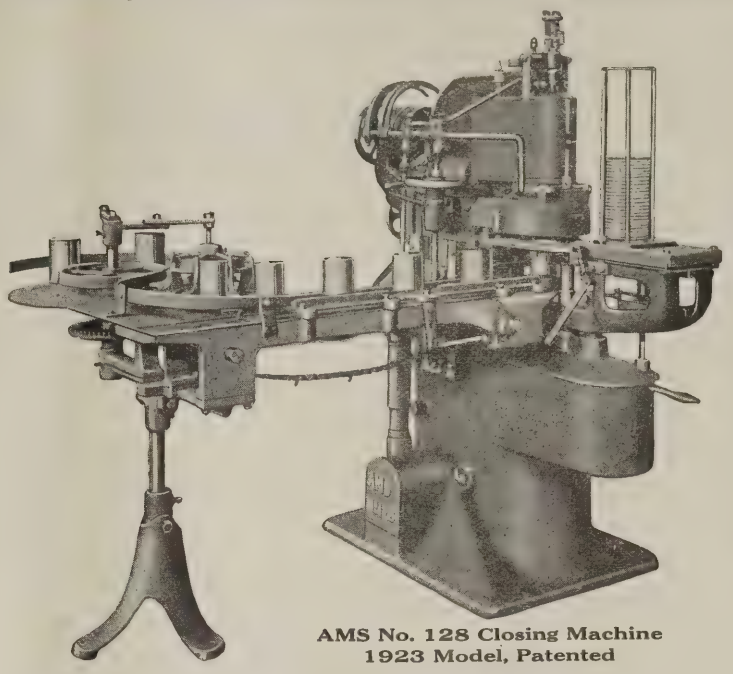
THE YEAR'S ACTIVITIES TO DATE

Thanks for Hearty Co-operation—The Outlook—The Increas Demands for Quality—The Spoilage Question.

By J. W. Hill,

President Western Canners Association.

IT is not my purpose to inflict you with a long-drawn-out address, but simply a brief resume of the situation as presented to me.



I desire at the outset, however, to express my appreciation of the countesy extended me at your last annual meeting at Milwaukee by election to the Presidency, but feel that you made a mistake by so doing.

This Association, as you are likely aware, is the oldest organization of its kind on the continent, and one which includes in its active membership 180 of the leading canners in the Middle West, and as addition thereto as associate members, all of the up-to-date brokers, supply and seed houses, also the machinery manufacturers, of this vast territory. Hence, I have reason to appreciate the honor which you have conferred upon me.

ESTABLISHED 1880

I desire at this time to express my appreciation of the attendance of our associate members. We are pleased to have you with us, gentlemen, and we want you to feel perfectly free to participate in the deliberations. Our interests are mutual, and we are pleased to extend you a most cordial welcome.

I am firmly impressed with the idea that there exists today a closer and more friendly and a more helpful attitude between the canner and those who represent the various interests with which we are associated. This co-operative spirit **should** prevail, for the success of one means the success of the other, and mutual confidence should be manifested all along the line. It really embodies the idea of "service for our fellow-man" which always results in happiness and satisfaction to the parties thus mutually engaged.

Outlook—The general conditions of our industry today are much improved over those which have attended our operations during the past three years, and the most conservative canners feel that we have now crossed over the roughest places and that an era of prosperity confronts us. The economical history of the past leads us to believe that the period of acute disability is practically over and that we are gradually passing into normal conditions.

Finance—The financial situation, which is an important factor in our business, has materially improved during the past six months, and those who find it necessary to secure additional funds at the peak of their operations are more readily doing so and upon more favorable terms than heretofore.

It is advisable, however, to have satisfactory arrangements made for necessary funds beforehand, as the jobber now seems to be more inclined to withhold future orders, by which the packer carries a greater portion of the load than formerly.

Grades—There seems to be an increasing demand for the better grades of canned foods. The consumer is paying higher prices for them than formerly, and he demands a better quality. Hence, it is "up to us" to see that our plants are operated accordingly if we expect to "stay in the game."

I might incidentally remark that in making an extended trip though the West, South and Southwest, I found this idea prevailing everywhere with regard to better grades. I am convinced that the time has come when this matter must be given our very careful attention.

Spoilage—There are several important matters claiming the attention of the canning industry at the present time, the more prominent of which is the mutual adoption of some method by the National Wholesale Grocers' Association and the canners' organization on the question of the disposition of spoilage. The matter is in the hands of committees representing both parties at issue, one from the National Canners' Association and one from the National Wholesale Grocers' Association.

Four plans have been suggested, of which you are, possibly, fully advised:

First—Graduated percentage allowances,
Second—Label-return credit plan.
Third—Half per cent flat allowance.
Fourth—Return to central warehouses for inspection and credit.

It is presumed that the canners will accept any plan agreed upon by the National Committee, but if this organization desires to discuss the matter as a means of information for our committee, I would recommend that it be made a special order of business for such an hour as may suit your convenience.

Canned Foods Week—This important matter is in the hands of my efficient predecessor, Mr. Roy Clark. This feature of publicity of the canning interests has met with the approval and hearty co-operation of the jobber, retailer and broker, and must surely have the enthusiastic endorsement and pledged support of every member of this organization.

Mr. Coolidge, before he became President, gave this movement his official endorsement and approval. Now that he is President of the United States, he no doubt is of the same poinion.

I believe, gentlemen, this is a movement in the right direction. I respectfully suggest that the Committee on Resolutions give same due consideration in their report.

Seed Corn—The supply and grades of seed corn are of supreme importance at all times, but the unfavorable season for maturity during 1923 makes it doubly so for 1924. I hope the "Seed Supply Committee" may be able to present such information in their report as will remove the anxiety of some of the canners present.

Federal Grades of Crops—The U. S. Department of Agriculture is considering the advisability of establishing federal grades on cannery crops and the basis upon which such grades should be formulated. This question is in charge of Mr. Charles W. Hauch, "Official Investigator of Marketing," who has been requested to be present at this Convention and more fully explain the proposition. He has been given a position on the program, and I feel sure you will be interested in his presentation of this matter.

Label Allowance—The question of label allowance under existing conditions is a matter which is now giving many of our members much concern. No disagreement of any consequence on this point has heretofore existed between purchaser and canner, but it is claimed by interested parties that this item of expense has become one of more importance, and we are requested to join with them in a conference on the subject. If you desire to do so, I would recommend the appointment of a committee to confer with a like committee of the wholesalers, with the request that they make report, with their recommendations, at a later session of this convention.

National Counselor—The United States Chamber of Commerce desires that a representative of this organization be selected, to whom matters of general public interest could be referred. I have taken the liberty of appointing our official Secretary, Colonel Lee, to this position, and hope such may meet with your approval.

The Canners' Review—In order that we might maintain closer touch with our membership and at the same time keep them advised upon matters of mutual interest, I prevailed upon Colonel Lee to undertake the issuance of a semi-monthly bulletin, which he has named "The Canners' Review." This has been mailed to every member of the Western Canners' Association during the past three months, and, judging from the many compliments and congratulations extended him, I feel that it is fully appreciated. I take this occasion to officially congratulate Colonel Lee upon the outcome of this venture. He, as usual, does all the work and the cost of the Association has been nominal. I ask that you, as members, extend the editor every possible encouragement. I believe, gentlemen, that this is a move in the right direction, as it keeps us in touch with all matters of importance, and hope you give Colonel Lee your full co-operation.

Buffalo Convention—I wish to call your attention to the forthcoming meeting of the National Canners' Association, which will be held in the City of Buffalo during the month of January. The officials are now planning to make "The Canned Foods Show" a special feature of the 1924 Convention. A large and commodious hall has been secured for the exhibits, and the individual canner respective associations will be given every convenience and courtesy possible in arranging proposed exhibits.

The officers of the National Association are very desirous of making an exhibit which will be a credit to the canning industry, but they cannot accomplish it alone. They solicit the co-operation of all canners and canners' organizations in the movement. The expense will be nominal, and it might be well for you to have a committee appointed to represent the Western Canners' Association, with instructions to co-operate with the Exhibit Committee of the National Association.

Reports of Committees—You have been presented with copies of the program of this Convention, which contains a list of various committees, all of which are on subjects of much importance to the canner, and it is hoped that the chairman of each committee will call a meeting of his associates and be prepared to present a report at the proper time.

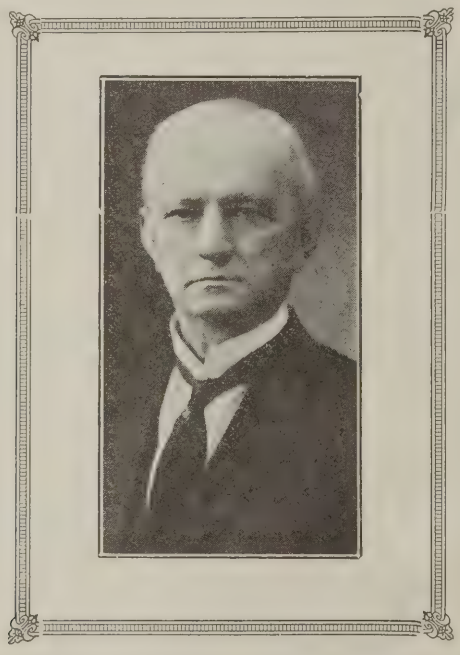
I very urgently request that this be done. The chairmen of their respective committees can call their men together and give a report on the subject assigned to them, which no doubt will be of general interest to all members.

In closing I desire to publicy express to Colonel Lee, our affable and efficient Secretary, my appreciation of the splendid service rendered the Association during the past six months. He promised me at the Milwaukee Convention that he would "do all the work" if I accepted the presidency, and he has kept his word. I thank you.



The President then requested Secretary Lee to make his report, which was done, as follows:

REPORT OF SECRETARY-TREASURER OF THE WESTERN CANNERS' ASSOCIATION

By John A. Lee

AS Secretary of this Association, I beg to report that the growth of membership since our April Convention at Milwaukee has not been as large as I would like, we having secured only eighteen (18) new members—all but two, canners or active members. The losses in membership by resignation since that meeting have been two.

The period between April and November is not propitious for securing new members, as all connected with the canning industry are so busy that they cannot be induced to consider matters of that nature. We exhausted our electricity a little previous to the April Convention in securing 104 new members, but I am very hopeful of a good increase between now and our next April Convention, as that is our harvest time for membership.

"Col." JOHN A. LEE [Wrangler]
Secretary
Western Canners Association

We have established a method of communication with our members which we call the Western Canners' Review, a semi-monthly letter, and have issued four copies. The expense of sending it to our members is small, and it has the influence of keeping our membership in touch with each other and our Association work. The directors approved the work.

We now have a membership of about 350, as compared with a membership of less than 225 when I assumed charge. The roll at that time embraced about 275, but at least fifty of them were being carried without payments of dues and without interest in our work.

We have eliminated that element and our membership is now on a fairly solvent and substantial supporting basis.

Our committees have been at work and have been trying to protect the interests of our members along practical lines, and their reports at this Convention will outline their efforts.

My report as Treasurer is that I have arranged to have all dues payable in January of each year, beginning the first of January next, and to have payments in that way simplified and uniform. New members joining after April meeting will pay only half a year's dues, so as to have all payments start from January 1st and to be good for the year. The collections since the April Convention at Milwaukee have not been large, as most of our dues were paid previous to that meeting. I reported $2,050 cash on hand at that time, and now have only about $850, but the expense of the Milwaukee Convention, which was heavy, has all been paid and all other expenses are paid. The expenses of this Convention at Chicago will be comparatively much smaller.

We have about $600 unpaid dues for 1923, which I consider collectable and expect to get them in this year. Some of them have been paid during this Convention. I estimate the collectable dues for 1924 at about $4,250, a much larger amount than ever in the history of the Association.

I hope, with the help of the officers and members, to increase the membership to 500 by the time of our April meeting. My accounts are in the hands of the Auditing Committee, and that committee will give you their report.

The report was accepted and ordered filed.

The President then neatly introduced the President of the National Wholesale Grocers' Association, who responded as follows:

THE WHOLESALE GROCER AND HIS PROBLEMS

Believes a Graduated Allowance for Swells Fair—The Urgent Call for Quality in the Cans—Advocates an Advertising Campaign by Canners and Wholesalers.

By J. W. Hersher, President.
National Wholesale Grocers Association.
At the Opening Session.

WE grocers who are here attending the National Canners Convention, came with the sincere desire of helping solve the problem which was confronting the industry, that affects you and affects us.

It is a great pleasure for me to come before you. I have always been a great believer in association work, and those of you who are here today are to be congratulated on having the association spirit. We need to carry on this work

You folks as the producers of the foods, and we as distributors, are engaged in one of the greatest businesses on God's green earth. We should not fail to appreciate the position we occupy in our business life. We are the producers and distributors and warehouse people for the food supply of—you might say—the world. That work deserves our closest and most careful attention at any and all times.

Obviously, conferences must be held between the producers and distributors on various topics of interest to buyers and sellers.

As I understand it, there are 4,000 canners in the United States. I am convinced—and I say it with no feeling at all except that I am trying to be helpful—that the canners as a class are unable, not through lack of desire on their part but simply because of the position they occupy, to appreciate and understand the problem of the wholesale grocers, who have 400,000 to 500,000 customers Consider the retail grocers, delicatessens, hotels, cafes and various other eating houses and clubs, and all other people who buy food for distribution to the ultimate consumer. I don't believe there is a canner in this room who can imagine the vast problem confronting the wholesale grocer. Any inefficiency in the wholesale grocery business comes out of our "Net"—when there is such an animal.

I simply want to bring out this point, that in discussing this problem with you I want you to bear in mind the fact that we have to deal with 500,000 customers daily. When you have placed your orders through us, you are **through** for another season; whereas the wholesale grocer's work first begins then and continues until the goods are consumed. The wholesale grocer is carrying a load. In the discussion of any canning problem, I want you always to try and visualize the problem down until the stuff is really consumed by the consumer.

The improved quality of canned foods during the past few years has given me one of the greatest surprises in my career. Only the best that can be turned out should be put in a tin container, in order to make your business worth while. You must remember, folks, that the stuff in a tin can must be bought by the purchaser on faith. He can't see the contents when he buys. More and more people are coming to live in apartments in metropolitan cities; and I am sorry to say that these people seldom

see any fresh-grown foods. They are impressed with the idea that the fresh foods displayed in windows are "fresh" from the ground. But the stuff might be several days or several weeks old. Whereas the stuff in tin cans is much fresher because it goes into a tin can the same day it is taken out of the field.

Wholesale grocers, except in a few instances, do not deal in fresh food or fruits.

In regard to the one-half of one per cent. flat allowance on swells, I think you folks have brought on this difficulty by allowing it to certain organizations. Consequently it has been made a general proposition all along the line, whether it is a fair proposition or not. We have come to the conclusion that a graduated allowance was fair.

Just for a moment on that subject: your guarantee on swells in the past provided a guarantee only until July 1st, next. Then you step out from under. I want you to realize there is always a large amount of stock after that date left on the shelves of the wholesale grocer, as well as on those of the retailer. We have given you folks free insurance. It hasn't cost you a cent. We have seen you out whole.

Supposing we didn't. To quote one retailer, the retail grocers would say, "All right, I'll just quit you, and sell fresh goods."

Would you be benefited by such action?

The best friend you have in the whole world is your wholesale grocer friend. We endeavor to do everything we can to render service to you canners. Our industry, like yours, has been having a trying time during the past few years. Conservative canners feel that things have gotten sort of normal. I feel that the wholesale grocery business is in a very healthy condition.

We are simply seeking, with this flat allowance for swells, the simplest way out with the least expense to you folks. Add it in to your cost. If you all do it, as you did the cost of your raw material and labor, this percentage allowance can be included with safety in the cost of your product And, except for undue spoilage, you folks are through with it.

The problem was not adjusted yesterday, but sooner or later must be adjusted. We have the general Pure Foods Act, and whether No. 381-A becomes amended or not remains to be seen. But we honestly are of the same belief that it is a very unwise move on your part. I want you folks to remember that 500,000 direct customers of yours must be considered in this matter.

We have discussed informally in some of the conferences with you folks and among ourselves the appointment of a joint committee—or a new association might be organized for that purpose—to advertise each day "CANNED FOOD"—not a particular brand, but a commodity.

Think what happened to spinach!

Increased consumption is to your interest and ours. You folks realize the difficulty in raising money for your Canned Foods Week. But how nice would it be if the canner and wholesale grocer would come to an agreement something like this:

The wholesale grocer donates ½ cent per case on each order, and the canner makes a similar donation on each sale. With 20,000 000 cases of goods a year, on that basis you would have $200,000.00.

Then, place that money in the hands of an advertising committee. It is the best way money could be spent. I want you folks to give that matter some thought.

I have no quarrel to make with the price of a commodity, but quite often the public is informed that the spread is too great between producer and consumer. It looks to me as though some statement should be made or evidence produced along the line. When some of these charges are made to politicians, they naturally blame the middle-man. That has been the age--old cry.

I do not know whether the price of cans is too high, or the can companies making too much money. It does seem to me as though this exhorbitant container cost—I mean the tin can—gets no notice in the discussion about this or that. I do not know whether you folks are easy and let them charge you such prices as they desire, or not. But when the container costs fifty per cent of the price you charge me, I think it needs a little investigation.

As to Canned Foods Week, regardless of what follows or happens, I think I can assure the Canners Association that we are going to do everything we can in the furtherance of that idea.

Your President remarked about jobbers not buying on futures. You canners throughout the country are not troubled with the increased city taxations, and it is getting rather difficult for institutions of all character in the cities to carry large stocks of merchandise within the city limits. Taxation has gone rapidly upward in the cities. I do not think the farming elements have been penalized to a similar extent. That is the reason for dealers not wanting to deal in futures.

There is just one more plea I want to make to you. You want to have your invoices made out uniformly and your cases so marked and your labels so made out that a customer will be able to ask his retailer for a certain can and be sure he is getting it. You would be surprised, gentlemen, if you went to a jobber's and looked through his stocks and saw the lack of harmony and uniformity. That is something you could very easily straighten out. I want you to give this your serious consideration.

I appreciate the opportunity, Mr President, of talking to this meeting, and thank you.

President Hill then asked Mr. Preston McKinney, vice president and secretary of the Canners League of California, to address the meeting, as he was obliged to leave before the day on which the program announced him.

THE CALIFORNIA METHOD OF BUYING CROPS BY GRADE

Special Corps of Inspectors—Backed by State Food Authority—Growers Like the System—Canners Heartily Favor It.

By Preston McKinney,

Vice President and Secretary, Canners League of California.

OUT in California we are just completing the tomato pack. If the frosts do not come, we may be able to run another two weeks. Before we are through with tomatoes our plants will begin to operate on olives, and before the olive season is over, the asparagus and spinach will begin to roll in. Long before either of these items are fully packed, cherries will be ripe, and it will be early June. Apricots will crowd cherries, and peaches and pears will come in quick succession, so that by the first of August, we will be at the peak. Before peaches and pears are through, tomatoes are back with us again, and we have completed the cycle—a year of hard work. It is like the old advertismnts of Sam T. Jacks' Theater in Chicago—a continuous round of pleasure—the curtain never drops.

Naturally, we are envious of the pea canners of Wisconsin, and the corn canners of Iowa and Illinois. As we understand your game, sometime toward the end of June, you gather a few huskies around you, get into your motor car, drive over to the plant, unlock the door, get up steam, and then stand by while the peasants bring in the raw products, and the automatic machinery grinds out the dollars for you. This arduous labor on your part, as we understand it, lasts five or six weeks, and then tired out, you hie yourselves to Florida, and at least three miles off shore, where the flying fish play, you bask in the sun, not too far away from the vessels that fly the English flag. During this period, between seasons, which lasts, as we understand it, nearly eleven months, the only worry is that late June will come again, and for another six weeks you must labor, and incidentally, your golf game will suffer thereby.

Seriously, it has occurred to me that you might be interested in an element of association work, which was experimental with us in California three or four years ago, but which this year has proven to be successful. This work started in the San Jose district, which I may say in passing, is the canning center that produces most of the advance thought in the industry out there. Several years ago, every season some canners had difficulties with the State and Federal food inspectors. Occasionally, they condemned our canned tomatoes, and on several occasions, canners who thought their work was being interfered with, unjustly contested the State and Federal action. The officials always won, and we concluded that they were on the right track, and we, while not on the wrong track, were not as careful as we should be. All the canners in Santa Claire county, of which San Jose is the center, met one night in the Von Dome Hotel, and we had as our guest, Professor Lee, enforcing officer of the state food law. We found he had no horns, and that he was just as sincerely anxious to approve our quality as we were, and he made the rather astounding statement for a food official, as we thought then, that he was not interested one whit in legal prosecution; his interest he said, was improving the quality, and he hoped the time would come when there would be no prosecutions—because the quality would be beyond repreach. He said, however, that he wished that he had a half dozen more inspections, because he did not think he was doing his job justice.

Professor Lee also said that after a good many years of watching cannery operations, he was certain of one thing, and tht was, no matter how efficient the cannery, you could not produce a good product with poor raw material, and further,

that where clean and sound raw material was delivered at the receiving platforms, there were mighty few instances where the canned product was not also clean and sound and of good quality.

As an outgrowth of this evening's exchange of ideas, the canners themselves raised a fund to employ three inspectors. These men first reported to Professor Lee for instructions, although they were not officially under his supervision. He told them, however, his ideas of quality in tomatoes. They then reported to me, and I told them their job was to see that every canner who subscribed to the fund, received his products in accordance with Professor Lee's ideas, and that the examination of the finished product to be made each week, would be proof as to whether they had done their full duty, so you can see it was not a whitewash job.

Every canner agreed that it was my duty to report any member to Professor Lee for prosecution, if he received any raw material which was below Professor Lee's ideas. And it was not a hollow threat! During the first year, we had reported several of our own members to Professor Lee, and his own men went down, confiscated several lots, and served notices on these our own members, that he would close their plants if they received any more off grade tomatoes.

The plan worked so well in Santa Clara county that two other major tomato producing districts of California asked that we put in the system, and all have been operating in this manner for three years. As a result, not a member of our organization this year or last, has produced a tomato which even approached the danger line. If any canner comes within thirty-three per cent. of the danger line, we call it to his attention. In other words, through this co-operative method, we have created a two-thirds margin safety, and we are getting better.

Having been successful in this work on tomatoes, and through them having gained a better understanding of each other's problems, and of the great fact that quality is competitive, as well as price; that is, you can afford to go to extremes in quality if you know the other fellow is doing likewise, we have extended this inspection work to fruit and other vegetables.

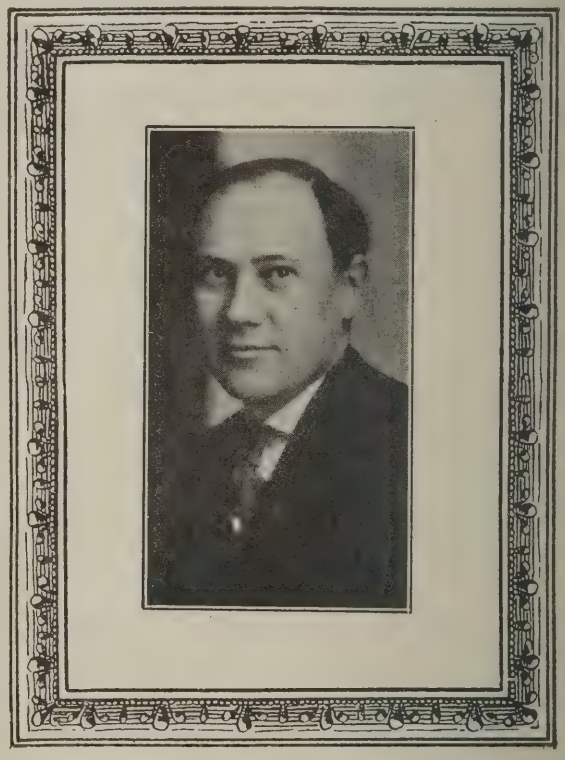
Last year we began on peaches in the great Sutter county district. We put men at the two leading receiving stations there, who have no direct authority over the individual receivers, but who watch all the receiving, and who are called in as arbitrators, whenever, there is a controversy between the receiver and the grower. In fact all of this work has a great advantage in our relationship with the grower, for the odium of rejecting a lot of inferior fruit or vegetables rests with the association rather than with the individual canner.

Of course, in receiving fruit, there is not the element of mould count, such as is the case with tomatoes, and therefore, the rigidity of the receiver is a matter of individual judgment, and the great advantage of having our men at these receiving points lies in the fact that my persuasion and constant comparison, our men are able to standardize the receiving, and to standardize it on a high plane. The grower cannot come back and say So and So is receiving more liberally, because it is all standardized.

Our work was so successful last year, that this year we have taken over, as an association, all the receiving facilities of the two leading points in Sutter county; have purchased the scales, have built regular receiving platforms, and have installed test graders, test machines; have employed traffic officers and weigh masters, all under the direction of the Canners League.

It is surprising the improvement in the quality of fruit, as a result of this collective effort, and also in the good will of good growers. There is nothing which takes the ambition out of a grower as quickly as the knowledge that, despite all his efforts at cultivation, pruning, spraying, etc., he gets the same price for his product as the man who is careless and slovenly.

WHAT IS THIS WAREHOUSE PLAN



How Will It Work—And What Will Be the Effect—Can All Canners Use It?

By Royal F. Clark.

Chairman Conference Committee with Wholesale Grocers.

Wednesday Afternoon, November 7th, 1923.

YOU have all heard a great deal in the last few days regarding swell allowance. You, no doubt, are familiar with ruling 381-A. This was an order prohibiting the shipment of swells interstate. However, that does not represent a new law in the traffic of swells; neither in reference to interstate shipments. The Pure Food and Drug Act prohibits the shipment interstate of spoiled canned food; and 381-A merely serves as an announcement from the Bureau of Chemistry that it would enforce the law. Naturally something must be done by way of chnge of contracts between producer and distributor. Throughout the country it has been the practice to include in the contract a provision to the effect that upon request from the canner, the distributor will ship back any spoiled goods or swells for his examination. This provision has not always been taken advantage of by the producer. You, as producers, as well as myself, in most instances paid the distributor's "swell" claims without exacting re-shipment of these goods. It would probably have been better had we asked for the return of those swells to our own plants to ascertain what the trouble was.

ROYAL F. CLARK
Vice President
National Canners Association, and *Chairman*
Canners Conference Committee

Prior to the introduction of this ruling, there had grown up between producers and some distributors a habit of allowing a flat swell allowance, and in some instances as high as ½ of 1 per cent. This was inaugurated by the chain stores in the first instance. And we granted the request of chain stores to the tune of ½ of 1 per cent., and not to the wholesale grocer. Naturally the wholesale grocer was very much disappointed with the discrimination carried on between the producer and distributor; and I want to saw now it has been and is unfair to the wholesale distributor to grant that concession to one distributor and refuse it to another. You must understand that they did have a just grievance.

As I said before with the promulgation of 381-A it became necessary to do something, and that is the reason they have met so often in an effort to solve the problem and in an effort to promote a plan that would be fair to producer and distributor.

There are certain fundamentals that must be kept in mind. The public has an interest in this question. The ultimate consumer has an interest in this question. I didn't believe, until I heard statements made by numerous state food officials, that there was such a large amount of traffic in and consumption of spoiled goods. It has been a practice of unscrupulous retailers to take off the labels from swells, and resell the goods, although collecting the claims for spoilage.

The canning industry must work in co-operation with the Federal and State and municipal food authorities of this country

ARABOL

PASTES and GLUES

For Labeling, Wrapping or Sealing

No matter what your requirements are - - there is a guaranteed ARABOL adhesive for every purpose.

Whether you label by hand or machine - - on tin, glass or other surfaces - - there are special ARABOL adhesives that have been tested and indorsed by the Canning industry for 35 years.

Let us know your adhesive requirements and we will gladly send free samples for a test.

if we wish to increase consumption of our products. We must have their co-operation, and they must have ours.

The issue between the distributor and the producer is a clean cut one. The Conference Committee representing you have taken the position that it is their duty to follow their goods to the ultimate consumer, and to see that those goods (spoiled goods), are destroyed and that there isn't a chance in the world of those goods getting into the hands of the consumers, and to protect the distributor against losses through swelled goods.

The distributors have taken the position that this whole matter can be solved by including in the contract a provision calling for a flat allowance. That is their position. They say that more laws should be put on the statute books—State and Federal—to see that all spoiled goods are destroyed. They say there are 400,000 retail grocers in the United States. The distributors say they don't want a flat allowance to make money out of it. They simply want it to save bookkeeping all around.

However, it is the duty of any organization to protect the efficient within its ranks, and not place a premium upon inefficiency. We maintain that if we issue a degree for a flat allowance, there would be an incentive created at once to deliver ½ of 1 per cent. of swells to take care of the flat allowance. Such a plan would operate so that a canner whose swells amount to only one-tenth or one-twelfth of one per cent. would have to pay one-half of one per cent. swells according to the flat allowance. On the other hand, here is a canner, unscrupulous and careless, whose swells amount to even more than 1 per cent. Thus such a plan operates to put a premium on the inefficient canner.

In the meeting between the wholesalers and the canners, the Zonal Warehouse Plan—which I will explain briefly to you—was discussed thoroughly. At that meeting both wholesalers and canners believed that this matter should be placed before the Food and Drug officials of this country, both from a commercial and health standpoint. They believed it would stop the trafficking in of swelled goods. There had been so many complaints that they felt something had to be done, but there are officials in the Bureau of Chemistry who doubted if that would give us control of the swelled goods problem. They are as anxious as the canners to formulate some plan that would offer better control over spoiled goods. During the convention of food officials of the country at Duluth they intend to present this plan.

It was understood that the wholesale grocers would join with us to try out this Warehouse Plan.

We have never had the backing of the food officials of this country that we ought to have, and I am not criticising them. They will admit this themselves. They are charged with the enforcement of the laws of the State or municipality, wherever they may be. They have a large territory to cover, and have never had the opportunity to study the question of spoilage the way our men in our own laboratories have had. They are anxious to co-operate with our men, to study the problem, and try to work out some control.

Through this plan, or any other plan, the unqualified support of our food officials, would make it a greater advertising for us than all the advertising that has gone on in the canning industry throughout the last ten years. Why? Because it would go over to the consumer. The food officials are watching over them, and make such rules and regulations that will prevent spoiled goods getting into consumption. This plan we have proposed has been supported by the food officials.

For years they have wanted some plan of this kind, and have often taken up the matter of doing more to control spoiled foods.

Our friends, the wholesale grocers, say this plan won't work because it costs too much money. We have the money to finance it. But it gives them a great deal of worry. Afraid the plan won't work and go through and be a success.

Now, we have the money. We have made the arrangements and are ready to start. We have the backing of the food officials of this country, and it will be a SUCCESS. And I think you will agree with me when you learn a little more about the plan.

The purpose of the plan is to give the canner a chance to investigate the claims of swells. It is fair to distributor and canner. Every single paragraph of the proposed plan is backed by precedent

We are asking the jobber to do nothing he has not been doing, except that instead of returning the goods to the warehouse of the individual canner, he will return them to a Zonal Warehouse of the Association. Please remember that.

Just consider this proposition. We must assume the relationship between distributor and canner has been all right up to the issuance of this new ruling. There had been no request on the part of the distributor on the question of swelled goods, until this ruling was proposed. Then they felt, it seems, that here was a good chance to get an extra "trade discount." Not all of them, my friends, want to do anything of that kind.

I have a letter from the Bureau of Chemistry, which I will not read, reviewing the problems that have confronted them in the past. And then, as they state in their last paragraph, they are willing that the plan we propose be tried out.

In other words, they announced that they would not prohibit the re-shipment of spoiled goods interstate wherever we have a warehouse, and we have already established Zonal Warehouses in 19 different places in the United States.

Notices will have to be sent to both State and Federal officials when these goods are moved.

I want to say, gentlemen, that we don't expect by any means that every spoiled can of food will be sent to a Zonal Warehouse—any more than every spoiled can of goods was sent to your factory heretofore. And we expect the same relationship to exist between canner and wholesaler that existed heretofore. But, when you desire to have your goods examined, this plan affords you an opportunity to send these goods where they have technical men, and you will find out then what is the cause. It also takes care of cases of unusual swells. Not many of us experience cases where 100 or 150 swells occur in one shipment. But that does happen, and the distributor must be protected. In such a case undoubtedly, where 100 or 150 cases of swelled cans occur, the National Canners Association would send their representative on the spot for examination, and save the freight charge involved if the goods were sent to the Zonal Warehouse. Although this is a complete plan, it is not a finished product. You can't expect that to be the case.

But it is a step, we claim, in the right direction, and so complete that it is worthy of a trial, and we have convinced the food officials that it is complete enough to be worthy of a trial.

After two days session here in Chicago we went before the committee of the National Wholesale Grocers Association. Only four were present. The remaining members of the committee were not there last evening. The plan was presented. A representative of the Bureau of Chemistry was there. Dr. Gelger, of the Health Service Bureau of the United States, was there and answered questions put up to him. Both of these government men were in hearty approval of this plan.

Notwithstanding the fact that this plan has the approval of food officials, the National Wholesale Grocers Association's Committee made the statement that while they were there clothed with authority to accept, they would only act if we agreed on some kind of a flat allowance.

We met the committee from the American Wholesale Grocers Association this morning, and while it was not expected that they had authority to finally approve of this plan and could go only so far as to approve the principle, they unanimously voted in favor of the principle as outlined by our committee.

They made very clear that the reason they were in favor of such a plan was that it gave absolute protection to the distributor, and that it meant protection to the ultimate consumer, and that they believed with your co-operation that it meant a large increase in the consumption of canned foods in the future. They took a very broad view of it, and will recommend it to their conference committee for their approval of this plan.

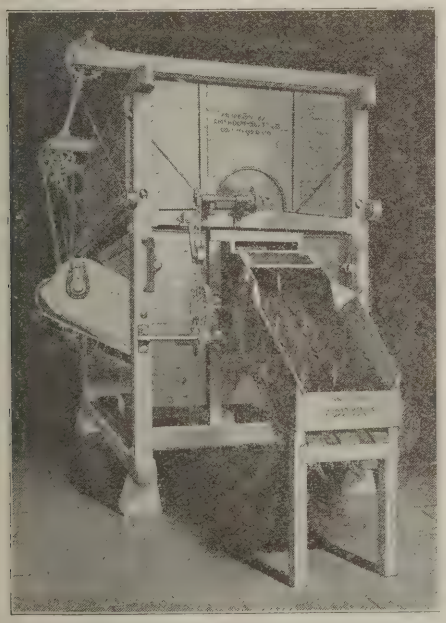
We were to have a meeting with representatives of the Chain Stores Association, but I think they will not be here on account of sickness. But I want to say something about the Chain Store Association. They are not of one mind on this proposition by any means. I know of several large chain store concerns who are unalterably opposed to any flat allowance, and will not enter into any contract with such a provision.

There is one large chain store, however, (the Atlantic & Pacific) who characterized this plan—adopted after many months of study—as an idle dream, and they say they will make no agreement with a canners association that does not allow ½ of 1 per cent. on all commodities, although there is a difference in the amount of spoilage, running from one-tenth of 1 per cent. in some instances to 2 and even 3 per cent. on others.

In all the conferences we have had no distributor claimed that this spoilage as far as tomatoes, peas and corn were concerned, exceeds one-fifth of 2 per cent., and it is generally agreed that it is much lower than that. And all agree that on all commodities spoilage may run as high as three or even four per cent.

Yet this chain store says that unless we allow this flat allowance of ½ of 1 per cent. on all commodities, and let the pea canner, corn canner, and tomato canner grant this same allowance, "we don't make any arrangement with you."

I don't know what we're coming to. But not all the chain stores voice that gentleman's sentiment or take position with him. As far as the National Wholesale Grocers Association is concerned, I think I can truthfully say to you that many, many wholesale grocers belonging to that association are not in favor of a flat allowance, but do prefer such a plan as we have proposed. I believe they will follow in line.



The officials of the National Canners Association have been authorized to proceed, and arrangements will be made for inspection. The food officials have said it would be all right.

Surer of Results

No matter what you sterilize there's always one outstanding advantage in using A-B Continuous Agitating Cookers and Coolers—you are surer of results.

Quick uniform cooks insure quality in the can—sturdy, simplified construction eliminates delays producing quantity output.

Write for Catalogue.

ANDERSON-BARNGROVER MFG. CO.
San Jose, Calif.

We are going to proceed with this plan. I would like to know whether the wholesale grocers—notwithstanding that this plan as the approval of the food officials—are going to take the position that they will have nothing to do with it. How long are we going to be dictated to by the distributors?

They are friends of ours. We need them. They need us. You can't get along without them. But can they get along without us? Some wholesale grocers have embarked in the canning game for themselves, but did not succeed. We need them and they need us. I sell a carload of peas to the wholesale grocer. Whose goods are they? If they are spoiled on whom is the responsibility placed to see they are destroyed? On whom should the responsibility be placed? I say it rests exactly upon the man on whom it should rest. On the producer.

If they are our goods, then shall we all have something to say about how they are to be handled, and the examination that should take place on these goods?

We think this plan is O. K. And, gentlemen, we have to stand pat. We didn't say that yesterday. The National Wholesale Grocers Association said it would not come to an agreement with us unless it embodied some kind of a flat allowance. The American Wholesale Grocers Association and the food officials have been present at all of the discussions. They believe our plan is sound. And I want to say it is up to you canners to include this plan for all future orders. You need not worry about the expense. The provision in this plan is that the Association will handle the matter of swells for non-members as well as for members. Non-members will have to pay the actual cost involved. It is open to everyone.

I don't believe—or if I thought that there was a majority of canners in this room, or even one out of ten who believes in a flat allowance, I would tear up the papers and go home. But I have not found one who is in favor of it.

This is the plan that will absolutely work out and give satisfaction in the end, both to the distributor and to the canner; and you will have the satisfaction for once at least of knowing that you have done something for the protection of the consumer and something for the health of the public and that has the absolute approval of the food officials, something that we have not had in the past, because we have been too busy to take care of these things.

(Continued Next Week.)

NEW PEA STANDARD DEFINITIONS ADOPTED

NOTE—The importance of absolute accuracy in the Pea Standards, given below, requires a republication of them from our issue of November 19th, with some important corrections. As below given, the Pea Standards are correct, as adopted. Editor.

The Pea Section of the National Canners' Association has been working on pea definitions of standards for a long while, and at the Atlantic City Convention adopted tentative standards. A special committee at that time was appointed to perfect these definitions, and they worked on them, and finished their work in a long session, lasting from 8 P. M. to 1 A. M. Monday, November 5th. Mr. Charles H. Hunt, Chairman of this Special Committee, and its members were present, and with them Dr. Blanck, of the Bureau of Chemistry and member of the U. S. Committee of Standards, and some others.

The outcome of their long deliberations was as follows:

Canned vegetables are properly matured and prepared fresh vegetables, with or without the addition of potable water, salt and sugar, as specified in the separate definitions for the several kinds of canned vegetables, sterilized by heat, with or without previous cooking, in equipment from which they take up no injurious substance, and kept in suitable, clean, hermetically-sealed containers.

Canned peas are the canned vegetables prepared from the fresh seeds of the common or garden pea (Pisum sativum) by shelling, winnowing and thorough washing, with or without grading and with or without precooking (blanching), and by the addition, before sterilization, of the necessary amount of potable water with or without sugar and salt.

Canned Pea Qualities: Fancy quality peas are fresh, young, succulent peas of practically uniform color and size, unless declared to be ungraded for size, with reasonably clear liquor and are free from flavor defects.

Choice quality peas are fresh peas and may be less succulent than the "fancy quality" of reasonably uniform color and size, unless declared to be ungraded for size, with reasonably clear liquor, though not necessarily free from sediment, and are reasonably free from flavor defects.

Standard quality peas are fresh, but may be mature peas may not be uniform in color and size, and may have a roily liquor.

Off-grade peas are fresh peas that lack in some other respect the qualifications of the standard quality.

Canned Pea Sizes: No. 1 peas are peas which were, before precooking (blanching), small enough to pass through a screen of 9/32-inch (7mm.) mesh.

No. 2 peas are peas which were, before precooking (blanching), small enough to pass through a screen of 10/32-inch (8mm.) but too large to pass through a 9/32-inch mesh.

No. 3 peas are peas which were, before precooking (blanching), small enough to pass through a screen of 11/32-inch (8.7mm.), but too large to pass through a 10/32-inch mesh.

No. 4 peas are peas which were, before precooking (blanching), small enough to pass through a screen of 12/32-inch (9.5mm.) mesh, but too large to pass through a 11/32-inch mesh.

No. 5 peas are peas which were, before precooking (blanching), too large to pass through a screen of 12/32-inch (10.3mm.) mesh.

Ungraded peas: Ungraded, unsifted or run o' pod are peas not graded for size before precooking (blanching).

NATIONAL KRAUT PACKERS ASSOCIATION TO MEET

Hotel Sherman, Chicago, December 4th, 1923.

This is to tell you that there will be a meeting of this Association at the Hotel Sherman, Chicago, Illinois, on Tuesday December 4th, 1923.

The figures for this season's pack will be reported and compiled at this meeting.

We are planning on having a food chemist, from the U. S. Department of Agriculture, address the meeting and report the results of his research work on the lactic acid content of sauerkraut. This will be a part of the discussion of fixing grades for kraut.

Those who are regular in attending know that many other matters of much interest are discussed.

We want all the kraut packers to attend—whether you're a member or not. Remember the time—10:00 A. M., Sherman Hotel, Tuesday, December 4th, 1923. Best wishes.

ROY IRONS, Secretary-Treasurer.

HIGHER PRICES FOR 1924 CANS.

THE American Sheet & Tin Plate Company have opened their books for tin plate orders for the first quarter of 1924 at a price of $5.50 per base box, which has been the official price since April 26, 1923, and this announcement is generally taken to mean that the official price of tin plate on January 1, 1924 will be $5.50 per base box. Can prices will be increased accordingly to cover the increase in the tin plate price, amounting to 75 cents a box over the price in effect in canners' contracts this year. This increase will be as follows:

No. 1 Cans	$1.37 per 1000
No. 2 Cans	2.03 per 1000
No. 2½ Cans	2.55 per 1000
No. 3 Cans	2.85 per 1000
No. 10 Cans	5.63 per 1000

In terms per dozen cans, which is the familiar basis of consideration by canners, the increase is as follows:

No. 1 Cans	1.64 cents per dozen.
No. 2 Cans	2.44 cents per dozen.
No. 2½ Cans	3.06 cents per dozen.
No. 3 Cans	3.42 cents per dozen.
No. 10 Cans	6.76 cents per dozen.

SARDINE SITUATION STILL VERY GLOOMY.

THE brisling prospects have improved slightly during the middle of October, says Consul Ifft, Bergen, Norway, in a report submitted to the Departmentof Commerce. Bergen has received 1,864 baskets of brisling, 125 baskets of small herring, and 120 baskets of mossa from the Sogn og Fjordane district, and it is reported that considerable shoals of brisling have appeared at various points in the Sognefjord. Small brisling shoals have also appeared in the Hardangerfjord at various points, but in both fjords the fish are in the main too small to be used as sardines and in most places hold themselves too deep for fishing. The sardine canners express themselves extremely pessimistic in regard to the situation. This is the fourth year of scarce raw material and the worst of them. The cannery storehouses are empty and it is probable that many orders cannot be filled.

THE CANNING TRADE

BALTIMORE, MD.

Wanted and For Sale.

This is a page that must be read each week to be appreciated. You are unlikely to be interested every week, in what is offered here, but it is possible you will be a dozen times in the year. If you fail to see and accept your opportunity your time is lost, together with money. Rates upon application.

For Sale—Machinery

FOR SALE—100,000 No. 2 Southern Pine Box Shooks, 5-8 x 5-16, a carry-over from our spring contracts. Will sell for less than today's market. Price delivered your station on application.

W. E. Robinson & Co., Bel Air, Md.

FOR SALE—One Kraut Cutter; one Shredding Machine, Vegetable Chopper and Mincing Machine, practically like new. Address: John E. Smith's Sons Co., 50 Broadway, Buffalo, N. Y.

FOR SALE—

We have on hand at bargarin prices for quick shipment the following, all being in first class condition and subject to inspection:

2 Sprague Inspection Tables as shown on Page 93 of Sprague's late catalog.
1 No. 14 Disc Exhauster
1 Westcott Washer about 20 ft. long
2 Sprague Goose-neck Elevators for Peas, Beans, etc.
3 Variable Speed Pulleys
3 Kraut Cutters
1 Large lot of chain, Sprockets, etc., for Corn Conveyors
5 40x72 Retorts
1 Harris Hoist
2 Emerson Dicing Machines
3 Monitor Pea Washers
2 Boiler Iron tanks 18 ft. long, 6 ft. wide, 2 ft. high

and other miscellaneous bits of canning machinery in A-1 condition, We are willing to dispose of this material at exceedingly low prices for prompt shipment and will give reasonable terms.

A. K. Robins & Company, Baltimore, Md.

FOR SALE—A well equipped jam and jelly plant, in operation since 1910, with 1000 steady customers, will dispore of controlling interest to parties or party who will take charge of plant. All books open to investigation. A good opportunity for men with capital.

Address Box A-1107 care of The Canning Trade.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

The Markets

BALTIMORE, NOVEMBER 26, 1923

WEEKLY REVIEW

Holiday Quietness Settling Over the Market—Holders Firm in Their Ideas—Canadian Buyers of Tomatoes in This Market—Lesson in Labeling—No Cause for Weakness in Tomatoes—Corn Pack of 1923—No Weakness in Corn—The Future Pea Prices —Oysters of Ruling Interest.

THE MARKET—It is not unusual for the canned foods market to slip into a very quiet condition at this time, because of the proximity of the holiday season, and more particularly since the advent of the income tax and other very special taxes which compel men to keep their inventories at the lowest possible ebb. This latter feature is a marked condition at this time, as the heads of houses hold their buyers to a strict accountability, and no happening in the market can cause them to change. They want to show low stocks when the accounting comes, and they will do it will or nill.

This market, like most of the markets of the country, shows a quiet condition this week. New York City seems to have been the exception, and has been buying fairly freely this week and in quite good-sized lots. The New York market has been hoping against hope that prices would break in their favor, but nothing of the kind has happened, and now they are forced to cover urgent wants and to stock up for their holiday trade, which nowa-days is heavy in canned foods of all kinds. This is the plausable explanation of New York's better market, and it rings true.

But, despite the quietness of general buying, there is a very healthy tone to the entire canned foods line. All canners had some futures on their books, and the delivery of these has relieved their immediate wants in the money line. None of them can look upon large blocks of surplus goods in their warehouses, and, with the immensely increased demand for canned foods and the heaviest consuming months still ahead of us, they feel that such surplus as they have is good property, and they are more willing to wait for a later market and the better prices indicated than to dispose of the foods now. Summarized, the market is quiet, trading on a limited scale, but prices firm and indications for better prices, especially after the turn of the year.

TOMATOES—It was not expected that tomato prices could continue to ascend without at least a temporary lull or hesitation. Just now we are in that lull, and some interested parties are trying to make the most of it by hinting that the market is weak, that prices will decline, etc. Such tactics undoubtedly catch some unwary canners and lead them to part with their goods; but not many. There is no weakness in tomatoes. Every can of decent quality has more than one buyer for it who will take long before another canning season can come. We do not want to see tomato prices reach too high a level. In fact, they had reached as high as is good for the market—that is, about $1.50 for No. 3s and $1.00 for No. 2s. The tomato canner cannot make all his profit in one year, and it is better that he should not try to do so. At prices above this high level, th market passes out of the line of staples and into the luxur class, and canned tomatoes do not belong in the luxury clas It is hoped the market will remain at or below this top pric and there seems no hope that it will get below it to any materia extent.

Canada has been in this Baltimore market looking for an buying canned tomatoes, where she could get the kind of good that would fit the label that must go on them in that country What a lesson in labeling for all canners, and for tomato canner in particular! You have to tell what's in the can in Canada. A tomato label reading "Two tomatoes and two small pieces equal 40 per cent; pulp, juice or added water, 60 per cent" would no sell very rapidly over the retail counters in Canada—nor any where else. In buying other items Canada exercises the sam diligence, and tomatoes are by no means an exception. In peas a "vegetable schrapnel in a sea of liquor" has to be labeled a such if it is taken. With corn, a thin soup of corn or a mass o tough, indigestible husks cannot masquerade as fancy corn unde a five-color and gold-embossed label. Not in Canada, and w pray for the day when it will be impossible in this country, too.

But with California short on tomatoes, the West generall cleaned up, and Canada coming to the Tri-States for tomat supplies, why should any tomato holder listen to the tales o weakness in the market and that prices are going to drop? Th situation is too strong rather than too weak in tomatoes. An yet No. 2 standard tomatoes have sold in this market as low a 90c, and efforts have been made to buy at 87½c, though we un derstand none could be found at such a priec. Most holders nam 95c as their lowest, and others from that up to $1.05. No. tomatoes are said to have sold at $1.35, but it is hard to fin quotations on full standards below $1.40, even in distresse hands, and most holders want at least that, and others up t $1.50. No. 10s are quoted from $4.75 to $5.

CORN—The statistics published elsewhere in this issue show that there was a very good pack of canned corn this year— 14,106,000 cases. In the last 15 years there have been bu two packs which exceeded this figure—that of 1911, when the packed 14,301,000 cases, and 1920, when they packed 15,040,00 cases. But in neither of these former record years was the ger eral quality of the pack on as high a standard as this season' And in neither of those years did the pack come upon an entirel cleaned-up market, as was the case this year. And of immensel more importance, canned foods consumption was nothing lik what it is today. Therefore, a bold comparison of the figure of the packs means nothing.

Illinois and Indiana show the greatest proportion of in crease, the former by nearly a million cases, and the latter b about doubling its usual corn pack. Maryland came throug with an increase of about 300,000 cases, and Maine and Ne York State were the only two who did not equal the previou year's output. The figures give a chance for an interestin study to market students, and we leave them to their game.

The notable feature of the situation is that canned corn i cleaning up rapidly, and the reports all say that spot stocks ar light. Without these statistics in front of us we would say tha

ned corn would be cleaned out of first hands many months ore any new corn could possibly be soaked, and it is more than ly that this will be the case in spite of the pack as here wn. This is just another evidence that canned foods are being e heavily consumed than ever before.

The canned corn market remains firm, but quiet. It will not surprising, however, if the bears make the most of these ures and try to drive the market to lower levels. Here is ere the canners can show their backbone, or lack of it. This he weak period of the canned foods market, as we have nted out above—due to the holidays and the approach of in- tory time—and if you were a buyer and needed canned corn, most of them do, you would try to get it now at a bargain. l that is what they will try to do. There is no good reason a depressed market, for, despite the figures, the stocks are heavy, and the bulk of the consumptive demand is yet to be rd from. The part of wisdom for the holders of canned corn o draw out of the market until after the turn of the year, en the entire feeling of the market will be better. The market ces remain unchanged this week.

EAS—Spot peas are so well cleaned up that they are largely out of market consideration. Prices are purely nominal, dependent upon the ideas of the holder and the quality he s to offer. The buyers need more peas — or, rather, we uld say, will need more peas—after the turn of the year, and y will pay the price for the quality they want. Never before the history of this article has the pack of peas been distributed rapidly or as early as it was this season

Future peas are holding the attention of buyers now. In our w York market you will note the prevailing quotations on these ures. The buyers recognize that costs will run higher next ason, and they accordingly expect higher future prices. The ners must be careful on this or they will find their 1924 packs ken away from them without a chance for fair profits.

PINACH—The fall packing of spinach at this point reached its height the past week, as the weather has been ideal and the best has been made of the opportunity. With the ending the week the fall rains seem to have set in, and colder weather ay be expected, thus ending this activity. Packers have been rking mainly on orders in hand, and the surplus will be light. ices remain unchanged in this item, and the demand has been ite good.

TRING BEANS—Some few string beans are packed here in the fall, but this has passed into history for the season, and not a considerable amount was added to the total. They e scarce everywhere and held at firm prices. Those who have cks are lucky, and if they can hold will be able to command eir own prices later in the season.

There were some very good-sized packs of lima beans this st season, and the market prices on them should be attractive the buyers. If the people were better informed on this article, ey would be better consumers of it, as they can be bought at e price of good peas. The market is about $1.30 on No. 2 limas, een.

UMPKIN—The year's pack of pumpkin has been light and the market is ruling strong and high. No. 3 is quoted in this market at $1.20, and in the Central West at a higher ure, where it can be found.

YSTERS—This is the season when all the world turns its attention to oysters. The water has chilled off nicely and the oysters are getting fatter and of better flavor. But ey are so scarce as to cause real worry among their handlers. is known that the total supply of oysters, of canning stock nd, coming to this market could be handled by one house, and at house would not be overworked. This reduction in the oys- supply is merely the result of gross carelessness and lack of tention on the part of the oystermen. Rightly handled, the esapeake Bay alone could supply all the oysters the world uld eat, but with every oysterman scraping the bottoms and tching every oyster in sight, and none of them making any ort at propagation, the result could be only what we see it. nd it will grow worse and not better unless the hand of politics removed from the oyster and common sense installed in place it. Cove (canned) oysters are ruling at high prices, as our rket page will show, when they can be found.

HANKSGIVING—Never in the history of the canned foods industry have all its members had better reason to bend their knees in humble thanks for the blessings of a kindly ovidence than this season of 1923, and we trust everyone will member and give thanks.

NEW YORK MARKET

A Seller's Market—Future Tomato Prices Heard—Future Peas Meeting Good Demand—The Prices—Sardine Prices Withdrawn—Corn Selling Well—Fruits Advancing—Reports of Consession on Tomatoes—Notes of The Trade.

By "New York Stater,"
Special Correspondent "The Canning Trade."

New York, November 22, 1923

SELLER'S MARKET—The canned foods market is a seller's market in practically every respect at the present time, and prices are showing a stronger tendency on most items day by day. The 1923 pack of all commodities is to a great extent cleared from first hands, and in cases where canners still have some stocks on hand unsold they are generally able to dispose of them at their own price, rather than have to let them go at what the buyer is willing to pay.

Futures—One Southern brokerage concern has put out a price on 1924 Maryland tomatoes already, quoting futures at 80 cents for standard 2s, $1.20 for standard 3s, and $3.85 for standard 10s. Considering these low prices, says the broker in question, buyers will do well to make their commitments now for next season's delivery, as every indication points to a much higher market.

Peas—Future Wisconsin peas have been meeting with a good demand, and canners are now quoting a little higher than at the opening a few weeks ago. Announcement that can prices are to be higher in 1924, together with a report that shipping containers would also be advanced, has caused the pea packers to revise their prices upwards. One of the largest packers is quoting the following tentative prices; Fancy Alaskas, 1s $2,65½ 2s $2.15, 3s $1.60, 4s $1.35, all in No. 2 tins, as are the other sizes quoted. Fancy sweets, 1s $2.75, 2s $2.25, 3s $2.00, 4s $1.65, 5s $1.35; Extra standard Alaskas, 2s $1.75 3s $1.40, 4s $1.20; Extra standard sweets, 3s $1.65, 4s $1.35, 5s $1.25; Standard, Alaskas 2s $1.40, 3s $1.20; standard early Junes $1.10. standard No. 5 sieve sweete $1.10. Many other canners are booking at fixed prices, while the remainder are taking s. a. p. orders. New York State pea canners are beginning to come into the market looking for 1924 business, and it is understood that Ohio canners have also named on 1924 pack peas, although the prices quoted by the State and Ohio packers have not yet been made public.

Standard Corn—There has been quite a good deal of business booked on standard corn during the week, at from 90 to 95 cents per dozen, cannery. Western canners have not definitely established the market on the 90 cents basis, and Southern canners are generally quoting 5 cents over this price, although some goods are still available at 90 cents.

Fruit Advancing—The fruit situation is steadily improving, from the standpoint of the canner, and prices are working upwards. Holding of standard and second quality fruits, particularly peaches, are very light in California, and the canners expect that the end of the year demand will clean them up. No. 10 pie fruit have also been meeting with a very active demand for factory shipment, and prices are stiffening on the entire line.

Salmon Firm—The position of the salmon market has not shown any quotable change during the week. Reds are now generally quoted firm at $2.35, Seattle, although an occasional seller at a price under this figure. Alaska salmon canners will probably find the British market practically closed against them next year, as a proposal is now up for consideration in Parliament imposing a tax of ten shillings per case on all salmon imported into Great Britain, originating from non-British possessions.

Spot Tomatoes—The usual report of concessions are heard, and in a few cases are undoubtedly genuine. Some canners have not adequate warehouse facilities to store their tomatoes during cold weather, and have not enough of a carryover to justify the trouble and expense of shipping them to larger warehouses where they may be safely kept. Such canners in many instances are willing to take 2½ cents per dozen less than the general market to clean their stocks. The great majority of the canners, however, are holding firm at the going prices.

and look for a firmer market yet early in 1924, after the jobbers are through with taking stock and begin to buy for their spring and summer requirements. The carryover this year is a very small one, and most of the canners will do into the new year with their holdings entirely cleared. As a result of this state of affairs, it is thought that the canners will show up at the convention in January all primed to take on future business, and with the general canned foods situation in its present firm position, there is little doubt but that the tomato canners will find some ready listeners among the numerous jobbers and brokers who will be in Buffalo for the convention.

Trade Gossip—J. W. Herscher, president of the Hubbard Grocery Co., of Charleston, West Virginia, and also pesident of the National Wholesale Grocers' Association, was in the market this week.

C. W. Glick, for the past four years New York manager for Mailliard & Schmiedell, will go to London as European manager for Bisceglia Bros., prominent California canners, with headquarters at San Jose.

Norman J. Griffith, general manager of the Stittville, New York, Canning Company, was in the market this week, making the rounds of the trade in company with Ross Yerby, manager of the canned foods department of W. D. Breaker Co., Inc.

Fred. Buehler, formerly in charge of the canned foods department of Sanford & Timpson, is now with the California Coast Products Co., who represent in the New York market the Fontana-Hollywood Co. of San Francoso, Wm. H. Sinsheimer has succeeded Mr. Buehler as the manager of Sanford & Timpson's canned foods business.

CHICAGO MARKET

Lake and Rail Shipping Season Closes—Michigan Stocks at Low Ebb—Iowa Has Small Holdings of Corn—Corn Prices Tending Upwards—California Canners Reported Delivering Short on Tomatoes—But Few Peas Offered in Market—Inquiry for Krout Quiet.

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chicago, November 23, 1923.

THE season for lake navigation between Michigan and Chicago points closes this week, and the rates to Chicago will be advanced from about 20c per hundred pound to 33½c per hundred pounds.

The holdings of Michigan canners are prettily well closed out. There are a few broken assortments and odd lots still remaining in first hands, but quantities are unimportant. The canning of apples in Michigan has ceased as the winter apples have been all picked, barrelled and put into winter storage, and this advances the price of them to a figure which is prohibitive for canning purposes, at present prices prevailing for canned apples.

The Iowa and Nebraska Canners Association reports that there remains in the hands of the members of that association only 371,370 cases of No. 2 canned corn, all grades. The sales for the week, November 8th to November 15th, were small, only about 19,285 cases.

This is explained, however, by the fact that a great many Iowa canners were in Chicago attending the Western Canners Association Convention. It also means that he canners are asking more for their canned corn than wholesale buyers are willing to pay, but all the sales reported the week mentioned were made at 90c f. o. b. cannery, excepting a few small sales that were made at 95c cannery. This shows that the market is being steadily maintained and that it is more likely to go higher than otherwise.

Canned corn in Illinois and Ohio is still to be had at 90c per dozen, standard No. 2, and there is still a little to be had in Wisconsin at 90c per dozen for standard No. 2; but the buyers do not seem to be particularly interested in standard corn at present, but rather more inclined to negotiate for extra standard and fancy quality.

Extra standard is being held in Iowa at 95c to $1.00 per dozen, while fancy corn is being held at $1.15 to $1.25 per dozen.

The advance in can prices which goes into effect January 1, 1924, is having effect on the canned foods market. The price for tin plate at this time has advanced to $5.50 per box. Ca prices will be figured on that basis.

It is reported that the pack of canned tomatoes in Cal fornia is about over and that canners of that State in man instances are being compelled to deliver short on their contract having either restricted their output or having experienced cro shortage.

Canners of peas in Wisconsin are making but few offering of spot goods for prompt shipment, as the stocks in first hand are very limited and usually are undesirable as to assortment.

Wisconsin packers have all their goods in winter storage an they are indifferent whether they close out what still remains i their hands before the close of the year, as they expect to ge better prices in the spring.

The chief interest at the Wisconsin Pea Packers Associatio Convention, held last week, was in future sales and prices. I is understood that quite a number of canners named future price during the convention and that considerable business was don by the brokers in placing future orders.

The Indiana Canners Association held their annual meetin this week at Indianapolis, November 20-21st, and the meetin was well attended and full of interest. That association is wel managed and its membership derives great practical benefit from their membership. The two days session was filled wit interest.

The demand in this market for canned beets is rather urgent but the beets seem hard to find. The Baltimore and eastern can ners seem to have such a demand for their product from nearb localities that they do not express any interest in the inquirie that they receive from the West, but the canners of the Wes are sold out and buyers will have to buy in the East, if there ar any canned beets in the East that are for sale.

There is not much interest in canned sauer kraut just a present with the buyers. The new kraut is not sufficiently cure to be desirable, and it is too early for the jobbers to experienc any briskness of demand.

The usual indifference of buyers towards making a heavy re plenishment of stock at this season of the year is being encoun tered by the brokers, who state that buyers all seem to want t go into the New Year with what still remains in their hands o canned foods, and cannot be induced to buy heavily by speculativ argument or arguments to the effect that prices will be advance or goods be unobtainable.

ST. LOUIS MARKET

Holiday Goods Absorbing Attention—Jobbers Buy Only Wit Orders In Hands—Canners Holding For Full Prices—Brokers Look For Improvement After Inventory—All Lines Show Scarcity and Firmness—Fruits Show a Quiet Market.

By "Missourian."
Special Correspondent "The Canning Trade."

St. Louis, Nov. 22, 1923

Business Quiet—With inventory time only about a month off, there is but little business being done in the canned goods line. The retailers are devoting their time and attention to holiday lines, while jobbers are only buying in a routine way. If a retailer wants any particular kind of goods the jobber has not got, the jobber goes out and buys it. That is about what is now being done. The jobber continues his hand-to-month buying. Advices from canneries state that they are not selling except at their own price. They are waiting for a healthy call when the lull now on is over. Several well known brokers here, say that while the present movement is quiet, they look for a considerable of a call later on, after inventory time, when distributors will know what they need in the way of supplies in desirable goods. Even now, they claim they have to do considerable hunting to get many items. Retailers are having a good trade and as that is the case, jobbers are not worrying over large reserve stocks.

Tomatoes—A firmness prevails in all tomato products. Buying continues moderate as most of the distributors have enough stocks on hand for their immediate requirements. The chain stores are rather active in the tomato market and some of them are offering at very low prices. Southern canners hold firm on all sizes.

Peas—Spot peas are firm with a big inquiry for cheap es, which cannot be filled in the country. It is almost possible to locate them in first hands. No. 2 sieve fancy askas are very strong. Futures are being booked to some tent by dealers here, with Wisconsin canners, either at firm ices or S. A. P. This shows the interest in peas, both old d new pack.

Corn—Spot corn is holding firm, with little fancy stock ing offered. Distributors who turned down contracts for tures now have to look to second hands, and pay a premium. andard corn is in better retail demand, than in several years.

Spinach—This is showing more firmness than it did and flects the stronger market at Southern canneries.

Sweeet Potatoes—It is stated that canners are operating ly in a small way on sweet potatoes this fall.

Fruit—There is not much interest being shown in fruits. ne local distributors are pretty well supplied with canned uits, which are coming in on future orders, so there is not uch interest being shown in offerings from the coast. This probably due to the fact that jobbers generally do not make ditional purchases for late winter and spring markets, until ter they have finished their inventories. Spot apricots are iet. Peaches are in light supply on low grade stock, so ices are strong. Pineapple remains firm while pears are eady with little trade prevailing.

Fish—Brokers who make a specialty in canned fish state at the Government's restriction on salmon fishing, in Alaskan aters, will be stringently applied, beginning with the 1924 ason. The permits issued will mean a curtailment of about 0.000 cases in the 1924 pack. Packers of Red salmon hit the ardest, in view of the new curtailment in packing. A broker ere said that they will see a firmer market on red salmon, ven if they carry it over into the 1924 pack, so holders are not nxious to sell at the inside figures.

Milk—There is no material change in the canned milk arket situation.

CALIFORNIA MARKET

teady But Quiet Demand—Spot Stocks Cleaning Up and Will Be Gone Before Spring—Some Canners Will Be Entirely Sold By End Of Year—Immense Increase In Local Consumption—Awaiting Thes—Rain—Apples More Important Than Generally Thought.

By "Berkeley,"
Special Correspondent "The Canning Trade."

San Francisco, Nov. 22, 1923.

THE Market—The California canned food market is without new features, the demand continuing steady, with no changes in prices except in rare instances. Stocks in first ands have been reduced to a much lower level than seemed kely a few months ago and it does not seem possible that here will be a surplus of anything on hand by spring. In fact iany canners will be entirely sold by the end of the year. Vholesalers have not bought to speculate, but have bought tocks largely to replace goods that have gone out to the retail rade, and have come into the market very often. One interesting feature of the demand is the increased quantities being urchased for domestic consumption. California is growing n population at an unprecedented rate and larger and larger tocks are being held for local use. This also means that more anned corn, oysters, shrimp, and other products not packed ere are being brought in. The population of Greater San 'rancisco alone, has passed the 1,250,000 mark, making it a onsuming center of no mean importance, and the population f Los Angeles is not far from 900,000.

Awaiting The Rains—Weather conditions in the San Franisco district are absolutely ideal for physical comfort, but arming interests would welcome the entry of the rainy season. While Thanksgiving is within sight temperatures are ranging rom 72 to 78 degrees every day, summer attire is still being orn and tomato fields have scarcely felt a touch of frost. Of ourse, the nights are cool and crops are growing and ripening ut slowly, but there is still an abundant supply of fresh vegeables, even of the tender varieties. The rainfall for the season as been but little more than an inch, whereas a year ago it amounted to about seven inches. A downpour is needed to enable farmers to start late fall plowing and to keep orchards in proper shape.

Apples—While but little is ever heard of California apples, this fruit has a value equal to that of apricots, of which this State produces ninety-five per cent of all grown in the United States. Up to three years ago California produced more apples than Oregon, and even now is the closest rival to that State in the production of this fruit. The Watsonville district, just south of San Francisco, is the largest producing district, growing superb Belleflowers and Newton pippins, while Sebastopol leads in the production of Gravensteins. Some of this fruit is canned, but the pack is much lighter in proportion to the crop grown than in most other varieties of fruits.

Salmon—The canned salmon market has shown additional strength of late, notwithstanding the fact that the latest statistics on this year's pack show a larger output than was considered likely while canning season was on. The insurance of the new Government regulations affecting the salmon canning industry in Alaska has much to do with the strengthening of the market, packers declaring that the new rules mean curtailed packs and higher costs. Some operators have advanced prices on Alaska reds to $2.35, but it is still possible to secure some holding at slightly lower prices. The surplus of canned salmon which accumulated in recent seasons is fast being wiped away and there are indications that by next spring all old goods will be out of Coast warehouses.

English High Tariff May Hurt Export—The California canners see in the new tariff proposed by Great Britain a further curtailment in the market for their products. Full information in regard to the measure is not at hand, but from what can be learned the duty on California canned fruits would range from 40 cents to 22 cents a dozen, depending on grade and sugar content. A very marked differential is planned in favor of British colonies.

Beans—Reports from the bean growing countries of California indicate a lesser yield than last year. The total area planted to limas in 1923 was but 81,000 acres, as compared with 100,000 acres last year, but the crop was harvested almost without loss, there having been no early rains of any consequence.

The Great Show—The fourth annual fruit show of the College of Agriculture at Berkeley now in session promises to excel all former ones in the number and excellence of exhibits. Inquiries regarding this event have been received from all parts of the United States and it promises to soon be a national institution. At the show held last year more than three hundred exhibitors took part; the displays included 105 varieties of 81 varieties of pears, 68 of grapes, 30 of plums and prunes, 25 of citrus fruits, 20 of dates, 12 of olives, 9 of jujubes, 4 of quinces and many of lesser known fruits. This year there are special sessions for growers of apricots, prunes and pears. The pear conference is to be held tomorrow, Nov. 23. Many canners will attend the show, the growers' conferences and the Marketing Day session.

Coast Notes—The Western Pacific Railroad has lined up with the San Francisco Chamber of Commerce in the fight against the Pacific Car Demurrage Company's plan to increase California demurrage rates from $2 to $3 a day and to cancel the average agreement. If current demurrage rates and the present average agreement system can be retained it will mean a saving of $250,000 to San Francisco shippers, with canners especially benefited.

Growers, packers and shippers of California deciduous and citrus fruits have completed preliminary arragements for the holding of the largest fruit exposition ever attempted outside the State. The California Orange Show and Fruit Exposition will be held in the Coliseum, St. Louis, Mo. from February 15 to 24 for the purpose of popularizing California fruits and other products in the Middle West.

The San Francisco Chamber of Commerce has arranged to send a delegation to the Northern California Orange and Olive Exposition to be held at Oroville, November 27 to December 2. This exposition is held annually to illustrate that citrus fruits ripen fully six weeks earlier north of San Francisco than they do in Southrn California.

In speaking of the plan to reduce income taxes R. I. Bentley, president of the California Packing Corporation, recently expressed the opinion that this will be a very beneficial piece of legislation. The first effect it will have, he believes, will be a general loosening up of capital which is now in hiding, greatly to the detriment of general business prosperity.

MAINE MARKET

Business Quiet—Maine So Dry Its Manufacturies Cannot Operate—Spot Stocks of Corn Far Below Normal—Short Season on Apple Canning—Clams Need Protection or They Will Become Extinct—Mr. Conant in Charge of the Apple Show.

By "Maine,"
Special Correspondent "The Canning Trade."

Portland, Maine, November 23, 1923.

THE Market—General grocery business is rather quiet for November, usual Thanksgiving trade being less than usual. This is attributed to the slack times in our manufacturing towns. This condition will continue until we get rain soon, before ground freezes. The storage water supply is so low that manufacturing is greatly hampered, and the continued dry weather only increases the difficulty.

Maine corn is pretty well shipped out, the warehouse stocks this year being way below normal. To all intents the market is bare of offerings, the few lots available having been taken up. There are rumors of two or three small blocks being held for future selling, but these must be extremely limited as there were not more than half a dozen canners who had the goods for full delivery and possible carry-overs. There have been no new prices quoted on the various styles of Maine corn.

Apple is the most important item in the Maine canned foods market. $3.50 factory is the standard price for regular grade. At least one of the larger factories is shortening its season and will close December 99th. None will operate after the new year. Goods are being shipped out as fast as packed, and it is evident that there will be no spot stocks after the close of the canning season.

Clams should be coming into prominence just about now, but they are proving their proverbial reticence by staying out of reach even of the canner. If Maine continues in the clam business some action will have to be taken to protect present beds and increase propagation. Five-ounce clams at $1.25 and 8-ounce at $1.85 are comparatively high, but canners are loth to take on much business becuse they see no prospect of a normal pack.

Sardines are "out of sight" in every way, but not "out of mind." The season is over, stocks are nil and prices are strong. The current demand is far from filled and there is no supply on hand to take care of the next five months until the 1924 season opens.

Maine was represented at the recent New York show, Mr. Wilson Conant, of Conant Bros., being in charge of the exhibit. This was too large for one space and was considered of sufficient importance to have another section awarded to it. Mr. Wilson Conant is the orchard specialist of the well-known Conant Bros., who raise as well as can a very large amount of fruit.

IOWA-NEBRASKA CANNERS ASSOCIATION ANNUAL MEETING DECEMBER 4th AND 5th.

AS has been previously announced, our annual meeting will be held at Omaha, Decber 4th and 5th. A strong program has been prepared. Whether a member of the State Association or not, you are urged to come. President James A. Anderson, of the National Canners, and Chairman Roy F. Clark, of Canned Foods Week Committee, and other notables, have been secured on our program. If you have not sent in your reservation either to Secretary Austin or direct to Hotel Fontenelle, you should do so at once.

Canned Foods Week—Chairman Roy F. Clark, of Canned Foods Weeks Committee, has appointed Secretary Austin to act as chairman for Iowa-Nebraska to receive subscriptions to this fund to put over this national campaign of advertising canned foods. The committee is very desirous to have all contributions in hand by December 5th, so that all contracts for material can be let. Contributions of only $10.00 per line are asked for. Many of our membership have already contributed. If you have not, please send your contribution either to your secretary or direct to Chairman Clark.

Spot Sales Report—The relatively light report of spot sales for this week and last, clearly indicates the goodly representation from our membership that were in attendance at the Western Canners Convention at Chicago, last week. On the other hand, the few sales reported indicate a gradual trend toward advance prices. Increases in both quality and quantity of sales are looked for in the future.

C. L. AUSTIN, Secretary.

CANNERS!

When visiting Baltimore, call on us. We are located in the midst of the Canning Supply and Label Manufacturing District.

We want to sell your Canned Foods for you to the best Jobbers in the country.

The Indiana Pulper

Is a Modern Hercules

This machine will handle more tomatoes, pumpkin, squash, apples etc., than any machine heretofore offered the canning industry. It does all this in a sanitary, economic, efficient way. By its use your yield and profits will increase, worries and labors will be lessened. The capacity is unlimited.

A team mate to the above is the Indiana Pulper Finisher. This machine will pulp and finish 5000 bu. of tomatoes in a day.

SMILE AWHILE

FERTILIZER

The Sunday school teacher had been telling a story spring, and the miracle of the growth of the Easter lily.

"Now, children," she said, "who can tell me what it that makes the lily spring from this little bulb?"

"God does it," said one little boy. Frantically our Bobl raised his hand and shouted at the top of his lungs, "Fe tilizer helps!"—Judge.

FEATHERS ON HIS HAT

A near-sighted man lost his hat in a strong wind. H gave chase. A woman screamed from a nearby farmhouse:

"What are you doing there?

"Getting my hat," he replied.

"Your hat!" exclaimed the woman. "That's our litt black hen you're chasing."—American Boy.

THIS IS A DEEP ONE

Boss—Sambo, what were you doing yesterday, that yo didn't come to work?

Sambo—Well, sah, it's lak dis: You knows, Ah got brudder dat fahms foh himsef. Dat boy done went to a sa and bought hisself an old well, an' yest'day he hiahed me t chop it up into post holes.

ON WITH THE BATTLE

First Attorney—Your Honor, unfortunately, I am op posed by an unmitigated scoundrel.

Second Attorney—My learned friend is a notoriou liar—

Judge (sharply)—The counsel will kindly confine thei remarks to such matters as are in dispute.—Virginia Reel.

PLAYING SAFE

The stock salesman, after painting a beautiful word pi ture, said: "Now, Mr. Jones, you know this company hasn' got a dollar's worth of watered stock in it. How much ar you going to buy "

"Young man," he said, "the next stock I buy is going t have four legs, and I will water it myself."—Forbes.

SHINE-SHOCKED

Policeman Dugan found his friend Murphy shine-shocke and leaning against a lamp post.

"Shure, Mike," said Dugan, "you better be takin' a stree car home."

"'Sno (hic) use," answered Mike; "she wouldn't have i in the house."—The Blotter.

TWO SPEEDS

"How many speeds has she, old boy?"

"Two—when there's a traffic cop and when there isn't."

THE MISTAKE PAINFUL

Weak Eyes—I want a pair of strong spectacles. I've jus had a very painful experience that I don't want to repeat.

Oculist—Did you take a stranger for an acquaintance?

"Worse than that. I took a bumblebee for a berry."—Notre Dame Juggler.

TRY THIS EXCUSE

Dear Teacher—Please excuse Willie's absence for the last two days; he caught a skunk.—Mass. Ag. Squib.

EDITORIAL

IZE DOES NOT DENOTE QUALITY—A very nice question has been raised by a writer whose letter is now before me on the desk. He says: "I was talking with a prominent stern canner last Friday, and he advanced a very interesting ory in regard to the shortage of 4s and 5s peas in the packs 1923 and 1922. His opinion is that the seed growers are arfing' the pea seed, and are growing for size. As an exple, he told me that No. 1 peas packed this year were fully ured; indeed, some of them so much so that they had to be as standards, about 9,000 cases of his pack of No. 1 sieve ing to go out as standards."

We are citing nothing new or novel when this fact—for fact s—is mentioned, and yet it marks a change in the methods anning that should be mentioned in passing. No. 1s—or, as were formerly called, "Petit Pois," or little, tiny peas—were ays understood to be the small, only party grown peas of the ular varieties; small because they had not obtained the same vth as the others, and, therefore, were more tender. Tenness was, therefore, expected with the size, and it was nearly ays there. Of late years they have been producing a pea ch, when fully matured, is smaller in size than usual, some hem coming within the size of the former Petit Pois. There be no fault found with this progress in the pea-growing art, yet it would be a shame if we had to grade these former t Pois into fancies, choice, standards and off grade. How ld "Petit Pois Off Grade" sound on a label? or, as would e to be used now, "No. 1 Off Grade"?

They have done somewhat the same thing in the develop- t of sweet corn, now having a small-grained variety, when y developed, which has the same appearance as the former ng, very tender corn which went into the fancy grades. Both hese dwarfs or runts may develop in old age to be as tough he largest of their larger brethren, and if this is to go on, will cease to be a guide to quality. The writer of the ve letter intimates that he wonders if this is any advantage, it is certainly open to very serious question.

The No. 1, or Petit Pois, pea has been badly overrated and properly explained to the consuming public. It is mainly l for garnishing, has little or no substance, and has a tender- that is not at all the same as that in No. 3, for instance. t canners will admit that it is not a "good eating" pea. Not however, with the small-grained corn. The small, pearly ns of corn are the real "roasting ear" stage, the time when corn is at its finest. They may not contain the same amount ood calories, have not the starch and fibre, and possibly not nuch sugar, by chemical analysis, but they sure are "good ng." This is a question for the far-sighted business canners, use the consuming public must not be lead astray in this, must be properly educated. Remember, we have an immense of eager learners, and we cannot afford to take any chances them.

CANNED FOODS WEEK MATERIAL—Seldom has any industry been given such remarkable testimony of its worth as that given to canned foods by a world-renowned food expert—Sir William Willcox, of London. There are millions of Doubting Thomases as regards canned foods, but many can be converted if the following is brought to their attention. Here is Canned Foods Week fodder for all caliber of guns, and if it is not extensively used—given to every newspaper in the country—it will show a lack of attention that might easily be called criminal.

We have just received from the Department of Commerce this official statement, and we give it just as it came:

CANNED GOODS AND FOOD POISONING—An address has just now become available, delivered before the Provision and Canned Goods Trade Section of the London Chamber of Commerce last year by Sir William Willcox, who for twenty years was scientific adviser to the Home Office, and whose reputation in the world of science during many years has been of the highest, says Consul General Robert P. Skinner, London, in a report to the Department of Commerce. While this address was intended primarily for the information of British traders, it may be remarked that of the enormous quantities of canned goods referred to as having been consumed, with satisfactory results, during the war, certainly a large proportion, perhaps even a preponderate portion, was imported from the United States. Sir William Willcox relates that formerly it was thought that there was danger of poisoning from eating canned food, because of the food becoming contaminated with tin, or with lead or copper. But we now know that the danger of metallic poisoning from the eating of such foods is practically nil. "I have never met with a case," said he, "in a fairly large experience of food poisoning." Furthermore, he remarked, when we talk of ptomaine poisoning, or when we see ptomaine poisoning mentioned in the paper or elsewhere, "what is really meant is bacterial food poisoning." He went on to say that in ordinary circumstances, when digestive difficulties arise, the individual must look for the source of the poisoning in his own home, rather than in the provision trade. "It is usually to be found," he said, "at his own door; in his own kitchen." The remaining portion of the address, which is of special interest as coming from such a responsible source, is as follows:

"We will now come to, perhaps, the most interesting aspect of food poisoning, and that is: the food poisoning which may arise from tinned or preserved foods. Now, I think that I can make a statement here which will be of great comfort to you all, and which will serve to allay alarm as regards the dangers of poisoning from tinned food. During the war, as your Chairman remarked, I had the privilege of serving in countries where food poisoning abounded if there was any possibility—i. e., in the tropical countries, Mesopotamia and India, and also in the Dardanelles—and if one became infected with the germ, it produced very severe effects. The tragic example of that was the death of our beloved Commander-in-Chief, General Maude, who died from food poisoning, but not the type of food poisoning we are

thinking of now. He died from the effect of cholera germs being accidentally present in milk supplied at an Arab entertainment. That was an instance of food poisoning where some other germ—the cholera germ—through accidental contamination, or through adulteration with impure water, got into the milk, and so gave rise to food poisoning. But we are thinking of the dangers of poisoning from tinned foods. **I never (it would have been brought to my notice if cases had occurred) during the war saw a single case of food poisoning where the poisoning had arisen from the food being poisonous when it was in the unopened tin.** We had close on to half a million troops in Mesopotamia—Indian, British, and the Labour Corps, and accessory troops—and I can honestly say that not a single case was brought to my attention. I think this was remarkable, especially in countries where the conditions were most favorable for food poisoning.

"I wrote to my friend, General Sir William Macpherson, the Editor of 'The Medical History of the War,' and I said: 'I have had no personal knowledge of cases of food poisoning from tinned foods. Will you tell me something about what happened in France, because I think it is so uncommon?' He wrote back to me (I have his letter in my hand) and said: 'You are quite correct in saying that there were very few cases during the war of food poisoning from tinned foods. The only cases I can trace are three,' and then he very kindly gave me an account of three epidemics which occurred in France. I also saw General W. W. Beveridge, the Director of Hygiene at the War Office, and discussed this matter of food poisoning with him. He also said: 'You are quite right. Food poisoning from tinned foods was uncommon during the war, except when the tinned food had been contaminated during the process of subsequent preparation,' and he gave me an additional fourth case.

"Well, now, I investigated the reports of these four cases of food poisoning in the war, three in France and one in Port Said. The three in France were all due to contamination of the good, wholesome tinned food by carriers in the process of making this food up into pies and stews. Two of them were due to the **bacillus aertrycke**, and one was due to the **bacillus enteritidis** of Gaertner. The fourth epidemic—the one which occurred at Port Said—was due to the contamination of wholesome tinned milk, the contents having been emptied into a cauldron and then allowed to stand in that warm climate, a carrier probably having to do with the mixing of the milk. It was due to an infection from a carrier of the **bacillus aertrycke that this epidemic occurred. So there, gentlemen, you have the analysis of that great experiment—the greatest experiment in history—the feeding of many millions of troops for years on tinned foods, and the evidence as to the tinned food being poisonous was practically nil. It is a very marvelous example. I do not believe, gentlemen, that public attention has been called to that before.** I think that this is the first time it has been brought to the notice of the public, but I can assure you that it is absolutely true."

Now, it is "up to" the canning trade to give this statement to the whole public, and we hope it will be done. Let every canner, every Canned Foods Week Committee, see that his or their best local papers have the story. Be sure they get it—in full. They will welcome it.

HAVE YOU?—Have you gotten a fellow-canner to send in his subscription to The Canning Trade? Have you visited that fellow-canner, sitting in darkness, and told him to bring light into his life and business by reading more and becoming better informed? It is a small thing to do, but will prove a big thing for the whole industry. It is the ill-informed or misinformed canner—the so-called small canner, though not always in size of plant nor output—who has been the "tail that wagged the dog" in setting market prices. No canner can have too much information, but many of them have not nearly enough, or not the right kind. When we become a better-informed industry on market conditions—because the industry rates very high on a productive and efficiency basis—we will become a very much more profitable business. The need today is for better marketing, better selling methods, because that is where you make your money. Too much attention, it might be said, has been given to improved production methods—that is, all the canners have ever had since the earliest times. Efficient production is essential, very important, but it is not the whole story. You might have the finest equipped factory, with every latest and time-saving device, but if you sold your output as some canners now sell theirs, you would land in the poorhouse, as they are doing. The crying need of the industry today is for improved marketing-selling. With that accomplished we will then have an efficiently produced article, of high quality, effectively sold, and the result could be nothing else but success.

PENNSYLVANIA A PIONEER IN FOOD LAW ENACTMEN

PENNSYLVANIA, a pioneer among the States in the enac ment and enforcement of pure food laws, has waged co tinuous warfare against adulterated and misbranded foo products ever since 1900.

"Twenty-five years ago," says James Foust, director o the Bureau of Foods of the Pennsylvania Department of Agr culture, "30 per cent of our staple groceries were either adu terated or misbranded or both. Today we can say that les than one per cent of the staples are in this unlawful clas largely because of the wise enactment and the rigid enforc ment of constructive food legislation.

"The first food law was passed by a Pennsylvania legisl ture in 1895. The Federal Government and many of th States followed with similar laws. Today, all but a few of th States have enacted fundamental food laws.

"The chief concern of State food officials is with foo that are produced and consumed within the State, as mil cream, eggs, butter, non-alcoholic drinks, ice cream and col storage products. To protect its people against unwholesom articles of food, Pennsylvania regulates the sale of these pro ucts under the various provisions of the pure food law an twenty-three laws pertaining to special classes of commoditie

"Laws affecting special articles of food, such as fill milk, skimmed milk, fresh meat, fresh eggs and fruit syrup have been found essential to complete supervision of foo sales, because the special laws can accurately define what co stitutes an adulteration of the particular article of foo whereas a general food law cannot embody a definition th properly applies to all."

AN IMPORTANT WATER-SOFTENING SUIT DECISION

A DECISION recently handed down from the bench in t United States District Court, Detroit, declares the pate of the Permutit Company, of New York, on their zeoli water-softening system, absolutely void.

The case is one of the most important patent suits in r cent years, and is of particular interest to the readers of th journal.

The suit was brought by the Permutit Company to r strain the Wayne Tank & Pump Company of Fort Wayne, In patent infringement being claimed.

The Wayne Tank & Pump Company has attained a lea ing position in the water-softening industry. It manufactur both domestic and industrial water-softening systems, many the latter having been supplied to this field.

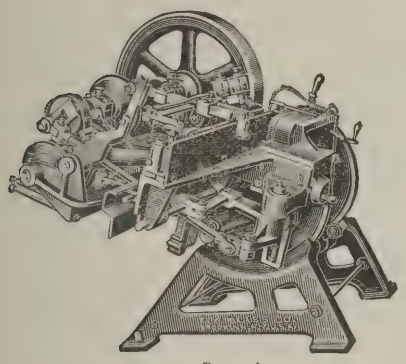
Judge Arthur J. Tuttle, who devoted nine days to t hearing, was aided by his knowledge of the German languag Much of the testimony was given by witnesses brought he from Germany, by both plaintiff and defendant.

Judge Tuttle declared, in his decision, that August Ne mann, a civil engineer and filter manufacturer, of Reppe Germany, and the star witness for the defendant, had ori nated the first commercially successful zeolite water soften

He further held that the Permutit Company had no mo right to the exclusive use of the mineral known as zeolite, a in this country dug out of the ground in New Jersey, than man would have to a patent on "water running down hill."

Excerpts from the decision follow:

"I started out with the presumption that this patent (t Permutit patent) was valid," said Judge Tuttle.* * * Th put the burden on the other people (the Wayne Tank & Pu Company). * * * That burden shifted early in the ca because in the hearing here early I began to discover the definiteness, the uncertainty and the unsatisfactory thin about the patent in suit (the Permutit patent).



"The reason this case has taken nine long days is becau I have seen this matter in a way that did not coincide with t decision in the second Circuit, and I have been reluctant reach a decision which is contrary to the decision reach there.

"I have had much to help me which that court did n have. I have had more testimony. I have new testimony.

"* * * and my decision is that the patent is void.

"* * * The patent in suit is no more entitled to t credit for the property possessed by zeolites than a man entitled to credit for making water run down hill, or entitl to a patent on gravity. It is a natural property know to t world, known to the art (of water softening), prior to t time of the patent in suit."

150 No. 3 Sanitary Ends a Minute BLISS

Patented

"BLISS" Automatic Top and Bottom Press

WHEN you buy BLISS Automatic Top and Bottom Presses you also buy production with precision. It is machinery in which is incorporated a knowledge gained in our sixty-five (65) years of press building. These machines are liberally proportioned and accurately built, insuring long life. One feature: The strips are fed from the magazine to the feed bar by a very easy motion, eliminating jars and vibration. When arranged with curler and stacker the ends are automatically curled and stacked, ready for compounding.

LANDRETH GARDEN SEEDS

THE LANDRETH

SPOT OR 1923 CROP SEEDS

We have for spot delivery, a few Alaskas, Green Admirals, Advancers and White Admirals. These are all short. Sweet Corn is short. We still have some however. Write us for prices.

We also have the following for spot delivery——

Peas Okra Cabbage Cucumber
Corn Tomato Spinach Snap Beans
Beet Squash Pumpkin Cauliflower
Dwarf Lima Beans

Or any other varieties you may want.

FUTURE OR 1924 CROP SEED

When ready to place your Contract order for delivery after 1924 crop is harvested, write us for prices.

If we had not grown good seeds, given fair prices and careful attention to business, we would not be the oldest Seed House in America, as this is our 139th year in the business.

THE WISCONSIN BUSINESS SESSIONS

Meetings of "Sections"—Election of Officers—Exhibitors and the Booths.

MR. Wollum's picture of Wisconsin contented home life is so good it deserves repetition:

A WISCONSIN IDYL

Response to Address of Welcome — Wisconsin Pea Packers' Association Convention, by Henry M. Wollum, of Owen Canning Company, Owen, Wis., on Nov. 13, 1923.

Living in delightful Northern Wisconsin, there is a family of eight: father, mother and six sons and daughters. Not unlike a great many other homes in the world, their home has an atmosphere that you become immediately conscious of when you step into the yard or within the shelter of the roof. The only difference between their home and some others, in this respect, is the degree with which you become conscious of that atmosphere.

When you go into this house, cozily nestled between picturesque hills, you feel a cordial reception. You know that you are welcome and you feel that the hospitality is deep-seated and sincere. There immediately springs up within you a love for the household, a strong attachment for the father and mother and the sons and daughters of this wonderful family. You feel a most persistent longing to go no further, but to remain there where all is so serene and restful.

As you prolong your stay you become aware that each and every member of the family is thinking of you; that in a hundred ways they are doing and saying things that make you comfortable and happy to be with them. No doubt you, too, can think of such a home in your own community, where the warmth of such hospitality makes of it the center of social life and the logical meeting place of the countryside.

I believe that I am voicing the sentiment of the Wisconsin Pea Packers' Association, the Womans' Auxiliary, and the many friends of both organizations who come to Milwaukee to attend this convention, when I liken Milwaukee to the home to which I refer and the Milwaukee Chamber of Commerce to the father and mother of this home. I believe there is no one in this auditorium today who does not feel the sincere welcome, the warm cordiality and the true friendship of this great Wiscinsin city, just as we of our community feel the congenial spirit of that home.

After listening to the words of welcome so sincerely spoken by Mr. Cleveland, that assurance of Milwaukee hospitality and welcome, given to us in addition to that welcome which we already feel, I am glad to say to you, Mr. Cleveland, that your message has been received and duly deposited in the archives of our hearts. We are experiencing that feeling of welcome which adds so much to the comfort and happiness of our short stay.

Speaking for all who come from out in the State and from the country at large who are your guests for three days, and for our organization, the Wisconsin Pea Packers' Association, I thank you for your kind words of welcome and for the pleasures that are ours due to your thoughtful care and planning. We appreciate all you have said and the arrangements made in anticipation of our coming. We are glad to be here, proud that you hold our industry in so high esteem, and happy to know that our presence in your midst gives you sincere pleasure.

MEETING OF THE KRAUT SECTION

Milwaukee, November 12th, 1923.

The Kraut Section met the afternoon of November 13th at the Hotel Wisconsin. We had a fair representation of Wisconsin kraut packers and just talked over our problems in an informal way.

Main discussion was on the question of employing a bacteriologist who would work with the University of Wisconsin in determining just what sauerkraut is and just what the problem of the packer was; that is, is it a cultural or manufacturing problem. The packers of Wisconsin are not satisfied with present production methods, because it is almost impossible to fix any definite standards for this product, and until it is possible to do this, consumption is not going to grow the way it should.

The Wisconsin packers present were given to understand that the National Canners' Association was contemplating bacteriological and chemical research work, and it was decide to await this body's decision, at the National Convention, an to do our part if they decided to go ahead; and if the did not, the Wisconsin packers would work out a plan fo themselves.

The importance of work of this kind is almost impossib of over-emphasis, because in a nationally advertised produ you have uniformity or we are not going to reach the goal w set ourselves. The advertising of the National Kraut Packer Association is effective and good, but it has to be backed u by a uniform product. How are we to pack a uniform produ when there does not seem to be any scientific basis on whic to base production methods? We have positive knowledge working with most canned foods, but kraut has been neglecte and positive knowledge is lacking on the part of both th packer, bacteriologist and chemist. Wisconsin packers are d termined to see this through, if we have to do it ourselves, b are ready to do our part if the National Association decide to take up this work.

Wisconsin is forging ahead in kraut, and it is only a que tion of a short time before it will occupy the same place th pea-packing industry does in point of production. We fe that we pack kraut of equal quality right now, but we want know how to assure ourselves of a uniform product if it ca be done. Do not think that this is an impossible objective all and is simply a question of trained brains and time.

The officers of the Section are: W. I. Berg, Onalask chairman; Robert Kurth, Neillsville, secretary and treasurer

THE CORN SECTION MEETING

Milwaukee, Monday, November 12, 1923.

THE principal speaker at the meeting of the Corn Sectio Monday afternoon was Prof. E. D. Holden, of Madiso who has done considerable work on the improving strains of canning varieties of sweet corn, and after reviewi his work in plain language that any layman could understan he emphasized the importance of using home-grown seed, at least seed that was acclimated, as being far more satisfa tory than seed brought in from other States, not only becau of its greater productivity, but also because proper selection ears could be made before shelling, thus getting corn mo true to type, more uniform in time of maturity, thus increa ing the yield as well as improving the quality.

In the discussion that followed it developed that mo successful corn packers of the State were getting away fro the production of standard grades by directing their effor toward the smaller grain varieties, such as Crosby, Count Gentleman, Narrow Grain Evergreen, Golden Bantam, et because of the fact that there was at least a small profit in t better kinds of corn, whereas the production of Evergreen co in standard and extra standard grades was usually done wit out profit, and for the last few years at an actual loss.

The chairman of the Section stated that while Wiscons packed over 700,000 cases of corn in 1922, considerably ov the total packed by our sister State, Minnesota, yet the fa remained that because Minnesota had for years specialized one kind of corn, that is Fancy Crosby Corn, Minnesota co was known in practically all of the better markets as an acti competitor with corn from the State of Maine, and in at lea some instances now had the preference over corn from Main and gave it as his opinion that Wisconsin could, within a fe years' time, build up a reputation for quality corn that wou be second only to her reputation for peas, as we had clima and soil conditions on a par with either Maine or Minnesot

After further discussion along the line of improving qua ity by eliminating the coarser grain varieties, it was mov that a committee be appointed to study the situation, a that at some future time a special meeting be called of t Corn Section, at which time a full attendance might be re sonably expected, at which time the committee would make comprehensive report, showing the volume now being produc in Wisconsin according to different varieties, and make effort for the State to concentrate on a few of the better va eties that were being successfully produced within the State.

The following committee was appointed: Theodore A derson, Augusta, chairman; George Greb, Shawano; Geor Shorer, North Freedom.

Since the adjournment of the session the secretary h already circularized the members of the Corn Section, advisi that this spcial meeting of the Corn Section would be held the time of the proposed Short Course to be given by the Un versity of Wisconsin at Madison some time early in Decembe at which time the members of the committee will make the

ort and an effort will be made to start Wisconsin in a for-rd movement for the production of higher quality corn than has produced in the past.

MEETING OF THE BEAN SECTION

the Vegetable and Fruit Packers' Auxiliary of the Wisconsin Pea Packers' Association.
Hotel Wisconsin, Nov. 12, 1923—5.30 P. M.

HE meeting was called to order by the chairman, Mr S. Williamson, the following plants being represented at the meeting: Coleman Canning Co., Gillette Canning Co., eside Packing Co., Hortonville Canning Co., Shawano Can- Co., Neilsville Canning Co., Falls Canning Co., and Samp- Canning Co.

Owing to the lateness of the hour, the reading of the min- s of the previous meeting was dispensed with It was ved and seconded that the present chairman and secretary elected to serve for the coming year. Motion carried. Mr. Williamson, of Neilsville, and Mr. R. A. Greb, of Coleman, serve as chairman and secretary, respectively.

Owing to the lateness of the hour and the limited time, it s moved and seconded that the chairman and secretary be tructed to confer with the officers of the Kraut, Beet and n Sections and arrange a date fo r holding an adjournment the meeting not later than December 1st. Motion carried. tion to adjourn.

THE RESOLUTIONS

sconsin Pea Packers' Association, Milwaukee, Nov. 15, 1923

The Committee on Resolutions feels that much construc- e work has been done at this Convention, and wishes to di- t the attention of the membership to the following:

Seed Stocks.

It has been common knowledge for almost as long as peas e been canned that much of the seed stock has not been all t could be desired or what it should be, and the Associa- n has for years been making every effort to secure improve- nt, and to this end has been watching with much interest l hope the great work of Professor Delwiche at the Ashland tion, and is much gratified to realize at this Association, plan of which was adopted yesterday, the method and ma- nery that will enable the canners themselves to assist in eloping and multiplying new varieties and strains, purify- old strains and maintaining the purity of all strains, and time it is hoped to distribute among its stockholders and dsmen pea seed in the pedigree of which we may have great de.

Association Label.

We believe the action taken yesterday, November 14th, adopting the plan presented by the directors to authorize o-called Association label, the use of which in due time may l should become a great stabilizer for the industry, and as e permits the perfection of the plan, it will become ap- ent to all that it is reasonable, conservative, inexpensive l will be of direct or indirect benefit to all at very low t to each.

Canned Foods Week.

It is hardly necessary to dwell upon the necessity of sup- ting Canned Foods Week, as its advantages are so plainly arent to require no comment except to urge upon every sconsin canner the desirability of promptly supporting the ional Canners' Association Committee with a check.

National Canners' Association Warehouse Plan.

We believe this plan to be absolutely fair and just to both ner and distributor, as it restores the much-discussed swells blem to its former status, except that in case a canner hes to examine swells reported and charged to him, he may lesired, have them returned to the nearest zone warehouse, there be examined, either by himself or by experts from National Canners' Association Laboratory in the presence the food officials of the city and State in which they are d and the probable cause of spoilage determined. It is in ct, if not in name, a court of appeal, and we urge the adop- n of its principles and their incorporation in the contracts our membership.

Research Work.

We should be much gratified with the progress made by fessor Dudley and his assistants in their fight on the pea se. We recommend that this Association be represented at conference called by the U. S. Department of Agriculture Washington next week.

We recommend greater activity of a co-operative nature between the Association and the State University, and the continuation of our Raw Products Committe, that they may aid the University in directing more attention to our problems to the end that our industry be safeguarded.

The members of the Woman's Auxiliary of the Wisconsin Pea Packers' Association wish to express warm appreciation of the courtesies extended to them by the Allied Industries. The generous entertainments provided for the Auxiliary on this and former occasions have contributed greatly to the interest and pleasure of its annual meetings, and its sincere thanks are offered to its liberal host.

Be it therefore resolved, that we endorse and support the Seed Corporation, the Association Label and Canned Foods Week, also the work of Professor Delwiche on Seed Peas and Professor Dudley on Pea Louse, as well as Professor Vaughan and Dr. Fred Jones and others on other contructive work; and that we endorse and support the National Canners' Association warehouse plan for handling swells, and that we condemn the so-called flat allowance as wrong in principle and prejudicial to the safety of the consuming public, as it provides no way to insure the destruction of swells.

Be it further resolved, that we deplore the abnormal advance in spot seed peas, and the announced advance in the price of cans, because these advances will in the main have to be absorbed by the canner, for in our efforts to stabilize prices in the interests of increased consumption, we fear that material advance in the price of canned peas will tend to curtail consumption.

Be it therefore resolved, that this Association protest against what we consider unwise and unwarranted advances in these important items as detrimental and prejudicial to the industry.

It is most fitting at this time to say a word of commendation and appreciation of the retiring President of this organization, J. A. Hagemann, who for twelve years of loyal, unselfish and diligent service has had a major part in bringing about the growth and success of our Association. To him we owe a great debt of gratitude. To him is due in a large measure the accomplishments of this institution, and to his untiring efforts is due the fact that he Wisconsin Pea Packers' Associaion is one of the largest and most progressive associations in this country.

Too much cannot be said in commendation of this gentleman. He has spent more time, more energy and more enthusiaum for the Association than has any other one individual. He has been true to his trust and deeply mindful of the confidence and responsibility placed in him.

It has been our pleasure to have kept him in office. It has been our good fortune to have had him for an officer and president.

This Association, in meeting assembled, fully appreciates the great services he has rendered. In token of that appreciation and the friendship we feel for him, and as a vote of thanks for all the loyal enthusiasm and untiring work he has done for our Association, we as a committee ask this convention to arise and to remain standing for a moment.

Respectfully submitted,

F. A. Stare, Chairman,
Charles Yunker,
H. C. Sorensen,
H M. Wollum,
Wm. Opitz,
Committee on Resolutions.

The resolutions were unanimously adopted; a standing vote of thanks to retiring President Hagemann was given amid loud applause.

MEMORIALS

WHEREAS, through the wish of our Creator, Carl W. Hutchinson has been called from this existence; and

WHEREAS, the deceased has been an active and industrious worker while associated with us, now, therefore, be it

RESOLVED, That the Association, in assembled convention, express its gratitude for his conscientious efforts and helpful activity; and be it further

RESOLVED, That a copy of this resolution be sent to all trade journals, a record of it spread upon the minutes of the Association, and a copy of it sent to the immediate family of Mr. Hutchinson.

WHEREAS, Divine Providence, in Its infinite wisdom, has taken from our midst William C. Leitsch, and

WHEREAS, Mr. Leitsch has been instrumental and a vital factor in promoting the welfare of our industry, had diligently given of his time and ability, and

WHEREAS, the pea packing industry has been materially benefited by his able and generous contributions, by his broad-gauged vision and timely advices, and

WHEREAS, Mr. Leitsch has always fought for the best interests of our institution and has helped to overthrow those interests detrimental to it; now, therefore, be it

RESOLVED, That this Association record its sincerest gratitude for the constructive and untiring efforts to the pea packing industry. Be it further

RESOLVED, That this assemblage pay a tribute to the memory of Mr. Leitsch by standing in silence for a moment immediately after the adoption of this resolution. Be it further

RESOLVED, That the industry perpetuate his well-founded principles and emulate his contributions by whole-hearted co-operation and loyal support to all beneficial work fostered by him; and be it further

RESOLVED, That a copy of this resolution be sent to all trade publications, a copy entered into the records of this convention, and also copies sent to the firm of which he was part, as well as to his immediate relatives.

Respectfully submitted,

J. P. Kraemer, Chairman,
H. A. Johns,
Dr. T. O. Goeres,
Charles H. Karch,
Wm. Blodgett,
Memorial Committee.

All stood facing west (towards Columbus, Wis., the last resting place of dear old "Billy" Leitsch.)

THE JOINT SESSION OF THE WOMEN'S AUXILIARY WITH GENERAL CONVENTION

President Mrs. A. C. Friday Speaks.

Milwaukee, Wednesday, November 14th, 1923.

IT is again my pleasure, in behalf of the Ladies' Auxiliary of the Wisconsin Pea Packers' Association, to welcome you who have come from near and far to the seventh annual session of this Auxiliary.

It seems but a few days since we last assembled here, but in the book of time another page has been turned and the story of a year is told. We are gathered here from all parts of our wonderful State with the one thought—of helping to make this session a success. Each year we look forward to these meetings as the pleasant means of forming new acquaintance and strengthening old friendships.

We are here to review the achievements of the past, the problems of today and the unlimited possibilities for the future of this Auxiliary. Those of you who are here for the first time, we hail with pleasure your coming among us and extend a welcome of sincere and hearty good fellowship. May all the feeling of strangeness pass away and the days spent with us leave pleasant memories and the desire to come again.

The ladies held a very enthusiastic and enjoyable session, the main discussion, according to schedule, to be how to acquaint housewives with the value of canned foods. Men are fond of "ragging" the ladies with talking of nothing but clothes and fashions; but this Women's Auxiliary is different, if that accusation be true—and it isn't.

The New Officers—The new officers elected this year are:
President—Mrs. A. A. Burr, Waterloo, Miss.
Vice-President—Mrs. Hazen Paul, Markeson.
Secretary-Treasurer—Mrs. Fred Hulbert, Fall River.

The Convention saw to it that the ladies were entertained during the Convention—at a special luncheon, at theatre parties, and at the big dance on Wednesday evening.

The Election.

President—F. T. Clark, Waupun.
Vice-President—J. J. Wittenberg, Cedarburg.
Treasurer—W. I. Berg, Onalaska.
Secretary—A. H. Fuhremann, De Forest.
Business Secretary—W. E. Nicholoy, Madison.
Directors—R. B. Johns, Antigo.
J. W. eniger, Beaver Dam.
W. F. Kelly, Fond du Lac.
G. J. Coxe, Humbird.

Change in By-Laws—The articles of incorporation an by-laws were amended to include, as members of the Wisco sin Pea Packers' Association, all packers of vegetables and fruits. The time of annual meeting was also changed fro the second Tuesday in November to the last Tuesday October.

The Auxiliary Dinner—As usual, the Vegetable and Fru Packers' Auxiliary gave a dinner on Monday evening at th Hotel Wisconsin. There was an air of sadness about it, th year, because everyone recalled that it was at this dinner la year that "Billy" Leitsch made his last formal appearanc before any body of canners as toastmaster of this dinner. H memory was fittingly observed on this occasion.

President Hagemann acted as toastmaster, and after sumptuous dinner, the toastmaster called upon first one no able and then another for a brief address, and they were mai ly in the lighter vein.

CHAIN BELT HAVE DIRECT COAST REPRESENTATIV

CHAIN Belt Company, Milwaukee, Wisconsin, manufact ers of Rex chain, transmission machinery and conveyi equipment, formerly represented on the Pacific Coast Meese & Gottfried Company, San Francisco, has establish direct factory branches and warehouses in Portland and Se tle. Arrangements have also been made with the Washingt Machinery Depot, Tacoma, Washington, to carry a large sto of Rex chain and transmission machinery. Other stocks w be placed in important centers throughout the Pacific Nort west for the prompt handling of local requirements.

The Northwest territory, with headquarters at Portla will be in charge of Allen C. Sullivan, M. E., a graduate of t University of Washington. Mr. Sullivan was formerly co nected with the Allis-Chalmers Company, of Milwaukee, a more recently with Smith & Watson Iron Works, of Portla as chief engineer. Just previous to his association with t Chain Belt Company he was engaged in special sawmill wo as consulting engineer.

Don B. Catton, formerly with Meese & Gottfried Co., a later engaged in the machinery supply business on his o account, will be the special sales representative for the Po land office. The Seattle and British Columbia territory will handled by Wm. F. Nichols, out of the Seattle office Mr. Nic ols for the past 11 years has been connected with the Mee & Gottfried Company, and is considered one of the best-post chain men in the Pacific Northwest

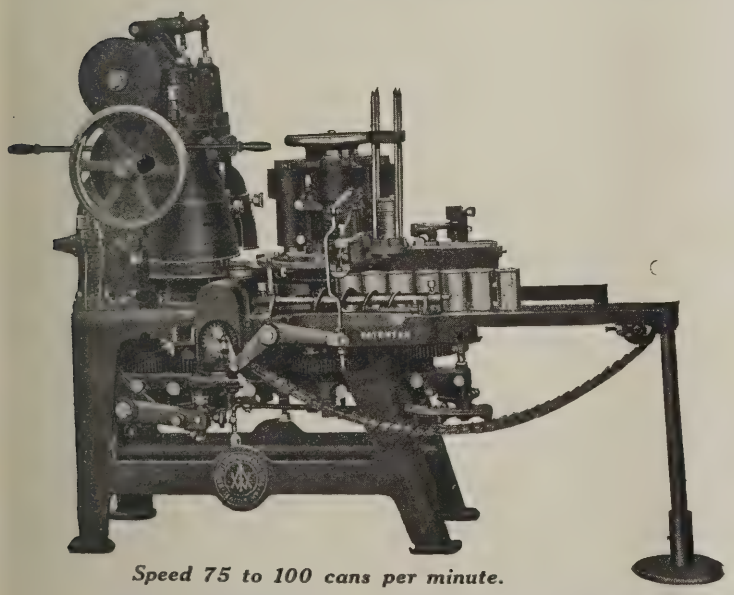
The Portland office of the Chain Belt Company is locat at 67-69 First St., Portland, Ore., and the Seattle office at 10 Sixth Ave. So., Seattle, Wash. Large stocks are maintain at both places.

Sanitary Cans for 1924.

IT is not too early for Canners whose contracts are expiring this year to be considering the question of their Source of Supply for 1924.

There are many reasons why our proposition should be analyzed:

Reliability of Service,
Unsurpassed Closing Machine Equipment,
General Responsibilty.



Southern Can Company

Baltimore, - - Maryland

NEW YORK OFFICE: 17 Battery Place.

Manufacturer of newly developed "SOCOCAN" for Coffee, Peanut Butter, Lard Substitutes, Dry Milk, etc.

Who Pays the Bill —

Speed 75 to 100 cans per minute.

When the overflow of syrup caused by pushing down high floating fruit, as peaches, apricots, pears, etc., is not caught and saved, as happens on the average Closing Machine.
A loss hard to estimate, for which some one pays.

A TROYER-FOX with the catch basin under the chucking attachment, saves all the overflow of valuable syrups in a clean sanitary way, none of which can get into bearings or other working parts to ware and damage the machine.

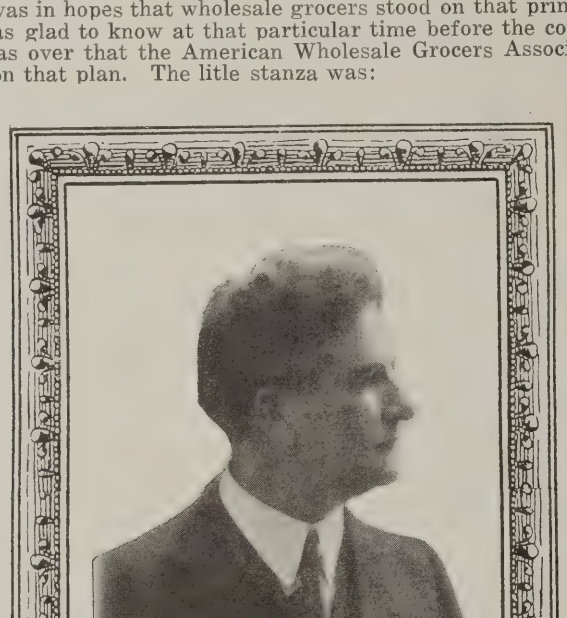
THE THOROUGH WORK OF THE CONFERENCE COMMITTEE

Every Section Consulted—All Angles Studied—No Snap Judgment—Everyone's Rights Well Considered.



By James A. Anderson.

President National Canners Association.

Afternoon Session—Wednesday, November 7th.

I AM going to discuss what seems to be uppermost in the minds of those present and of the whole canning fraternity, and perhaps uppermost in the minds of some of the wholesale distributors—at least some of those we met last night were fearful of what we are going to do.

Before presenting this, however, I am going to preface my remarks with a little stanza I happened to find when I addressed the American Wholesale Grocers Association down in Washington last spring. I came on the scene in a hurry and did not have a chance to prepare a subject and was somewhat at a loss as what to say. But I saw their program on the table, looked at it while another speaker was talking, and I read a stanza on that program that struck me as being worthy of a very careful consideration, and struck me as being a principle on which we could all stand, and I was in hopes that wholesale grocers stood on that principle, and was glad to know at that particular time before the convention was over that the American Wholesale Grocers Association stood on that plan. The litle stanza was:

JAMES A. ANDERSON
President
National Canners Association

When the Master Referee scores
Against your name
He will not note
Whether you won or lost,
But how you played the game.

And, gentlemen, that is the principle we're going to stand on, and as a member of the National Canners Association, I propose to stand on that principle, and whenever any other principle is advocated that does not afford honesty, justice, and equal rights to all concerned, I am going to fight it to a finish. Applause. If I go down to defeat, I will go down standing on my feet for honesty, justice and equality.

Now, to just review a few of the matters that have come up in our Conference Committee meeting, and which have been gone over very carefully, I want to say that this plan has not been hung up in a few minutes, but has been given the best and mos careful attention of the most conservative men in this industry I was at first very reluctant to advocate it for the reason that i had not at that time received proper consideration. I told Secre tary Gorrell that before I could endorse putting this plan int operation I wanted to have it considered very thoroughly by th rank and file of our great industry. I wanted the people out i California to consider it, the people over in Maine, and those i the southern part of the country, and those in the north—eve those in Hawaii. And for that reason we called in the Board o Directors and the Committee on Finances to meet this week, an we had a most splendid representation from all parts of th country. Literature had been sent out to each member of th Board of Directors, and they had been given a chance to stud this plan from all its angles before coming to this conference.

After a thorough and careful consideration of the plan, fro start to finish, we have come to a unanimous conclusion that thi plan will offer justice to everybody concerned, from the produce to the final consumer. and after all isn't that what we all want?

In checking over the causes of spoiled canned foods, ther was a member of the committee from the National Wholesal Grocers Association who made the remark that the laws ought t be so stringent that every retail grocer, or anyone else, when h found a single bad can on his shelves, would take that can an throw it away.

Well, I wonder if every retail grocer and every restaurar keeper, regardless of his nationality, or what his informatio regarding canned foods may be—I wonder if we want to trus everyone of them to say whether or not our goods are spoilt o whether they are fit for food purposes. And, don't you think is a good way to get rid of some of the goods and get a retur on them for labels by "hitting them in the head" with an ax?

I tell you gentlemen that principle is wrong and does n offer a solution or a chance to learn the cause of spoiled good There is no need to go into details. You know that principle wrong.

But when those spoiled goods are sent back to the warehous where they can be examined by technical men who understar the nature of the container and what that container should b whether the sealing is properly done, whether the tin-plate proper for canning purposes, whether the make-up is right, a whether the processing has been all right or whether there ha been defects in the processing or preparation—we then can lea something worth while.

Don't you think such information is of great value to t canner in the carrying on of his business in the future?

For example:

I shipped a carload of canned krout a few months ago. T goods were all right when they left the North, where the clima was all right. But when they reached their destination, in warmer climate, a complaint came back that at lest half of t goods were swells. I told them to put them in storage, and would determine the cause. I know the distributor was hone and sent him his money for the entire carload, as they we sold under the guarantee which has been embodied in our co tracts for years.

I had one case returned, telling them to pick out those th were swelled and to put in four cans that were not swelled. Wh they got back to my warehouse there were no swells. They we what we call "flippers." I will not trust them in any southe country without a different process in the future.

I immediately made an examination of the vacuum in t cans, and as a result I found I hadn't exhausted the cans bef sealing. I immediately ordered the whole carload sent back t northern jobber, and told him to notify me if there were any ca of swells. They all went back; all those "flippers" repented their sins and went back to where they had been while in good can.

Now, gentlemen, suppose we had adopted the principle th was advocated last night. We would simply have destroyed those goods on the assumption that all were swells. That w an extreme case, but it is as likely to happen to you as to r We can study these matters, and even the container itself is always perfect, and I am glad that some of our good can ma facturers are here.

But under this plan in the future, I want to tell you, th cans are going to be examined not only for their contents, also for the container, and find whether it is the can's fault, o it is the process. And we are going to clean up the industry far as canned foods are concerned. Now, are you behind t proposition?

You are sending your goods out as you would send y child out to school, and you have a right to protect that ch when he ges out to school or anywhere else. And you rese the right to bring him home if he goes astray and get him repent. The same with our canned foods.

On a flat allowance there is no checking up—just hitt

them on the head. I am going to fight for what is right, and I know that my canning friends are back of me.

There are a lot of things I am not going over as the time is passing. Of course they tell us it is an easy matter to accept a flat allowance of ½ of 1 per cent. and let it go at that. But if there happens to be more spoilage than that we pay for it; if there is less, they pocket the difference. That is the principle of the thing. It puts a premium on inefficiency, and tells the unscrupulous canner—and we have some of them—"never mind if you do have a lot of swells, they are taken care of with the ½ of 1 per cent. flat allowance." If this flat allowance were part of the contract, wouldn't the canner have reason to say, "under the terms of our contract I am allowed ½ of 1 per cent. swells." and then proceed to give them to the jobber?

In fact, I believe that was one of the things that may have caused the introduction of Rule 381-A. There are more swells since the flat allowance was put into effect with some jobbers than before, and so many more, that the food officials became alarmed and said they "can not be returned," and that something must be done.

If we adopted the principle of the ½ per cent. allowance, it would cause an increase in swelled goods, and it is a dangerous precedent to have been made. I am sorry it was ever inaugurated as it is a danger to canners and a menace to the consumer.

I heard a gentleman—a prominent canner and president of one of the best state associations—say yesterday:

"In going through a reputable cannery some time ago, I saw them putting cans in a case set to one side. I wondered what they were doing, and noticed that they were bulged on one end. I finally asked the manager about it. "Well," he said, "when they made a contract they forced me to put in a clause providing for ½ of 1 per cent. flat allowance. And I propose to give them what they bought."

I don't know but what distributor got what was coming to him and what he paid for.

I shouldn't say so much about my good friends, because I have to sell canned foods. But they are going to buy. But I have heard a number of members of the National Wholesale Grocers Association express themselves as absolutely opposed to the ½ of 1 per cent. flat allowance, or any other flat allowance. And one of them says he is the "father of this plan" and inaugurated it six or seven years ago.

Our reception last night proved they were cordial, splendid fellows. But after all their attitude put me in mind of a darky who was brought up before court for a certain crime. He protested his innocence very strongly. When all the evidence was in, it was so much against him that he judge saw fit to impose a very strong sentence.

The darky then began to mumble to himself. It was loud enough for everyone to hear him, although no one understood what he was saying.

"All right," said the judge, "just for that we will double your sentence, Sambo."

"But, Judge," the darky replied, "what all's the matter? Ah wasn't complainin' nor nothin'."

"Well, what did you say? I heard you mumbling."

"Well, Judge, Ah was jus' lamentin' the fact that ah had to go to jail, and was tryin' to console myself by saying. 'God-am the Judge. God-am the Judge!"

I want to congratulate the American Wholesale Grocers Association on the broad view they took of the plan we submitted. They approved of the plan in principle and said they would present it to their committee with their recommendation for adoption.

It is up to you in your contracts for future sales or spot sales, to incorporate therein and stand back of it, a guarantee that the goods will be 100 per cent. perfect, and let's say to them that we will pay for each can of spoiled goods that occurs in our pack. We will treat all of them honestly, and will do our best for the consumer; and we will co-operate with the food officials. And, gentlemen, if you will come along and do this with a united effort. I tell you that it is going to be the biggest step in the advancement and progress of our industry that we have ever done.

And I hope and pray that everyone of you will come along.

President Hill: Gentlemen, you have heard the report of your Conference Committee so ably delivered by President Anderson and Mr. Royal F. Clark. What disposition do you propose to make of it?

Mr. Lon. A. Sears: Gentlemen of the Western Canners Association, I have worked for years as a member of the Conference Committee. I have followed this subject as closely as I could, and I am satisfied gentlemen, that we have arrived at the only answer to the problem that could be given.

I make these remarks, prefacing a motion I desired to make that the Western Canners Association adopt the Zonal Warehouse Plan in taking care of spoilage in canned foods that have heretofore been taken care of by us as individuals. The same plan, the same method, in the same old way. The only differen is that if you want them returned they go to the Zonal Wa house. The other details will be just the same. If you have customer who has only a nominal claim for spoilage, you may s as heretofore, "Here is your check." If it seems excessive a you want to know more about it, then you can have the spoil goods sent to the zonal warehouse. That is the whole propo tion. That is all there is to it.

I hope that this Association by a standing vote will appro this plan. If the details are not all perfect, it—like all plans can have its details corrected as we go along.

Mr. E. W. Virden: Gentlemen, I was chairman of the Co ference Committee, which naturally has had charge of this que tion for the Western Canners Association, but the National Ca ners Association was handling it and covering more territo than we would have. I sat in at the conference, and—by the w —three of our members are identical with three members of t National Association And I am heartily in sympathy with t matter and in favor of the way it has been disposed of, and suggest that the members of the Western Canners Associati unite with the National Association on this plan.

Non-members of the Association can have their clai handled in the same way for a nominal charge.

President Hill: All in favor of the motion as made a seconded will signify so by saying "Aye."

President Hill: The motion has been carried unanimously

THE PRICES OF CANS IN 1924

The Progress of Increasing Costs—Tin Plate Has Advanced Can Prices Must Do So.

By Geo. W. Cobb.

General Manager of Sales The American Can Company.

Wednesday Afternoon Session, November 7th.

I want first to express my thanks for this opportunity. can't tell you that I enjoy the work, but I always obey our co mander, Colonel Lee, when he orders me to do something.

"Not ours to ask the reason why—ours but to do any d I changed the words somewhat so as to bring them up-to-date

I want next to congratulate the Western Canners Associat most heartily on its seventy-ninth birthday. That is a long for any organization. It has been kept alive by live men—r who have done so much for the advancement and uplift of t association and the canning industry.

I shall mention the names of only a few who have worked the building up of this splendid organization. I want to ment the name of that great builder and far-seeing one—Daniel Trench; and also that shining example William Moore. I s also mention the name of one who was the leader of us all—t dearly beloved Billie Leitsch. But of all those that have b or are, there is none who has done more for your great indus through the work of the Western Canners Association and National Canners Association, than our old, stalwart solc Colonel John A. Lee. I am sure there is no one who has wor more honestly, more unceasingly, more ardently, more efficien and I am sure unselfishly, than has Colonel Lee.

I am just going to tell you how proud I am to be mi up—if that is the correct term—with your great industry. know it has changed a lot since I first got mixed up with it. wife won't let me tell you how long ago that is. But the n marvelous changes have come about in the last few years, s the war was started. These marvelous changes and impr ments were allied with—if not actually caused by—the war.

The war has had a lot to do with the canning industry. was started over one hundred years ago—in Napoleon's tin before any of us were warriors—but it did not do much in land of ours until the Civil War. Then it received a great petus through that war. Later the Spanish-American War sh it a little further ahead. But it took the great world war to it in its present position.

We don't like war, and I am sure we didn't start the war, but we have to recognize the fact that even war has healthy side.

What has it done?

It seems to me it has taken the canning industry out of "lottery" class. A few years ago to admit you were in the ning industry, you had to an extent apologize for the fact. canning business is sometimes called a "game". I think tha a poor word. It no longer is a game. It is a great indu working upon and being built upon the same principles affect every other sound business in this land.

It still has its hazardous side—a sporting element; el might not be half so much fun for us. Some of us are in it

cause we can't help it;others because they love it; and still others because it gives us our living. To me it seems something like a story I heard the other day. (At this point my instructor in elocution told me to put on my glasses.) Laughter.

"A Dog Story." It seems there was a boy that had a houn' dog. His mother did not like the dog as much as did Willie. In fact, this dog was reckless and careless. In fact, sometimes absentminded. Willie's mother insisted that he sell the dog. So he took the dog down-town one morning. When Willie came back his mother asked him if he had sold the dog. "Yes," said Willie, "I got thirty cents for him, and another dog."

Now, have you ever noticed how many canners have gone out of business "for all time"? Then, a few years later they came back in again. "They just had to have a dog".

You know this Western Canners' Association, like all other associations of canners, is not a secret order. Jimmy Anderson mentioned the fact that "anyone can get in". That explains why many of us here today. We all belong to allied industries, and allied industries covers a multitude of sins. (Laughter)

I don't known whether this is orthodox but we remember a lot and gain much from these conferences. But I am sure that the biggest benefit we get isn't the friendship we make, and the better understanding and greater confidence we derive, from knowing each other.

What are just a few of the things that have occurred to help us since the World War? The output of canned foods has doubled in the past ten years. Any industry that has doubled in that time is no longer to be looked upon as an "infant" industry.

What is perhaps the greatest single outcome? A realization and acknowledgment of the absolute necessity of quality. It has been proven in peas, corn and fruit—and it is going to be proven in all lines some day—even tomatoes; also that the way to increase your business is by giving the people who buy and eat your products, the kind which makes them want more.

Think of it! Last year the largest pack of peas in the history of the industry was followed by a still larger pack this year; and now in November, peas in this country are relatively scarce. What is the answer to it? In my opinion, "Quality"!

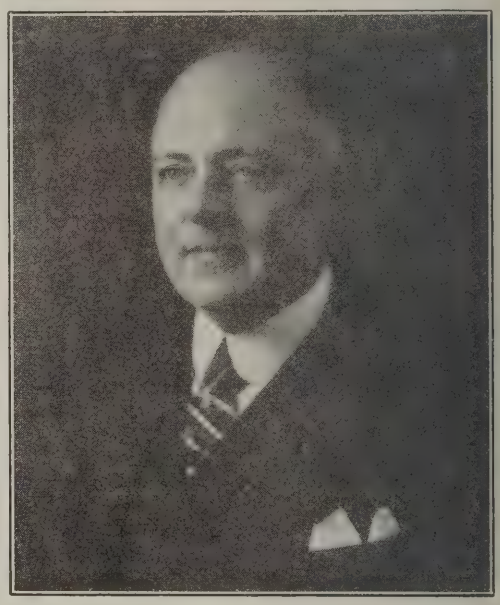
It costs just as much to pack Standard as it does the other 'ind. A scarcity in lower grades is a blessing in disguise. You will pack enough standards without trying.

You are better prepared now for quality because of all the lastest improvements in cannery equipment. Much has been done along those lines. The supply man is doing his part. And financially—most everybody knows now that you have to pay the ante before you get into the game.

What is another result of the War? A terrible thing—the Income Tax. Yet that same income tax isn't to be altogether condemned. It has taught us the value of a cost system, for you're got to know what your costs actually are. You just have to know because of that same terrible thing—the Income Tax.

There have been great improvements too in general manufacturing. We are all better manufactures. We are doing our job better. We are not only making our products better, but selling them better (I am using the term "we" in an editorial way). All this is better for the jobber and retailer. They want something stable. They want to know when they buy that the price isn't going off fifteen cents the next week.

The canning business is today a much stabler business than as ten years ago. But is it all done? There wouldn't be any more fun if it were all done. We are going to improve in the next ten years, and before that time is up I hope, improve our labels. We are going to make our labels—that most wonderful advertising medium we have—do some work for us. We're going to make them talk. We are going to make it easy instead of hard to purchase canned foods. We are going to have our housewives (if we have more than one—I have one) go to the store and pick out just what they want. I know it's going to be a hard, expensive job, but it will be worth it. No doubt about it.



What is another great thing not previously mentioned, which has come out of the War? A better knowledge of how to pack your goods. Great things have been accomplished along these lines. but there is still much to be learned about canning.

What has been accomplished along research lines through the National Canners and other agencies has been enormous, but a lot still remains to be done. That includes a more accurate knowledge of resorts, and what occurs on the inside. And Swells! That is a subject that always make a canner or can maker raise his ears.

I am not going to enter into that subject of swell allowance to jobbers, but I want to say that I believe that all this agitation which has been going on since the government ruling, is going to be beneficial. It is going to make every can manfacturer strive to make a little better can. He is going to act his ideals higher. But more important—the canner is going to pay more attention than he has been paying to the processing end of it. Then can manufacturer's ideal is pretty high already—two out of a thousand. But Mr. Anderson has called to my attention the fact that we weren't in all cases living up to our side of the contract. We're making them too good.

What about 1924? In my opinion the canned foods business has never entered a year under more suspicious circumstances. The people of this country better realize the value of canned foods, and there is a better market ahead.

Business is sound and stable, but we must remember many years it looked so fine in January and yet the year did not finish so well—and vice versa. It seems to me we want to go into the new year with our feet on the ground, realizing there is such a thing as packing too many goods. The general situation throughout the country seems to me sound, but confidence should always be balanced with caution.

GEORGE W. COBB
General Manager of Sales
American Can Company

We are not in a boom period. I am glad we are not. Remember, a few years ago we went up in a "boom" and came down in a hurry. Business is good and sound and we must do all we can to keep it good. Let's remember the sign "Stop Look and Listen". A few years ago we paid no attention to the sign, and we knew nothing about it until after the accident.

In regard to cans and prices I feel I have something to say. Cans are going to be higher next year. I say it right out like that! They are going to be higher not because the can manufacturer wants them to be higher—at least some of them; but for one reason only, and that is that tinplate, the raw material out of which cans are made, has advanced in price 75c a base box since January 1st of last year. That will make a higher cost for number two cans for the coming year of exactly $2.02 a thousand, or practically 2½ cents per dozen. There is nothing new about that. In fact, tinplate has been at this price many since July 1st of this year. But I haven't found a canner who knew that tinplate reached $5.50 during the year. He knew only the $4.75 basis.

I mentioned a while ago that canned food was a staple industry and may I mention one principal reason perhaps, for its stability. I refer to stable prices for cans.

We appreciate cans ought to be cheaper and wish they might be. But what makes them expensive, and they are expensive—won't argue that It is entirely a question of labor. After all what is tinplate but he ore out of the ground, plus labor all along the line. And the $4.75 price prevailed when mill labor was still earning $3.00 per day. Wages have materially advanced since then, and after all why should they not have advanced? The man who works is the man who buys canned foods.

Just one other statement in regard to price of cans. I am sure it is of interest to you. You all know something about the higher cost of conducting your own business, and every other

GOLD SEAL Lining Compound

Reg. U. S. Pat. Off.

GOLD SEAL Lining Compound is made from Rubber Latex —the juice of the rubber tree, containing rubber in all its original purity and with a resilience that cannot be retained after chemical coagulation.

You have read the United States Rubber Company's advertisements describing their work with Latex. Gold Seal Lining Compound is the joint invention of ourselves and their Vice-President, Mr. Ernest Hopkinson. It is protected in most of the countries of the world by basic patents controlled by us.

Only in Gold Seal Lining Compound can you get the advantages of Latex. The can manufacturer works with a solution which is both non-toxic and non-inflammable,—the canner gets a non-porous rubber gasket in sufficient volume to replace paper for the most difficult pack.

We will gladly supply sample Gold Seal Ends and further information.

DEWEY & ALMY CHEMICAL Co.
CAMBRIDGE MASSACHUSETTS

Two Billion Cans were sealed with Dewalco Compounds in 1923

business. Costs of can making, as well as costs in every line, have increased enormously. Today's basis price of cans represents an increase of only $1.00 per thousand on number twos since pre-war times.

The can manufacturers realize that you want to buy cheaply and your interests are theirs. I would call your attention to the fact that since the war cans have been reduced in price relatively more than any other item entering into the cost of canned foods. During and immediately after the war tin plate reached $7.75, and increases amounting to three dollars per thousand cans had occurred in the basis price, irrespectvie of tin plate. Today, you have tin plate at $5.50 per base box, and the price otherwise reduced from $3.00 to only $1.00 per thousand cans higher than the pre-war period. In other words, outside of the question of tinplate the can manufacturer is obtaining only $1.00 per thousand more for No. 2 cans than he did ten years ago. This comparatively slight increase has been made possible only by marvelous achievements along the lines of higher speed equipment, economies, and greater efficiencies, all taken in connection with the expansion and development of the canning business.

Now, I haven't said much and haven't much more to say, except that when we go sailing next year upon the sea of business let's make sure that our craft is sound and that it is within sight of land, so that in case of storm we can get back home, and let's take along that life-boat "Quality."

WAREHOUSING AND FINANCING CANNED FOODS

By Mr. A. H. Millward,

Of Wakem & McLaughlin, Inc., Chicago,
Representing the Illinois Warehousemen Association,
Before the Western Canners' Association,
Wednesday, November 7th, 1923.

AS the country grows, its natural resources become more thoroughly developed, the population and business of our cities increase, and the problems of distribution become greater. Seasonal accumulations of raw products and manufactured articles must spread over a period of consumption, and must be taken care of at the time of production. The products of one portion of the country must be readily available for the use of the entire nation.

In these problems, the storage warehouse industries are playing an increasing important part. There will ever be a close tie between the banker and the storage warehouseman, both guarding the wealth of others, the former as the custodian of your funds, and the latter as custodian of your goods, each must zealously protect his reputation for integrity and responsibility. Goods deposited with a storage warehouseman must in many cases be financed through the medium of negotiable warehouse receipts as collateral. In this respect it is essential that you use every precaution in selecting your warehouseman, so that the receipts he issues may be used by the holder anywhere for financing purposes or the transferring of merchandise from one party to another.

Practically all of the best warehouses of the country are members of the American Warehousemen's Association, whose work and ideals are, I imagine, very much the same as those of your own great Association.

Through our methods of cost accounting and standardization of services we have been able to place our business on a basis where we can render you the service you require on an equitable basis.

I desire to call your attention to the fact that where a shipper consigns a car of canned foods to a public warehouse, a responsible warehouseman will have already an established credit with transportation companies as mentioned, so that there will not be any delay in getting the goods into his warehouse for local market, and the service he renders in this respect is a great advantage to the storer or his representatives, so that you may gain the quick selling and access to goods upon arrival. I wish to impress upon you, gentlemen, that from past experiences the packers and manufacturers, who have representatives in this locality, have gained quicker and more sales by carrying consigned stocks in public warehouses rather than from the present trend of times, which seems to have become a habit recently in general business by being put on a hand-to-mouth basis, which has proved to be very costly to all concerned, and is somewhat of a detriment to the warehouseman and yourselves, owing to a lot of unnecessary extra service charges, which must be met and could be eliminated, and would result in a saving to the consumer, if same were shipped in carload lots, whether for storage purposes of for immediate distribution.

Within the past few years many warehousemen have established credits with their bankers, so that they are in a position to make loans on merchandise stored and covered by their own negotiable warehouse receipts as collateral. Loans can be arranged for according to their size, volume and market conditions. The amount of loans made on canned foods usually run from 60 to 75 per cent of their market value at prevailing rates of interest as charged by banks, and a small commission charge is made in addition to cover services, guaranteeing, billing, collecting, attendance, etc., so a certain amount of credit must be established at all times by the warehousemen in carrying a large balance on deposit with his banker.

In talking to you today, I have tried to impress upon you strongly the desirability of using the best warehouses no matter where they may be located, and now I wish to call your attention to the public warehouses of Chicago in particular.

The reason for the establishment of such warehouses here is, of course, the wonderful transportation system which serves our city. Chicago is the terminus of twenty-six great trunk lines, comprising 40 per cent of the entire railways of the United States.

Fifty millions of people live within one night's ride of Chicago, and it is truly the Great Central Market. Your goods stored here are immediately available for distribution wherever needed. There are in Chicago about twenty large public warehouses operating about six million square feet of space, all served by direct railroad connections and operated by men experienced in handling all of the various kinds of merchandise which move through this market.

The storage and distributing business has come to the front in many ways, by such actions of responsibility taken by the warehousemen, and we have all profited by the world-wide discussion on the cost of distribution, and by being able to create the good feeling and friendship of our clients, and hope that same will last indefinitely, in order to promote and increase the great volume of business between these two kindred industries, the canned food packers, their representatives and the warehousemen.

I wish to take this opportunity in behalf of the members of the Illinois Warehousemen's Association in thanking you for past patronage, and assure you that we are always ready to co-operate with you in order to promote the welfare of the canning industry.

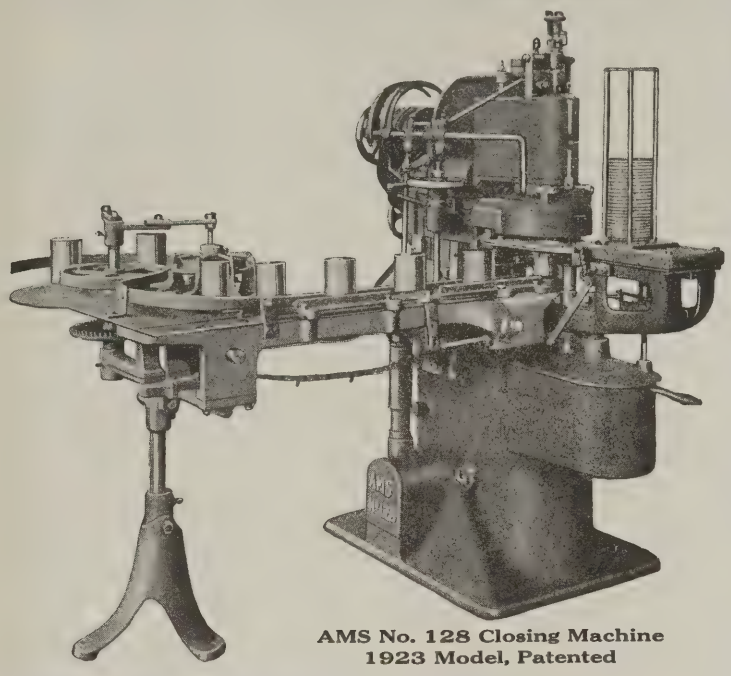
GREETINGS FROM THE AMERICAN WHOLESALERS

By J. H. McLaurin,

President American Wholesale Grocers' Association.

MY relationship with the canners of this country has now reached that point where I find myself annually looking forward to the dates when your great body, and also that of the National Canners' Association, will hold its convention. I no longer travel to your convention city in the performance of a duty, but rather I come here feeling it is one of the great pleasures and privileges that it is my good fortune to enjoy.

I am remembering, too, that for the American Wholesale Grocers' Association to appear before the Western Canners Association is a case of Youth entering the presence of Age and I want to know, Mr. Chairman, that I not only come to you today with a sense of real pleasure and happiness, but likewise with one of respect and reverence for our octogenarian friends. Seventy-nine years, not merely of experience—for if your work had been only that your continued existence would not have been possible—but rather seventy-nine years of real service in the interest, not alone of yourselves, but of distributors and consumers of the United States.



We hail, therefore, with intense satisfaction that condition of cordiality and friendship and of mutual confidence that is today a strong bond uniting the Western Canners' Association and the American Wholesale Grocers' Association, and thus I bring to you the felicitations and the very sincere good wishes of the wholesale grocers of the country that your bow may long continue to be strong, and that you may as individuals and as an organization go forward from this convention with renewed courage and inspiration in the splendid work in which you are engaged.

One of the most gratifying phases of the relations between the American Wholesale Grocers' Association and allied

food trade organizations is that when differences of opinion exist with respect to trade problems, there is machinery within those organizations for working out adjustments which are approximately fair to all, and happily there also exists the disposition to meet and discuss these problems in a spirit of reciprocity. This is notably true of the relations between your splendid organization and ours, as evidenced by the results of our conferences on future canned foods contracts.

The Label Allowance—We now have another matter to discuss with you which, while important, is probably of lesser import than the contract problem. I refer to the matter of a schedule of label allowances which I believe your organization and ours ought to work out and recommend to individual buyers and sellers as being fair to both. Probably we could take no action which would be binding upon individual buyers or sellers, but it must be equally true that a schedule worked out by a competent committee and based upon current prices for labels would be generally accepted by both buyers and sellers.

A number of complaints from wholesale grocers have come to my desk during the last few months, stating that label allowances offered by canners were entirely inadequate, and that they were evidently based upon prices of labels during the pre-war period. On account of these complaints we asked your officers to grant us a conference at this meeting for the purpose of discussing the matter with you. In line with your well-defined attitude toward our organization, to which I have already referred, your secretary notified us that a conference would be granted during the first two days of your meeting.

Our office arranged to have a representative committee here to engage in this discussion, and I assume they are here. As the conference was scheduled for an hour in advance of my arrival, I did not have an opportunity to participate in it. I hope it has been held and some mutually satisfactory agreement reached between your committee and ours, which I am sure it will be your pleasure to ratify officially.

The "Swells" Question—There is another problem which is of vital importance and which I know has been engaging the attention of the wholesale grocers and canners during recent months. I refer to the question of your protection of your product against swells.

I am not here to discuss with you what means you will employ to do a thing I know you men, in obedience to your own interests, recognize you must do, and must do thoroughly. In my judgment, when the Department of Agriculture prohibited the transportation of spoiled goods in interstate trade, the question of carrying out your guarantees already made is put squarely up to you, and it is up to you to work out and present a solution that will be satisfactory to your buyers holding contracts carrying your guarantee. That you will perform this duty fairly and honorably, I have not the slightest doubt.

Ten or fifteen years ago the grocery trade handled very little other than the low grades of canned foods. Now it is handling and consumers are demanding quality products, while there is diminishing volume and spasmodic demand for grades that can just manage to pass for human food.

The indestructible element of quality, as applied to products in cans, is revealed when it is realized that the consumer buys canned foods on faith. That means, of course, that such foods throughout their course, from the raw product to the consumer's table, are brought within the province of morals. Everone who has anything to do with the manufacture or sale of canned foods is discharging a trust which is reposed in him by the consumer and which he betrays at his peril.

Products of quality! Men of character! So usual is it to find them conjoined that it is natural to infer the one is the cause of the other. For it seems equally true that men of character make or sell goods of character, and that quality goods gravitate into the hands of quality manufacturers and merchants.

The Western Canners, by their resolutions and their acts, show they do not intend to countenance among their members any sub-standard or off-quality men.

The American Wholesale Grocers' Association has as one of the chief purposes of its organization the inoculation of the highest ideals of business conduct. It rejoices that so much of the thought of trade meetings and organizations is devoted to the affirmation, support and championship of honest goods, honest methods and honest men.

In the course of the development of modern business the world has passed through many different stages. There was a time when business was a part of the activity of the State and the Church. In the Middle Ages, for example, the Church declared that money was unproductive and that no interes on money was justified. The interest was declared to b usury. It was the duty of the State to determine and fi th just price for all commodities. The revolt from this regul tion of business is usually called the Laissez Faire period. is sometimes called the "let-alone" period of business, whe every man was for himself and the duty of the State limite to protection against the foreign enemy. Under this syste of business was developed the idea of free competition. The came later on the idea of co-operation, where producers pool their products and their interests. A new idea is floating int definition which may be called business self discipline.

This idea of discipline business is well worth careful a tention. It means simply that if business men can not or wi not discipline themselves, they must then be disciplined b some force from without. Very naturally that force fro without would be the power of the State. This new idea therefore, means a choice between the self-regulation or self disciplining business and an extension of government contro over business.

In the United States it is undoubtedly true that the Fed eral Trade Commission represents the idea of discipline fro without. A member of that Commission has declared that was analogous to a traffic policeman standing at the crossin of the streets. The duty of that traffic policeman is to pre vent confusion of traffic where that traffic desires to go in dif ferent directions. Obviously the chief source of such traffi confusion is one of conflicting desires on the part of those wh travel. One man tries to get the advantage of another in pass ing and such an effort to take advantage results in disadvan tage to all. Such a position, said this member of the Federa Trade Commission, that body holds in regard to business.

Among certain business activities there has recently bee a very great developmnet in co-operation. On the part of pro ducers co-operation finally means unity of action, and unit of action has meant that the judgment and discretion of th individual has been yielded to someone else. In co-operatio there is centralized control. Members of co-operative associa tions bargain away their individual business judgment b means of a contract. While co-operation certainly has its ad cantages for the members of the co-operative association, likewise has its very marked limitations.

The business men of the country responded instantly t the statement of the late President Harding when he sai "More business in government with less government in bus ness." An extension of the power of government control ove business is essentially contrary to American ideas. The bus ness men of this country want only equal opportunity and n paternalism. They want the opportunity to stand squarely o their feet and to demonstrate their own capacity for successfu business management.

Diverging from the idea of disciplining business fro without and from the idea of co-operative association, boun together by contract, is this new idea that business men ha the strength of character and the strength of will to disciplin themselves. The Secretary of Commerce has frequently d clared his abiding faith in the ability of business men and members of trade associations to develop their own fair met ods and practices in business. He did not say that a tra association should have the power to control or discipline i membership; the matter was rather referred to each ind vidual member of the association to see that his business co duct was as it should be.

It is reported that this idea of placing the responsibili for the right conduct of business upon the individual busine man finds favor with the present Chief Executive of the cou try. It is, in fact, an idea in complete harmony with the bus ness thought of New England from early days. It contai also a stimulating challenge to every American business ma as a test upon his own strength of character and his own pri ciples of fairness and justice.

It is believed that the business men in this country w generally respond favorably to such an idea of self disciplin After all what the business manager is, determines in a co trolling way what the business policies are on any individu establishment. It is certainly a true American idea that t correction of any unfairness should begin at the bottom of o commercial and industrial system, that is, in the individu establishment. This principle holds no less true in the dete mination of merchandising policies than it does in the dete mining of right labor policies. There would result for th country a wonderful period of business prosperity and ge eral good will if every individual business manager shou this day resolve that for himself and his business he would

all transactions do the right thing. There would then be a practical application of the principle of self-discipline in business.

May I thank you for your generous forbearance while I have tried to talk to you about some of the things that I conceive to be of such deep and vital interest to you and to American business generally?

(The above is the "set address" of President McLaurin, but it should be added that he spoke very much to the point on the matter of the Warehouse Plan in the settlement of swell claims, making the most diplomatic address we have heard him make, and we have listened to him often. He said he understood the Committee from his Association had expressed approval of the Plan, and that he felt sure that his Association, when their report had been properly presented, would endorse their action. He intimated that the Plan seemed fair and just, and that if the canners had suggested this form of settlement after long study and mature deliberation, he felt sure it must be right and would be accepted. We regret that the official reporter did not record his exact words, as we supposed he was doing, because there were many other points he touched upon which the industry could read with pleasure. Among others he said that the wholesale grocer must justify his existence by rendering efficient service as cheaply as the chain store, or he had no right to continue. He is a careful, clear thinker, a forceful speaker, with a great wealth of English at his command and a complete ability to use it, and we would have enjoyed reproducing his address as our readers would have in reading it.)

RAW STOCK STANDARDIZATION

By Charles W. Hauck,

Unite States Bureau of Agriculture,

Before the Western Canners' (and Indiana Canners) Associations.
